many engaging little tricks and habits. Not long ago I desired a good photograph of this specimen to have at hand to compare with some of the mounted Museum specimens, and by the kind leave of the Museum authorities we had several pictures taken of him by Professor Smillie, who has charge of the National Museum gallery; they are excellent and will be published in another connection. One of them is especially interesting, as by the instantaneous shutter we got him in the act of preening, with all the feathers of his plumage elevated; while in still another I secured him standing on a small limb in the attitude they assume when perching in a tree. The one where he is walking on the ground is also very good. Under the proper conditions I believe these birds would readily breed in confinement, and if my memory serves me right, our common Eastern partridge has done so.

Albino partridges are occasionally met with, but I do not recall ever having seen any hybrids among them,

FIG. 7. CALIFORNIA PARTRIDGE.

resulting from the crossing of species of the different genera in nature. This has been known to occur, however, in the case of some of our grouse, and my friend Mr. William Brewster, the distinguished ornithologist of Cambridge, Mass., has recently met with such an example, it being a hybrid which resulted from a cross of the prairie hen and a sharp-tailed grouse (*Tympanuchus americanus* × *Pediocetes p. campestris*). Through the kindness of Mr. Brewster I have been permitted to examine the skeleton of that specimen, and my account of it will appear very soon in *The Auk*, which is the official publication of the American Ornithologists' Union and a work which should be in the hands of every one interested in birds. Dr. Sharpe, who has charge of the Bird Department of the British Museum, has pointed out that hybrid game birds are not unfrequently met with in Europe, and quite a number of examples of them are on exhibition in the cases of that grand institution.

## Seabirds Ashore.

ROUSE'S POINT, N. Y., Aug. 28.—*Editor Forest and Stream*: I wish to inform you of a strange bird I captured here on Lake Champlain, after that last nor'east gale we had. I happened to be on the beach overhauling my boats, when I saw something fluttering out on the lake. It being very calm, I paddled out and saw what I thought was a wounded martin, but on running it down and capturing it, it proved to be a bird that I had never met with before, and on bringing it ashore I could not find any one who could inform me what it was. On looking through my Natural History I find my bird tallies exactly with a description given of a stormy petrel or Mother Carey's chicken. Do you suppose it possible that one of those birds could be driven so far inland? I would like very much to know. I have sent the bird to a taxidermist to be mounted; if it is returned in good shape I will have it photographed and will send you one, if it is of sufficient interest to you.

W. McC., JR.  
[It is very likely that the bird in question is a petrel. Such cases occur now and then. We have known of a case where a dovekie (*Mergulus alle*) was picked up in a field in western Massachusetts after a hard easterly storm, and there are many similar cases on record. We should be glad to see a photograph of the bird and could then tell with certainty the group to which it belongs.]

## A Badly Fooled Owl.

MR. R. B. HUGHES, now deceased, who lived a short distance from Huntington, W. Va., was witness to an occurrence, told me by his son, that well deserves to be called singular. Mr. H., in company with a Mr. Hanley, saw a large horned owl sitting on a dry oak tree, and while debating as to whether or not they could bring him down with their rifles at the distance he was from them, the owl spread its wings and darted to a spot about 50 yds. from the tree into a patch of weeds. Immediately feathers were seen to float above the weeds, and the men, supposing the bird had caught a fowl, ran to the place. What was their astonishment on seeing Mr. Hanley's house cat run from the spot in alarm at their approach, and the owl upon the ground partially disemboweled. The cat had killed it. Doubtless the owl had mistaken the cat for a rabbit, as it was yet hardly sunset. On reaching the house the cat was found to be unscathed.

N. D. E.

## That Foolish Fashion.

Mr. Woolerton.—"Yes, sah; mah wife's vanity done got me put in de jail yunst." Mr. Yallerby.—"How come dat?" Mr. Woolerton.—"Well, yo' see, I done borrowed 'r fowl' outen Colonel Gunnerton's hen house one night, an' mah wife 'sisted on wearing de wing feeders in huh bonnet. De Colonel knew de wings."—Puck.

## Game Bag and Gun.

## TENDERFOOTING IN THE ROCKIES.—II.

(Concluded from page 206.)

FROM here we made our way up the White River to Trapper's Lake, and spent a week in paradise. The only drawback was that we could not hunt nor fish; for we could have done nothing with the game killed or the fish caught but to have left it on the ground for the wolves. Two hours' work would have supplied a regiment with fish and flesh. We wandered down the north and up the south fork of the White. Two cowboys told us where we would find a cabin built by some hunters, which had a good roof on it; and we found it and took possession. It was the usual log cabin in an unfinished state, located in a pretty little bunch of cottonwoods, six or eight rods from the river bank. Three sides had been chinked and the fourth was open between the logs. While we were putting up some shelves by driving pegs between the logs and putting poles across, I happened to look through the unchinked side and saw something moving in some bushes a short distance away. A large buck deer came out and stood looking curiously at our jacks a little way from him. I grabbed my rifle, and shoving it through between the logs had a dead sure thing on him. He was soon dressed and hanging in a tree in front of the cabin. This caused no excitement, however; deer were too plenty. I kept on fixing up the cabin, and in less than an hour from the time I had killed the deer I heard the crack of Irv's rifle just outside; and saw him go rushing by the door. In a minute after I heard him shouting "John! John!" Picking up my gun, I started on a run in the direction I had heard his voice. After running some distance into the wood I stopped and listened, and hearing nothing, whistled. I got an answer from toward the river, and going that way soon sighted him on the other side wet all over. By him was the mate of my buck. He had shot him within a rod of where I had killed mine, and had run to cut his throat. Just before he reached the deer it got up and ran. He tried to load his gun, but for some reason the lever refused to work. He reached for his revolver, but he had thrown that out of his belt in some way while running to get to the deer; and then he shouted to me and followed the deer as fast as he could run. It would run a little way and then fall down; but before he could reach it would get up and run again, and finally ran through the river and dropped for the last time on the other bank.

In the evening I tried the trout—I shall always regret not having taken a Kodak with us that we might have taken some pictures of the game and strings of fish we took at that cabin. There were several ranches within reach of us, and the men being hard at work were always glad to get our surplus; we kept them well supplied. In an hour I have caught trout until it was burdensome to carry them—trout so big that no one man could think of eating one of the smallest, and many of them would alone have furnished a meal for a family. I find myself now holding my breath as I think of it—my fly going skipping out on the river near an eddy caused by some huge rock, and a streak of light darting through the water, making it boil as something took in that fly, and away like lightning; and then there would be a tightening of the line and a bending of the rod, and off we would go. I had no reel and had to run for it—up and down the river, in and out of the water, and finally to coax him tired out up near the shore, where I could reach gently under him and grasp him by the gills to complete his capture, for no snell was strong enough to take him out of the water. Many and many a fly have I lost with those superb fellows, which would break away in spite of all I could do.

We saw only two bears while we were out. One was

FIG. 9. THE MASSENA PARTRIDGE (MALE).

a big black bear, Irv killed one day when out with some other fellows; and one I found, or which found me once, when we had got separated in the mountains. I was signalling for Irv in vain, when an old "silver tip" walked out of some scrub oak within 50 ft. of me. He stood up on his hindquarters and proceeded to inspect me, uneasily swinging his head from side to side. I recognized his species at a glance and knew his fighting reputation. He looked 10 ft. high and I would have sworn just then that he weighed a ton. I was not scared, but I looked for a tree to climb just the same. I was in a clump of cottonwoods that had been burned over—every tree dead, not one over a foot in diameter, straight as spars and 50 ft. from the ground before a limb left their smooth bodies from which the bark was all peeled away. I might as well have tried to climb a greased pole, and if I could have succeeded in climbing out of reach—there was nothing to hold on to, and I would soon be forced to come down from exhaustion. So I cocked my gun and made up my mind if he started for me to "pump lead" into him just as lively as possible. He seemed to feel about it as I did, and seeing that I was not going to commence hostilities, he dropped down on all fours and made off one way, while I took the other. I shall probably always be laughed at for letting him go without a shot, but old hunters

have told me many times since that it was the wise course for me to take, for if I had failed in a dead shot the first time, the chances are ten to one I would have left my bones to bleach about there.

It was hard to leave this camp, but after a two weeks' stay we had to go. We could have supplied a city market with game and fish from that neighborhood. Our time was getting short and we had determined on our return to go across country where there was nothing but old Indian trails to follow, instead of going back the way we came. After the worst climb I ever had we got up on the White River Plateau and wandered east without much care about where we were going. The country was full of game, and when we tired of venison we lived on grouse. One day as we were tramping lazily through a small grove of spruce we came suddenly on a band of elk, the first we had seen. They saw us first and were off on a swinging trot, but not before we had a shot at them, which, if it did nothing more, frightened them out of the country, for we hunted several days for them without sighting them again.

We camped one night on the bank of a small stream and turned our jacks loose as usual. They wandered around until they had filled themselves with grass and then lay down a little way from us. I was awakened about 1 o'clock the next morning by a noise I could not explain, and arousing Irv we put on our shoes (we were otherwise dressed) and taking our guns went out to see what was the matter. We were not long in doubt. It was moonlight and nearly as light as day, and we could see that something was at the jacks. When we got close enough we saw that there was a mountain lion on each of them. The one nearest raised his head and growled at us threateningly, and we both fired on him at once, killing him. The other ran and we helped him along with lead just as long as he was within shooting distance, but he got away; though badly wounded, as the blood on his trail showed in the morning. We had followed him a good mile before we lost him, and when we got back to camp we found one sick dead and the other in such a condition that we were obliged to kill it.

Now we were in a fix. We had no knowledge of our whereabouts, except that we were somewhere between the White River and the Grande, and so we struck south, knowing that that must bring us to the Grande River and the stage route to our nearest railway station. I carried the skin of the lion we killed and the tent and blankets, while Irv carried a large satchel containing ammunition, clothing and some provisions. The rest of our outfit we left on the ground to bother some future explorer, who running across it will wonder greatly what became of the owner. We found our packs heavy enough before the close of the first day and I dropped the lion's skin for good. We were two days and a half steadily ramping before we struck the trail, and the last day and a half was filled up with some of the hardest down climbing I ever want to see. We had been following what turned out to be the west bank of Dark Cañon, and came to a point where we could look down through and see irrigated fields, and we made the mistake of going down into that cañon as our nearest and best way. It could not have been more than ten miles to them from where we got a birdseye view of them and did not look too; and yet we were a day and a half making it, dumping one night in the cañon. The bottom was an almost impassable thicket, and the sides were covered with slide rock, huge boulders and fallen trees, and we clambered over and under and around and through, and waded in the rushing torrent and let ourselves down precipices until with scratched faces and hands and torn clothes we finally struck a log road and our troubles were over. It was 3 o'clock in the afternoon when we finally dropped our packs at the Denver & Rio Grande Railroad depot in Glenwood Springs, and turning to look at each other in supreme content that that part of the fun was over, burst simultaneously into a fit of uncontrollable laughter. Two worse looking beggars were never seen outside of a ragman's fair. Our shoes were played out, the crown of my hat just hung on, my hair was sticking through the top bravely. We were all "broke up" generally. We counted up our funds and found that we had just money enough to pay our railroad fare to Buena Vista and leave us two cents. After getting our tickets and finding out that no train would leave until late in the evening, we discovered that we were very hungry, and went up town to see if we couldn't raise some money. We had a fifty dollar certificate of deposit on a Pueblo bank, but as we had no one to identify us we failed to get it cashed. We went back to the depot and I asked the agent to take one of our guns and lend us two dollars on it and then express it to Buena Vista C.O.D. for that amount and charges, telling him our difficulty, and that as we were acquainted at Buena Vista we could get our paper cashed there. He asked to see the certificate, incensed it for us himself and told us to go to the bank where he did his business, and they cashed it for us. It was taking some chances and was an unusually clever act which we shall never forget.

After this all was plain sailing. We had walked over 100 miles without counting our tramps into the mountains, hunting and fishing; and had seen country that we could not not have got at in any other way. I had worked myself down from 205lbs. to 180lbs. weight. It had not had that effect on Irv, for he was slender to start with, but we were both as tough as whalebone, and am satisfied that such a trip taken once every twelve months would add years of enjoyment to the lives of most men of sedentary habits and employment.

JOHN M. ROE.

**Connecticut Game Birds.**

HADDAM, Conn., Sept. 2.—*Editor Forest and Stream:*—I am more than ordinarily plenty in this locality, the boys getting from five to a dozen at one tide without a dog. I never saw the rice so plenty and fine as it is this year, caused perhaps by the extended freshet in the spring, quail and partridge, notwithstanding the closeness in which they were shot last fall and deep snows and severity of the winter, bid fair to be about as plenty as usual.

A.

**Nebraska Grouse and Quail.**

BEATRICE, Neb., Aug. 30.—Prairie chicken and grouse shooting is good throughout the western part of the State this year; and quail are more numerous all over Nebraska than ever before, on account of dry weather, good feed and good shelter, I think.

W. S. P.

**CHICAGO AND THE WEST.**

[From a Staff Correspondent.]

Out on Bail.

CHICAGO, Ill., Sept. 5.—On next Friday Mr. Percy Stone, of Chicago, will go up to Waupun, Wis. He will be glad to go. He will go cheerfully. You couldn't hire him to stay here. If he doesn't go he will be attached for contempt and his bail bond forfeited, and a lot of unpleasant things will happen. In fact, Percy is only out on bail, and his case comes up at Waupun next Friday.

A good many of us have thought for a long time that Percy had been out of jail long enough, but no one was expecting him to be arrested just when he was. You see, Percy is manager of both the Diana and the Horicon shooting clubs, which control the entire Horicon Marsh, at the upper end of which the village of Waupun is situated. No other man could have done what Percy Stone has done by way of organizing the two clubs and putting them in practical running order. We can make that short by saying that both clubs are now controlled by the Chicago vote. The marsh is the best in this part of the country. Everything is in good order, and the price of the shares in either club is steadily advancing.

The upper part of the marsh, that is controlled by the upper club (Horicon Shooting Club) has always been much overrun with local poaching shooters, who have disregarded the rights of the club, and have felt themselves injured by being deprived of the free use of the entire grounds. Before Mr. Stone reorganized the club, the club sold shooting permits at \$5 each. This injurious feature was at once cut off. Hence war.

On Friday morning last, Sept. 1, opening day of the duck season, the entire upper end of the marsh was alive with these trespassing shooters, who flocked in from Waupun and began a canonading at 4 o'clock in the morning, before it was dawn, and an hour and a quarter before the time set for the club members to begin shooting. During the day, Klieforth, the warden, and Cummings, the club watchman, arrested a couple of the trespassers. One of them had his gun taken away after refusing to give it up, but was not struck or hurt at all. He handed over the gun himself when he saw Klieforth meant business.

Of course, this "outrage" on the part of the club men raised a howl at Waupun. Revenge must be had. Accordingly the next day the aggrieved Waupunite sent down officers to the club houses, and arrested Klieforth and Cummings at the upper club and Mr. Percy Stone at the lower club. They caught Percy just as he was taking the train to come home. He was taken as manager of the clubs. The charge was assault and battery, deprivation of property, maybe highway robbery and arson, it makes no difference. Anyhow, this is how Percy Stone got in jail, and why he is cheerfully going back to Waupun next Friday. We all hope he will not get over seven years in the penitentiary, for with care and self restraint he could still be made a useful member of society. We hope for the best.

The fight is now on between the new way and the old way. Either the club men own this marsh or the trespassers own it. The old destructive way must make room for more intelligent methods. There will be only one end to this fight. The Waupun contingent will get more law than they want. Arrests will go on, the cases will be taken up, and they will be beaten and harassed until they are sick of it. They would better lay down their arms now. At the close of this justice suit (which may naturally be expected to go against the clubmen), appeal will be taken, the belligerent Waupun man will be arrested for malicious prosecution, sued in civil damages by Mr. Stone, and haled fore and aft and crosswise, until he would rather he had never thought of night shooting on another owner's grounds. Waupun men will also be arrested under the State law forbidding night shooting. The club will win in the end, and it will fight all the way. The old, reckless, selfish, destructive way will not do. Other times must be set on. Leave the clubmen alone, and they will tread on local shooters' toes of course, but they will preserve the wildfowl of this great natural breeding ground. Leave the local men alone and they would exterminate the birds to the last feather, for they would shoot in spring, summer and fall, day and night. This last fact is the main one, when it comes to the ethics.

**Opening Day on Horicon.**

Sept. 1, the opening day on Horicon Marsh, has come to be what is probably the most notable sporting event of the year in Chicago. The excellence of the shooting on this marsh, and the scarcity of shooting elsewhere, have made these two clubs very popular. The sport on opening day is usually the best of the season, as the birds are bred on the marsh, are young and not so wily as they become later. It is therefore usually a goodly crowd which goes north from this city to meet the Wisconsin members on the marsh on the first day of fall. This year there were thirty guns registered for the upper club and sixteen for the lower, a total larger than most tournaments would show, and in view a sport more interesting than that of any tournament.

**Broke the Rules.**

It is a rule of the two clubs that there must be no shooting before sunrise or after sunset. This wise rule ought to be observed strictly and to the letter of the specifications. Cards were distributed setting the hour of sunrise at 5:15 for Sept. 1, and all the members knew this, yet I am sorry to say that on the upper marsh not one but many members followed the example of the poachers, and began shooting as soon as they could see a moving shadow. This is all wrong. The birds if left alone would not fly much before sun-up anyhow. Greediness of this sort should not be tolerated for a moment. Moreover, the members should show more comity and courtesy among themselves, and not all crowd in on one another at the start because they hear a little shooting. The marsh is big enough for all. The time has come for gentlemanly usages in sport, and we must say good-bye to the old free-for-all scrambling ways. In a little while the members of the newly organized club will realize this, and things will gradually straighten themselves around.

**Heavy Shooting.**

The shooting last Friday was very heavy, the best for some time. The record shows what the duck preserve may be even to-day. There were over 1,100 ducks brought in on the one day, Sept. 1. The lower club, with 16 guns

out, had a trifle the better total, and indeed a most phenomenal average, but the shooting anywhere was good enough, the flight going by luck as much as anything, as it always does on opening day.

The following is the record of the upper club: H. S. Eldred 15 ducks, J. W. Burns 13, M. A. Cornell 14, A. H. Lewis 10, J. H. Burns 13, G. J. Clark 33, E. E. Munchow 20, L. J. Zinke 17, F. M. Fish 19, W. E. Warren 21, B. H. Sanford 13, E. A. Galoway 16, H. F. Bosworth 25, E. W. Chubb 63, C. W. Lamoreaux 30, R. Buchholz 18, F. A. Hanson 19, L. R. Brown 13, Geo. Holden 30, E. Hough 10, A. J. Baxter 6, C. H. Kaetel 12, M. Lehner 7, R. G. Richter 34, R. Rom 23, P. F. Stone 11, Wm. Klieforth 14, J. L. Gault 24, W. J. Hamilton 13, A. R. Keating 24; total 576.

The Diana or lower club record is as follows: Hall 10 ducks, Hamline 25, Mussey 75, Wilcox 61, Dupe 40, Parker 9, Buechner 19, Peabody 19, Hunter 6, Petit 30, Dicks 44, Leidersdorf 9, Wildicomb 55, Clement 6, Yorgey 31, Kretschmar 62, Melcher 62; total 590.

High bag on the upper club, 63 birds, was made by Mr. E. W. Chubb, of Milwaukee, who shot in the upper part of the "burned holes." Center Point, usually good, yielded only 12 birds, and the race of Mr. Kaetel for it at 3 o'clock in the morning was not worth the pains.

High bag on the lower club, 75 birds, was made by that happy and lucky shooter Mr. W. P. Mussey, of Chicago. They do say there was no living in the house with Billy after that, he became so offensive. Mr. Mussey shot in the West Bay. Mr. Wilcox, 61 birds, says his share is not for sale for a wagon load of gold. Everybody had a good time and everybody was elated to the point of excitement when the returns came in.

Mr. Holden, Mr. Brown and myself, all of Chicago, staid over to try it another day or so, as we had no shooting to amount to anything the first day. The other gentlemen got a dozen birds a day or so each, and their total made a magnificent lot of game. The ducks bagged were teal, mallard, redhead, pintail, woodduck and scattering varieties for the rest.

**Abundance of Jacksnipe.**

In all I bagged 40 ducks, but I found something better than that. On a little meadow just back of the club house I discovered a lot of jacksnipe and put in an hour or so there on two afternoons. The sport at the long hills was as pretty as anything I ever had, and I bagged 50 jacks as quickly and pleasantly as any one every did, though I lost nearly a dozen and a half more that fell in the flags. Running out of No. 9 shells I begged everybody for No. 7 shells, and finished up my bag with No. 7s and No. 6s. I found that one can kill jacksnipe a good deal better with No. 6s than he would at first think; indeed, can do very respectable shooting with them when the birds lie close as they did here.

**A Useful Remedy.**

But for one incident of Saturday's duck hunt I might have had a lot more snipe shells for the jacks. It happened this way. I was located on a little bog, just big enough to make a blind on, in the center of the waterway that runs through the burned holes. The birds kept out pretty well in the middle, and I got an occasional shot. This attracted the attention of another shooter, another club member, too, by the way, who should have known more of the courtesies among sportsmen, and leaving his blind on a point at the edge of the water he pulled in a couple of hundred yards below me on my flight and built a blind, which naturally meant an end to my shooting. Protesting mildly, I was informed that the country was free, a proposition to which I could find no adequate answer. Soon after this, however, I got very tired, and had to stand up in my blind a good deal. Also, I suddenly concluded that I would like a mess of yellowlegs. So I called my pusher over from his cover, gave him my gun and a lot of snipe shells, and sent him out with the boat on the flats to shoot yellowlegs, of which there were 700,000,000 around. My pusher must have misunderstood me, for somehow, he did most of his shooting out on the open water right around the other fellow's blind. Between my tired streak and my pusher's activity in the yellowleg matter, I regret to say that the other fellow didn't get another shot the rest of the morning, and he went home mad. I don't see what made him mad, it being a free country. Nothing to get warm over if a fellow wants a few yellowlegs to keep the wolf from the door. Anyhow, I can recommend the yellowleg scheme as a good way to serve a man who pulls in close on your flight deliberately and without courtesy. The only bad thing I know about this was that Ferdinand, my pusher, grew so interested in making double shots on flying yellowlegs that he got a deck load of birds, and meantime used up about all my fine-shot loads. Still, as it was, I got all the jacksnipe anybody ought to have, and this I found to be the nicest part of my hunt on the marsh. No one else seemed to be after the snipe.

There seems to be great abundance of ducks on the marsh this fall, and the phenomenal shooting of this first day of the season may be repeated in part later on. There are great quantities of mallards, and later in the fall these should make grand sport.

**The Other Clubs.**

It is too early yet for the flight on our lower clubs. The Horicon birds were all bred on the marsh. At Mak-saw-ba Club, on the Kankakee, there was some little shooting at local ducks, but high bag was about a dozen this year. The bass fishing at that point has, however, been most extraordinary all the season. Mr. Organ tells me that on opening day he got a nice little bunch of ducks, and then went to fishing. Everybody got heavy strings of bass. Mr. John Matter has had exceptionally good fortune there with the bass this summer.

**Homeless.**

There have been a good many unemployed and idle men around Chicago for the past week, owing to the fact that Mussey's billiard hall has been closed. It is a wonder that the authorities have not closed the place before, so many trap-shooting robberies of aliens have been perpetrated there. But it is closed now for repairs, and will be for a week. It will be thoroughly disinfected, fumigated and whitewashed, and its walls will then be ready for another year's incrustation of bluffs, challenges and lies. Until then, many sportsmen of this city will be homeless.

E. HOUGH,

909 SECURITY BUILDING, Chicago.

## SUMMER SLAUGHTER IN MAINE.

PHILADELPHIA, Pa., Sept. 2.—*Editor Forest and Stream:* I notice in your issue of this date an editorial, "An Old Story in Maine Woods," also an article in same issue, "Dead Deer in Maine Woods," which interest me very much, as it doubtless will others. It is well known that about all the hunting and fishing camps throughout the northern section of Maine are supplied with deer meat during the open season of fishing from June to October, when it is unlawful to kill deer, moose or caribou. This game is generally killed around the water in June, July and August, and as a general thing no more is brought to camp than what seems necessary to supply the camp with meat. How much is killed that never reaches camp no one knows. Doubtless a large percentage dies from wounds that may be recorded as waste, judging from the report of the Bangor News of Aug. 20, which you quote. It may safely be said that a large percentage of the game killed in the section referred to goes to waste, as you say, shot down in pure wantonness.

The State Commissioners and game wardens cannot enforce the law as it now stands, for the reason that most of the killing is done at night, and so far away from law that you cannot reach the offender or establish his guilt. What remedy can you or your readers suggest for the better protection of large game in the State of Maine?

Will you be kind enough to answer this question: Why do the people of Maine allow the indiscriminate use of rifles above .23 caliber in their forests during close season when there is nothing to shoot but the protected game? There is no game in the forests of Maine except the bear that would demand the use of a rifle during close season. And not one sportsman or guide in five hundred ever sees a bear in the Maine woods in the summer months. So long as every man and boy is allowed to carry rifles, or an armory, into the Maine woods in close season, just so long will the large game be killed in close season, and a large percentage of it will go to waste, as described in the article referred to. Make some regulation by law preventing the carrying of firearms in the State during close season, and you take from the offender the instrument which enables him not only to break the law, but the possession of which too often prompts the temptation to use it in an unlawful manner.

A.

## NOTES FROM THE GAME FIELDS.

The following notes on game prospects may prove interesting to sportsmen. The following is from Dr. Otto Moebes, Athens, Ala., in a letter dated Aug. 29. He says:

"There is a good sprinkling of deer. A town party chased and killed one a week ago on my land, and as I have been waiting for lawbreakers for some time, I happened to get up to them while they were in the very act of cutting the deer's throat. A bombshell could not have created greater consternation. It served them right. Let them wait till September.

"We have had the most remarkable dry season I ever experienced in this country. There have been but two little showers since June 2. A dry June always brings in a good quail crop. We have consequently more and larger coveys than I have seen for years. I have three coveys in my field, which are full grown, eighteen or twenty birds to each covey. I took a couple of youngsters to the Brown's Ferry preserve one morning recently, and found five large coveys inside of an hour, all well grown, and strong flyers.

"The spring set in very unfavorably for a good quail year, as it rained steadily during April and May, but fortunately the weather was extraordinarily cold at the same time, which kept the birds from pairing off and mating.

"Through an experience of many years and close watching, I have never been able to find a mated brace of quails before April 17. That is the earliest date I have observed. This year, the first couple I found was on May 9. I have found many unbroken coveys in the last week of May. Therefore you will see that they did their breeding in the dry season, hence the fine outlook.

"Do you recollect that once we had a little conversation in regard to quail following water courses, or even emigrating to them in the dry warm season of the year? Some parties had so written in a contemporary, if I am not mistaken. Well, they may do so up North, but I promise you it is not so in the South. Our quail care no more for water than if it were not in existence. I have known coveys on the Mason place, which I could find almost at any time during a terrific drought, and those birds were at least two miles from the nearest drop of water, excepting the dew. Dew is enough for them. If there is no dew, they simply do without water.

"I have also found, on an average, more birds on the uplands, a long way from the water courses, than I have found close to the latter.

"Turkeys have nested well also, and I know of two large gangs within a mile of my house. If you can come here and rest up a while, we will teach them a lesson."

From Mr. T. Andrew Jackson, Opelousas, La., an ardent sportsman and a keen shot, I have received the following under date of Aug. 28:

"Quail are plentiful. The season has been fine for their breeding—not too dry and not too wet. Almost every day I see from one to a half dozen brace of old ones in the road dusting. The shooting season on quail will open Nov. 1. This is the new law made by the police jury last spring. In many respects it was a good one. Heretofore the shooting season opened Oct. 1, but very little shooting was done before Nov. 1 and still later, as the cover in the fields is then too rank to permit of pleasant sport. Real good shooting can not be had till December, along about Christmas.

"The police jury also changed the law for the protection of deer. It used to be from April 1 to Oct. 1 in all parts of the parish. The new law reads as follows: 'Deer in the swamp portion of the parish can be hunted from Nov. 1 until May 15.' In other portions of the parish the old law holds good. The new law for swamp-hunting is a fraud. The rutting season begins there in November and the does begin to drop their fawns in July. In May they are heavy with fawn and it is then a shame to shoot them.

"In the pine woods the rutting season begins in September and the does drop their young about the middle of May.

"The only game birds to be found now are plover, but

the weather is too warm and the sport is very tame. Upland plover were here in July and the first part of August, but they have about all gone further south for the fall and winter.

"Good bear hunting could be had in the swamps a few years ago, but for some reason bruin has left his accustomed haunts and very few are now killed. Several years ago a black bear was killed in the Waxia swamp which weighed 619lbs. That one was the largest ever killed in this parish until last spring, when one was killed in the Atchafalaya swamp which weighed 800lbs. or more. These two are the largest bears ever killed in St. Landry parish, and I think the last-mentioned is the largest ever killed in the State. Old hunters tell me that there are three different kinds of bears in our swamps—the large black bear, with a white spot on the breast, a small black bear which is exceedingly tough and hard to kill, and a long, slim brownish bear which is so swift of foot that it is called the running bear. The latter species, it is said, can run all day and is about as fast as our red deer. How true this is I am unable to say, as I never hunted bruin.

"Squirrel shooting is good this summer. Many hunters report fine bags. We have five or six species of squirrels here. Some of the species may be the same. For instance, we have the red fox squirrel and the black fox squirrel. They are the largest. The black and gray squirrels are smaller, and many say that they belong to the same species. The cat squirrel is smaller than the gray, but is larger than the flying squirrel. The gray squirrel predominates; the red fox squirrel next.

"Alligator hunting is indulged in to such an extent that the sport threatens to exterminate the saurians. Several police juries have passed laws recently prohibiting the killing of these reptiles. The alligators kill the muskrats, which do the Mississippi River levees so much harm. Thousands of alligator hides have been shipped to New York this year from this parish.

"The Louisiana prairies, at this season of the year, are the feeding grounds of cranes. I note three sizes of the white species, one about three feet tall, the second about two feet, and the smallest about the size of a common chicken, only a little taller. A few blue cranes and herons are mixed in with the white ones. I have seen a few black ones, but they are scarce, sometimes only one in a season being seen. These cranes are being killed by thousands, and their skins are shipped to Northern cities."

B. WATERS.

909 SECURITY BUILDING, Chicago.

## Vermont Game Outlook.

HIGHGATE, Vt.—The outlook for good sport in north-western Vermont this season is very discouraging, unless the rabbit and fox crop happens to be a prolific one.

There are no gray squirrels and but few ruffed grouse. Up to the late cold storm there was a large number of woodcock and the young birds were well matured, but they are now gone; the late blizzard started them southward. The open season for these birds formerly began Aug. 15, which usually made us sure of several weeks of good shooting, but the last Legislature changed the date to Sept. 15. As we usually have a cold storm early in September, our birds are usually away before the middle of the month, which means no shooting after that date, as it was only occasionally that the flight birds stop here, for between here and the St. Lawrence River due north, there are but few grounds. Last season, however, was an exception, as the constant heavy west winds that occurred during their flight brought the birds here from their breeding grounds west of the Richelieu River.

The old law on snipe was also changed, so that now these game and toothsome birds are among those that cannot be shot at any season of the year. There is a general howl among the members of our gun club here against such legislation, and unless there is a change made for the better before another season no effort will be made to enforce the present game or fish laws.

We know that when woodcock are fat their first flights are short ones, and that the birds that are bred here are to be found when the present season opens down in the middle or southern part of the State; and we believe that this law was changed to favor that section of the State where most of the members of the State Fish and Game League reside. It is also our belief that such a law, one that favors one section of the State at the expense of another portion of the State, is unconstitutional, and if a test case was made on either of the above cases this would be found so.

STANSTEAD.

## The New .25cal. Shell.

In a recent number of the FOREST AND STREAM W. L. Carpenter describes a new .25cal. straight shell using (as maximum) 25grs. of powder and 97grs. lead, soon to be placed upon the market. The shell, being straight, will be capable of receiving a load varying all the way from the maximum given above to a charge of 2 or 3grs. powder and a round ball for gallery practice. Mr. Carpenter's shell will certainly prove much more satisfactory than the present bottle-necked .25-20, and I, for one, wish him all success, and shall watch with much interest for further information in regard to it.

BARRISTER.

## Shooting Prospects West.

A NORTH DAKOTA report which has just reached us gives the following highly-colored report of the local outlook: "The shooting season has commenced and the birds are being slaughtered in large numbers. Ducks are very plentiful, the numerous lakes and sloughs round about Forman, N. D., being a favorite breeding place for aquatic birds of all kinds. The variety of ducks is greater than usual, though the spoonbills and teal are most numerous. The grain fields are literally covered with chickens, and sportsmen report the shooting the best ever experienced in the country."

## West Virginia Game.

WAVERLY, W. Va., Sept. 4.—We have had a pretty fair fishing season; fishing camps dot the Ohio River every few miles, and their occupants seem to have good success. The river is lower than for many years; boats have not been running for several weeks until lately.

The outlook for fall shooting is good, with plenty of quail and pheasant, while rabbits are thick in the fields and timber, and as the season advances I look for some fine sport,

FOX HUNTER.

## The Shore Birds.

NEW YORK, Sept. 5.—Agreeable to your suggestion in the last issue regarding the effect the late storms had upon snipe shooting along the South Bay, I would report as follows: Having followed the shore birds for a number of years past with more or less success, I thought, as I suppose did many others, that such storms would bring a big flight of birds down from the North. The evening of Friday, Aug. 25, found me on Oak Island Beach near points from which I have had good shooting in past years. Out early Saturday morning, sat in a blind nearly all day. Saw one black-breasted plover, but not a yellowleg, though two came to the stool of a friend of mine. From all I could gather from the natives there had been some little shooting prior to the first storm, but no birds during or after either blow.

NIAGARA.

OAKDALE, Sept. 6.—*Editor Forest and Stream:* In answer to inquiry in FOREST AND STREAM in regard to the flight of snipe this season, I would say that those two severe storms brought to our shores two splendid flights of fine birds, mostly yellowlegs, and large breakers, with a splendid sprinkling of ring-tail marlin, blackbreast plover, golden plover, willet and yelpers. Half a dozen baymen have a blind on Dr. Green's meadow, where they shoot most all the time at small breakers.

A. A. F.

## Birds on the New England Coast.

SHORE bird shooting seems to be fairly good. Good reports come from Pine Point, Scarborough, Me. Mr. I. W. Pillsbury recently shot some 150 birds on a gunning trip to that locality. Mr. J. H. Brown got 120 birds. They were generally summer yellowlegs and snipe. Mr. Geo. Barrett is a successful gunner. He got thirty-two birds in a few hours' shooting at Ipswich the other day; mostly summer yellowlegs. Mr. J. Miller and friends were recently at Marshfield on a shoot. They are reported to have bagged 240 birds, with many of the larger varieties. There is a complaint all along the shore, however, that the larger birds are not plenty.

Mr. Claude H. Tarbox, with A. P. Aldrich & Son, has again made a good shot. He lives at Byfield, a long distance from Boston, and he is obliged to take a train at 7 o'clock A. M. to go in to business. He is very fond of gunning, and the river, the creek and the pond are very handy. But to get up early enough to take a pull of half a mile in a boat, up to the pond and back to breakfast, all before train time, requires a good deal of exertion. But sometimes he does it. The other morning he was up the river in his boat almost to the pond, when a couple of ducks started and appeared to be leaving for other regions. But soon they circled back and near enough to give Claude a fair shot. He used both barrels and got both ducks. They proved to be a pair of very handsome blue-winged teal.

SPECIAL.

## Chickens to Sell.

*Editor Forest and Stream:*

The chickens are not all dead in this neck o' woods, but are being killed mighty fast. Every train out of St. Paul on the Great Northern R. R. brings a whole skirmish line of chicken shooters, and a baggage car full of dogs, which are dumped at the various stations between Crookston and St. Vincent. It makes little difference where you stop; there are birds enough everywhere for any one but a hog.

Unfortunately, the market-shooter is in it also. Every southbound train on this division of the road carries to St. Paul and Minneapolis thousands of chickens, loaded at the various stations. Three hundred went from here yesterday and the express agent tells me that 200 to 400 go every day since the opening. Seven hundred went from Hallock on the 8d. In thirty days from now there will not be birds enough left for a decent seed supply. The railway and express companies are holding the shooters down to the provisions of law, and no game is accepted for shipment beyond the limits of the State. Copies of the game laws are printed on large yellow cards and, by order of the company, posted in all the ticket offices, baggage rooms, baggage cars, hotels and post-offices along the line, and the would-be violator is given to understand, in plain United States, that if he violates in this region he will be set on p. d. q.

G. O. SHIELDS.

STEPHEN, Minn., Sept. 6.

## Potomac Notes.

WASHINGTON, D. C.—The oats crop on the eastern branch of the Potomac, here at Washington, is a very large one this season, and as a consequence the river is full of reed birds, blackbirds and ortolan. Although the law was not off until the first of September, many of these birds had already been slaughtered and were openly exposed for sale in our markets before that date.

A lady saw a lot of reed birds in market one day in August and asked the seller if it was not unlawful to sell them, to which he replied, "Oh, these are cultivated birds, not wild ones." These non-enforced law-protected birds are shot right within sight of the police station at the Anacostia end of the Navy Yard bridge.

A stormy petrel, or Mother Carey's chicken, was shot near the Navy Yard bridge right after the recent great blow. It was very much fatigued from its exertions in battling against the storm. Several of the birds were seen.

Last week I noted the rather unusual occurrence here of willet, being quite unknown to this locality during the summer months. Sunday, Aug. 27, a flock of thirty of these snipe were seen on the flats opposite the Navy Yard.

BART.

## Beef Broth in Ten Minutes.

DON'T cook beef broth until it is worn out. Take half a pound, or a pound, of clear red beef, cut from a thick round steak—not tenderloin or hock. Half submerge in convenient pieces in a pan of cold water; put in a little salt and pepper. Let it boil on one side five minutes, then the other side five minutes. Cut into small strips or squares, and with the aid of a lemon squeezer extract all the juice into a bowl. Fold the strips and corners of the beef into the squeezer. Dilute this rich extract with the water the beef was boiled in, season to suit the taste of the patient, and the finest beef broth ever made for hospital, house or camp, is before you.

TILE.

## Proposed Powder Test.

Editor Forest and Stream:

The proposed powder tests for establishing the relative merits of the various nitro and black powders used and in the market of this country, of which mention has been made previously in your esteemed paper, will be carried out at Watson's Park, Burnside Crossing, Chicago, Ill., between Sept. 15 and 25, 1893.

The experiments are to be controlled by two or more judges not interested in the trade in question, and all sportsmen and manufacturers of, or dealers in, powder or ammunition, will be permitted to witness the trial.

As far as expedient and possible, all suggestions presented to me, and pertaining to the proposed test, from numerous shooters of this country, will be taken into consideration.

The test is intended to have a public character and will be conducted with a view to benefit and enlighten alike the trade and the shooting fraternity of America.

ARMIN TENNER.

## Expensive.

MILFORD, Mass., Sept. 5.—J. S. Cortezze, who was caught Sunday killing birds out of season, was brought before the local court to-day, and on plea of guilty was fined \$80, which he paid. He had the birds—robins and thrushes—in his possession when taken. The officers are determined to put a stop to illegal bird shooting, and have several others under surveillance.

Others may well take warning, and they are not all Italians, either. Sunday shooting will command the attention of the newly appointed game constables Edwards and Shields, through whose efforts the above case was brought, assisted by Chief of Police Delano.

## Birds in Maine.

BANGOR, Me., Sept. 10.—The fall shooting season opened ten days ago and the grounds hereabouts have been faithfully hunted with very unsatisfactory results. It is generally believed that there are but few birds in the Maine woods this year. I have not been out shooting, but during my wanderings in the summer I saw but few broods of grouse and those few were very small indeed. Woodcock are scarce as yet, and but few have found their way to the markets. On the whole, therefore, the gunners in this neighborhood are disposed to take a gloomy view of the prospects for the season. M.

## New Hampshire Prospects.

LAKE WINNEPESAUKEE, N. H., Sept. 6.—Editor Forest and Stream: Prospects for fall hunting in northern New Hampshire seem excellent; saw a good many partridge and other small game. Glad the hunting season has come at last. "Payson" is right on the subject of fishing versus hunting. MATTERHORN.

## Cost of Trip to World's Fair.

In the short space of two months the World's Columbian Exposition will have run its course. Its gates will be forever closed—the grand buildings, first stripped of their marvelous exhibits, then demolished, never to be restored—and the greatest and grandest spectacle in all the world will be but a memory of the past.

We consider it a duty as well as a pleasure for everybody who can raise the money to see the World's Fair, and because we believe that many are staying away from it through misapprehension, who can really afford to go, we will endeavor to set forth with particularity the very moderate cost of the trip. The following is based on a leading editorial in the New York Evening Post, and all the items have been verified, so that there can be no doubt of their correctness.

First, as to the railway journey. The New York Central has made a special excursion rate of \$32, on stated trains, with \$5 each way for a berth in sleeping car.

Good rooms near the Fair grounds, accommodating two persons, can be found without difficulty, at \$1 apiece per day, and a small room for one at \$1, while even more favorable terms are possible. Practically everybody eats luncheon on the grounds, getting breakfast before he enters, and dinner after he leaves. A great many people who rent rooms also furnish breakfasts and dinners, and good meals can be obtained at such places as well as at many restaurants for no more than 50 cents apiece. A person with simple tastes can also get along very comfortably on 50 cents for the mid-day meal.

Now add to these items the cost of admission to the grounds, the necessary extras for getting around the Midway Plaisance, a small allowance for the purchase of modest souvenirs and other incidentals, including fees to porters and other petty expenses of travel, and we have the following summary:

Railroad fare (round trip).....	\$32.00
Sleeping car berth (both ways).....	10.00
Meals en route (both ways).....	5.00
Breakfast and dinner (six days).....	6.00
Room in Chicago (six days).....	6.00
Luncheon (six days).....	3.00
Admission (six days).....	3.00
Expenses on grounds (six days).....	0.00
Incidentals (six days).....	0.00
Incidentals en route (both ways).....	2.00
	\$78.00

This estimate is given as the result of a practical test, and we reiterate that the sum of \$78.00, judiciously expended, will cover the cost of a trip to and from Chicago, made in comfort, and for a week's stay in that city under comfortable conditions, including six days at the Fair, and seeing every feature of it of any interest whatever.

Trains of the New York Central, on which the special excursion tickets quoted above are good for passage, leave Grand Central Station at 9.15 P. M.

The company also announce a series of Day Coach Excursions at one-half the regular rate on Aug. 23, 30; Sept. 5 and 11. By taking advantage of one of these excursions, the total given above can be materially reduced.

Accommodations may be secured by applying at the nearest ticket office of the company or addressing George H. Daniels, General Passenger Agent, Grand Central Station, New York.—Adv.

M. ISENSTEIN & Co., of 424 Broome street, New York, manufacture a superior quality of sportsmen's leather goods, including leggings, gun cases, cartridge bags and belts, etc., at popular prices. It would be worth while to send for their catalogue.—Adv.

You are invited  
to visit the "Forest and Stream's"  
exhibit in the Angling Pavilion at  
the entrance from the main hall  
of the Fisheries Building, in the  
World's Fair.

## "FOREST AND STREAM" AT THE FAIR.

## Where to Eat at the Fair.

There are hundreds of sportsmen who visit the Fair, and unless they know the ropes, they either get robbed, go hungry, or leave dissatisfied and displeased. The attendants are often fagged out, the management of the café does not care, and the whole business of eating is a trial and a care and not a pleasure. For all of this I have a remedy—not that I have a restaurant concession, or care who does have one. In short, the other day I blundered into the Casino restaurant (not one of those operated by the main restaurant concessionaires). Here I found in charge as manager no less than Wm. Werner—our old friend "Possum Bill," who got up the possum suppers for the old Possum Club. Billy Werner has been *chef* to the best institutions of gastronomy in Chicago, and he can cook a plenty, whether it be a question of possum or anything else. After I found him I ate easy, calm and hearty, and all the boys ought to know that here is the place to go—the Casino, southeast corner of the Court of Honor, near the big gold girl. Because why, Billy Werner is an old FOREST AND STREAM man, one of the oldest field shooters of Chicago, and sportsman clear through. He doesn't believe in spring shooting, and moreover, he has refused to sell illegal game, not only here but elsewhere. I will just take this much trouble right here to say that this is the place for the visiting sportsman to get something good to eat at the Fair, and I imagine easy that if any FOREST AND STREAM reader who pauses at the Casino will tear off a page-head of FOREST AND STREAM and send it in to Mr. Werner, he will get what he asks for, get it good, and get it via a waiter who will appear to have an interest in earthly things.

## The Winans Bronzes.

For reasons which will appear below, I am tempted to offer for publication the following letter from Mr. Walter Winans, the donor of the now famous Winans Trophy, which FOREST AND STREAM put in competition for the revolver shooters of America. On a very interesting subject Mr. Winans writes:

As one of the oldest readers and contributors from this side (not in age, but in length of time I have known the paper), I write you on a matter of possible interest.

You may know of me as the revolver champion of this country, but you may not know I am an artist as well. I sent over to the Fair, a fortnight ago, two bronze statuettes of mine, done in the same style as the FOREST AND STREAM Winans Revolver Championship Trophy. I sent in charge of Susse Frères, in the French Art Section of the Fair, but if you do find them on their stand kindly ask the attendant at their exhibit where they are, most likely in the American Art Section.

The statuettes represent respectively a trotter in action to sulky, and a "Bronco Buster" getting on to a bucking pony. I am rather proud of the details in the latter, but an Indian I hoped to send, which is better than either of these, was not ready in time. I am at present at work on a much larger trotter in the new pneumatic sulky.

If any one wants to buy either of my exhibits as a prize for shooting, I am ready to let them have them at the price they cost me to have them cast, without charging for my work.

WALTER WINANS.

Mr. Winans will pardon the use of a personal letter when he knows how heartily in his debt I am for an hour of pleasure, of which I wish all the readers of FOREST AND STREAM could share with me. The representatives of FOREST AND STREAM are spending a hard and faithful summer here, trying to find out for the readers of the paper that which they would naturally want to see out of the wilderness of opportunity offered. No readers of FOREST AND STREAM, even if he live here in Chicago, can see all the Fair. Without the above advice I might never have got beyond the great drooping caryatides which support the entablatures of the gallery in the French section of the Manufactures and Liberal Arts Building. With the advice, perhaps others also may go, if they do they will not regret it.

One must brush up his French if he goes hunting for a given spot among the dreamy sights and languorous odors which fill the house of beauty back of the patient caryatides, but finally he comes to Susse Frères, French Department, Class XXIII, where he finds the two statuettes, which came too late for installation in the American art section.

As for the size of the statuettes, let us call them about a foot and a half by two feet, though they seem much larger. The action in them makes them seem big. The horse and sulky statuette seems to me to suggest Nancy Hanks, the driver resembling Budd Doble. It is a keen and spirited thing, so we must dismiss it, saying only that if the Washington Park Club of Chicago does not secure it at the ridiculously low figure asked by the exhibitors showing it, then they miss an opportunity, that's all.

Comparisons are notoriously odious, but when I came to look at the cowboy and the bucking pony, I could not help thinking that it was anyhow fully as good as Mr. Winans's earlier effort, the FOREST AND STREAM cowboy.

In this later work there is tenser muscular strain, a more intense action, a higher key all through, although the figure materials employed are much the same. There is nothing of sharper action, nothing of keener interest, nothing of higher pressure, so to speak, than one of the wild struggles between a genuine "buster" and a genuine "bucker."

Mr. Winans catches this struggle in *medias res* for the bronco is clear off the ground with all four feet, and there is daylight under him and all around the slender figure of the cowboy, who grips the horn of the cow saddle with his left hand, thus really supporting the main bulk of the metal, though one cannot imagine that he is supporting the horse, so fine is the muscular treatment and the force handling throughout. I suppose Mr. Winans might be amenable to the old rules of criticism about the necessity of "suspended action" and all that in statuary, but must believe that most observers will join with the African brother and "bress God for the variation," for here you have the plains horse himself, fairly at the climax of rebellion, head down, feet bunched, mane pitched forward, wild with rage all through, and with every muscle, so to speak, quivering with excitement.

The mastery of the controlling figure is complete, and one heaves a sigh of relief to see that as a cowboy the figure is all right, and not imaginative altogether. And the cow saddle is all right, too, and the gun, and the rope, and every other detail. When we see this we have instant confidence in Mr. Winans's Indian, and believe that he will make the right sort of Indian. After a while FOREST AND STREAM will publish a picture of the colossal group, showing a mounted cowboy, which stands on the lagoon side near the Transportation Building at the Fair.

There is some "go" to this, too, but it is the equal of Mr. Winans's forceful work in no one particular. The artist has the idea in his head that the cowboy's horse should be the thick-necked charger of the ancient wars. Let him go to Mr. Remington, to Mr. Winans, or to the plains. The material of this fine object of art is silver bronze or bronze silver plated, in half oxide finish, the material giving a snappiness in keeping with the theme. Concluding mention of it, and reverting to the last sentence of Mr. Winans's letter, I could almost regret his generosity. So fine a work should never by possibility become a cheap gun club prize, but should be made an emblem of national significance, as is the FOREST AND STREAM Winans trophy.

## Sports and War in Art.

Go where you will in statuary or color, in any part of the art displays of the Exposition, as even here in the collections of French bronzes, and you will find still a few virile masters who know that a bit of vigor is as good in art as a scene of sensuous beauty, who abandon the bathing girls, the Naiads, the so-called loves and graces, and knowing that the male figure is as beautiful as that of the female, turn their hands to manly types. When you come to examine into it is astonishing how large a part of the field of art is held by the claims of sport and war. I could have found a dozen beautiful instances of this as I passed out through the French section after my visit to the Winans statuettes. Here was a great bronze greyhound, life size, and again a group showing a keeper with foxhounds, and yet again a grand solemn foxhound standing alone, his forehead wrinkled in grave thought. Yonder was an Arab examining the lock of his gun; here were two fencers, there an oarsman and beyond a noble group of runners (labeled, by the way, "Sold to Mr. A. G. Spalding"). A soldier, a savage, a sheik, a hawker, a hunter—all these are there, bronze, immovable, yet instinct with life, and teaching a harmless lesson which points up and never down.

E. HOUGH.

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavillion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

## LIVE FISH FOR THE AQUARIUM.

THE U. S. Fish Commission needed some whitefish and lake trout for its aquarium at the World's Fair, and arrangements were made to send one of its cars to Michigan for a supply. One of the most important features of the journey was provided through the courtesy of the general passenger agents of the Michigan Central and Chicago & West Michigan railroads, namely, free transportation of the car and its crew from Chicago to Muskegon and return.

It is probable that many visitors at the Exposition do not realize the extent of their indebtedness to the railroads for the success of the Aquarium exhibit, and it is certain that few persons appreciate the amount of co-operation furnished by railways to Fish Commissioners in their work of stocking public waters.

We left Chicago at 11:35 P. M. and ran around the southern and eastern shore of Lake Michigan through the night, reaching Muskegon at 7 in the morning. Here we met Capt. Bronson of the steamer City of Racine, who put us in communication with the fishermen from whom the specimens were to be obtained.

We traveled by trolley car five miles to the foot of Muskegon Lake, and then five miles by steam along the shore of Lake Michigan to Lake Harbor, where we arrived in the evening and remained over night. Lake Harbor is a beautiful little summer resort, having for one of its principal attractions a gem of a lake in which black bass, yellow perch, crappie and masacalongo are to be found. The short stream through which it empties into Lake Michigan also furnishes good fishing. Visitors were about leaving notwithstanding the delightful air and the unusual abundance of bass.

Very early in the morning Capt. Ole Anderson aroused the occupants of our car, and announced his intention of bringing the whitefish and trout from his pound nets. The water circulation was started and all arrangements completed for the care of the fish. The fishermen filled one of their boats with water for the safe transportation of the specimens. The boat was brought to within 50 ft. of our car and the fish were carried without injury in large tin pails to the tanks prepared for them.

It would be difficult to find another place at which live fish can be more advantageously handled than at Lake Harbor, and it would be equally difficult to find railroad officials who are more courteous and obliging than those with whom we were associated on that occasion.

A fine lot of whitefish, lake herring, lake trout and burbot were secured, and they were carried to Chicago and placed in the aquarium the same day without the loss of a fish. The men had also some suckers, yellow perch and fresh-water drum. The fishing season was about closing, but arrangements were made for another shipment about the end of August.

Muskegon Lake and vicinity is an attractive region for the angler, and its accessibility from Chicago is greatly in its favor. The lake is full of white bass and pike-perch, and its tributary, Little Bear Lake, is well stocked with black bass. There is a hotel at Little Bear Lake, and accommodations at Lake Harbor, which has excellent black bass waters, are ample. Pike are abundant, but they are called pickerel, the name pike being applied to our eastern pike-perch.

Capt. Bronson takes up parties of anglers from Chicago to Little Bear Lake frequently during the fall. There is always a cool breeze along the shores of Muskegon Lake, even when Lake Michigan may be perfectly calm. Port Sherman, at the mouth of the outlet of Muskegon Lake, is a good place for black bass. At Lake Harbor the anglers were still fishing and trolling with live minnows and grasshoppers.

Ice is sold for \$3 per ton at Muskegon, teams can be had at \$1.50 for an afternoon, and boats are let at about 25 cents per hour for a party of two or three. T. H. B.

## CHICAGO AND THE WEST.

(From a Staff Correspondent.)

## The Fly-Casting Tournament.

CHICAGO, Ill., Sept. 6.—The judges of the angling tournament of the Chicago Fly-Casting Club at the World's Fair, Sept. 21, will be Dr. Jas. A. Henshall, Mr. W. C. Harris, and Mr. H. L. Stanton. There will be expert and amateur classes, light rod competitions, an amateur club team contest, etc., and the day should prove of interest. The preliminaries are all now about concluded. Mr. Stanton's appointment as a judge, though late, is a good one.

This will be the first angling tournament held in Chicago, to my knowledge, and it will be a spirited event. Let us hope that it will work a new era for the Chicago Fly-Casting Club, and begin one which shall know less of the squabbles and bickerings of the past. That such an event will bring out hot competition and diligent effort among the rival rod makers goes without saying. If the rod representatives carry emulation too far into what purports to be a sportsman's club, they do not best subserve their own interests, for a club split and harried is of small use to any one. Mr. Osgood, of the Spalding Bros., has Kosmics in the hands of Mr. Johnson, Mr. Goodsell, and Mr. Wilkinson. Mr. Leonard is coming from New York and will likely have his rod represented. Mr. Isgrigg, of Montgomery Ward & Co., will probably use a Leonard for his long distance work, and for delicacy and accuracy will use the Abbey & Imbrie, which he has used during the summer. So we will have rivalry all right. What should be hoped is that the result will be a friendly and sincere handshake all around when the returns are in, and may the combination of the best man and the best rod and the best luck win, as it probably will.

## A Cheap Attraction.

I notice that the club publishes a brief list of merchandise prizes. This is unfortunate and gives an unmodern, behind-the-times and countrified air to what should be an event worthy of the time and place. Times change with them. The old ways will not do. The plunder list is one of the abominations of beggary, and has had place long enough in the history of tournaments. If a body of gentlemen wish to offer a prize for competition, why do they not put their money together and go buy one and not beg one? If the gift comes without asking it is quite another matter, but better a tin cup bought than a silver vase begged. The latter is not worthy a club of sportsmen. Donors will not look at it this way from selfish motives alone, but from the position of principle. A donor would be willing to give out of his own pocket to a needy sportsman twice what he will with a feigned and timorous cheerfulness give to a club of sportsmen or to a money-seeking management. But let the right of it go. It is enough to say that times have changed, and that to tack a plunder list to a programme to-day cheapens it and does not improve it. A scrap of paper will do for a trophy among gentlemen, and the thought of money gain should be left out of and far away from the gentle art in any of its forms. If we must then have prizes, let us not have those begged for under an absurd old system, whose day, moreover, is quite gone.

## Will Pay for the House.

The Fly-Casting Club has never yet succeeded in paying for its structure, the Walton lodge. Mr. Davidson, the secretary, informs me, however, that the debt will soon be canceled. Himself and five others of the club have decided to send their personal checks for \$50 each, the funds to be repaid by the club later or not as the club may choose. This is certainly a mighty generous thing to do, though it shows mighty bad business management on the part of the club in building before it had its funds. Certainly men like Mr. Davidson, Mr. Stanton, Mr. Strong and the others should not be allowed to advance this money alone. The club should repay it as early as it can. But with workers so zealous and unselfish as these in it, how can we predict for the club anything but a future of ultimate success? Cut off your useless lumber, gentlemen of the club, kill off your wranglers and quarrelers and gobs, insist on businesslike and parliamentary meetings, pay your debts and then go slow, and you have in this Chicago Fly-Casting Club the opportunity of making a highly useful sporting organization. It has the material for it. Let us heartily hope the coming tournament will constitute a prominent step in that direction.

## Justice and Injustice.

By the way, the secretary of this club, Mr. F. B. Davidson, one of the most unselfish and disinterested club workers I ever knew, and one of the best secretaries, writes me a letter in regard to my recent criticism of a club official's conduct, and states that, being misinformed, I have done the club an injustice. This is something I would not willingly do, and which I would go a long way to right when I found I was at fault. Mr. Davidson points out that the dates of the meetings were often set by himself, and shows dates which could not favor any one paper more than another. This I am very glad to state. Mr. Davidson also says that what I call a "star chamber" meeting (my information as to this came from two other members who were present) was not really closed, but that there was one other man there, not a member of the committee; "and," he naively adds, "that man made as many motions as anybody." I am glad to know this, too. As to the others of my statements, I only wish I could find myself mistaken there also, but fear I cannot. Mr. Davidson is a man who will always be young. He will always believe that all the women are good and all men are honest. To look at his great, honest face is enough to rest one, and I love the boy (he is married and has a family), though, as I told him yesterday, I don't believe he would see a load of hay go across the table in a game of poker. It is, I fear, owing to this inability to see a load of hay that Mr. Davidson is of the belief that my informants twisted the tenor of the remarks I quoted. I wish I had a similar visual defect, but even Mr. Davidson would lose it in this unholly calling. As to the main features I fear I am right, and am sorry that I am, so let it go at that. I am sorry. I apologize. I will not do it again, not until the next time when for journalistic reasons pure and simple, and for those only, it again becomes necessary. Then I probably will.

## Plenty Wise Paper.

THE popular wisdom department of the Chicago *Inter-Ocean* for Aug. 25 has the following:

"NAPERVILLE, Aug. 20.—To the Editor: What is the weight of the largest black bass fish? W. D.

"The weight of the sea fish known as black bass is from 1 lb. to 17 lbs., and the last-mentioned size is very seldom found. The black bass of the lakes is a smaller fish and seldom exceeds 8 lbs. in weight."

On the whole, this is not so bad, except that there isn't any black bass in the sea, and that it inhabits streams as well as lakes, and that it sometimes weighs over 20 lbs. It is pretty good for a swift grab at facts, and conveys the impression that the *Inter-Ocean* is plenty wise in natural history. E. HOUGH.

909 SECURITY BUILDING, Chicago.

## LATE NEW ENGLAND FISHING.

THE fishing parties are about done for the season of 1893. Close time began on trout in Massachusetts on Sept. 1, and it begins in Maine on Oct. 1. On the whole the season has been a good one, though opening very late in Maine. A great many trout have been taken. The only wonder is as to where so many trout have come from. Naturally the question arises, can the supply be kept up, considering the increase in the devotees of the rod and reel? Personally I am acquainted with three men and the wife of one of them, who never fished for trout till this year, and one trip has made them enthusiasts. My experience is only one of many. The passion for trout and salmon fishing is very decidedly on the increase. Bass fishing is fairly holding its own; nothing more. The supply can be kept up with the demand only by restocking. This restocking must largely come from angling associations and anglers themselves. State commissioners can hardly be depended upon to do the work, with the limited means at their command. If they can carry out reasonable protection during close seasons, and enforce reasonable fishing in the open seasons, they will accomplish a good deal. I learn from the Rangeley region and the ponds back of that section that the custom of returning small trout to the water, especially among the best of fly-fishermen, is a growing one, and has been particularly noted this season.

Occasionally a belated fishing trip is mentioned. Mr. J. W. Chickey, of the Boston *Herald*, with a friend made a fishing trip to Lower Bartlett, N. H., the last of August. They took ten trout from the Ellis, fishing down that stream two miles or more. They caught a number of trout too small to count. Their largest trout was 13 in. long. The trout were small and the stream showed signs of having been fished to excess. It is evident that it is early cleaned out each year, and hence few trout beyond two or three years old can be taken.

Mr. E. M. Gillam, of the Boston *Advertiser*, has gone on his vacation. He is much disappointed that business compels him to take his vacation this year too early. The open season on most of the game and game birds in New Jersey has not begun, and Mr. Gillam feels it his duty to spend his vacations in that State at the paternal homestead, where his mother is living. He will visit his brother, city editor of the Philadelphia *Record*, and together they will occasionally try the shore birds in New Jersey. Mr. Gillam, with a Mr. Black, of Reading, spent Labor Day (Sept. 4) on a pond in Boxford, Mass. They drove eighteen miles from Reading for the sake of trying the black bass. They used crickets for bait, Mr. Black obtaining them the night previous. There were several other boats on the pond, but Mr. Gillam and his friend seemed to get all the bass there were taken. They attributed their success to the bait they used, but did not bother to explain this matter to the other fellows. They took six good bass before dinner. In the afternoon their success was not as good, for the reason that they got tired of fishing.

Sept. 6 J. A. French, landlord at the Upper Dam, Richardson Lake, Me., dispatched that the fishing was good at that celebrated trout pool. The weather had been very cool, the mercury registering 40° for several mornings, and this weather had brought the trout to the fly, as it usually does there. From the 1st to the 5th a number of big trout had been taken, with a good showing of smaller ones. One weighing 7 lbs. 10 oz. had been taken by T. L. Barber, of South Framingham, Mass., and that gentleman had also taken one weighing 6 lbs. 10 oz. Dr. Drake, of North Weymouth, Mass., had taken a trout of 6 lbs. 12 oz. Besides, a trout of 6 lbs. 10 oz., and one of something over 5 lbs. had been taken. All these trout are reported to have been taken on a fly, in the pool below the dam. Mr. N. G. Manson, Jr., mentioned in the *FOREST AND STREAM* last week as being at his camp at Cherrytree Point, head of Richardson Lake, Me., is having good fly-fishing, or as good as he cares for, never fishing but for camp use. He is accompanied by his long-time friends, Mr. and Mrs. Bynner, of Cambridge, and Mr. Will Jones and wife, of Brewer, Me. Mr. Jones is likely to be highly pleased with what Mr. Manson will introduce him to in the Rangeley woods. But game will be scarce, even if the trout fishing is good. Mr. Geo. H. Cutting, of Andover, with his brother Will, were for ten days at Camp Stewart, on the same lake, engaged in repairing and rebuilding boat houses at the ponds. George reports that they saw but one partridge during all the time. Under circumstances of partridges fairly plenty they should have seen twenty at least. Other reports indicate the same scarcity of ruffed grouse in all the Rangeley region. It is reported that another moose has swam Richardson Lake in the vicinity of the Narrows, and that he was shot by some tourists. The game wardens have a clew to the perpetrators of the deed, and they are likely to be invited to settle, if indeed they have not already done so. A moose swam that lake last year, at about the same spot, and was shot during the hot weather. I have never heard that anybody was punished for the shameful breach of the game laws. That moose was reported to have rotted on the shore.

Mr. Henry Whitmore, with Mrs. Whitmore, mentioned in the *FOREST AND STREAM* recently as making their first trip to the Rangeley Lakes, is back to his work on the Boston *Herald*. They were the guests of Mr. Hal. Haskell, at Allerton Lodge, on Mooselucmagantic Lake. Both are greatly pleased with the region. Harry did not expect to take trout on this his first trouting trip and so early in his experience in trout fishing. But he was most happily disappointed. They made a pool, each putting in "a cartwheel dollar," the pool to go to the member of the party taking the largest trout. To Harry's surprise, he took the big trout and the pool. The money will go toward some improved fishing tackle. SPECIAL.

## A DAY WITH THE 'TAUG.

THE writer was tautaug hungry; not literally, but he was aching to go fishing. A few days ago he mentioned this fact in the presence of the ever-ready "Cad" C., and it was not long before a short trip was planned.

"You just come down to the cottage in the morning, and Jim and I will be ready to go," was Cad's remark, and the consequence was the writer took the first boat down the bay one fine fishing morning and landed at S., where Cad has a neat summer cottage, and where he and Jim spend a good portion of the hot weather. They were both there, Jim busily engaged in overhauling his tackle, and Cad smoking the favorite little briar and making miscellaneous comments about Jim's precaution regarding his tackle. Now Jim is a thoroughbred from the word go. Fish! Why that man will fish to the last minute, at any time, and for anything! A sticker is he and an expert.

"That's all right," was his reply to some one of the lazy C's remarks about his care in testing the line, etc. "We don't know what we may strike down where we are going. Don't you remember that big fellow I hooked and who broke away because I had one of your old rotten lines? I do, and I tell you it's best to know what you have got before you start."

"Yes, yes," was C's reply to this shot as he came to meet the arriving fisherman. "Well, old man, you did get here after all. Jim and I thought probably you wouldn't get up in time."

"Well, we're ready and the train leaves at 9, so you fellows better get packed up, and I'll take the wheel and go down shore after the fiddlers, and meet you on the bridge."

We settled down on the piazza, packed the duffle and tackle into the baskets, and sat smoking, when Mrs. Cad appeared with a good-sized package which she carefully laid in the cleanest basket. We knew what that was; it was C's lunch, and the size of the package brought out a new volley of remarks.

"Yes, it looks pretty big, to be sure, but after you have been fishing by the salt water a few hours I reckon you will be glad to help me get outside of some of it; that is, if you get a show," was his return; and he proceeded to mount the bike and start for the bait.

Jim and the writer sat on the porch telling the standard fish stories, of which we generally get a good supply, and then started for the station. The train came and we boarded it, arriving at the "Meadows" in due season. No Cad was on the bridge as agreed.

"I'll bet the lazy rascal has stopped somewhere; but never mind, you hitch up the rods and get things shipshape, and I'll go along down shore and get enough fiddlers to last us till he comes, anyway."

Our fishing point at this time was the railroad bridge crossing the Warren River, and upon one of the stone piers we took up our station. Several parties were fishing for bass, using a long hand line, with hook baited with small eel or sand worm. At this point the tide rushes back up the river like a mill race, and the current served the purpose of a moving boat, the line being paid out and then drawn up taut, giving the worm the same motion that trolling from a moving boat would. Several small bass and bluefish had been caught already, and we were promised some good sport.

"There's Cad," said Jim in a short time, "now let's see what he has to say for himself."

Full of apologies, the smiling C. dismounted from his wheel, looking rather dusty and warm. "You see," began he, when he had recovered some of his breath, "I had a good lot of fiddlers and was coming along the road O. K. when I passed a carriage in which were some friends, and in trying to raise my hat the machine caught in a rut and I got 'spilled.' Well, sirs, you ought to have been there and seen those fiddlers scatter (and have helped to catch them again, too). The result was I had to go back and get another lot." He looked closely at one and the other, but we remained silent. Jim was fishing. He always set in first. No waste of time. He means business.

"Come, come," said he, "you fellows get to work, if we are going to take home a mess."

We did. That is, we worked. Baiting hooks for blue perch, or "chogets," is surely work.

Pretty soon the writer has a good strong bite. The way the little rod bent and twisted bade some kind of a good fish. We all looked as the catch was slowly brought to the surface, dragging, floundering and making quite a stir. We got a sight of it. The other two laughed in a rather disgusted sort of a way and paid closer attention to their own lines. The first catch was a "dog."

C. and the writer talked a good deal, and whether it was our inattention to "business," or the stories that C. tried to spring about his catches in the past, we don't know. At any rate Jim silently took his departure for the other pier.

The tautaug were not biting very voraciously. We pulled in several fairly good sized ones. I say "we," that is the way we always do. "We" covers a good deal. Jim caught the 'taug. Cad and the writer became tired in the latter part of the day, and not having any great degree of luck (or skill) proposed that we leave for home. Of course it was our "off day." Jim was having good luck and fishing all around us, and we declared him a "Jonah."

Cad started for the cottage on his wheel leaving the writer to bring his duds. Jim fished nearly until the engine whistled, and we scrambled aboard arriving at C's with a good mess of tautaug.

It is early in the season, but the outlook for October catches is fair. TODE.

## An Indian Fish Fry.

EUFULA, Ind. Ter., Aug. 29.—I inclose you a true statement of a huge fish-killing that occurred near here lately. You will readily see that our red brethren play great havoc with the fish. The story is told in the Fort Worth *Gazette*:

"The biggest fish fry on record in the Creek Nation, or perhaps the Indian Territory, came off at Rock Ford, on the north fork of the Canadian River, two miles east of Eufaula, to-day. About 2,000 lbs. of fish were caught and about 500 Creeks from all parts of the Nation took part in the grand fish festival. Over 1,500 bushels of 'devil's shoestring' were used by them to vitiate the water preparatory to catching the fish.

"This mode of fishing is practiced a great deal by the

Indians, and is the best way in the world to catch lots of fish. The way they do this is simple. The day is agreed upon by all the Indians to meet at a certain place at the river, and every one that wants any of the fish is required to bring with him fifteen bundles of "devil's shoestring." On the day set all meet and select marshals to conduct the affair. It is their duty to collect all the fishing gigs, spears, etc., and enroll the names of all who are entitled to take part.

"Just about daybreak the next day the pounded shoestring is put in sacks and put in the water the entire width of the river. It soon makes all the fish in the stream so drunk that they can easily be picked up out of the shallow water or gilled or killed in the deep water. The command is given to go in and get them, and they are brought to the banks by the boatload, many weighing as much as 80 and 100 lbs. The frying process is then commenced by the women and a general feast is had. The shoestring poisons the water for miles below where it is put in."

Besides the great number taken on that day, so many died that were not caught that the river stank, and the buzzards swarmed around. I am sorry to see such a slaughter, but as this country belongs to the Indians, and there is no law against it, but is a regular custom practiced every year, we can do nothing. This would be a fine country for the sportsman if there was any protection for the game, but as there is none, the large game has almost disappeared. G. R. R.

### THE DOLLY VARDEN IN ALASKA.

PROBABLY there is no place in the world that affords better trout fishing than some parts of Alaska. It is no uncommon occurrence for a hundred or more trout to be caught by a single individual in an afternoon's fishing.

A short time since, an officer of the U. S. Fish Commission Steamer Albatross landed one morning on Unger Island, one of the Shumagin group. He climbed several hills with gun in hand in search of ptarmigan. Having brought down a dozen or more birds he was about to return to the ship when a stream was sighted a short distance away in which several trout were noticed jumping.

Not having a rod, the sight was somewhat tantalizing. A half hour was spent in walking up and down the banks of the stream watching the fish. Many times he wished he had brought a rod and fly. Presently, a search was made in his pockets for a string, and luckily a piece was found about 20 feet in length. A string, however, was of no use without a hook. This led to another diligent search, and every pocket was turned inside out, and the much desired article was found. A clump of alders close by furnished a rod. It was an easy matter to obtain a bait, for worms were numerous.

The line was thrown into a fine looking pool and no sooner had the bait struck the water than a trout struck at it, and soon a fish weighing 4 lbs. was landed in the tall grass. Twenty trout were caught in a very short time in the first pool. Another a little further up the stream was found, in which ten more were taken out, ranging in size from 1 lb. to 1 1/2 lbs.

It was not necessary to fish in the swift running current, for every little pool not larger than a good sized straw hat, was filled with fish. At the end of two hours 150 trout had been taken—surely not a bad catch considering that the fisherman had started off for a day's tramp with only a gun.

It is very probable that few white men had ever fished in this stream, which accounts for the great number of trout found in it, and the greediness with which they bit. A few days subsequent to this trial, 450 trout were taken out of the same stream in a day by one fisherman.

This stream is only one of many to be found on the islands of the Shumagin group. The majority of the streams and lakes where trout are plentiful are situated in most inaccessible places, and it requires no small effort to reach them. The fisherman, however, is generally amply rewarded for his long and laborious tramp, and returns to the ship feeling well satisfied with his day's sport.

Captain L. A. Beardslee, of the U. S. Navy, has given a very interesting account of trout fishing in Alaska, published in a volume entitled, "Fishing with the Fly." It is stated by this gentleman, that Alaskan trout will not rise to a fly. Such may have been his experience in south-eastern Alaska, but many lovers of fly-fishing who have fished in a score or more streams in various other parts of the Territory, have found that Alaskan trout will frequently rise to a fly.

During the past five years many trout have been caught with a fly at Captain's Harbor, Unalaska. To be sure much better fishing is to be had if the hook be baited with salmon spawn. The same author says: "From personal observation and collected information, I am prepared to accuse all of the salmon family which are found in Alaska of the grave offense of utterly ignoring the fly, either as food or plaything, and of depending upon more gross and substantial recourses."

This may be true of the salmon family among the islands of the Alexander Archipelago, through which the author cruised, but on the island of Kadiak and many islands of the Aleutian group, salmon trout have frequently been caught with a fly. No longer ago than June 7, of this year, a salmon trout weighing 5 1/2 lbs. was taken with a fly from a small stream not far from the settlement of St. Paul, Kadiak. This species, however, like the trout of this northern region will at all times rise to salmon spawn much quicker than to a fly; but that they will take a fly is a well known fact to many of the officers of both American and British men-of-war who have cruised in the western part of Alaska.

On July 3 and 4, at the Bay of Waterfalls, Adakh Island, nearly 400 trout were caught with a fly in a small mountain stream which flows into the sea. This island is situated in an isolated position, Lat. 52.00 N.; Long. 176° 30' W., is uninhabited, and is only occasionally visited by a few sealing vessels that stop for water while on their way to the coast of Japan.

It is safe to say, that flies for the first time were cast into the stream on the above mentioned days. How the trout did bite! Three, four, and sometimes a half dozen, would be result of a few minutes' fishing in one small pool. A short walk of 30 or 40 ft. would generally bring us to another place where equally "good fishing" was to be had.

Only those who have been confined on a ship for a month or more, can truly enjoy a day's sport of this kind.

One who has been poring over books and figures for months in a counting room, feels a wonderful buoyancy of feeling within him when he finds himself free among the mountains, green fields and clear running streams. It suddenly occurs to him that there is something left in life, and that he has not wholly lived in vain.

Something of this kind steals over a person who steps on land for the first time in weeks, having been tossed about by rough seas and enveloped in a heavy fog. He takes a breath of clear fresh air redolent with fragrance of wild flowers and rank growing vegetation and makes a plunge into the tall grass or dense forest. Never before has the earth presented so many pleasant sights. All things have seemingly put on fresh color as if nature was making special efforts to please the eye that has so long been deprived of sights which, even if gazed upon only for a few minutes, have the power to almost immediately change gloomy and partially depressed spirits into cheerfulness and temporary contentment.

Such, in a measure, was the effect that a day's tramp along the grassy banks of a prolific trout stream had upon a party from the Albatross on July 4. A. B. A.

### Potomac Fishing Notes.

WASHINGTON, D. C.—The fishing on the Eastern Branch for rock-fish, white and yellow perch, is very good.

Capt. Blake, of the Charles Macalester, is having good sport in the evenings at Marshall Hall. While the boat lies at its wharf the captain fishes from the pier. White and yellow perch are abundant there.

Black bass fishing in the Potomac is getting better and better. Good catches have been made at Sycamore Island, right above the Little Falls.

A small party is just back from Romney, W. Va. Harry Fiske, Horace Upperman, John E. Buckingham and Arthur M. McCormick, among others, have been to this delightful place, on the South Branch of the Potomac. Bass fishing was not so good, but all the same the party had a good outing of it.

On the way home from Romney several of the party stopped off at Dickerson's, where they found the fishing very good. The Monocacy was fished near where it empties into the Potomac, and proved better than the river.

A very large eel was caught recently in the Patapsco River at Ellicott City, Md. It measured a little over 4 ft. and weighed 6 1/2 lbs. This was a monster eel for the locality, and attracted much attention in Baltimore, where it was on exhibition. BART.

### To Extricate a Fish Hook.

GOSHEN, Mass., Sept. 6.—*Editor Forest and Stream:* A New York paper says: "Associate Justice Jas. F. Kelly, of the Kings County Court of Sessions, New York, was injured Wednesday of last week by having a fish hook penetrate his lower lip during a fishing expedition. There is danger of blood poisoning, and he is confined to his home in Flatbush. The Judge went fishing on Flatlands Bay with a party of friends, one of whom caught a bluefish and swung his line, intending to land his prize in the boat, but the fish dropped back into the bay and the hook penetrated Judge Kelly's lip. The hook was barbed, and to pull it out would cause painful mutilation. The only way to extract it was to cut his lip with a penknife. This was done and the Judge fainted with pain. The wound was washed and the Judge soon recovered and now awaits results."

Let me remark that to extricate a fish hook from the flesh it is not necessary to mutilate, by excision or otherwise. Simply break the shank and draw the hook through. The pain will be little and the wound slight. C. H.

### The Pacific Salmon Record.

BAIRD, Shasta county, Cal., Aug. 31.—*Editor Forest and Stream:* When I read in a recent copy of your paper, of the large salmon weighing 82 lbs., that was sent to Chicago, it reminded me that it was the largest Columbia River salmon, with one exception, that I had ever heard of in my experience of somewhat over twenty years on this coast. The salmon that formed this exception weighed only one pound more, viz., 83 lbs.

I could not help thinking when I read your quotation from the *Oregonian*, what a considerable salmon this monster was, to allow itself to be caught just in time to be sent to the World's Fair.

By the way, do you not think it would lead to interesting replies, if you should ask your many truth-telling correspondents to write *FOREST AND STREAM* what the largest salmon was that they had ever heard of on good authority being caught in Pacific Coast rivers, and especially to state how large the largest one was that they ever saw? LIVINGSTON STONE.

### Chicago Fly-Casting Tournament.

CHICAGO, Sept. 9.—*Editor Forest and Stream:* At a meeting of the tournament committee of the Chicago Fly-Casting Club to-day, Geo. W. Strell, president, in the chair, it was decided to extend the closing of entries to all events in open to the world tournament, World's Columbian Exposition Grounds, Chicago, Sept. 21, to ten minutes before each contest. The club's Walton House, on the grounds, is kept open every day, where late arrivals may gain information and fill their entry. Entry blanks, etc., of F. B. DAVIDSON, Sec'y.

127 WEST WASHINGTON ST.

### Channel Cat on Spoon Hooks.

MITCHELL, S. D., Sept. 2.—In the last issue of your paper a correspondent from West Virginia speaks of catching channel catfish with a fly while fishing for bass, and asks if others have had a similar experience. Last week while trolling in the Jim River, Mr. Frank Baughman and myself caught with spoon hooks four channel cat that weighed from 2 lbs. to 6 lbs. They took the bait savagely, made a gamy fight, and in each instance we thought we had hooked a pike or pickerel. A. E. C.

### Pennsylvania Fish Protective Association.

The first monthly meeting of the association following the summer recess, was held on Tuesday evening, Sept. 13, at 1030 Arch street, Philadelphia. Numerous applications for membership were presented and important communications read.

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

GOSHEN, Mass., Sept. 6.—Pickerel fishing in the reservoir at this place is prime now. The fish average about 2 lbs. and their flesh is sweet. As many as forty have been taken in one day by two lines. Trolling from skiff seems to be the most successful method. Anglers find excellent quarters at T. P. Lyman's. C. H.

BOSTON, Mass., Sept. 6.—Have just returned from a four weeks' stay at Lake Winnepesaukee, N. H. Fishing has been fairly good for all around fish, but saw few really good strings of game fish. Her luck—23 black bass and 3 dukes for the season, but the dukes were all thrown back, because not lawful size; they bite well on the right kind of bait. MATTERHORN.

### Fishing Near New Orleans.

NEW ORLEANS, La., Aug. 29.—*Editor Forest and Stream:* About three weeks ago I went fishing with two other young men to Lake Catherine. We spent Saturday night at the club house and at 4:30 next morning were ready for our pull down to the Rigolets, which is five miles further east. We had a little luck. Our total catch was two redfish, one weighing 12 and the other 3 lbs.; six sheephead, of which one weighed 4 lbs.; three drumfish, about three dozen nice green trout and two dozen large goggle-eyed perch.

We caught the perch and trout up in the bayous. S. P.

### A Bass "as Big as a Shad."

HADDAM, CONN., Sept. 4.—Like many another fisherman the black bass I did not catch was the biggest; I hooked him fairly, near my boat, and running out about fifty feet of line he made a scoot out of water, and when he went down parted the snell and my hopes. I found the snell parted just where I had pressed on a split shot—no more split shot about a line for me. It is useless to say he would weigh from 5 to 7 lbs., but I verily believe it, and can prove by my companion in the boat that he was as big as a shad. Three small ones had to satisfy the morning's sport. A.

### We Should Think Not.

CORTLAND, N. Y., Sept. 9.—Otisco Lake is not a bad place in which to wet a line. Messrs. Moss Stearns, E. A. Stearns and Porter Clark, of West Groton, Tompkins county, spent a day there last week and caught 520 perch, bass and pickerel. One member of the party in three hours caught 187 fish, pulled them out, in fact, faster than the other two could clean them. Although this comes within two letters of being a stern story, it is nevertheless vouched for as a stern fact by a lot of people who helped eat the fish. M. C. H.

### Where to Go.

ANYBODY desiring information with regard to the hotels advertised in *FOREST AND STREAM*, such as rates, routes, fishing and hunting opportunities, should address *FOREST AND STREAM* Information Bureau, where all reasonable inquiries will receive prompt answers.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y. Entries close Aug. 31.  
Sept. 19 to 22.—Mount Holly, N. J. H. I. Budd, Sec'y. Entries close Sept. 11.  
Sept. 19 to 22.—Rhode Island State Fair Ass'n at Narragansett Park, Cranston, R. I. D. C. Collins, Sec'y. Entries close Sept. 4.  
Sept. 26 to 29.—Ottawa, Canada. Alfred Geddes, Sec'y.  
Oct. 3 to 6.—Minneapolis K. C. at Minneapolis. H. T. Van Duster, Sec. Nov. 21 to 24.—New Jersey K. L. at Newark. Dr. W. F. Seidler, Sec. Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

#### FIELD TRIALS.

Sept. 12.—Manitoba Field Trials Club's Trials, Souris, Manitoba. R. J. Gallagher, Sec'y, Winnipeg.  
Oct. 30.—National Beagle Club trials, at Nanuet, N. Y. Geo. Laick, Tarrytown, N. Y., Secretary.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—New England Beagle Club trials. W. S. Clark, Linden, Mass., Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lellinger, Sec'y.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

### Fox-Terrier Old Tartar.

*Editor Forest and Stream:*

I note letter on "Fox-Terriers" in your issue of Aug. 26 by "The Tyke." In reference to Old Tartar he is mistaken as to color of markings, the same being patch of tan over eye and not black. Tartar was not bred by Mr. Domville Poole. In fact, he never owned the dog. The dog was bred by Mr. Brierly, of Chester, England. The sire of Tartar belonged to Dr. Weaver, of the same city. I know most people considered Tartar's pedigree was unknown. Tartar was purchased by my uncle, Mr. James Stevenson, also of Chester, for \$7.50. The dog was born about 1862. Mr. James Stevenson's strain of terriers originally came from Mr. Domville Poole and Lord Hill's kennels, Shropshire. As far back as 1850 Mr. Domville Poole's terriers' pedigrees were registered and kept with the greatest care. In color these dogs were generally white, sometimes with slight tan markings on head. They had the best of hard, dense jackets, good bodies, bone, legs and feet. Their gameness has never been questioned. It was usual to test the youngsters in Mr. Poole's kennels at nine months old with badger, fox, etc. If not game they were at once destroyed. As a boy, about 1860, I always accompanied my uncle with his young terriers to Mr. Poole's, and the day was spent in testing 20 to 30 young tykes, and I have seen many of them prove themselves as game as a bull-terrier with the "gray gentleman" and "Master Reynard." T. S. BELLIN.

ALBANY, N. Y., Aug. 28.

## NORTHWESTERN FIELD TRIALS.

RARELY if ever was there a pleasanter or more satisfactory field trial to all concerned than that of the Northwestern Field Trial Club, which commenced at Morris, Man., in the early morn of Sept. 4. Every one connected with it filled his part in a manner truly sportsmanlike. The management was skillfully conducted, the judges were most thorough, firm and accurate, the handlers ran their dogs quietly and without any displays of ill-temper toward each other or toward any one. The judges' decisions were accepted with respectful consideration, and were accepted, too, as final by all. In short, it was a field trial in the true sense of sportsmanship.

The judges were W. Hamilton Spence, of Grand Forks, Dak., who acted in a like capacity last year for the club, and Mr. John Davidson, well-known throughout the land as a field trial and bench show judge. Their duties, briefly stated, were well done. The running was most thoroughly and impartially conducted. The good dogs were sifted out with an accuracy which came from practical knowledge of field work and of competition and how to conduct it. The trial—the first one of the kind, I think, so run in this country—was run without any set rules. The dogs were placed in the judges' charge to pass upon without restrictions. The running and results thoroughly demonstrated that judges who are competent do not need rules. It has been quite as clearly shown in the past that rules were valueless when judges were incompetent. Good sense is gradually taking the place of mathematical standards which cannot be applied, and rules which are supposed to be a substitute for practical knowledge in the event that the latter be absent.

There were birds in abundance, both sharp-tails and prairie chickens. They were tame and easy for the dogs to work on, excepting now and then when an old bird, which had grown wary and wise from experience, made his puzzling run and turns for the dogs to follow. It was much like the good old days in Minnesota and adjacent States a decade ago, when shooters made bags of a hundred birds easier than they make one-quarter of that quantity now. I learn, however, that chickens are quite abundant in Dakota and Minnesota, particularly in the northern sections, on the lines of the Great Northern Railway. This road runs hundreds of miles through sections where wheat stretches from horizon to horizon, where wheat gives the landscape the color of old gold, and where it makes prairie chickens fat and plentiful.

The grounds were mixed grass prairie and wheat stubble, with an occasional flax or outfield here and there. The birds were found in both grass and stubble. They had not begun to pack, hence were always easy to find.

## The Derby.

## TUESDAY.

Most of the youngsters in this stake showed a lack of experience in their work on birds. The competition was of an inferior quality. The weather conditions were unfavorable for good work, a large part of the day being oppressively sultry and calm, unfavorable weather conditions for sharp point work or well sustained ranging. There was a breeze in the morning, but it gradually died away till in the afternoon a dead calm obtained. In the long grass where the direct and reflected heat was strongest the puppies after a few minutes' running were greatly distressed and required water frequently, and, too, care was required in working them. Notwithstanding the unfavorable conditions, once in awhile some good exhibitions of scenting power were displayed in roading and locating birds, yet there was a noticeable unevenness in all the point work, due apparently to inexperience in that work. As a whole, the work was decidedly inferior, though many of the puppies appeared to have good native capabilities. The short period available for preparation in late summer does not admit of the necessary training or physical conditioning being established by early September. To postpone the trials to a later date, however, would be to run the risk of bad weather, packs of chickens instead of beves if bad weather sets in early, and shooters in action in different directions on the grounds, which would seriously obstruct the trials.

As an offset against the sultry, unfavorable weather which prevailed, it may be mentioned that the birds were slow to take alarm, made short flights, and were easy to work. They often endured a deal of pressing before taking wing.

Mr. A. P. Heywood Lonsdale owns the winner, Dogwood, a good ranger and worker. He does not run idly. He seeks for game constantly and displays intelligence in his work. With more experience, he will make an excellent chicken dog. The most unselfish pleasure was expressed at the honors falling to Mr. Lonsdale, and truly his pluck in sending his dogs so far, merited such generosity.

Dolly Shaw, owned by Mr. R. W. Shaw, of Galveston, Texas, displayed a good nose in roading and locating. She pointed her birds well, but was somewhat too painstaking or overcautious in roading, though quite accurate. Her range when she was with a fast competitor was lacking in independence, she preferring to follow betimes a faster and wider ranger, as was Dogwood.

Selah, owned by the Charlottesville Field Trial Kennels, is a good ranger and is industrious, but her unsteadiness, which he irregularly exhibited, undoubtedly set her back in the judges' estimates. She had, however, but a limited experience on chickens, and this factor being considered, she really did well.

There were twelve starters, which would have been increased by quite a number more but for unavoidable adverse circumstances. Mr. Thos. Montgomery, of Winnipeg, who intended to start four dogs, injured his knee a few days before the trials, so badly that he is temporarily crippled. Mr. J. C. Phillips could not be present with his four entries in consequence of important business needing his personal attention.

Some new handlers participated. Mr. Sefton Hallam, recently from England in charge of Mr. Lonsdale's dogs, made his American field trial debut at Morris. He has a most sunny and friendly disposition, handles his dog intelligently, and bids fair to become a good American inasmuch as he thinks he may settle in America permanently. Mr. Joseph Spracklin, well known to bench show goers, also handled in these trials.

Following is the order of running:

Chas. W. Armstrong's white and black bitch Laurie A. (Roy McD.,—Flirt A.), Thos. Sheldon, handler,

T. G. Davey's blue belton bitch Monk of Furness Lill (Monk of Furness—Sue of Hatchie), Thos. Hallam, handler.

W. B. Wells's black, white and tan setter dog Mars (Cincinnati—Daphne), Joseph Spracklin, handler,

Frank Aulthouse's white, black and tan Victoria (Rego—Nell), Thos. Sheldon, handler.

Thos. Johnson's black and white pointer dog Paul Frank (Ightfield Upton—Genevieve), Sefton Hallam, handler,

A. Gale's lemon and white pointer bitch Frankie (Lord Graphic—Bab Bab), Thos. Sheldon, handler.

R. W. Shaw's black and white pointer bitch Dolly Shaw (Ightfield Upton—Genevieve), Sefton Hallam, handler,

Eddie & Armstrong's orange and white setter dog Monk of Furness Sting (Monk of Furness—Sue of Hatchie), Thomas Hallam, handler.

Thos. Johnson's black dog Ponto (Manitoba Toss—Pitti Sing), Sefton Hallam, handler,

T. G. Davey's liver and white pointer dog London (Lord Graphic—Lassie Faust), Thos. Hallam, handler.

A. P. Heywood Lonsdale's liver and white pointer dog Ightfield Dogwood (Ightfield Dick—Cowslips), Sefton Hallam, handler,

Charlottesville Field Trial Kennels' liver and white pointer bitch Selah (Rip Rap—Dolly Dexter), Capt. C. E. McMurdo, handler.

## The Running.

LAURIA AND MONK OF FURNESS LILL gave an inferior performance in the competition. Laurie did not remain out at her ranging. In fact, she required kind urging to keep her out from heel. In the tour to and from the Red River, the birds were numerous enough to afford many opportunities for good work, but they were flushed by dogs or men. In this heat, which lasted 55m., there was no satisfactory performance.

MARS AND VICTORIA were next, but the former being sick in town, Victoria was run alone. She ran about ten minutes, making a point and one or two flushes.

PONTO AND LONDON started briskly. Ponto, in attempting to locate, flushed some birds, and, again on them where they were marked down, made game, but found nothing. A detour was made to get out into open ground. On some birds, each did inferior work, Ponto making a poor point and a flush, and London making a poor find. They ran 45m.

SELAH AND DOGWOOD began the first meritorious ranging of the day. They stayed out well in their casts and were speedy, Dogwood the better in that respect. They were industrious and sought for birds. Dogwood made game and was about to point as the bird flushed. Selah took a long cast and pointed, flushed and made a mild chase. But little was done on the marked birds other than flushes by dogs and men. Dogwood showed more steadiness. Selah was disposed to be unsteady, though having decided merit in speed, range and finding abilities. They ran 55m.

FRANKIE AND PAUL FRANKIE were to run next, but the latter being so lame that he could hardly use the injured leg, Mr. Johnson, on requesting of the judges the privilege of withdrawing him, was permitted to do so. Still, with all his crippled condition, the dog was working and might have performed creditably, yet humanity was on the side of withdrawal. Frankie ran alone. Her work was inferior. In the 30m. devoted to her she made one inferior point and one or two flushes. She was not in the best of condition, being too fat for work. Her range was limited to a narrow scope.

MONK OF FURNESS STING AND DOLLY SHAW ran briefly together, the former refusing to hunt soon after starting, he preferring the comforts of walking at heel. He was returned to the wagon. Dolly worked enthusiastically. She found and pointed a bevy well. Cast off again, after a ride in the wagon a short distance, she soon caught scent, but failed to locate the birds. The judges flushed the birds afterward. She did not display full confidence in herself when on birds. Down 50m.

The party then went to lunch. The judges announced the list of the next morning as follows: Monk of Furness Lill with Victoria, Ponto with Laurie A., Selah with Dolly Shaw, Dogwood a bye.

MONK OF FURNESS LILL AND VICTORIA.—A short interval was occupied in partaking of luncheon, and the running was resumed at 12:00. Lill made two flushes and Victoria flushed a bevy. Down 27m. The weather was sultry and calm, and good work was difficult under the conditions.

LAURIA AND PONTO ran 30m. without any competitive results. Laurie ranged in and out, and from her handler.

SELAH AND DOLLY SHAW were given a short run. The former, at the end of a long cast, flushed and pointed foot-scent.

The weather was so oppressively close that further running was postponed till 4 o'clock. The work was then resumed. But the faintest of breezes then could be felt betimes. It was too hot for prolonged exertion, and far too hot for any sharp, spirited work. A few minutes were sufficient to get the dogs heated too much for them to perform well, though they kept at work. Frequent watering was necessary. A bird was marked down in grass and Selah pointed it, marring the work by springing forward and flushing. Dolly backed. Sent on, Selah took a cast about 150yds. and pointed a bevy nicely. She showed unsteadiness to wing and shot. At the same time Dolly roared to an excusable flush on a chicken which ran on to plowed ground. When sent on she began roading and pointed. She roaded on about 40yds. and the bird flushed wild. Another bird was flushed near her last point. She showed intelligence in her roading, but was overcautious. Up at 4:26. Selah had the wider and better range. On birds she showed finding abilities, but was lacking in staunchness.

DOGWOOD AND DOLLY SHAW were called to run after giving the latter a reasonable rest. Dogwood was the faster and wider in his range. Dolly often chose to follow him instead of working independently. Dogwood pointed a single. Sent on, each at the same time flushed a single. Dogwood in the stubble and Dolly in the grass. Sent on, Dogwood wheeled to point, but the bird flushed a moment too soon for him. At this juncture the atmosphere was closer and most uncomfortably hot. The dogs were watered, put in wagon, and a short detour made to get the wind. Sent on, Dolly nicely roaded and pointed a single bird. Dogwood made a point, yet he showed indecision, possibly from being excessively warm. He moved on. Judge Davidson rode up to where he had pointed and flushed a chicken. Dolly roaded prettily to a point on a bird. Dogwood backed, broke his back, drew in and stole the point. He showed unsteadiness, but stopped to order. He finished with a point on a single. Dolly, swinging in, got a point on the same bird. Up at 5:35.

The judges soon announced Dogwood first, Dolly Shaw second, Selah third.

## The All-Age Stake.

## WEDNESDAY.

An early start was made, all the party leaving the hotel before 7 o'clock. The morning was densely cloudy and a light fog obscured the view. About an hour after starting the weather thickened and rain fell for a short time. Gradually the clouds broke away and the weather cleared up. The comfortable coolness changed to close sultriness, and the breeze gradually died away. The afternoon was much like that of the previous day, oppressively warm with barely perceptible breezes.

The dogs were frequently watered, and no extremely long heats were run. The morning work was very poor but the scent was undoubtedly bad, as nearly every dog seemed unable to scent keenly.

This stake, like the preceding one, was finished on the day it was started. The dogs were thoroughly tested and skillfully selected. The decisions gave the most complete satisfaction. It was a pleasure to see a field trial concluded pleasantly. Long usage has not sanctioned "kicking" at field trials, but the absence of it was something of a novelty. In this particular instance there appeared to be no one who had any of the common grounds of "kicking," namely, ill temper; a desire to advertise dogs in any manner at any free opportunity; vilification of the judges to pacify a dissatisfied employer or to prejudice the public, and avarice and a natural fondness for brawling all seemed to be absent. Could all trials be so satisfactorily run and pleasantly terminated,

they would be a source of uniform enjoyment and a promoter of good fellowship and good sportsmanship.

A decidedly superior quality of work was exhibited by several dogs in the stake. Some of those which were unplaced showed excellent capabilities. The winners, however, were most skillfully selected by thorough tests in running, which was managed with excellent judgment.

Mr. John Wootton's English setter dog Dick Bondhu (Duke Bondhu—Manitoba Belle) would be a dangerous competitor with the best. He ran a very even race, his excellent work being well sustained in every heat. He not only worked on his birds with rare accuracy and a keen appreciation of how to manage lying or running birds—beves or single birds—but he was most amiably observant of working carefully to the gun. Thoroughly trustworthy, a high ranger, skillful in locating and pointing, he won his honors without question. Yet his modest owner or handler could hardly believe that he was the winner.

Mr. T. G. Davey's setter dog Brighton Tobe made a uniformly good competition for second. He has a wide, well-managed range, is a good finder, roads with skill and accuracy and points well. He is lacking in animation when roading, carrying his tail and head a bit low. He knows how to work on chickens, be they tame or cunning, lurkers or runners. His work was well sustained throughout.

Mr. W. B. Wells's setter bitch Chloe was a very close competitor for second, and in sharpness and quickness in ordinary point work was superior to Tobe. However, she did not possess his skill in following the trail of a cunning old bird, nor was her range quite so well sustained throughout the day though her performance was excellent.

Following is the order of drawing:  
W. B. Wells's black, white and tan setter dog Luke (Toledo Blade—Cambriana), J. Spracklin, handler,

Thos. Johnson's blue belton bitch Manitoba Patti (Duke of G.—Flora), S. Hallam, handler.

W. T. Hunter's black bitch Duff (Manitoba Toss—Pitti Sing), W. S. Richards, handler,

W. B. Wells's black, white and tan dog Matane (Mark J.—Cambria), J. Spracklin, handler.

W. B. Wells's black, white and tan bitch Cleopatra (Mingo II.—Cambriana), J. Spracklin, handler,

Thos. Stone's liver and white dog Sam (Coton—Psyche), H. H. McCullough, handler.

Thos. Greeley's black and tan setter dog Swab (Manitoba Toss—Pitti Sing), Thos. Johnson, handler,

John Wootton's black and white setter dog Dick Bondhu II. (Dick Bondhu—Manitoba Belle), owner, handler.

Eddy & Armstrong's black, white and tan setter dog Toledo Bee (Toledo Blade—Maggie Bee), J. Spracklin, handler,

L. W. Smith's black, white and tan setter bitch Atalanta (Jean Val Jean—Shena Van), owner, handler.

T. G. Davey's black and white setter dog Brighton Tobe (Locksley—Leddendale), Thos. Hallam, handler,

Thos. Johnson's liver pointer bitch Diamond (Upton—Blithe), S. Hallam, handler.

T. G. Davey's pointer dog Jones (Lord Graphic—Devonshire Fan), T. Hallam, handler,

Thos. Johnson's black setter dog Winnipeg (Manitoba Toss—Pitti Sing), Capt. C. E. McMurdo, handler.

W. T. Hunter's black setter bitch Pet (Roderigo—Florence Gladstone), a bye. N. S. Richards, handler.

## The Running.

LUKE AND MANITOBA PATTI began at 7:05. Birds were found in abundance, but no points were secured till Patti made a good point on a single bird. Patti showed good speed and range. The point work was very inferior. Down 35m.

DUFF AND MATANE were started at 7:59. The performance of both on birds was simply a succession of lost opportunities or errors. They had numerous opportunities to do good point work, with the advantages of wind and location in their favor, but they seemed to work diligently only to result in errors. Both had good speed. Duff had the better range. Down 43m.

CLEOPATRA AND SAM started at 8:46. Cleo. set a lively pace, showing vivacity, sharpness and fair accuracy in her work. Sam, too, exercised excellent judgment in beating out his ground. He flushed repeatedly, but unintentionally when instead he had good opportunities to point. Cleo. pointing well an outlying bird of a bevy, then, as she was drawing on to locate better, the bird flushed wild. Next she pointed some remaining birds after Sam had flushed an outlying one. Sam made a good point on a single, and was well backed by Cleo. The latter ranged well, was very sharp and quick in her work on birds, and her speed was superior. Sam had a good range and stayed out well, but his work on birds was faulty, though he was anxious and careful to be correct. Down 42m.

SWAB AND DICK BONDHU II. began at 9:33. They started their bird work by a bad flush of a large covey on the stubble. On the scattered birds each flushed twice. Dick made a long cast and pointed a covey nicely on the stubble, holding his point nicely till his handler came up. He moved on to locate, but lost scent, and cast off to the right. Swab started in to road and the birds flushed. They were taken to new grounds. Each, about 200yds. apart, pointed. Swab had no birds, Dick had two. Dick next made a point and Swab a flush.

TOLEDO BEE AND ATALANTA ran a half hour, beginning at 10:55. While they ranged well they did not succeed in doing any bird work.

BRIGHTON TOBE AND DIAMOND started at 11:30. Diamond pointed a bevy soon after being cast off, then roaded on to a flush. She was steady to shot. Tobe made a good point on three birds, and was steady to shot. Diamond dropped to a point on a small bevy. She next flushed three times. Tobe pointed a single. He ranged well and roaded his birds accurately, though his manner of roading was not spirited, he carrying a low head and tail. Diamond's work on birds was awkward and faulty. Down 37m.

The running was suspended till late in the afternoon, as the weather was sultry. In the meantime, the party went to town to lunch.

JONES AND WINNIPEG started at 3:51. Winnipeg had the better range, he covering a great deal of ground speedily. Jones also had good range. Winnipeg made a good point, while Jones roaded to a flush. Down 40m.

PET AND MANITOBA PATTI began at 4:36. Patti showed a wide, excellent range. Pet's range was irregular and rather narrow; she flushed three times. Patti took a long cut and pointed a covey well, doing a good piece of work. She next pointed a marked covey and Pet backed unsteadily. Patti showed good judgment. Up at 4:53.

SAM AND DUFF were cast off at 4:57. Sam again showed excellent judgment and speed in beating out the ground, but his work on birds was faulty. Duff dropped to a point on a bevy. Duff next made two flushes. The latter dog appeared to be indifferent as to errors. Up at 5:03.

DICK BONDHU AND CLEOPATRA began at 5:09. Birds were found plentifully throughout the heat. Cleo. made three flushes in quick succession, two of which were excusable. Dick stopped just in time to save a flush on a single. Chloe roaded nicely to a point on two birds. Dick pointed a bird well and Cleo. backed. Dick flushed. His next work was really superior. He pointed, moved on to locate, but lost scent. His handler urged him on. Dick plainly showed that he was satisfied that there were chickens about. He took a circuit in a masterly manner till he found the trail, roaded along the edge of wheat stubble and pointed the birds. Cleo. failed to catch the scent but backed well. Sent on, Dick started a rabbit which he coursed joyously in the sultriness for about a mile, then galloped back pretty well blown but still ready to go. Up at 6:02. Dick beat out his ground excellently well and maintained a uniformly good speed. Cleo. also was sharp and quick both in seeking and in work on birds.

ATLANTA AND TOBE were cast off at 6:06. Tobe roaded nicely to a good point on a bird which flushed wild. Atlanta next pointed, but failed to locate, abandoned the scent and moved on. Tobe took up the roading, went accurately to the birds and pointed them. Next he flushed a bird, partly excusable; he next roaded nicely to a point on a single. Atlanta took no advantage of her opportunities, although she ranged diligently and well. Tobe showed great accuracy in roading running birds. Up at 6:27.

MANITOBA PATTI AND WINNIPEG were started at 6:30. Patti, in attempting to locate a single on stubble, flushed it. She made another flush, and Winnipeg flushed a bird and chased it vigorously through a weed field. Winnipeg kept up his speed well to the end of the heat, while Patti shortened her range and speed. Up at 6:53.

PET AND DUFF ran together 13m., in which time they flushed repeatedly. At 7:10 they were ordered up. Pet showed inferior work.

WINNIPEG AND DUFF were run next. As the former was roading on a bird it flushed wild. Next Duff roaded to a point on birds and Winnipeg backed, then broke back. Duff next pointed some birds, then sprung in and flushed and was unsteady. Winnipeg backed. The latter had a great deal of ability, but was not well in hand, his handler having had him in charge but a few days. Both missed more opportunities, and the heat ended. Up at 7:21.

BRIGHTON TOBE AND CHLOE.—They were started at 7:23 and ran 17 minutes. Chloe on the stubble pointed some birds which flushed wild. It was dark when the dogs were ordered up.

The judges announced the winners as follows: First, Dick Bondhu; second, Brighton Tobe; third, Cleopatra. The dogs were quite accurately placed. The decisions were received with approval.

### The Championship Cup.

#### THURSDAY.

This stake was eligible to winners which had won first. There were five starters.

The prize was a large silver cup of artistic design and finish. The grouse, pointing dog and guns on it were appropriately emblematic of the occasion.

Following is the list of starters:

Armstrong & Eddy's setter dog Toledo Bee, winner of International Field Trial Club's Derby, T. Hallam, handler, against

Thomas Johnson's setter bitch Pitti Sing, winner of International Field Trial Club's All-Age Stake, owner, handler.

Thomas Johnson's pointer dog Manitoba Shot, winner of Northwestern Field Trial Club's All-Age Stake, owner handler, against

A. P. Heywood-Lonsdale's pointer bitch Musa, winner of English Kennel Club's All-Age Stake, S. Hallam, handler.

John Wootton's setter dog Dick Bondhu II, winner of Manitoba Field Trial Club's Derby, owner, handler, a bye.

The morning was cool and damp, though the weather was clear. There was a heavy dew when the dogs were cast off. The scent appeared to be bad, the first hour or more being full of errors in the dogs' work on birds. As the dew evaporated the work improved. There was almost a dead calm.

#### The Running.

TOLEDO BEE AND PITTI SING began at 7:35, the start being made west from town. Pitti made a fine display of wide ranging and good speed. Neither did any commendable work on birds, both losing many opportunities to point, flushing instead. Both were industrious workers. They had flushed so uniformly and often that they destroyed all chances of again being called up. Down 26m. Considering her nine years Pitti Sing showed remarkable dash and endurance.

MANITOBA SHOT AND MUSA started at 8:06. Shot soon demonstrated his superiority over his competitor in range, speed and work on birds. He sought more intelligently and beat out his ground with excellent judgment. Shot flushed three times. He roaded carefully and pointed. Musa roaded on the bird Shot was pointing and flushed it. Sent on, Shot took a long cast and pointed staunchly till his handler came up. Musa cut in ahead and roaded. Shot drew on and the bird flushed to one side not far from Musa. Up at 8:20.

DICK BONDHU ran alone 10m. He pointed, then roaded down wind accurately on the birds. He got close to them and flushed, but it was a very pretty and good piece of roading down wind. Sent on. He soon roaded and accurately pointed a bird. Up at 8:48.

MANITOBA SHOT AND DICK BONDHU II were selected for the final heat, which began at 8:51. Dick across wind flushed a bird. Shot flushed one down wind. Sent on. Going down wind, Shot flushed a single, then both pointed the bevy down wind. It was a good piece of work. Cast off in another direction, Dick swung back to where the birds had lighted close by, he apparently having marked them. He flushed a bird. Next he took a long cast and flushed. Shot at the same time flushed a single. Shot roaded nicely to a point on a single bird. Dick ran on to a bird and flushed it. Shot held his nose high and drew rapidly about 75yds. straight to a bevy on the edge of stubble and pointed it. Dick, coming in, joined in the point. Both were steady. Sent on, Shot flushed some remaining birds. Dick pointed a bird on the stubble. Shot stopped to a flush or pointed as the bird flushed wild, no one could say which. Dick took a long cast and in grass flushed or pointed. He next drew nicely to a point on a single, and was steady to shot. Up at 9:45.

Both dogs showed good training, being perfectly steady to shot and wing. They handled easily, and in fast work quite correctly without orders or prompting. They were attentively seeking for birds, and beat out their ground with excellent judgment. The number of flushes is no criterion of the excellence of these two dogs' abilities. There appeared to be some atmospheric conditions which were unfavorable for good scores. The flushes were not due to carelessness or bad judgment. The heat was well and closely contested. Dick fell off some in range in the latter part of the heat. Manitoba Shot won the prize.

#### A Mistake.

CHATHAM, Ont., Sept. 9.—*Editor Forest and Stream:* My bitch Cleopatra (Mingo II.—Cambriana), winner of third in Northwestern Field Trials' All-Aged Stake, is by mistake entered as Chloe or Cloe, her kennel name, and is given as by Toledo Blade out of Cambriana, a mistake which please rectify in your report. WM. B. WELLS.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

### The Quality of Courage.

My attention was recently called to an editorial under the above caption, in a contemporary, and it contained so much fallacy that I feel impelled to touch on some of its main features.

The "quality of courage" is a strange subject to select for analysis; since it is a wise man indeed who can positively define and differentiate it. In its metaphysical phases, it may be interesting as a matter of speculative philosophy, but when forced bodily, regardless of its relevancy, to fit some far-fetched theoretical practical application, it becomes involved and somewhat silly.

The writer of the editorial says: "In every form of contest, it appears to be generally held that courage is the one great quality above all others that is a requisite of success. Critics have long held, and continue to hold, that without a high degree of courage a competition is almost certain to come to grief against one or more that have this quality of courage in abundance. Indeed, the measure of its worth is about the only thing the critic regards in his consideration of the value of courage. Gameness, bulldog tenacity and a fearlessness of pain is taken to stand for almost certain victory, other things being nearly equal. It is worth while to imagine how much of truth there is in what the critics have taken so long for granted."

The foregoing quotation can be taken as mere idle assertion. There are no recognized critics in the dog world who hold such views. I do not think there ever were. It affords an opening merely for a pedantic display.

The writer of the aforementioned editorial then goes on to say that the best informed setter and pointer men do not measure "the promise of a puppy by his courage, although there are still to be found men of sound minds who select a puppy from a litter by holding the youngsters up by the tail."

It would have been instructive to know who the men are who test a puppy in such manner. Such trashy nonsense might have been good editorial teaching twenty years ago, but it savors too much of writing against space at this day.

The writer then goes on to illustrate his teachings by separating courage into two parts—physical courage and timidity, as shown in the prize ring, and deduces from the performances of some pugilists that a timid man is the best, other things being equal. He then carries these conclusions over to dogs and field trial competitions, and lays down the rule that a timid dog is the best.

Yet there is not, in any stage of the competition at a field trial, any test of courage as between belligerents. At field trials, it is purely a comparative test of individual performance in working powers, the work of one compared against the work of the other; therefore, physical courage such as is required in battle, is an irrelevant matter.

However, to inculcate his precepts by individual illustration, he mentions the names of Count Noble, Gladstone, Adam's Drake and Gath, and makes his own inferences of courage.

Of Gladstone he says: "The effect of all this, added to the running with strange dogs, soured Gladstone and caused him to set up his own opinion against the wishes of his handler. He became headstrong and did all the mean things a high-couraged dog can do."

Can anything be more misleading than that high courage is associated with meanness? That perforce a high-couraged dog can do mean things?

Of Count Noble he says: "Count Noble was just such a dog as Gladstone in respect to disposition. He could and would do in private most magnificent work. In trials he would do a brilliant piece of work and then do work that an unbroken puppy would shame to do. He had courage, and then things did not go to suit him; he got angry, and an angry dog cannot do good work."

What gross injustice. How little the writer of the foregoing knew of Count Noble! It is more particularly on account of this gross misrepresentation of one of the grandest dogs which ever made a point, that I notice the article in question at all. Count Noble, when in competition or in private did not get angry. A better tempered or more affectionate dog under all circumstances no one would desire. It is true that he behaved badly in field trials, but not from anger. He possessed rare cunning and intelligence. It was only when running with strange dogs that he showed a disposition to do mean work, and then he worked badly from jealousy. He would flush birds with no other purpose than to cut his competitor out of any participation in the work. But as for getting angry and working badly to show resentment to his handler, he never did so. It is only of late years that Count Noble has been appreciated, yet even now the high worth of that grand dog is not generally known. He was an indefatigable worker. The hours or days of work never seemed to lessen his ardor. If called to heel, while other dogs worked, he whined and fretted, shifted uneasily from one side of his handler to the other, and was most unhappy till he heard the order to go on. He beat out his ground in a masterly manner, and although he took great casts, he never "boiled." He was most skillful in pointing bevy under all conditions, whether the birds were running or resting, or were gentle or wild. A favorite method of his, when roading a running bevy down wind, especially if the wind was at all stiff, was to back up wind, swiftly take a circuit below the birds, and point them, at the same time stopping their running.

I once was out shooting with Mr. E. Odell, then of New Orleans. We were at Grand Junction, Tenn., and had Count Noble. One piece of work of that day is still fresh in my mind, though it happened full ten years ago. Count roaded rapidly along a side hill till he came to a high rail fence, where he feathered and half-pointed. His actions were peculiarly intense, and he seemed to feather all over. I saw the old dog was planning something unusual, and I remarked so to Mr. Odell, and that I would let Count alone to see what he would do. He trotted back a few steps, then ran down the hill about 80yds. at top speed, crossed the fence, thence up the hill rapidly, and made a staunch point not far from where he had left the fence. The ground was quite bare. We crossed over and flushed to his point one of the largest bevy I ever saw, probably two bevy together. Count had made his estimates, and saw that if he crossed the fence so close to the birds he would flush them.

Several times he has, when lost on a point in heavy grass, left the birds and, by his actions, conveyed the information that he wished to be followed. He would then lead the way a few yards ahead till he got to the birds when he would resume his point. Day after day, and week after week, has he worked, and never was he happier than when working. And the grand dog never got angry. He came the nearest to being able to work three days, from sun to sun, of any dog I ever saw.

As for Gath being somewhat cowed by training the first season, such has no reference to his brilliant performances. Gath was truly a great dog. But because he was a bit timid, it does not follow that his greatness came therefrom. It would be quite as irrelevant to argue that it was on account of the color of his eyes, or his diet, or what not.

Returning now to the "quality of courage," it is an absurdity to define it under such heading. No one knows what the "quality" of it is. Even the physical courage, which the labored editorial in question considers as the only quality, is not a fixed quantity in any one individual. Womenkind are timid by nature, yet they will face death and dangers in any form in defense of their children. The same is true of the females in the lower classes of animals.

A man may be full of physical courage when strong and active. If disease or old age weakens his strength his courage decreases accordingly. A brave man may be cowardly betimes. Even armies have panic fears, as the histories of wars attest. In short, we can only treat of the "quality" of courage in a most indeterminate manner, same as any other phenomena of the organism which is partly mental and physical. But that the courage or timidity of the competitors in a field trial is that shown by the pugilist in battle I think no sportsman will admit.

As a metaphysician, the writer of the editorial in question cuts with a very dull blade. Erroneous data and inconsequential conclusions are not the best material for him who poses as a teacher.

909 SECURITY BUILDING, Chicago.

### Southern Field Trials Derby Entries.

MARIETTA, Ga., Sept. 4.—*Editor Forest and Stream:* Inclosed herewith I hand you a list of the entries for the fifth annual Derby of the Southern Field Trial Club, which closed Aug. 1 with 69 nominations, 63 of which are English setters and 6 are pointers.

T. M. BRUMBY, Secretary.

#### ENGLISH SETTERS.

BLUE RIDGE MARK—Blue Ridge Kennels' dog (pedigree not given).

ANTOIA—Blue Ridge Kennels' bitch (pedigree not given).

UNNAMED—Blue Ridge Kennels' dog (pedigree not given).

ANTON—C. P. Stoke's dog (pedigree not given).

ALLEN—C. P. Stoke's bitch (pedigree not given).

PAULINE—M. F. Rogers's black, white and tan bitch (Breeze Gladstone—Katie Noble).

UNNAMED—Will Wilson's black, white and tan dog (Gladstone Boy—Specklegown).

NATCHES—Will Wilson's black, white and tan dog (Gladstone Boy—Specklegown).

ALFRED JINGLES—F. I. Stone's black, white and tan dog (Lad B.—Rowey B.).

COUNT ROBERICK—Chas. C. Mills's black, white and tan dog (Toledo Blade—Grace M.).

GLEAM'S PRIDE—W. W. Newsome's bitch (Gleam—Pride's Bell).

NETTIE GLADSTONE—Manchester Kennels' bitch (Dan Gladstone—Queen Novice).

CALLIE WHITE—Manchester Kennels' bitch (Gath's Mark—Georgia Bell).

GLEAM'S SAM—H. J. Smith's dog (Gleam—Schamp S.).

MARY EARLY—Patrick Henry's bitch (Gath's Hope—Gladstone's Girl).

RUTH OBERLY—Patrick Henry's bitch (Gath's Hope—Gladstone's Girl).

BOUNDLESS—Patrick Henry's bitch (Gath's Hope—Gladstone's Girl).

IGHTFIELD ROSALIE—P. Lorillard, Jr.'s bitch (Fred—Rosa).

ANTONETTE—P. Lorillard, Jr.'s bitch (Antonio—Daisy Hunter).

BERYLE—P. Lorillard, Jr.'s bitch (Gladstone Boy—Ruby D.).

LADY ARAMINTA—P. Lorillard, Jr.'s bitch (Eugene T.—Dell Rivers).

LEONA—P. Lorillard, Jr.'s bitch (Eugene T.—Bess of Hatchie).

ALMANTA—P. Lorillard, Jr.'s bitch (Gloster—Maspa).

VELMA—P. Lorillard, Jr.'s bitch (Gloster—Maspa).

DAME DURDEN—H. S. Bevan's dog (Eugene T.—Dell Rivers).

FLORENCE DOMBEY—H. S. Bevan's bitch (Lad B.—Rowey B.).

LITTLE DORRITT—H. S. Bevan's bitch (Whyte B.—Andromeda).

CHOW CHOW—N. T. Harris's dog (Wun Lung—Sunshine).

LOOK OUT—Bryson & Bedford's dog (Tremont—Sue II.).

MISS B.—Bryson & Bedford's bitch (Tremont—Sue II.).

MONITOR—J. W. Shreiver's dog (Gath's Hope—Cleo S.).

BOWDRE—Avent & Thayer Kennels' dog (Roderigo—Novelist).

CIGARETTE—Avent & Thayer Kennels' bitch (Roderigo—Norah II.).

HESTER PRYNN—Avent & Thayer Kennels' bitch (Roderigo—Norah II.).

TOPSY'S ROD—Avent & Thayer Kennels' dog (Roderigo—Topsey Avent).

TROLD—Avent & Thayer Kennels' dog (Jean Val Jean—Lucy Avent).

COUNTESS PEYVOSS—James H. Trezevant's bitch (Ace—Pareppo Rosa).

GLEAM'S PRIDE II.—J. Charles Wood's bitch (Gleam—Pride Bell).

ROD'S MARK—Greensboro Field Trial Kennels' dog (Roderigo—Mark's Maid).

MISS HATTIE—Greensboro Field Trial Kennels' bitch (Gath's Hope—Queen Noble).

HOPE'S PRIDE—W. A. Hennesley's bitch (Gath's Hope—Lulu Hill).

LOTTIE H.—W. A. Hennesley's bitch (Gath's Hope—Lulu Hill).

MAY—A. L. Finney's bitch (Gath's Hope—Gladstone Girl).

SOLITAIRE—F. R. Hitchcock's dog (Roi D'Or—Tory Diamond).

AMETHYST—F. R. Hitchcock's bitch (Count Gladstone—Tory Diamond).

TOPAZ—F. R. Hitchcock's bitch (Count Gladstone—Tory Diamond).

SANDSTONE—F. R. Hitchcock's bitch (Count Gladstone—Tory Diamond).

JESS—F. R. Hitchcock's bitch (Count Gladstone—Tory Mollin).

ROD—F. R. Hitchcock's dog (Roi D'Or—Tory Petal).

FURITITY—Herbert Merriam's bitch (Gath's Mark—Eve).

FANNY RICE—Jackson & Denmark Kennels' bitch (Gladstone's Boy—Manitoba Peggy).

EARL PALMER—Jackson & Denmark Kennels' dog (Frank Whitley—Dulcinea).

FRANK NAGEL—Jackson & Denmark Kennels' dog (Tremont—Sue II.).

BOY—W. D. Taylor's dog (Gladstone's Boy—Echo).

MAJOR THOMAS—W. E. Smith's dog (Gladstone's Boy—Bell Foster).

DAISY CROFT—Charlottesville Field Trial Kennels' bitch (Antonia—Daisy Hunter).

ROD'S DEUCE—West End Kennels' dog (Rod's Ace—Rosa Noble).

ROD'S DEUCE—West End Kennels' dog (Rod's Ace—Rosa Noble).

MARKELL—Charles T. Field's dog (Antonio—Field's Cosette).

MISTY MORNING—Charles T. Field's bitch (Antonio Field's Cosette).

OPAL—George E. Gray's bitch (Count Gladstone—Diamond).

#### POINTERS.

WRECKER—Charlottesville Field Trial Kennels' dog (Rip Rap—Croxie Wise).

RIPPLE—Charlottesville Field Trial Kennels' bitch (Rip Rap—Croxie Wise).

LAD'S RUSH—T. H. Gibb's dog (Rush of Lad—Devonshire Belle of the Ball).

ALICE LESLIE—E. M. Beale's bitch (King of Kent—Bell Randolph).

KING OF LYNN—Robert Leslie's dog (Tempest—Nadyj of Nasso).

BLACK BEAUTY—A. T. Latta's bitch (Rex II.—Fanny).

### Dr. Mills Relieves his Feelings.

THE president of the Canadian Kennel Club publishes what he terms an "Annual Address to the C. K. C." This is not customary, but he thinks it should be, and perhaps it is if kept to a proper purpose. In this address, which is quite a long one, a good deal of space is devoted to a defense against the attacks made upon him during the past year, and he intimates that he has commenced legal proceedings against three kennel papers for defamation of character, etc. He proposes that we change the terms used in speaking of the "fancy," "dogmen, etc.," to "caniculation"—methods and expedients to advance the dog; "cynology"—knowledge of the dog in health and disease; "cynophily"—devotion to dogs without any pretense to special knowledge. Thus we have caniculation, cynologist and cynophilist, terms which may do for the cultured employment of Boston dogmen, but which we are afraid will scarcely be found in common parlance just yet awhile. Dr. Mills proposes using local clubs as recruiting agencies for the C. K. C., and advises, if feasible, the holding of executive meetings at different towns. The president again gives his views regarding American talent to judge Canadian dog shows, and then goes on to attack the "Mud Slinging Trust" in no measured terms. At the same time he should be more explicit and not include all kennel papers in his diatribes. An expression of opinion, candidly given, is not necessarily an expression of hostility to the person criticised. He speaks of the "Trinity in Union" as trying to make all judging, reporting, etc., subservient to their ends, but the paper would have greater weight had he given the names of the members of that union. The charges recently made against him and dismissed by the C. K. C. are gone into and motives explained, stating plainly that certain men were chief actors and another a cat's paw.

In speaking of the American kennel papers he remarks that "the editors have risen from the ranks, i. e., they were professional reporters, handlers, exhibitors, etc. While to rise from the ranks always reflects credit on the man himself, it has its disadvantages for others. Among these are an undue amount of sympathy with the professional element and clannishness with its attendant evils. The professional element as judges, handlers, reporters and editors in America is strong relatively, if not in numbers at least in influence, and as this element virtually controls the press it can to a large degree arrange matters to suit itself. They can even form a "combine" to "run out" or keep out any aspirant as reporter or judge. They may wrangle among themselves, but unite for such a purpose as that to which reference has been made. So that a great deal must now depend on the character of the men that are editors, judges, etc. Not only is this professionalism which is rampant a source of possible, but I believe it has become a source of real danger. To illustrate, we have the case of an individual, essentially a professional, who at one time wrote against an editor also acting as judge. He has, himself, recently stepped into the editorial chair and now acts as reporter, editor and judge. As professional judges are paid and there is competition, it is manifest that the fewer the competitors the better for the pockets of the lucky few; hence this Editor-Judge-Reporter is wont to contend that dog men are being imposed upon in not employing competent judges which, so far as I have been able to make out, he thinks include himself and about two or three others. According, then, to this writer, we should restrict ourselves in our choice to perhaps three judges, two of them pure professionals, (i. e., they make their living by dogs or business relating to dogs) and another nearly so."

While there is considerable truth in the above quotation, it is far too sweeping to be wholly true. We would uphold Dr. Mills as a judge of dogs, were he competent, as it would a Mortimer or a Davidson. Dr. Mills is himself not without a feeling of resentment, and it shows itself in this address, that part regarding Mr. Stewart and the superintendency of the World's Fair Canadian exhibit might well have been left to committee discussion.

As a panacea for all these ills Dr. Mills thinks that kennel interests would be better served by a paper "largely independent of advertisers, and whose editor-in-chief would not be a professional." It would be easy enough to find such an editor, easier than running a paper without advertisers.

In conclusion he reserves the best part for the last: "When I reflect on what I know I was, and on what according to a portion of the kennel press I have become, I marvel that before now I have not taken means to make away with my wretched self—and I do not think I am restrained from this course by cowardice either—possibly the affairs of the club have kept me too busy!"

If Dr. Mills will take our advice he will not indulge in these periodical defenses. Human nature is the same the world over, and when a man attempts to answer or defend himself from all the attacks made upon his public acts he is bound to let slip a little personal feeling, and he loses to some extent the sympathy of the public. Men who are interested in dogs well know whom to trust and whom not; vituperous writings where vindictiveness is plainly shown are best left unanswered and the verdict left to an impartial public.

### That World's Fair Show.

ALL this scribbling about the abandonment of the World's Fair show serves no good purpose, but is in keeping with the local and crude methods of the management of that dismal farce. To say that the result is to be attributed to the professional handlers, professional judges and editors disappointed because they were not on the list of judges, is the veriest bosh. Practical men, men who know something more than the A B C of dog shows, know why the show came to naught; they place the responsibility in a newspaper office not 100 miles from Jackson Park. Of course retrenchment in World's Fair finances affords the best practical excuse. No paper upheld and drew attention to the World's Fair show more strenuously than did FOREST AND STREAM, and no one wished more to see the affair a success and the show worthy of its name and associations than we did. But, knowing as we do what dogmen expect and require in a first-class show, we criticised the methods of the management in the hope that they would find that this was an undertaking of national importance, and not a local affair where the voices of one or two men were all powerful. A lesson has been taught by the outcome. Ask the average exhibitor what he thinks of the abandonment of the show, and he says, "Oh, I'm sorry there's not going to be a show; but it's just as well as things were being managed." It is our firm conviction that, some time before the June postponement, there was no intention of holding the show, else the arrangements would have been made differently.

The whole affair was picaresque in such a cause, and the show, had it come off, bereft of foreign competition, would have had the same standing as a Mascoutah or Chicago Kennel Club show, neither better nor worse. There were judges on the faked list whose names carry little weight in dogdom, and World's Fair prizes won under such conditions would have carried small meaning. Of course a good many men are disappointed in not being able to kill two birds with one stone, and from them chiefly come the grumbles. Had we been animated by any feeling but that of wishing to see a properly conducted show that would have been a landmark in dogdom and something to look back upon with pleasure in years to come, we should probably have swam with the swim for the sake of getting a free trip to the Fair. The only thing that troubles us now is what will become of those embryo champions that "I'm keeping back for the World's Fair." It's hard—but they'll do for New York next spring.

It has been suggested that the Mascoutah Kennel Club take the matter up, and, under the name of the "World's

Fair Show" give a show in October or November. They can afford to give big money, and a special World's Fair medal for the best of each breed might be donated by the World's Fair managers if they are not already sick and tired of the sounds of dogs and dogmen—pardon, we mean caniculationists.

### Dog Judges.

A PROMINENT and very practical owner of dogs in writing to us on the foolish idea prevalent in many minds that a judge of dogs must necessarily be a breeder, etc., of dogs remarks: "I suppose there will be another spasm about — judges that never bred a —. On the principle, you know, that a man can not pick out a good picture unless he has painted one, or a statue unless he has modeled one, or a star or comet unless he has made one. Some people in this world are very wearisome." They are. Some of these men say that dog judges are born, not made. Granted to some extent, but before they can show their talent in this direction they must become practiced through opportunities for comparison and a knowledge of standards and their application, and it is this very comparison and contact that makes a man a judge of dogs. It is universally admitted that a man must have a "dog eye" to succeed as a judge of dogs, in the same sense that a good judge of a horse is gifted with an optic that will at once take in the good and bad points of a horse. We would like to ask how many of the acknowledged good horse judges, horse dealers especially, have bred, etc., the animals whose faults and good points they are so quick to detect. The old theory is absolute bosh, and has been proved if anything to be a distinct detriment rather than a help. Take the work in the ring of some of the specialist judges, for instance. A man can only become a thorough judge of dogs by continually being brought in contact with dogs of every degree of proper shape and by comparison and the study of dogs that are acknowledged to be excellent specimens of this breed. A breeder generally becomes biased in favor of his own type of dogs—we speak for this country only—and probably attends a New York show or possibly two shows in the year; the rest of the year he sees a few of his own dogs only. Still when put on the specialty list he is hailed as a judge because he fills the requirements in being a breeder, exhibitor, etc., and when he judges it is considered almost heresy to criticize his decisions. We live in a more progressive age nowadays, and all these foolish theories should be relegated to the background. We would rather trust the opinion of an all-round judge than that of almost any specialist on any breed of dogs. Of course there are a few, very few exceptions. An all-round man generally begins right and keeps so, and if wrong is quick to take a hint, whereas a specialist breeder is just the other way.

### Wire-Hairs.

MR. FREEMAN LLOYD, when he indulges in a little fatherly advice to fanciers in general, usually speaks to the point. He took occasion recently, in writing of the importation of Cribbage and Surrey Janet, to touch on the trimming question, one that is little, either for "war or weal," understood on this side of the herring pond. He wrote:

I am very pleased to see that there are some signs of the Americans turning their attention to wire-haired fox-terriers. A very useful brace in Cribbage and Surrey Janet will shortly leave these shores for those of the United States. This is a representative brace of terriers, and can more than hold their own with any wire-hair in America capable of being out on the bench at this moment. But it will be interesting to see how soon the American will educate himself in that important little matter, the finger-and-thumb business. Wire-hairs when they are kept at home, and without work, soon turn into peculiar-looking animals, and far removed from the sprightly animals we see from time to time in the show ring.

The wire-hair classes in this country have been object lessons in this respect from the first. Exhibitors have imported from time to time both Irish terriers and wire-haired fox-terriers only to become disgusted with their "fuzzy" appearance a few months after, and rather than attempt the trimming they know so little about have shown the dogs in a natural state and very much to their detriment, as far as appearances go. The trouble with many what to leave out, what to take off, but one cannot but be proud of the fact that training and faking is so little known of and practiced among our exhibitors. The writer we quote further says:

When you buy a pot of paint you generally purchase a brush, and when you feel inclined to go in for certain sorts of terriers you ought never to forget that they are of little use without something to keep down a superabundance of coat. That there are a few people in America well up in the art of trimming I do not for a moment doubt, and one man in particular, had he not become a "respectable" member of society and a prominent official in the army of General Booth, would have been able to earn a drow-load of dollars at the old game.

From this one would infer that trimming wires, etc., is an art not to be encouraged. Why not? Man trims his own locks and why should he not do the same to those of his dog? There is a distinct line between trimming and faking and the removal of a too abundant growth of hair hardly comes under the latter category, any more than the docking of a fox-terrier's tail which smartens the latter end of the terrier in the same degree that trimming does the other. An interesting case in this connection came before the English Kennel Club recently, in which a handler was hauled over the coals for cutting the superfluous hair on an Irish terrier's head with a pair of scissors instead of trimming in the ordinary way with the resined finger and thumb. He pleaded ignorance of wrong intention, though an old exhibitor, remarking that as he used the scissors on his bull-terrier he thought the same could be done to the Irish terrier. The authorities let him off with a "Don't do it again" verdict. This implies a mechanical distinction from a natural difference.

### A Careful Retriever.

Editor Forest and Stream:

Perhaps your readers will be interested in the inclosed photograph of my Gordon setter Romulus, delivering a retrieved jack snipe, as an example of an exceptionally tender-mouthed retriever. I have observed, as have probably other sportsmen, that most setters dislike the taste of jack snipe or woodcock, and incline to pinch birds in retrieving them. My Gordon, while being a perfectly broken dog in the field on quail or jack snipe, has, it seems to me, a remarkable instinct in this particular. When ordered to "fetch" he will secure his preferred bird, by the skin on the under side of the neck (and will turn a bird over in order to secure this hold), and a winged bird by one of its wings or tail.

SEATTLE, Washington.

### Rhode Island Dog Show.

CRANSTON, R. I., Sept. 9.—*Editor Forest and Stream:* Our entries closed with 494, as follows: Mastiffs 15, St. Bernards 24, Newfoundland 3, great Danes 3, English bloodhounds 4, deerhounds 6, Russian wolfhounds 6, greyhounds 11, foxhounds 14, beagles 27, pointers 46, English setters 36, Irish setters 20, Gordon setters 11, spaniels 21, collies 21, bulldogs 10, bull-terriers 19, fox-terriers 61, Irish terriers 22, Boston terriers 17, black and tan terriers 17, Skye terriers 1, Scottish terriers 11, Dandie Dinmont terriers 6, dachshunds 2, York-shire terriers 7, pugs 10, Japanese spaniels 3, King Charles spaniels 3, toy spaniels 1, Chesapeake Bay dogs 5, poodles 4, schipperkes 7, whippets 2. Mr. Henry Brooks donates \$10 for the best kennel (four or more) of Scottish terriers entered and owned by one exhibitor.

RHODE ISLAND STATE FAIR ASSOCIATION,  
(David S. Collins, Sec'y.)

### TORONTO DOG SHOW.

TORONTO show opened at 2 o'clock with 680 entries. The quality, on the whole, is not so good as last year. The majority of dogs are from Toronto and vicinity. Spaniel quality is not up to average and mastiffs and St. Bernards are poor. There is a large entry for fox-terriers but the quality is deficient. Pugs have fallen off. Beagles are only fair, the Harmony Kennels having a walkover. There is a falling off in pointers and setters, both in numbers and quality. The Seminole, Oak Grove, Chestnut Hill, Dixon, Anglo-American, Wankie, Heather, Rochelle, Oakview, Wolverton, Bay City and Higginson's are the principal kennels represented from the United States. There is a large attendance, the weather is beautiful, and all points to a good show. Great improvement in management. Following are awards made up to press time:

MASTIFFS.—CHALLENGE—1st, Bunno's Lady Coleus.—OPEN—Dogs: 1st and 3d, Forbes's Grimby Caution and Lord Grimby; 2d, Evil's Raleigh; 4th, Smith's Baron of Chester. High com., Burden's Lion, Whitaker's Mikado. Com., Carver's Tough. Bitches: 1st, Falconer's Attraction. Puppies: 1st, Forbes's Prince Imperial. Com., Gurney's Prince.—NOVICE—1st and 3d, Forbes's Nige and Lord Grimby; 3d, Croft's Tom. Reserve, Smith's Baron of Chester. High com., Whitaker's Mikado.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, Bay City Kennels' Lord Dante; 2d, Hughes's Lord Wilton; 3d, Worts's Captain Worts; 4th, Buntia's Dauntless. Reserve, Howard's Safety. High com., Cronyn's Clarf. Bitches: 1st, Fenwick's Maypole. Puppies: 1st, Fenwick's Prince; 2d, Chespe's Hector.

ST. BERNARDS.—SMOOTH-COATED—Dogs: 1st, Bay City Kennels' St. Augustine; others withheld. Bitches: 1st, Barlow's Glenwood Goldy; others withheld.

FOXHOUNDS.—ENGLISH—Dogs: 1st and 2d, Wilroy's Spartan and Bounce; 3d and com., Typical Kennels' Sportsman, Jr. and Snider. Bitches: 1st, Wooling's Bush.—AMERICAN—Dogs: 1st, Williams's Commodore; 2d, 3d and reserve, Smith & Clark's Clinton, Genesis II. and Ringwood. High com., Typical Kennels' Gamer. Com., Schol's Ruler. Bitches: 1st, Smith & Clark's Fan.

HARRIERS.—2d, Hobart's Fan.

POINTERS.—CHALLENGE—1st, Leamington Pointer Kennels' Count Graphic.—OPEN—Dogs: 1st and 3d, Molton Banner and Donovan; 2d, Leamington Kennels' Boxer. Bitches: 1st, Davey's Josie Brackett; 2d, Leamington Kennels' Count Graphic; 3d, Holmes's Spotted Girl.—CHALLENGE LIGHTWEIGHT—Dogs: 1st, Biddle's Gladstone. Bitches: 1st, Davey's Lady Gay Spanker.—OPEN—Dogs: 1st, Davey's Ridgeover Comet; 2d, Winslow's Comet; 3d, Davey's Beppo's Boy. Very high com., Leamington Kennels' Beppo Graphic. Bitches: 1st, Davey's Miss Rumor; 2d, Leamington Kennels' Count Graphic Baby; 3d, Mount Royal Kennels' Chakra. Reserve, Briggs's Josie. Very high com., Prudhomme's Henry. Bitches: 1st, Winslow's Rosy.—NOVICE—1st, Ridgeview Pointer; 2d, Winslow's Administration; 3d, Holmes's Spotted Girl. Reserve, Briggs's Josie.

ENGLISH SETTERS.—CHALLENGE—Bitches: 1st, Lewis's Victress Lowella.—OPEN—Dogs: 1st, Northwood's Worsley Dude; 2d, Forest Kennels' Forest Rex; 3d, Boughman's London. Reserve, Davey's Roy of Colehill. Very high com., Forest Kennels' The Sultan, Ayre's Ponto, Kime's Royal Dan, Downing's Benzine. High com., Kime's Druid, Jr., Holmes's Dick. Bitches: 1st, Kime's Lady Patch; 2d, Winchell's Nita Gitana; 3d, Kime's Lady Luck. Reserve, Briggs's Starlight B. Very high com., Corbett's Lady Howard, Forest Kennels' Trippo. High com., Littleton's Nora Gladstone, Forest Kennels' Lulu.—NOVICE—Dogs: 1st, Forest Kennels' Rex; 2d, Broughman's London; 3d, Davey's Roy of Colehill. Very high com., Kime's Mingo, Jr., Kime's Sam. Bitches: 1st, Winchell's Nita Gitana; 2d, Kime's Rose Rapid II.; 3d, Briggs's Starlight B. Reserve, Forest Kennels' Trippo. Very high com., Kime's Lady Luck, Littleton's Lord Gladstone. High com., Holmes's Lulu. Com., Forest Kennels' Nla.—PUPPIES—Dogs: 1st, Holmes's Sam. Bitches: 1st, Holmes's Vic H.

IRISH SETTERS.—CHALLENGE—Dogs: 1st and 2d, Seminoles Kennels' Tim and Pride of Patsey. Reserve, Oak Grove Kennels' Duke Elcho. Bitches: 1st, Oak Grove Kennels' Queen Vic; 2d, Seminoles Kennels' Elfrida.—OPEN—Dogs: 1st, Townsend & Sharpless's Blarney, Jr.; 2d and 3d, Seminoles Kennels' Young Tim and Montauk, Jr. Reserve, Apted's Tom; 3d, Mount Royal Kennels' Reserve, Briggs's Starlight B. Very high com., Little Phil and Parnell. Bitches: 1st and com., Douglass's Sharpless's Toronto Mollie and Kitty; 2d, Moe's Nona; 3d, Seminoles Kennels' Delphine. Reserve, Corbett's Madcap II. Very high com., Vansant's Alannah, Dixon's Eady Cleveland and Lewis's Mollie. High com., Typical Kennels' Nora and Seminoles Kennels' Biddy.—NOVICE—Dogs: 1st, Douglas & Chambers's Toronto Little Phil; 3d, Mills's Toronto Spot. Bitches: 1st, Douglas & Chambers's Mollie; 2d, Douglas & Chambers's Toronto Mollie; 3d, Moe's Nona; 4d, Lewis's Mollie. PUPPIES—Dogs: 1st, Howarth's Idstone. Bitches: 1st, Howarth's Nora.

GORDON SETTERS.—CHALLENGE—Dogs: 1st, Dixon's Ivanhoe. Bitches: 1st and 2d, Dixon's Duchess of Waverley and Lady Waverley.—OPEN—Dogs: 1st, Oughton's Heather Lad; 2d, Lindley's Homer S.; 3d, Mount Royal Kennels' Irish. Very high com., Dixon's Duke of Waverley. Bitches: 1st, Dixon's Princess Louise; 2d, Van Zandt's Dundee; 3d, Mount Royal Kennels' Reserve. Reserve, Blinn's Santa Maria. Very high com., Mount Royal Kennels' Floss. Com., Dixon's Myra.—NOVICE—1st, Lindley's Homer S.; 2d, Dixon's Santa Maria.

IRISH WATER SPANIELS.—1st and 2d, Carson's Musha and Dan Rice; 3d, Irving's Shot Rue. Bitches: 1st and 2d, Carson's Shellia and Rose O'Neill. Puppies: 1st, Carson's Musha.

CUMBER SPANIELS.—CHALLENGE—1st, Smart's Darby.—OPEN—Dogs: 1st, Fleming's Rake.

FIELD SPANIELS.—CHALLENGE—1st, Foster's Judge. High com., Typical Kennels' Sampson.—OPEN—Dogs: 2d, Mullins's Pedro; 3d, Sprackline's Nig. Com., Typical Kennels' King Bruco. Bitches: 1st, Sprackline's Mora; 2d, Palmer's Grace.—LAYER COLORED—1st, high com., com., Typical Kennels' apoleon, King Lear and King Pat; 2d, Sprackline's Quincey.—ANY COLOR—1st, Sprackline's Workman; 2d and 3d, Typical Kennels' Antirio and Leslie; 4th, Douglas's Billy. Puppies: 2d, Typical Kennels' King Lear.

COCKERS.—CHALLENGE—BLACK—Dogs: 1st, Luckwell & Douglas's Black Duck; 2d, Ancient & Modern Kennels' King of Obos. Bitches: 1st, Ancient & Modern Kennels' I Say.—ANY OTHER COLOR—Dogs: 1st and 2d, Brant Cocker Kennels' Red Jacket and Red Roland. Bitches: Laidlaw's Jessie C.—OPEN BLACK—Dogs: 1st, Blake & Herbertson's Pickpatria; 2d and 3d, Luckwell & Douglas's Black Dufferin II. and Woodland Prince IV. Reserve, Farwell's Black Brant. Very high com., Kennedy's Beau. Very high com., Thompson's Jack. Kennedy's Chancellor, Armstrong's Tasso, Allward's Black Robbie, Typical Kennels' Roger. Bitches: 1st, Laidlaw's Rideau Reine; 2d, Bell's Realization; 3d, Luckwell & Douglas's Kitty; 4th, Laidlaw's Cora II. Reserve, Concord Kennels' Lady Dufferin. Very high com., Raven Kennels' Duchess and Nellie Ayres's Nellie. High com., Piper's Beauty, Bell's Fashion.—ANY OTHER COLOR—Dogs: 1st, Clappison's Hamilton Jack; 2d, Bohlen's Nellie. Bitches: 1st, Flynn's Red, Brant Cocker Kennels' Golden Rod. Reserve, Concord Kennels' Brantford Rufus. Very high com., Brant Cocker Kennels' Brantford Red Star, Typical Kennels' King Rufus. High com., Niblett's Russett Palmer's Sturdy. Com., Allward's Red Robbie, Gowan's Redfellow. Bitches: 1st, Laidlaw's Tonito; 2d, Luckwell & Douglas's Bessie Warner; 3d, Niblett's Gypsy Queen; 4th, Raglan Kennels' Russette. Reserve, Brant Cocker Kennels' Brantford Beauty. Very high com., Gowan's Pat. High com., Seminoles's Cherry Blossom.—NOVICE—ANY COLOR—Dogs: 1st, Clappison's Hamilton Jack; 2d, Luckwell & Douglas's Woodland Prince; 3d, Raven Cocker Kennels' Chancellor. Reserve, Brant Cocker Kennels' Brantford Red Star. Very high com., Flynn's Red Justice. High com., Allward's Red Robbie, Raven Kennels' Beau Kay. Bitches: 1st, Luckwell & Douglas's Kitty; 2d, Laidlaw's Cora II. 3d, Raven Kennels' Nellie. Reserve, Raglan Kennels' Russette. Very high com., Brant Cocker Kennels' Brantford Red Beauty, Ayre's Nellie, Raven Kennels' Raven Duchess. High com., Clappison's Hamilton Gie E.

BEAGLES.—LARGE—CHALLENGE—Dogs: 1st, Hornell Harmony's Tricriton; 2d, Lewis's Doctor. Bitches: 1st, Hornell's Elf.—OPEN—Dogs: 1st and 2d, Hornell's Sherry and Roger W.; 3d, Oakview Kennels' Mr. Winkle. Reserve, Hornell's Iliwaco. Very high com., Briggs's True Boy. High com., Schele's Drive C, Snellie & Viasey's Samson. Bitches: 1st, Hornell's Daisy Corbett; 2d, Schele's Pipelo; 3d, Oakview Kennels' Sawtooth. Reserve, Schol's Lillie. Very high com., Hornell's Kiska. High com., Albion Kennels' Graceful. Puppies: 1st, Oakview Kennels' Tony Weller II.; 2d, Wakefield's Blucher.—SMALL—CHALLENGE—Dogs: 1st, Hornell's Royal Krueger. Bitches: 1st, Hornell's Ava W.—OPEN—Dogs: 1st and 2d, Hornell's Little Wonder and Kester. Bitches: 1st, Mullane's Beauty; 2d, Hornell's Evangeline; 3d, Finn's Sly Lass. Reserve, Hornell's Queechey, Mabel's Dainty. High com., Bowman's Flora C, Oakview Kennels' Jeany.

DAORHOUNDS.—Dogs: 2d, Allan's Faust. Bitches: 1st and 3d, Rickett's Frieda and Huldah; 2d, Bloggs's Lena.

An East Waterford (Me.) boy recently saw a full-grown fox sitting on a knoll. He crawled up, seized it by the tail, and swung it around in his efforts to kill it, but was forced to let go after having his shirt nearly torn off.—*Evening Post.*

DOG CHAT.

Death of Donna.

News of the death of Mr. Fiske's English setter bitch Donna (5/17) only reached us as we went to press last week. She was one of the best brood bitches in the country, being the dam of Donna Juanita, Prima Donna, Don Quixote, Don Carlos, Glendon, Sheldon, Domino, Domingo, Dominion, Dimity, Spectre and Spook, which she threw to Rockingham. Donna was by Yale Belton out of Forest Dora. She was really whelped Aug. 2, 1886, and died Aug. 26, 1893, and the coincidence is peculiar. She was chloroformed in consequence of having a series of incurable tumors, two of which had been removed, but two others were forming. Donna never had a puppy shown that did not win a ribbon but one, Donna Carlotta, and she was out of condition and won vhc., and never had a puppy shown that did not win first the first time shown, unless beaten by another Donna puppy. At New York in 1891 seven of her puppies were shown and they won four firsts and two seconds, and she herself won the brood bitch special. Donna was bred by Roscroft Kennels and when she died was the property of Mr. Wilson Fiske.

California Notes.

According to the *Breeder and Sportsman*, the English pointer Glenbeigh, that Mr. Huber imported to California, is doing good work for the pointer breed out there. A bitch puppy, presumably by Sally Brass II., belonging to Mr. Haight, is spoken of as a more than ordinarily good one. The same journal states that Mrs. Thos. Higgs, of West Berkeley, has received the English setter bitch puppy presented to her by Mr. John Davidson. Some of the California kennels can compare favorably with Eastern kennels in point of number of dogs contained in them. The Californian Kennels at Suisun have from forty to sixty English setters; L. L. Campbell, of West Berkeley, twenty-three Irish setters; H. M. Tonner, owner of Solana Kennels, has thirty-two English setters and pointers, and at Raymond Wm. De Motte has twenty pointers and setters, and D. M. Walters and Geo. T. Allender have about the same number. At the Echo Kennels Dr. A. C. Davenport has over twenty cockers, and the Great Western Kennels also contain a large number of good dogs.

Accident to Mr. Munhall.

We are sure that all lovers of the dog will join with us in sincere sympathy for Mr. C. M. Munhall, of Cleveland, O. From a letter we learn that as he was alighting from an electric car on Euclid avenue he slipped and fell and a wheel of the car ran over one of his feet, crushing the ankle so severely that it was found necessary to amputate the foot. Such a loss must be a great blow to himself and family. Mr. Munhall is now in the hospital, but says the leg is doing nicely and he is feeling well himself. This gentleman has long been associated with dogs and dogdom, pointers being his principle hobby. He is moreover, we believe, the only remaining original delegate to the A. K. C., having represented the Cleveland Club since its inception.

Dogwood Wins the Derby.

A dispatch from Winnipeg dated Sept. 6 states that Dogwood, owned by Mr. A. P. Heywood-Lonsdale, of England, won the Derby in the Northwestern Field Trials, which commenced last Tuesday week; Mr. Thos. Johnson's, of Winnipeg, Dolly took second money and our Charlotteville friend, Capt. McMurdo, piloted Lelah into third place. The stake seems to have been run through in short order and augurs well for a quick termination of the trials, allowing Mr. Davidson ample time to fulfill his Toronto engagement. There are few men of his age that could stand the racket of traveling as does our Michigan friend. From Monroe to Lexington, Ky., is quite a jump, from Lexington to Morris, Manitoba, almost takes in the length of the country, and from Morris to Toronto is a little journey in itself. All this within two weeks, to say nothing of a week's tramp behind the dogs in the trials.

West Chester (Pa.) Show.

The exhibit in connection with the Chester County Fair was quite a good one. The prizes fell in most cases to local dogs. There was an entry of 197, and Mr. Frank P. Smith was the judge. Next year the show is expected to be under A. K. C. rules, as application will be made for membership at once.

A. K. C. Meeting.

The next quarterly meeting of the A. K. C. will take place at Chicago, Sept. 23, at 8 P. M., in the new Athletic Club House, corner of Michigan and Monroe avenues. Mr. A. P. Vredenburg will attend, leaving Sept. 18, but it will probably be a distinctly Western gathering with little important business to transact.

Mr. James Robinson, who is now managing the Woodlawn Stock Farm Kennels, and is director of the Woodlawn track, should be in his element now. He used to affect dogs, terriers we believe, some twelve or fifteen years ago, but has since devoted himself to athletic training, having until recently been trainer for the defunct Manhattan Athletic Club.

Fred Kirby has another little excitement on. A Pekin poodle, so he calls it, recently arrived from Amoy, China, and has given birth to some little Pekins which Fred, with a characteristic wave of the hand, avows are worth "anywhere from \$2,000 to \$3,000 each." The bitch was sent by Dr. E. Bedloe, U. S. Consul to Amoy, to his friend Mr. Postlethwaite and is in Mr. Kirby's charge.

Mr. A. D. Stewart, the popular Canadian "cynophilist," as his friend Dr. Mills would say, has been having a good time among the kennels in London and Birmingham. He saw Mr. Sam Woodiwiss's kennel and those of Dr. Benson, Fred Hinks, Fred Reeves and Joe Davis, and then had a look at Arthur Hargraves fox-terriers at Manchester. Mr. Stewart arrived last Saturday and brought with him the wire-haired fox-terrier Partney Cornet, known before as Undercliffe Cornet, and a puppy Partney Marksman. He also brought two smooths, Partney Policy and Partney Ration. The breeding of the latter is of the best, Verdad being their sire (brother to Vesuvienne and Venio), dam Ratus, by Reckon out of Reeve. Mr. Stewart bought them from Mr. C. Burgess of Spilsby.

On Thursday night, after the heavy work of the Lexington show, Mr. Roger Williams gave the visitors and a number of his friends a supper at his home. A most enjoyable time was spent, and the quartette from Dockstead's Minstrels rendered some very pleasing songs. Dog chat, fox hunting reminiscences, etc., helped to fill in the intervals. The skin of the wolf that the wolfhounds didn't kill at Denver was passed round, and we quite agreed with the dogs that the hinder end must have been the safest part.

A queer dog case comes to light in a Maine village. Two neighbors owned dogs, and one dog running foul of the other was rapidly making sausage meat of him when the owner of the dog's owner threw a club at his neighbor's dog and broke its

leg. This dog's owner then brought suit to recover damages. He lost his case, however, and was ordered to pay costs. He didn't pay and an execution was issued against him, whereupon the deputy sheriff mixed things up on his own account, the verbiage of the document being too much for him. He proceeded to arrest the man who had been sued. In the hubbub that ensued the real culprit took alarm, and in order to save himself went into insolvency before the sheriff got unsnarled and served the execution.

Accounts from the chicken countries are very encouraging. The dry season has been very favorable for their propagation, and it is thought that the trials in the far North, now in progress, will be run through in good time.

We hear very encouraging reports of the Excelsior meat dog cakes. We have tried them on the dog and found them "take like hot cakes." Several well-known kennels are using them as a change on the other foods. Among the best ones are Chestnut Hill, Rinada Pointer Kennels, Geo. Jarvis, J. L. Winchell, H. W. Smith, Grove Kennels, Swiss Mountain Kennels, W. B. Douglas, etc.

Mr. S. Tripp, of Millerton, N. Y., has a pointer which in 1892 was sent by Mr. E. Rowe, of New Haven, to Kent, Conn., for training. Mr. Tripp would like to learn the pedigree of the dog.

There are many anxious inquiries as to whether there will be a show at Brooklyn this fall. We can find no encouragement in this direction on inquiry of members of the N. G. C. There was a big deficit last year, and one of the guarantors does not feel as happy as he did when he was so eager to participate in an expected profit. Pay up or disqualification now stares him in the face, the ultimatum having gone forth. All the New York and Brooklyn guarantors have long since made good their share.

A paper in Wilkes-Barre, Pa., urges that citizens adopt the new Orleans method of dropping pieces of poisoned meat to get rid of the curs in the streets. The *Times* of that city rightly scores its contemporary on such a cruel proposal, pointing out that "Dogs are property and people who own them pay taxes for the privilege. The law protects against

A CAREFUL RETRIEVER.

the unnecessary killing or theft of a properly registered dog. The *Record* makes itself accessory to the commission of a crime when it urges the adoption of the New Orleans method of surreptitiously poisoning dogs. In the absence of a mayor's proclamation ordering all canines running at large muzzled no person has any right to slaughter a dog unless in self-defense. That's the law. The only remedy that can be applied to protect against danger in the premises is to muzzle the loose animals, and that can only be done by proclamatory action on the part of the mayor."

Peter McLane's dog catchers, who have earned for themselves an unenviable reputation in their dog catching methods in Brooklyn, received a lesson that they are best fitted to appreciate. After stealing a lady's pug that was muzzled and under control, they were brought to bay by an infuriated mob, pelted with bricks and other missiles, their wagon overturned and smashed and about forty dogs set free. Later, Peter, the official dog catcher, was brought before the authorities and now we understand has been removed from office. This should be a warning to others of the fraternity.

The Seminole Kennels should have a prize winner or two in the litter of twelve that the Irish setter Claremont Heather has thrown to their champion Tim. The latter dog is certainly a wonderful one for his age.

FOREST AND STREAM was the only kennel paper having a staff representative at the Lexington (Ky.) show, and contained the earliest report of the show.

At the coming meeting of the A. K. C. in Chicago, Mr. J. E. Isgrigg, the well known setter breeder, of Chicago, will prefer charges against the field trial handler Charles McCartney. He will also do the same before all the field trial clubs.

The Cumberland Kennel Club, of Nashville, Tenn., has not been the success anticipated and several members have ceased to take an interest in it. Mr. Goodman still has the dogs, but they will be sold off as soon as possible. We are in a position to deny the rumor that Messrs. Heppner and Muss-Arnolt intended purchasing Melao.

Man earns his bread in divers places. Now we are told of a man who gains a living by collecting dead dogs from the river Thames, near London, his beat extending between Putney to the Ship, Mortlake. Sometimes this man finds as many as sixty dead dogs in a day and other times not more than twenty-five.

What has become of the English Setter Club and its medals? A. K. C., how about that sixty-day clause in the rules?

Fox-Terriers at Lexington.

Editor *Forest and Stream*:

In your report of the Lexington show, under fox-terriers, you say it is reported that my dog Paverino is deaf. I wish to deny this at once. He is not deaf, nor was he ever deaf. Congratulate you upon so full a report of the show.

GEORGE D. B. DARBY.

PHILADELPHIA, Pa., Sept. 7.

[We wrote the Lexington report on the train coming home, and the sense of the sentence got jumbled slightly. My Fellow was the dog we alluded to.]

A Good Entry at Toronto.

Editor *Forest and Stream*:

As predicted by Secretary C. A. Stone, the Industrial Exhibition Association Bench Show of dogs of 1893 is a grand success. The finest kennels of Canada and the United States are well represented. The king of handlers, Ben Lewis, is on hand with 52 entries. The following noted kennels have entered: The Seminole, Chestnut Hill, Oak Grove, Chesterford Park, Lansdowne, Oak View, Rochelle, Wentworth, Mount Royal, Forest, Clover Hill, Cambridge, Ancient and Modern, Campton, New Brighton and besides many others Dr. Dixon's Gordon setters, Edward and Henry Brooks with Scotch and Dandy Dimont terriers. Among the novelties are Dr. Dixon's famous kennels of black French poodles, the only ones ever shown in this country. The entries closed with 637 and comprise the following breeds: Mastiffs 24, St. Bernards 30, Newfoundlands 4, great Danes 19, Russian wolfhounds 6, greyhounds 24, English fox-hounds 6, American fox-hounds 10, harriers 1, pointers 25, English setters 43, Irish setters 30, Gordon setters 16, collies 43, bulldogs 2, bull-terriers 21, Airedale terriers 3, Irish terriers 10, Bedlington 7, King Charles spaniels 6, Italian greyhounds 1, miscellaneous, white English terrier 1, whippet 1, Scotch terriers 16, Skye terriers 2, black and tan 19, French poodles 6, Russian poodles 1, retrievers 1, Irish water spaniels 8, Clumbers 2, field spaniels 16, cocker spaniels 86, dachshunds beagles 35, smooth fox-terriers 39, wirehair fox-terriers 19, Yorkshires 12, toy terriers 7, Dandy Dimonts 8, pugs 9, Ruby, Blenheim and Prince Charles spaniels 1, Mexicans 1, Russian terriers 1, selling class 1.

Kansas City Show Postponed.

[Special to *Forest and Stream*.]

KANSAS CITY, Sept. 12.—The Kansas City dog show has been postponed for reasons which I will give by mail.

J. W. W.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

*Thasmo Penelope*. By F. M. Thomas, Catskill, N. Y., for red Irish setter bitch, whelped May 23, 1893, by Thasmo Ned (Charles W.—Lady Learner) out of Bell (Sarsfield—Red Flash).

*Thasmo Lemme* and *Thasmo Finney*. By F. M. Thomas, Catskill, N. Y., for liver and white and lemon and white pointer bitches, by Daniel (Sensation II.—Guenn) out of Cora II. (Nimrod—Ethel).

*Thasmo Linn*. By F. M. Thomas, Catskill, N. Y., for fawn pug bitch, whelped April 29, 1893, by Teddy (champion Bedford Ruby—imported Topsey) out of Trinker (Dandy—Pansy Blossom).

*Thasmo Mandy*. By F. M. Thomas, Catskill, N. Y., for fawn and white dachshund bitch, whelped Sept. 16, 1890, by Daschel (imported Wisner—imported Fearless) out of Shroppsie (imported Werdmere—imported Phoebe).

*King David*. By James Jeffers, Westfield, Mass., for black, white and tan foxhound dog, whelped March, 1892.

BRED.

Prepared Blanks sent free on application.

*Bess—Hillside Tarquin*. F. A. Stuppelbeen's (Hudson, N. Y.) fox-terrier bitch Bess to F. M. Thomas's Hillside Tarquin (Mixture—Lyra), June 11.

*Flaherty's Florence—Gem*. M. J. Flaherty's (Providence, R. I.) English setter bitch Flaherty's Florence (Roi d'Or—Nellie Bly) to T. M. Aldrich's Gem (Druid—Ruby), July 31. [In correction of note in issue of Aug. 19.]

WHELPS.

Prepared Blanks sent free on application.

*Thasmo Midget*. F. M. Thomas's (Catskill, N. Y.) pug bitch Thasmo Midget (Pug Bailey—Linn Thasmo), Aug. 4, four (two dogs), by his Pug Bailey (Teddy—Trinker).

*Cora II*. F. M. Thomas's (Catskill, N. Y.) pointer bitch Cora II. (Nimrod—Ethel), Aug. 25, nine (six dogs), by his Thasmo Sport (Frank Smith—Bell Smith).

*Nellie*. Chas. Nichols's (Catskill, N. Y.) pug bitch Nellie, May 21, ten (eight dogs), by F. M. Thomas's Pug Bailey (Teddy—Trinker).

*Patient*. Al De Bar Kennels' (North Attleboro, Mass.) collie bitch Patient (champion Charlemagne—Patience), Aug. 25, eight (six dogs), by J. Brett's Bendigo (The Squire—Bertha).

*Rose*. Al De Bar Kennels' (North Attleboro, Mass.) Chesapeake Bay bitch Rose, Aug. 19, eleven (five dogs), by Dr. Bigelow's Marengo II. (Boatswain—Glady's).

SALES.

Prepared Blanks sent free on application.

*Thasmo Nellie*. Fawn Irish setter bitch, by F. M. Thomas, Catskill, N. Y., to F. A. Adams, Boston, Mass.

*Say Boy*. Black spaniel dog, whelped March, 1892, by Jas. Jeffers, Westfield, Mass., to Connecticut Valley Kennels, Northampton, Mass.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

G. R. B.—Write to Mr. J. L. Drevenstedt, Johnstown, N. Y.

RICHMOND JACK.—See answer to F. H. O. and the law of New Jersey on this subject published in another column.

J. L. K., Boston.—I have a young English setter 14mos. old, whose tail crooks over the body to one side. The crook is about 4in. from the end. Can it be straightened? Ans. Yes. Take the dog to an experienced veterinarian.

F. H. O., Olean, N. Y.—We do not know that this question has been settled. In several States the city or local authorities are empowered to levy such tax on dogs as they see fit. Where a dog license is levied it makes no difference whether you keep the dog on your premises entirely or not. To harbor the dog entails the liability.

E. W. F., Mount Vernon, N. Y.—Our city has a dog ordinance which reads, "Owners of dogs must pay \$3 for each dog, and \$5 for each bitch annually." Now I have a kennel of registered dogs (registered in A. K. C. S. B.), am I obliged to pay this license, or is there a State law affecting this case? Ans. Registration in the A. K. C. S. B. conveys no exemption from such a tax.

R. S., Mahwah, N. J.—One of my pug puppies (a bitch) 4mos. old is weaker than her sisters and brothers, has less appetite and is a dainty feeder. What makes me anxious is that every time before evacuating she tries to climb the wall as if she had pain, but never cries or pants, the faces are black, but not too hard, no appearance of worms. Otherwise she is gay and seems well. The mother of the puppies died of peritonitis when they were three weeks old. I fed them cow's milk, Sprats puppy meal and puppy cake; now I feed oatmeal, vegetables, soup and a little meat and large bones in order that they may keep their teeth clean. All the other puppies are very well and strong. Ans. There would be no harm in treating the pup for worms. In addition to diet you mention give a little raw meat, you might also give a little Fellows' syrup and cod liver oil daily.

C. B. B., Falconer, N. Y.—I have an English pointer bitch which was shipped me from Mississippi about two months ago. She has seemed to be in good condition. Yesterday worked her hard all day on woodcock and in afternoon noticed small blotches began to appear on forehead and have continued to enlarge till some of the swellings are about 3in. across. In the center of blotch I notice yellowish matter is discharged (several of same blotches appeared on head of bitch some time ago, but healed up in a few days). Would briars, nettles or poison ivy cause this? Ans. The spots may have been caused in the way you mention. Bathe them with the following lotion:

℞. Lq. plumbe acet. 3 iiss.  
Tr. opii..... 2 i.  
Aq. ad..... 3 viii.  
Mix. Lotio.  
Apply to irritable spots two or three times a day. Also give dog a dose of Epsom salts.

A. N. C., Glens Falls, N. Y.—My sister has a cocker spaniel puppy 8 months old. Since weaning he has been fed on dog biscuit cooked in milk, except on a few occasions he has had a soft boiled egg, corn bread or oat meal, and has had bare bones to gnaw upon. Has been fed regularly, first three times and later twice each day. The pup never has been sick, never vomited, never had a hot nose, until about three weeks ago he began to scratch his ears, when it was discovered

that his ears were slightly sore and his eyes also. Then followed what appeared to be an aggravated form of dandruff in his coat, on his belly, inside his legs and on head. None on his back. Soon after the appearance of the dandruff, diarrhoea began. He was then given chalk mixture and beef tea until diarrhoea was checked. Discharge from eyes was first watery, then thicker. After the appearance of the dandruff there was an offensive smell from the pup. Within the past two days about a dozen lumps or pustules have appeared on the pup's belly, sides and inside legs, which discharge a thick pus, and the diarrhoea continued. Appetite fairly good. He now licks the sores and has vomited a few times after doing so. Hair does not come off, has no fever and nose is cold. The pup always is bathed regularly, never has been off the grounds about the house, where he has plenty of exercise, and has not been with other dogs nor other dogs with him. Can you tell me what should be done? Ans. Treat for worms. Wash dog once a week in a solution of creoline (1 oz. of creoline to a pail of warm water). Give following mixture:

R. Ferri et quinia. citra. . . . . grs xxxvi  
Inf. calumba. . . . . 3 iij  
Aq. ad. . . . . 3 iij  
Mix. Give one dessertspoonful twice a day. Also give some meat in addition to diet you mention.

F. L. Sharon, Conn.—My pointer dog 1½ years old will stick his head out straight and his nose up when he is something hurt him, and a place just above his left ear on the top of his head will raise up and when that goes down he will be all right in a few minutes. He looks and feels as fine as silk in every way only that. He has had this trouble three months. He will keep his mouth going all the time when he has these spells. Ans. Treat for worms and then try the following mixture:

R. Pot. brom. . . . . 3 iss.  
Liq. arsenicalis. . . . . 3 i.  
Aq. ad. . . . . 3 vi.  
Mix. Give one tablespoonful twice a day.

E. N. C. Brooklyn—My one year old pointer is very thin; has no appetite. I have given her worm medicine with no results. When she was about three months old she had distemper, which left her with a sort of St. Vitus dance. She is well bred and I hate to destroy her. Ans. Give the following mixture:

Sr. hypophosphite co. . . . . 3 iv.  
Liq. arsenicalis. . . . . 3 i.  
Aq. ad. . . . . 3 vi.  
Mix. Give one tablespoonful twice a day. Also give two tea-spoonfuls of cod liver oil three times a day. Let dog have anything she will eat—raw meat, etc.

E. S. W. Portsmouth, N. H.—I have a young Newfoundland dog, eight weeks old; what is the best kind of food to feed it on? 2. Do all puppies have the distemper? 3. What are the symptoms, and treatment? Ans. 1. See advertisements. 2. No. 3. Loss of appetite, fever, cough, discharge from eyes and nose, loss of flesh, diarrhoea.

## Hunting and Coursing.

### FIXTURES.

Oct. 3.—International Coursing Meeting at Huron, S. D. J. Herbert Watson, 26 Court street, Brooklyn, N. Y. (chairman).  
Oct. 17.—Kenmore Club meeting at Goodland, Kan. Frank L. Webster, Sec'y. Entries close Oct. 16.  
Oct. 24.—American Coursing Club. Ira D. Brougher, Sec'y.  
Nov. 7.—The Cowley County Coursing Association, Winfield, Kan. J. R. Ballard, Secretary.  
Mix. Lotia. A little to be poured into the ears twice a day. You might also wash the dog in a solution of creoline (1 to 60). Repeat purgative in a week.

### Brunswick Fur Club Field Trials.

Editor Forest and Stream:

The fifth annual field trials of the Brunswick Fur Club will be held at North Acton, Mass., during the week of Oct. 23. The grounds selected are well suited for the trials, foxes are plenty, and the village offers comfortable accommodations for all who desire to attend. Headquarters will be at the Nagog House, one mile from North Acton station on the Farmington & Lowell branch of the Old Colony Railway, and stages will take hunters to the hotel.

In addition to the usual money prizes and diplomas which are to be awarded the three winners in each class, the following special prizes have been presented for competition: Dr. A. C. Heffner offers a silver medal for the winning hound in the speed class; Mr. A. B. F. Kinney, a silver medal for the winner in the hunting class; Mr. O. F. Joslin, a silver medal for the winner in the trailing class; Mr. Richard Seely, a silver medal for the winner in the endurance class; Mr. N. Q. Pope, a silver medal for the hound making the highest general average in all classes.

Rod, Gun and Kennel offers \$25, and the executive committee of the club, desiring to make this sum an additional inducement for hunters from a distance to enter their hounds, have voted to divide it as follows: \$10 to the best all-round foxhound owned outside of New England and New York; \$5 to foxhound showing the most speed and endurance owned outside of New England and New York; \$10 to best Derby entry bred outside New England and New York.

The American Field cup will be awarded to the hound making the highest general average in all classes and can be held for one year.

Mr. R. D. Perry offers the steel engraving "A Promising Litter," to the winner of the Derby, to become the personal property of any one winning it three times. Entries close at 9 P. M., Oct. 23. BRADFORD S. TURPIN, Sec'y.

DORCHESTER, MASS.

### Foxhounds in West Virginia.

Editor Forest and Stream:

The fox hunting season will soon be upon us again in full play. Even now the hills and woods ring with the bay of the "long ears" and the loud "halloo" of the huntsman, training his dogs and getting them in condition for the season's work.

We have several packs of very good foxhounds in this country, and we look for some grand sport in the near future. By the way, by all means add a special hunting department to your paper. Don't care if it is a special fox hunting department, as I think our interests have not been written up near as much as they would be a special space devoted to this most fascinating sport.

What will you say, brother fox hunter—will you support the move or not? Let us hear from all enthusiastic hunters of the "red rover." More anon. Success to FOREST AND STREAM. WEST VIRGINIA FOX HUNTER.

### Open Crates.

Editor Forest and Stream:

Some few weeks ago Mr. Michael Allen, of Chicago, sent two of his greyhounds—Woolford Boy and Roetzle's Fanny—here to "Fox" Kenny to train for the International meet at Huron.

In shipment Woolford Boy, through carelessness of the railroad employes, had his tail broken in two places, so badly that "Fox" was compelled to amputate about four inches of it. While it may not affect his running greatly, it does damage his looks.

From a similar experience, I would suggest to my friends and others, always screen the sides of a crate when shipping dogs, or only ventilate from the top. H. G. NICHOLS.

MITCHELL, S. D., Sept. 1.

### Mr. Turpin will Judge at Nanuet.

Mr. B. S. Turpin has decided to judge at Nanuet. He hesitated because he has always thought a great deal of his Clyde's ability as a worker and wished to run him in the champion stake. As Mr. Turpin will have an opportunity to run his dog at Oxford, two weeks later, and in a country more suited to the small beagle; for the good of the fraternity

we are pleased that Mr. Turpin has eventually acceded to the N. B. C.'s wishes. Mr. Turpin is now at North Conway, N. H., and reports great hunting weather up there, though he has no hounds with him. The mountain tops were covered with snow last Wednesday morning.

### The International Meet and English Coursers.

The international coursing meeting has not attracted any foreigners, and in order to give English coursers the full limit of time, and also because there are many coursers here who will be disappointed if they are deprived of the chance to win the largest coursing stake ever run for in the United States, the committee have decided to take nominations for the Columbus Cup until Oct. 2, at 11 A. M., at \$52.50 for each nomination. The nominators up to Sept. 1 have not yet all been heard from, but it is thought that at least thirty-two nominations have been taken.

J. HERBERT WATSON, Chairman of Committee.

BROOKLYN, N. Y., Sept. 7.

### National Beagle Club Trials.

TARRYTOWN, N. Y., Sept. 9.—Editor Forest and Stream: The premium lists and entry blanks for the fourth annual field trials of the National Beagle Club of America are now ready, and have been forwarded to all beagle owners I could think of. Should I have overlooked any one, I will be pleased to have them write me at Tarrytown, N. Y., and I will cheerfully furnish them at once. Entries close Oct. 5.

GEORGE LAICK, Sec'y.

### New Blood.

The Strodes Valley Kennel Club, of which Dr. Miller is president, has its club house and kennels about eighteen miles from Lexington, Ky. This kennel had an excellently mixed couple of English hounds on exhibition that they have just imported from the Holderness Hunt, in Yorkshire, with which, when James Hall and his plucky daughter held the horn, we had many a good run on the Yorkshire wolds. The stallion hound is large and heavily built and will be used on the light bitches of the pack, and a better type will surely be the result.

### HUNTING AND COURSING NOTES.

We believe that the coursing men of this country will be disappointed in the number of entries they expect from English cousins of the leash. English coursing men are very conservative, and it is not at all likely that they will go to the expense of bringing their best dogs over here on the eve of the commencement of their own coursing season when lots of stakes are offered and comparatively little exertion required on their part to compete for them. Neither Australian nor English dogs, we are afraid, can be counted upon to take any part in the meeting, and the coursing will probably resolve itself into a question of supremacy between Californian dogs and those from this side of the Rockies. It is too late now to expect English entries. If they are made, there is not time for training here, and it would be foolish for the English dogs to attempt competing without due preparation and acclimation. This was seen in the case of Norwegian, Belle of Eltham, Royal Crest and others. We sincerely trust that the stake will fill, for the rivalry between the Eastern dogs and those from the Pacific slope should afford a series of courses that will be memorable. As it is there is no doubt that the meeting will command more general interest among coursing men than any yet held, and the prizes offered are well worth winning. There are so many chances in the cup stake, the plate and the purse to win expenses at least, that greyhound men should make every effort to nominate. Any one can nominate and secure a dog to run for him from some other kennel.

The Australian Waterloo cup for 64 dogs, all ages, winner \$1,000, has just been won by S. Bladen's Bloomer, by Livingston ex Bliss, owned by the same man, who won it last year. The 32 dog Waterloo purse went to R. Ritchie's Rosy Morn, by Rent Charge ex Rent Hind, and the Plate to Surrey, by Faugh-a-Ballah ex Janet. Belgravia, that won the cup last year, is now in England and will be seen in public during the coming year.

The well-known California greyhound bitch Lady H. Glendyne, owned by Mr. Hugh McCracken, has recently whelped four pups by Midnight, a dog bred by Mr. H. W. Smith, by Friday Night out of Mother Demdike. Lady H. Glendyne is by Trales out of Lady Graham Glendyne, and the combination of such bench show and field blood should result in something better than the average.

The California coursing men will show up strong in the coming International meet. Among the best known are Valley Queen, Vida Shaw, Longfellow, Wee Lassie and Joe McAuliff. Merced will also send some dogs and Skyrrocket will also be among the nominations, but it is said Moondyne will not go.

The Albany Hunt Club has twelve and a half couple of hounds, and fifty-one members, among whom is Amasa J. Parker, who was connected with the defunct Albany Kennel Club.

Dr. Van Hummel was in De Soto, Wis., a couple of weeks since training his greyhounds for the International meeting.

## Yachting.

### FIXTURES.

14. Cor., San Fran., Closing Day. Boston Harbor.

AFTER a rest of nearly a year the high-speed launches have lately broken out into the brag and bluster over fictitious records which seems characteristic of this peculiar branch of yachting, the result being a fiasco which will cost some money and might easily have resulted more seriously than the scalding of one man. On Saturday several of these alleged 30-knot boats were chasing each other through the fleet, one in particular making a very prominent exhibition of her self. Flying a "champion" pennant, the meaning of which is not clear, as she has never raced, and with a crowd on deck waving bottles and hats, and loudly cheering themselves, she steamed around the big steamers as they lay at the finish. A little later she started

for another "race" of that safe sort in which no times are taken and each boat wins, in the course of which her boiler gave out in some way. One of her competitors passed a line and started to tow her at a high speed, she sheering so violently that the bits were torn out and her bow stove in by collision with a passing steamer. This class of yacht is a nuisance when its doings are confined to the newspapers, but it becomes a positive danger when let loose at full speed in a big fleet of yachts.

THE work of the America's Cup committee, always difficult, and this year presenting unusual difficulties and responsibilities, has been greatly lightened by the race of Monday, which made the selection of one particular boat a matter of certainty. The races thus far had been so devoid of any plain results that doubt existed on all hands as to the merits of the four contestants, but this race has simply excluded three of the four from the deliberations of the committee, and relieved them from all responsibility in the selection of the fourth boat. The committee and the club have also much to be thankful for in that the calms, fogs and other causes for postponements were absent this year, three races being sailed, as arranged, without a hitch or delay of any kind.

### Beverly Y. C.

THE 20th race, fourth open sweepstakes, was sailed off Monument Beach, Sept. 2. Wind at start was a light westerly breeze, but it looked as if it would breeze up, and many of the smaller boats started reefed. After start wind shifted to S.W., and after third and fifth class boats had finished and second and fourth classes were nearing the line, an ugly S.W. squall broke, sending them all across the line within 90 seconds of each other and with all the wind they wanted. A feature of the race was the presence of the new Herreshoff boat Mojave in this class. She did exceedingly well, winning by 2½ min., but part of this was due to the change of wind.

P. D. Q., R. W. Emmons, B. Y. C.	12.00	Disabed.	

Second class, Gymnote first, Anyonoma second, Ulua third. Third class, Mojave first, Gilt Edge second, Nobska third. Fourth class, Dawdle first, Zora second. Fifth class, Axe. Judges, N. H. Emmons, W. Lloyd Jeffries.

The 20th race, second open race, was sailed Sept. 4 at Monument Beach in a moderate and very streaky northwester.

In first and second classes the Crosbys carried off the honors, their boats being very fast and beautifully built and finished, a great improvement on their previous boats. They were not only fast, but good, comfortable and very well built boats. In third class the famous Herreshoff Mojave had a bad beating from Gilt Edge, and from the manner in which she reefed down it looked as if she would not be in it with the local boats in an ordinary southwester. Unfortunately both her races were sailed in moderate westerly breezes and smooth water, a very uncommon thing on the bay.

In fourth class Fin misread course and in place of running home from Dry Edge, went out to Abels's Edge and Pines Bouy and then home, changing a 3¼ mile course to a 7½ mile course. In spite of this she was fourth boat, but was ruled out for leaving Pines on wrong hand.

THE CUP DEFENDERS OF 1893.

Yacht.	Owners.	Designer.	Builder.	Type.	Rig.	Length.		Beam.	Draft.	Sail area sq. ft.	Racing Length.— Allowance for		
						Over all.	l.w.l.				Actual.	Amended, 30 miles naut.	
Vigilant.....	C. O. Iselin et al.....	N. G. Herreshoff.....	Herreshoff Mfg. Co.....	Keel-centerboard.....	Cutter.....	128ft.	86.12ft.	26ft.	14ft.	11,312	96.24.....	96.80.....	Allows.
Colonial.....	Arch. Rogers et al.....	N. G. Herreshoff.....	Herreshoff Mfg. Co.....	Keel.....	Cutter.....	126ft.	85.48ft.	24ft.	15ft. 9in.	11,355	96.02.....	96.26.....	14sec.
Jubilee.....	Gen. Chas. J. Paine.....	John B. Paine.....	Lawley Co.....	Bulb-fin centerboard.....	Cntter.....	123ft.	84.47ft.	23ft. 6in.	14ft.	11,340	95.48.....	95.48.....	37sec.
Pilgrim.....	R. S. Palmer et al.....	Stewart & Binney.....	Pusey & Jones.....	Bulb fin-keel.....	Cntter.....	120ft.	85.23ft.	23ft.	22ft.	10,269	93.31.....	93.45.....	1m. 39s.

The allowances are calculated on the basis suggested by Lord Dunraven, that any yacht exceeding the limit of 85ft. l.w.l. by more than 2% shall be disqualified from racing, and that any excess under 2% shall be doubled. Thus Vigilant is 86.12ft., or 1.12ft. over the limit, her waterline being assumed as 87.24, or 2.34ft. excess in place of 1.12ft. Jubilee is the only one of the four which escapes a penalty by being under the limit. Valkyrie will probably be penalized a little in the Cup races.

THE TRIAL RACES.

The trial races for the selection of a defender for the America's Cup are hardly less important and interesting from a technical standpoint than the Cup races themselves, in fact, the question of type has at times entered into them even more than in the principal races to which they were but auxiliary. The first trial races were sailed in 1881, at a time when the question of type as between the old centerboard sloop and the modified "compromise," involving the issues of lead ballast, deeper form, lighter construction and modified rig, was argued with considerable heat and friction.

The new school was then represented by Mischief, the "iron pot" as she is now termed with respect and affection by all of her old adherents. Opposed to her were Hildegarde and Gracie, existing wooden sloops of the old type, and the new Pocahontas, the first yacht built for a Cup defender, but embodying even more thoroughly if possible than Gracie and Hildegarde the ideas of the old school of American yachtsmen.

The trial races of four years later marked a great advance in yacht designing; then the modified sloop, as represented by Mischief in 1881, was on the defensive as the "old," while the "new" was represented by a still greater "compromise," the centerboard cutter Puritan.

Apart from the question of type, over which excitement ran high, there was a strong local feeling between New York and Boston, a feeling which went even further than friendly rivalry and competition, and was marked by a good deal of bitterness and jealousy.

The New York representative, Priscilla, was as first launched an enlarged Mischief, an improved and modernized sloop, but still in model and rig distinctly a sloop. The Boston yacht was a "compromise" to an extent never before tried save in some small craft, combining, in a moderate degree of body, and centerboard of the American sloop with the lead keel, increased draft and proportions of sail plan of the British cutter.

The main issue of the year was naturally the successful defense of the Cup by an American yacht against a typical narrow and deep keel cutter, but hardly less exciting was the preliminary contest between the two types represented in the results of the two series of trial and Cup races were most curious and at first sight might seem contradictory; the preliminary trials and subsequent alterations of Priscilla, followed by the success of Puritan, demonstrated the value of the cutter rig, with some modifications of detail, as opposed to the old sloop rig, and also the advantage of a deep keel with the ballast in it. The victory of Puritan over Genesta, confirmed by the Cup races of the following year, proved the value of moderate beam, depth of displacement as opposed to the extreme narrow beam and great displacement of the British cutter.

The results of these races, though some were not immediately visible, were the abandonment of the old type of centerboard sloop, in model, ballasting construction and rig, and on the other hand, the abandonment of the old British tonnage rule with its severe restriction on beam. Taken altogether, the whole international contest of 1885 has led to greater changes in yacht design than have ever taken place at any one period before or since.

The trial and Cup races of 1886 were among the least interesting of these noted contests, the local issue between New York and Boston was completely buried with the successful defense of the Cup by Puritan and the prompt commencement of another Cup defender by Gen. Paine; and the performances of the two yachts, followed by the altered Priscilla and the new Gracie, but little interest. In fact, the technical interest disappeared with the general adoption by Americans of the new Puritan as the national type, all past arguments and controversies over the ancient sloop being quietly and decently buried out of sight.

Mayflower was but an enlarged Puritan, just as Galatea, the challenger of the year, was an enlarged Genesta, and the technical interest in the races had largely died with the defeat of Genesta, while the poor performance of Galatea at home had discounted her success here. Although a certain interest and excitement attached to the first meeting of the quartette of Cup defenders, Mayflower, Puritan, Priscilla and Atlantic, in the early regattas, it did not survive the August cruise; and the trial races were very dull and perfunctory affairs, the selection of Mayflower being a foregone conclusion.

The Cup races too were usually dull, being sailed in the lightest of winds, in which Galatea went to the worst possible disadvantage. Genesta was lucky in having one day in which she made a good showing and came within a small margin of winning, but even this was denied to Galatea by the whims of the weather, though it was afterward proved that she could do nothing with Mayflower in a breeze and rough water. The trial races of 1886 were void of results, nothing showing the value of increased power through the use of lead keel, and the races were useful only in giving the final quietus to the tonnage rule of the Y. R. A.

The domestic side of the races of 1887 was much like that of the preceding year, Volunteer was a larger and more powerful Mayflower, and her success over that yacht and Puritan was assured almost from the selection of her crude quantities; the trial races proved nothing more than had been shown in the first meeting of the three. Like Mayflower, Volunteer was not accepted as a New York boat, built by a member of the New York Y. C. to defend the club's cup, and local issues between Boston and New York were forgotten.

So far as the trial races were concerned, there was nothing at stake, local, personal and technical issues had disappeared in the general recognition of Mr. Burgess and General Paine as the champions of the nation, the head of the work of Cup defense; and in the adoption of the three Boston boats as the only representatives of the national type, "compromise sloop."

The Cup races, however, had assumed a very different aspect, the challenger being no longer a typical narrow cutter, but a much wider boat, her designer having quickly availed himself of the increased advantages offered by the new rating rule adopted at the end of 1886. While distinctly a keel cutter, this was far different from the two previous challengers, as Yarna and the first Valkyrie, and on this side the Burgess-Paine boats had been firmly accepted as the one standard of perfection, so that Volunteer's success made no material change.

As all international competition promptly ceased with the adoption of the new deed of gift at the termination of the last Volunteer-Thistle race, it is impossible to say just what results would have followed had it been necessary to construct a new defender, but it is tolerably certain that while American yachtsmen as a body placed a very low estimate on Thistle, that those most deeply interested and most qualified to judge, Mr. Burgess and General Paine, entertained a much higher opinion of her, and that another Cup defender from their hands would have shown further departures from Puritan and Mayflower.

While all progress in designing was not necessarily stopped by the cessation of the Cup racing, it was kept alive only in the classes under 70ft. and in the schooner's; monotonously, in fact, in the classes under 40ft. So far as the mere designing goes, the loss was not so great; but the construction of a racing cutter, keel or centerboard, of 85ft. waterline is a matter of special engineering which can gain little from experiments in the 40ft. or 21ft. classes.

The changes of the last three years, first the evolution of the fin-keel, then the introduction of the new form of body with its very full waterlines and long, easy diagonals, and finally the replacement of the plain lead fin by the plate fin and lead bulb, have been so many and so radical that it is a difficult matter to sum up the present condition of yacht designing, and to say just what advance has been made; and it is quite likely that the present trial and Cup races may shed little

light on the many complicated questions that are vexing yachtsmen. The direct issues in the present trial races may, however, be readily ascertained.

In the first place, the old local feeling between Boston and New York has been revived and quickened in a most curious manner; while it rips as high as in the days of Priscilla and Puritan, it has a far less substantial basis, as the four new Cup defenders are purely of Yankee origin in design and construction, save that Pilgrim was partly built on the Delaware, like Volunteer. The two "New York" boats are simply because they were bought with New York money, and were built in the East, although one was canvased by a New York firm of sailmakers.

There is perhaps nothing which could contribute more to the successful growth of American yachting than a keen but friendly rivalry between the two great yachting centers; but to be of any benefit such a rivalry should be based on the merits of local designers and builders, and not on the mere ownership of boats from the same locality. It is all the more regrettable that with all her claims of leadership and her old-time reputation in all branches of marine architecture, her home-built boats have completely disappeared from the Cup contests. So far as the local issues are concerned this year they are interesting to those immediately connected with the various yachts.

The technical issues are more clearly defined and of far greater importance, and it is a matter for regret that owing to the lack of proper facilities for the construction of the boats, the results will be obtained from a most expensive experimental fleet. If the present trial races could be followed by a short period for necessary alterations and then a month of hard racing, the merits and defects of the four different types might be closely determined, but it seems almost certain now that the season will end with a few more trial races, in which few conclusive results will be reached, and that by next season the four will have disappeared from racing, the class dying out again at the event of its continuance, the present boats being outbuilt during the winter. The four types may be classed as follows:

- Keel cutter.
- Keel-centerboard cutter.
- Bulb-fin keel.
- Bulb-fin centerboard.

Half a dozen years since this lingo would have been Greek to the most experienced yachtsman, but to-day any ten year old boy who lives within three miles of Long Island Sound could give a full explanation of it.

Colonial is the first keel boat built to defend the America's Cup, although the old yacht herself has always been a keel boat, and a number of keel schooners have sailed at times in the fleets which have been opposed to two of the various challengers. In model Colonial has the appearance of the last of the old yachts of thin plate, the narrow cutter or the shallow sloop, but her form is the result of a general process of evolution carried out in common by American and British designers for the last four years. The main points of this development, the reduction of displacement and frictional surface, are directly traceable to the tax on sail imposed by the new Y. R. A. rating rule which replaced the tonnage rule in 1886 in England, the influence in these directions being slight at first, but strongly felt about 1890 and increasing ever since.

The return of the Herreshoffs to the designing of sailing yachts, in 1891, is marked by the feature of extreme beam and draft with reduced displacement in Gloriana, and in the fall of the same year, in Dilemma, by the adoption of the canoe-shaped hull and fin-keel in a new and extreme form, the fin being, instead of a thick lead keel with the lead bulbs for ballast, a thin plate, the weight of which is concentrated at the lowest possible point in the form of a lead bulb or cigar affixed to the bottom of the fin.

Radical as were these departures from the then popular form, they were accompanied by a still more extreme feature in the abnormal fullness of the waterlines, accompanied by long, clean and easy diagonals and section lines, leading to a great length of overhang at each end. A careful study of the successes of the last few years, and the wish of the last few years to have a vessel of this type, and the fact that the Wasp and Dilemma combine more extreme features than any other yachts, these features by no means originate exclusively in them, but are the results of a clearly marked course of evolution in which each of the leading designers has taken part, the result being a very close agreement in dimensions, models and what are popularly classed as "freak" features in the racing yachts.

Colonial, like the prototype Wasp, represents but a medium stage in this extreme development, possessing the long, easily lined hull, and the overhanging ends, but with the fin only partially developed, representing an intermediate stage between the wide cutter, such as Thistle or the first Valkyrie, and the pure fin-keel. While allied to the older cutters in construction, her frames and plating running down to the trough keel, at the same time she has the deep centerboard, and the weight of the hull is concentrated at the lowest possible point in the form of a lead bulb or cigar affixed to the bottom of the fin.

While the depth of this fin is considerably in excess of the draft of the older cutters, the total draft of Colonial being about 15ft. 9in., while Thistle, Genesta and Galatea drew just 13ft. each, it by no means approaches the proportional draft of the successful keel boats, such as Minerva, Gloriana and the Wasp. The proper ratio of the fin to the hull is a matter of exact calculation, and more than the sail area is, but figures are at least useful as a basis of comparison. In the 40ft. and 45ft. classes the ratio of draft to waterline ranges from 23% in the low-powered boats like Minerva, to about 26% in the high-powered, an increase of lateral resistance of course accompanying a larger sail plan. In the older of the large cutters, all of which have failed to windward besides the deep centerboard boats, the ratio is as low as 15%, a very low figure, even after a liberal allowance for the reduced proportion of draft which accompanies the doubling of the waterline length. In Colonial the ratio in spite of her high power, is only 18½% or little more, in proportion to her power, than in Thistle.

Compared with Thistle, the lateral plane of Colonial is vastly more effective, presenting a flat side of considerable depth in place of easy-flowing curves; but compared with the Wasp, of similar form, and power, the proportion of fin to the hull is less than the figures would indicate as necessary, perhaps 2½, or a total draft of 18ft. While these figures and conclusions may be crude and incomplete, they at least indicate a line of thought which may be profitably followed in estimating Colonial's importance as an exponent of the keel type.

The other Herreshoff boat, Vigilant, is of the same general form, the exact difference being best indicated by the dimensions, some 3ft. more beam, 2½ft. less draft, and the addition of a centerboard, the displacement being less by some 15 tons. One important difference between the two is the material of the skin. Vigilant being plated with Tobin bronze, a smooth and non-corrosive alloy, while Colonial, like the two Boston boats, is plated with steel.

The most extreme of the four is the bulb-fin Pilgrim, a boat of small displacement and easy form, not unlike a canoe, the draft of hull being 5ft., while beneath it is a depth of fin of 17ft. At the bottom of this fin, which in itself weighs some 15 tons, is the lead bulb of about 17 tons, its length being about 18ft. The yacht has no centerboard, relying entirely on her keel for lateral resistance.

The fourth boat is less extreme than Pilgrim but no less odd and interesting; the hull is similar in general form, but of greater displacement and with fuller lines, especially at the ends, and the power is similar in general form and construction, though attached to the hull in a different manner, and it is much shoaler, the total draft being but 14ft. as against 22ft. The depth of body is a little greater than in Pilgrim, making only about 8ft. of fin. The lead bulb is longer and larger, projecting 3ft. beyond the after side of the fin and weighing some 40 tons. Through the fin a centerboard works, increasing the total draft to about 22ft. The plan of the hull, the details, and apart from the bronze bottom of Vigilant there is little difference in construction, either in hull, rigging or sails; the main points of difference being in dimensions and type, as already described.

This difference is so great, and the accompanying effect on the future of yacht designing must be so powerful that a thorough test of each type is in every way desirable; but the indications now are that the trial races will afford only a partial and inconclusive test as a basis for next year's work.

The earlier races of the four and their preparation for the trial races have already been described. The alterations made in Pilgrim included the removal of her lead bulb and the insertion of two plates of lead, each weighing about 2½ tons, between the fin and each half of the whole being bolted through the fin in the first place. The spars were also lengthened about 3ft. all around and new sails provided.

The fleet has made its headquarters off Bay Ridge, though Pilgrim has anchored at times off Stapleton. Vigilant has been served by her faithful handmaid, Hattie Palmer; Colonial has had a large tugboat

in attendance for towing and stripping; Pilgrim has had an old hulk for the latter purpose, while Jubilee has chartered the nondescript yacht named Harlequin but better known as the Lightship, which has for so long lain idle in Winthrop's Basin.

On board of Colonial have been Rear-Com. Rogers and Mr. John E. Brooks, with Captain Rhodes, of Lasca, and Captain Berry, of Katrina, and this year in Wasp. On Jubilee are General Paine, Messrs. John B. and Sumner Paine, G. H. Richards, Joseph Fay, Fred Woods and Dr. Beant, with a Captain of the Navy, saving his brother on Pilgrim. On Pilgrim are Messrs. Stewart, Palmer and the two Adams brothers, while Captain Newcomb, of Fortuna, accompanies Captain Sherlock. On Vigilant are Mr. Iselin, Vice-Com. W. Butler Duncan, Messrs. Herreshoff, Willard, Leeds, Belmont and Captain Terry, of Grayling. It will be seen that most of the talent, amateur and professional, of New York and Boston is busy with this fleet.

Pilgrim was measured at Boston by Mr. Hyatt Hoppe there for the purpose of starting the first measured race, after Thursday's race Mr. Wilson of Boston, called on Mr. Sawyer for aid, and a gang of sailmakers was set to work on Colonial's mainsail, the head being cut off 3ft. on the leech and 2ft. on the luff; while her spinnaker was mended, having been badly torn at the finish of the race.

First Trial Race—Thursday, Sept. 7.

Windward and Leeward, 15 Miles.

Thursday morning promised well for a race, the wind being fresh from the south and likely to increase, while the day was clear and bright, with a warm sun tempered by the sea breeze. The four big racers were towed down from Bay Ridge to Sandy Hook, running inside the Hook to set their canvas and standing out under sail for the Scotland Lightship, a large fleet of yachts and a number of smaller craft starting at 9:30. In anticipation of a punctual start, the big Vigilant towering over the other yachts. Many parties went out on tugboats, the Larchmont, Seawanhaka, Marine and Field and other yacht clubs each having a boat. The interest in the race was shown by the crowds on some of the large outside steamers.

Colonial was the first to get under way after dropping her towline and setting sail. Jubilee and Vigilant each started under way, and when off the Lightship, sent her down and at once began to house her topmast. Jubilee followed her, while Colonial, after sailing about for a time to try the wind shifted her clubtopsail for a jibhead. The three were ready, but there were no signs of a fourth boat, though Pilgrim was inside the Hook when the steam fleet passed down. She was made out, still inside, but in tow of a tug that was heading for the Horseshoe. Many guesses were made as to the cause of her withdrawal, and it was learned later that it was due to her reef jaws. She had been fitted in Boston with a new pair of jaws with a universal joint, some untidy device, and when the sail was hoisted the joint allowed the fore end of the gaff to swing around alongside of the mast. There was nothing to do but to tow to Bay Ridge, where Winthrop's smith set to work at once to make a pair of strong reliable jaws for her.

About 11 o'clock the flagship May, with Com. Morgan on board, accompanied by the Cup committee and regatta committee, anchored N.E. of the Scotland Lightship and set the course signals, S. by E. 15 miles; the large tug Edgar F. Luckenbach, successor to the old Luckenbach, of the Puritan—Genesta races, started off in charge of Superintendent Nells Olsen, to lay out the course. On her stern she carried a boat with a flag, which was hoisted as the signal was made, and she was followed by a large red ball at her masthead until all the racers had passed.

The wind was now fresh and steady, and none too strong for working topsails provided that it did not increase, but the barometer was falling, the indications being of more rather than less wind later on. The sea was but moderate, rolling the big steamers and sending some of the smaller craft overboard.

Jubilee was in trouble just before the start, the upper batten flying out of her jib and rocketing through the air, and then her jib sheet parting, the wire pendant giving way. She lowered the sail but was unable to repair damages before the starting gun was fired at 11:45:00, the preparatory gun having already been fired ten minutes before, and she went over the line with her jib down.

Colonial crossed first on starboard tack at 11:45:27, Jubilee, timed at 11:45:35, was second, and the weather grew steadily worse, the wind crossing at 11:46:46, and as she went over made a tack and stood in for the Jersey beach. Jubilee had her jib up in a little time, and was going well. At 11:50 Vigilant swung about on port tack after Colonial, and Jubilee followed. She had hardly trimmed down on the new tack, however, before she met with another mishap, the block on the middle span of her peak balliards broke, the pieces flying in the air, and she was permanently disabled, at once giving up and starting for Bay Ridge.

This mishap put a new complexion on the race, which all had looked to as a duel between Jubilee and Vigilant, Colonial being hardly dangerous in the popular estimation. Now it was Vigilant and Colonial, the Herreshoff deep centerboard against the Herreshoff keel. Colonial stood in under the Highlands and at 11:55 made a tack for shore; Vigilant was in the windward position, and at 12:01 Colonial made a tack, planting herself about 150yds. from Colonial's weather bow.

The two were fairly started now, with some dozen miles to go and perfectly fair and even conditions. Vigilant was carrying three lower sails, with topmast housed, and was holding to windward as well as pointing high. Colonial had her topmast on end and working topsail set, and in spite of the extra sail and weight she was heeling no more than Vigilant. The two were sailing slowly, the wind was blowing, seeming to swing off more when struck than the other, but going as easily through them. At Vigilant's wheel was Mr. Herreshoff, seated on the weather side of the wheel box, while Capt. Hansen was to leeward, the two taking turns in steering.

Capt. Haft was steering Colonial. It was evident from the first that Colonial could not hold on with the centerboard boat, and Capt. Haft was quick to understand this as an advantage, and he was slow in trying to point with Vigilant he kept his boat full and always moving, with the result that she soon showed a decided lead in distance, though continually going to leeward. What the result would be was a matter of doubt, but disregarding all temptation to pinch up and get beside the other, Colonial was kept footing as fast as she could be put through the water.

At 12:45 Vigilant went on port tack and Colonial followed 3m. later, having made a decided gain from the start. At 1 o'clock there was a light haze over the sea and the wind had fallen a little, the anticipations of Vigilant's crew not being realized. She began to need her topsail now if she had not before and in the next quarter of an hour Colonial was still closer to her. At 1:10 the work of setting up her topmast began on Vigilant, the spar being quickly hoisted and fiddled, her topmast of setting time, and the topsail was set slowly down, and not until 1:33 that the sail was broken out and sheeted home. A number of men were aloft all this time, the lacing holes being small and the work of passing the lacing being difficult.

The two now made a hitch off shore. Colonial being first to tack and held it for over 30m., at the end of which time, with her topsail now drawing and both wind and sea lighter. Vigilant began to show a light gain. When her great lead was made her loss was made, and a couple of minutes until Vigilant was fairly about and then she swung back to the offshore tack; Vigilant immediately doing the same.

The wind was now working more to the west of south, shifting and breaking off one or the other, though neither gained much by these brief puffs. Vigilant was doing better work as she neared the mark, her topmast of setting time, and the topsail was set slowly down, and not until 1:33 that the sail was broken out and sheeted home. A number of men were aloft all this time, the lacing holes being small and the work of passing the lacing being difficult.

The run in was uneventful, it was impossible by the eye to gauge the difference between the boats, and opinions differed as to whether Vigilant or Colonial was gaining. When near the finish the wind went to the west and Vigilant's spinnaker came in at 3:03, Colonial carrying hers

For three minutes longer and about one minute too long, as the pole lifted nearly to the forestay and the sail was torn in handling it. The times of the Lightship were: Vigilant 3:33.41, Colonia 3:33.55. This made the race very close, the allowance being but 20s. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Colonia.....	11 46 46	3 20 41	3 33 55	3 33 55
Vigilant.....	11 45 27	3 19 08	3 33 41	3 33 41
Jubilee.....	11 45 35	Withdraw.		
FROM START TO OUTER MARK.				
Vigilant.....			2 18 08	
Colonia.....			2 19 44	
FROM OUTER MARK TO FINISH.				
Colonia.....			1 14 11	
Vigilant.....			1 15 32	

Both could well have carried clubtopsails coming home, in fact, none of the older Cup defenders would have hesitated to shift to clubtopsails for a 15-mile run in such a breeze. It is possible, however, that neither had her topsail yards aboard, and each was probably glad that the other did not force her to set a jackyarder.

The result of the race was a surprise to many, not the least of all to the Vigilant party, as they had feared Jubilee as a dangerous possibility, but had given little thought to Colonia on the wind. So far as the selection of a Cup defender went, the race only added to the difficulty of the task imposed on the Cup Committee, the result being inconclusive and perplexing in view of what was already known about the two boats. There was general regret that the two Boston boats were out. The race was finished so early that the whole fleet was back at the city by 5:30, a piece of good luck that all who remembered the many postponements, delays and late finishes of the trial races of 1885 were not slow to appreciate.

### Second Trial Race—Saturday, Sept. 9.

Triangular Course, 15 Miles.

By Saturday the two Boston boats had repaired all damages, and the four were off the Scotland by 11 o'clock. The day was not unlike Thursday, but even more of a ladies' day, light wind and no sea, the breeze being from E. S. E. A rather smaller attendance of yachts was present in the morning, but many came down later to see the finish. May again anchored N. E. of the ship and set the signals for the three legs of the course, each ten miles; E. S. E., S. W. by W. and N. W. 1/4 N. The tugs started off to buoy the course and at 11:20 the preparatory gun was fired.

The yachts were working about the start, all with clubtopsails set and baby jibtopsails up in stops. As Colonia passed some of the large excursion steamers she was saluted with loud cheers for "Hank" Hoff. She and Vigilant stayed close by the line, but Jubilee was inshore and Pilgrim quite a distance down the beach. Her new mainsail was sitting well and she appeared in perfect condition. As the time drew near she came up, and was first over the line, 30s, after the gun. Colonia followed her with the weather, but she could not make a gap of a couple of hundred yards before Jubilee crossed, astern of the two, while Vigilant, with a small handicap, followed on Jubilee's weather quarter. The start was timed: Pilgrim 11:30.39, Colonia 11:30.54, Jubilee 11:31.51, Vigilant 11:32.00. Vigilant was handicapped 13s.

She went over on starboard tack, the first leg being dead to windward. Pilgrim broke out a little triangular bit of canvas on her portmast stay, hardly more than clews and tablings with no middle. Colonia set her smallest jibtopsail, and Jubilee and Vigilant each set baby jibtopsails considerably larger than Pilgrim's. Colonia tacked inshore about three minutes after crossing the line, and Pilgrim followed her about, leaving Jubilee and Vigilant on the crossing tack, which, by dint of a shift of the wind she could get no further, Jubilee now had her turn, and footed out from under Vigilant and drew clear ahead. Colonia was coming down fast, though not holding to windward, and first placed herself on Vigilant's weather beam and then drew clear ahead. She was losing all the time, however, for with a start of over a minute she was, at the end of twenty minutes, really astern of Vigilant, and Jubilee was as soon as Colonia had cleared her, while the keel was, though running ahead fast, was sagging to leeward of both Vigilant and Jubilee.

As Colonia neared her, Capt. Barr gave Jubilee a hard luff that shot her out to windward, and as soon as she had gathered way again he followed it with another like rally, keeping her well clear of all possible entanglements with Colonia. At noon Jubilee was in the lead, to windward of Vigilant's course and an eighth of a mile ahead; Colonia being between the two in distance, but down under Jubilee's lee quarter. Pilgrim was to windward, but quite a long distance astern of Jubilee. At 12:10 she awoke to the fact that her doll-baby jibtopsail was doing more harm than good, and as the wind was now freeing the fleet, she replaced it by a stiffer jibtopsail. All could now fetch the mark and the wind was a trifle fresher.

Jubilee, Vigilant and Colonia held their relative positions quite closely over the last part of the leg, Colonia losing a little. Jubilee passed to leeward of the mark and tacked to go by it, but she had made a sad miscalculation; no sooner was she on port tack than Jubilee loomed up ahead of her with the right of way, and there was nothing for it but to tack under Vigilant's lee and stand on until she was out of the way.

Pilgrim had been held high and when eased off she came down very fast for the mark, making it a question whether she would not serve Vigilant as the other had served Jubilee a minute before. Luck was with the bronze boat, however, and though on the wrong tack she had room to clear Pilgrim's bows as she rounded the mark. Poor Jubilee had now tacked for the second time, but it was little but such a face to face with Pilgrim this time, and only fell into third place astern of her. Colonia had tacked when Jubilee first did, but being to leeward she was last boat, and clear of all the others. She went by the mark with a pilot's luff, barely clearing it. The times at the mark were:

	Turn.	Elapsed.
Vigilant.....	1 08 38	1 38 28
Pilgrim.....	1 09 09	1 39 30
Jubilee.....	1 10 25	1 38 34
Colonia.....	1 10 50	1 39 56

Jubilee must be credited with the best work over this leg, though she lost all that she had gained by her blunder at the mark. As between her and Vigilant there was little to choose, however, the latter having lost something in being blanketed by Colonia. Colonia under these conditions of smooth water and light wind was decidedly inferior to her form of Thursday, and never was really dangerous. Pilgrim made a far better showing than in any previous race, being well up with the leaders, as it was, robbing Jubilee of second place.

The second leg should have been a reach, but as it proved the yachts had to lie close to fetch. Pilgrim did some smart work at the first mark, sending down her No. 2 jibtopsail and quickly setting the No. 1; but the sail proved more than she wanted. Jubilee carried her No. 2 jibtopsail over the second leg, but it was little but such a face to face helping her little. Vigilant at once worked to windward, Pilgrim being to leeward of her and a quarter of a mile astern by the time they had covered a third of the leg. Jubilee was also held high, in Vigilant's wake by nearly half a mile. Colonia was doing poorly, dropping astern and to leeward. In spite of her jibtopsail Jubilee gradually picked up, and at 1:40 was abreast of Pilgrim, soon passing her.

The quartette was now in two pairs, Vigilant and Jubilee in the lead and Pilgrim dropping back to Colonia, well astern. Long before the mark was reached Vigilant launched out her spinnaker boom and mast-headed the sail, sheeting home almost as she rounded and then hurrying up her balloon jibtopsail. Jubilee was not much slower, breaking her spinnaker very promptly. Colonia, to the surprise of all, jibed her boom to port at the mark, and then, to everybody's astonishment, a maneuver that brought her all the way home on the wrong jibe and cost her some time. The second mark was timed:

	Turn.	Elapsed.
Vigilant.....	2 13 23	1 04 53
Jubilee.....	2 15 45	1 05 23
Pilgrim.....	2 16 28	1 10 43
Colonia.....	2 20 30	1 10 43

The run in with smooth water and a light air, the boats too far apart for any blanketing or luffing, was devoid of interest, the race being virtually over at the second mark. The finish was timed:

	Turn.		Turn.
Vigilant.....	3 36 01	Jubilee.....	3 41 31
Pilgrim.....	3 44 55	Colonia.....	3 48 03

The official times were:

The official times were:

	Start.	Finish.	Elapsed.	Corrected.
Vigilant.....	11 32 00	3 36 31	4 04 31	4 04 31
Jubilee.....	11 31 51	3 41 31	4 09 40	4 09 03
Pilgrim.....	11 30 39	3 44 55	4 14 16	4 12 40
Colonia.....	11 30 54	3 45 03	4 14 19	4 16 55

Vigilant beat Jubilee by 38s, Pilgrim 8m, 9s, and Colonia 2m, 24s. Like the first race, this was in no way conclusive; though Vigilant did the best work of the day Jubilee was close to her, especially on the windward leg. Pilgrim was evidently improved by the alterations. During the race the new steam yacht Feisen was flying about, running round other craft and showing her speed, those on board cheering themselves and doing a great deal of unnecessary shouting and waving of hats over the performance. On the way home she fell in

with Vamoos and the two started in for a race. Feisen finally burst a tube in her boiler and was taken in tow by Vamoos. The tow line was long and the boat veered badly, Vamoos still keeping up a good speed. Captain Smith, the steamer Guyandotte was met, bound out, and in passing Feisen parted her tow line and sheered into the big iron steamer, the bow of the yacht being smashed in. The police boat Patrol and the tug Carrie Ramsay went to her aid, while Vamoos laid by her, and she was made fast to the tug by heavy hawsers, being finally beached on Coney Island Point, but too late to prevent her sinking. Charles Smith, the fireman, was badly scalded and was taken ashore by the Patrol. The yacht was raised next day and taken to Tebo's, her entire bow being stove in.

### Third Trial Race, Monday, Sept. 11.

Windward and Leeward, 15 Miles.

Monday morning brought the first real racing day which the four boats have yet encountered. The gales and raging seas that figure in some of the accounts of the race existed only in the heated imaginations or troubled interiors of the various writers, but there was a fresh, steady breeze, about 18 knots at the start, dropping to 15 at the turn and increasing to nearly its original force on the return. The sea was rough and lumpy, and some venturesome ladies were sick on the big steamers, while some of the spectators were driven out of the bows by spray which might have spoiled the gloves and shore hats. It was a day to test fairly the better sailing qualities and the endurance of the boats, but there was nothing in the least terrifying or appalling about the wind or sea. Going over the bar Pilgrim, in tow, made bad weather of it, leaping out until she showed the fore end of her fin, and then coming in bowsprit and anchor stay. Under sail she did better, but all of the big acousts pounded hard.

The May took her usual place N. E. of the Scotland Lightship and set the signals for a course due east. The weather was fine, a bright sky and very clear atmosphere, with just enough chill in the air to remind one that summer was over and fall had come, and to promise a truer and steadier wind than in hotter weather.

All but Pilgrim started on starboard tack, Vigilant sent her down when the line, and Colonia and Jubilee at once followed. Three lower sails were set on each, and there was every promise of a hard-fought battle that would at last afford some conclusive basis for the committee. While this expectation was finally realized, the interest in the race was largely deadened at the very start by the poor performance of the two Boston boats.

The first gun was fired at 11:30, Colonia and Vigilant being then west, or inshore, of the line on the starting side, and not far away, while Jubilee was working about, also inshore, but south of the Scotland.

Pilgrim had crossed the line and tacked out for some distance on the course, heeling more than any of the others, and when the preparatory gun was fired she was half a mile from the line. It would have been an easy matter to run down in time, but the lay still and made no apparent effort to bear away. Her sails were well up and there was no sign of anything wrong with her gear, but the minutes went by, with the other three closely playing for place, while she showed no intention of starting.

With the gun, at 11:40, Vigilant flew across, on starboard tack and close to the Lightship, and Colonia came close astern of her. Jubilee had been on a weather position, but as she neared the Lightship she was evidently in trouble, and instead of crossing she went to leeward of the mark. Her gaff had sprung in the jaws, but Gen. Paine determined to make a race if possible, and Capt. Charles Barr, with two hands to help him, went aloft and lashed the jaws as well as could be done under such conditions. After partial repairs were made Jubilee crossed the line, Pilgrim in the meantime having sailed up to the mark, crossing just ahead of her. The handicap gun was fired at 11:42, but the times of the two yachts were taken with the leaders:

Vigilant.....	11 40 17	Pilgrim.....	11 48 06
Colonia.....	11 40 33	Jubilee.....	11 49 06

Such a start as this spoiled the race, but there was still a chance for a thorough test of the boats.

Vigilant was by this time hurrying inshore and leaving Colonia every minute, the keel boat falling to point or hang on. She was looking so far to leeward of Vigilant that it hardly seemed that they were going the same course, while fast as she went through the water she slid off still faster in proportion.

The first tack was made by Colonia at 11:40, Vigilant at once following. At 11:58 Colonia tacked inshore again, Vigilant going about a couple of miles. When Vigilant passed the Sandy Hook Lightship, leaving it nearly a quarter of a mile to leeward, at 12:20 Colonia was obliged to go to leeward of the ship.

Jubilee, with a badly crippled gaff and her mainsail half set up, was in no condition for short tacks, but held offshore on one long leg, with Pilgrim ahead, but to leeward.

At 12:30 she was in the lead, but she was a good half mile to windward of Colonia, while the other two, though out to windward, were so far astern as to be out of all calculation. Jubilee gained on Pilgrim and passed well to leeward of her, and, in fact, at one time promised to make it warm for Colonia, but the gaff made more trouble, the fore end getting adrift and running some 6 or 8 ft. forward of the mast.

At 12:40 the fleet was off Rockaway, Vigilant, Colonia and Pilgrim inshore and Jubilee making long boards in the open. Both wind and sea had gone down a little; when Vigilant went on port tack off shore Colonia and Pilgrim fell into her wake, the distance between the first and second boats being about a mile, and between second and third a little less.

Jubilee was now on the same tack, apparently pointing high, but near a mile to leeward of Vigilant. Had as her gaff and mainsail were, there would be more trouble in store for her. In the first race her chances had been killed by the failure of a block, one of a special set made at an extra cost to insure the highest quality.

This time it was the headstays which suffered; first the jib halliard block burst, letting the sail down at the head. After a time the jib was lowered and the headstays the jib being reset, apparently with the staysail halliards, the block in them giving way also. In spite of all these hardships the yacht was making a brave struggle, beating Pilgrim and Colonia.

Vigilant turned the weather mark at 2:10:50, at once jibing and sending up her topmast. She set no topsail, but got out her spinnaker first, taking 8 minutes to set it. About 5 minutes later her balloon jibtopsail was broken out, and then she set a small clubtopsail.

	Turn.	Elapsed.
Vigilant.....	2 11 50	2 31 33
Colonia.....	2 19 08	2 38 35
Jubilee.....	2 25 41	2 36 35
Pilgrim.....	2 39 50	2 51 44

The second column shows the actual time taken by each to sail 15 miles to windward. Colonia had her topmast partly up when she rounded. She set the same sails as Vigilant. Jubilee and Pilgrim set only working topsails.

The work of Jubilee to windward is surprisingly good, the boat being crippled badly from the start.

The run home was made with a freshening breeze, the wind hauling a little to the south, the relative losses and gains are best shown by the times at the finish:

	Finish.	Elapsed.
Vigilant.....	3 46 44	1 34 53
Colonia.....	3 53 56	1 34 48
Jubilee.....	4 04 28	1 38 47
Pilgrim.....	4 19 41	1 39 51

Off the wind the Vigilant and Colonia are even, the two fin boats being a little slower. The official times of the race are, from actual starting times:

	Start.	Finish.	Elapsed.	Corrected.
Vigilant.....	11 40 17	3 46 43	4 06 26	4 06 26
Colonia.....	11 40 33	3 53 56	4 13 23	4 13 09
Jubilee.....	11 49 06	4 04 28	4 15 22	4 14 45
Pilgrim.....	11 45 06	4 19 41	4 31 35	4 29 59

The times from the last race are:

	Start.	Finish.	Elapsed.	Corrected.
Jubilee.....	11 42 00	4 04 28	4 22 28	4 21 51
Pilgrim.....	11 42 00	4 19 41	4 37 41	4 36 00

Immediately after the race a meeting of the Cup committee was held on board the May and Vigilant was unanimously chosen as the Cup defender, the following notice being posted in the club house on the evening:

NEW YORK, Sept. 11, 1893, 1  
Flagship May. }  
By direction of the America's Cup Committee it is announced that for the defense of the America's Cup against the challenge of the Valkyrie, the committee has selected the Vigilant.  
By order of the America's Cup Committee, A. CASS CANFIELD, Sec'y.

Mr. Iselin was immediately notified.  
The thorough test of the four yachts, under much more severe conditions than exist in most races, was very gratifying after the many disappointments of the past month, and sets at rest almost all questions of superiority. The result has been accepted gracefully by all the defeated boats. The performance of Vigilant first and last, in light and heavy weather, has been most satisfactory, proving her a safe all-around boat, her ability to windward being fully demonstrated. The only question which remains in doubt is that of the true position of Jubilee. That the boat is badly rigged has been proved by her many breakdowns, but in light weather on the cruise she has held very close to Vigilant, and in the last race did wonderfully good work to windward for a boat so badly crippled in all her sails. It must re-

main an open question how close she could be to Vigilant with as good a rig, but it is evident that she is by no means a failure as to model. Had Gen. Paine requested another trial it would have been in all probability accorded him, and many would be glad to see a final test, but he accepted the situation very philosophically and went home after the finish of the race on Monday. The rigging and canvassing is as much a part of the game as any other detail of Cup racing, and in one sense a boat must stand by her own defects.

As to Colonia and Pilgrim, the last race marks them as failures, the former from a lack of weatherly power, the latter to general inefficiency due to causes which are probably as yet unknown. The Cup races of 1893 have passed from conjecture into history, and now the great question of the future possession of the Cup will take their place for the next three weeks.

### Royal Victoria Y. C. Cup.

The first race for the Royal Victoria Y. C. gold cup was sailed on Sept. 6, the challenger being Navahoe, owned by Mr. Royal Phelps Carroll, and the defender being Britannia, owned by the Prince of Wales. The course was off the line of Wight (see chart in the Forster and Strick of Aug. 12) from the Warner around the Owers, thence around a mark boat off Dunnoose and outside the Princessa Ledge buoys, around the Nab and finish off the Warner, about 50 miles. The start was made at 11 A. M., the wind being so light that the yachts were towed to the line. The wind was S. E., a beat to the first mark. Navahoe started in the weather berth, but was soon headed by Britannia. Near the Owers the wind freshened, Britannia still gaining. They were timed at the second mark, off Dunnoose:

Britannia.....	3 39 15	Navahoe.....	3 55 25
----------------	---------	--------------	---------

Spinnakers were carried to the Nab, where they were timed:

Britannia.....	4 31 07	Navahoe.....	4 46 17
----------------	---------	--------------	---------

The finish was timed:

Britannia.....	4 49 21	Navahoe.....	5 05 51
----------------	---------	--------------	---------

The second race was sailed on Sept. 7, the course being 40 miles out and home, laid out to leeward, but proving to be a reach. Navahoe led over the first half of the course, but Britannia was only 40s. astern at the turn. Coming home the wind increased until topmasts were housed and single reefs turned in, the sea being heavy. From all accounts Navahoe was doing well until a peak broke parted and also some of her head gear, she finishing under mainsail and staysail only. The times were:

Britannia.....	4 50 17	Navahoe.....	5 24 47
----------------	---------	--------------	---------

The third race was started on Sept. 8, but Navahoe was beyond the line at the start and was recalled. The wind was very heavy and mainsails were reefed. In returning Navahoe split her keel and was compelled to withdraw, the Prince of Wales declining to sail over, so that the race was postponed.

The postponed race of Friday was sailed on Monday, the course being from off Ryde around the Nab, the Spit Buoy off Southsea, and a mark off Old Castle Point, two rounds, 60 miles, naut.

The wind was strong S. E., Britannia and Navahoe each having single-

THE FOUR BRITISH YACHTS.

From the Model Yachtsman and Canoeist.

reefed mainsails at the start, 11:05 A. M. The wind held strong through the race, Britannia being about a quarter of an hour in the lead all day. The finish was timed:

Britannia.....	4 29 17	Navahoe.....	4 44 25
----------------	---------	--------------	---------

This ends the series, Britannia having won three successive races, and the Royal Victoria Y. C. retaining the cup. The races with Britannia for the Cape May and Brenton's Reef cups, one each, from the Needles, around Cherbourg Breakwater, 130 miles naut., were set for Sept. 15.

The conditions of the races were as follows:

The winner to be the yacht which wins three out of five matches. Ballast may be taken in, put out or shifted between the time of entry and forty-eight hours before the first match; but the owner must at once give notice of the same to the club holding the cup, in order that the load-water line may be remeasured, if necessary, before the start.

The starts to be made at the exact time specified (10 a. m.) unless—

- (a) A dense fog prevails.
  - (b) In the opinion of the sailing committee a postponement is desirable; but if either competitor desires to start at the time specified the sailing committee shall start them at that time.
  - (c) An accident occurs before the start, when a reasonable time will be given to effect repairs.
  - (d) A serious accident occurs during any match, when a reasonable time will be given, before the next match, to effect repairs; but a yacht must abide by her accidents during a match.
- Any match, the average rate of which is under five knots per hour, to be resulted.

### COURSE.

A course.—Twenty miles to windward or leeward and back. Reelboat, outside the Nab Lightship.

B course.—From the Warner Lightship to the Owers Lightship, thence to a flagboat off Dunnoose, back to the eastward, off two buoys on the Princessa shoal outside Nab Lightship, and finishing off the Warner.

C course.—The Long Victoria, namely, from Ryde round the Nab Lightship, thence round a flagboat near Portsmouth Outer Spit Buoy, round a flagboat anchored off Old Castle Point, Coves, and back to Ryde; twice round; 50 miles.

Wednesday, Sept. 6.—A or B course.

Thursday, Sept. 7.—A or B course, whichever was not sailed on first day.

Friday, Sept. 8.—C course.

Saturday, Sept. 9.—B course.

Monday, Sept. 11.—A course.

The matches to be sailed under the supervision of the Sailing Committee of the Royal Victoria Y. C. Yacht Racing Association rules, measurements, time, scale and allowances.

### Sewaren Land and Water Club.

The club held its second regatta of the season yesterday over a course of five miles and repeat on Staten Island Sound. The wind was light during the first round, but freshened considerably before the end, so that both heavy and light weather boats were well tested. The boats taking part and the results were as follows:

	Start.	Finish.	Elapsed.	Corrected.
Emily, R. G. Clarkson.....	10 35 30	11 54 30	1 19 00	1 19 00
Fay, W. H. H. Smith.....	10 33 30	11 54 13	1 20 33	1 20 03
Clytie, D. G. Whitlock.....	10 34 30	11 59 00	1 24 30	1 22 30
Ripple, W. H. Smith.....	10 33 00	11 59 05	1 26 35	1 22 35

The winner, Emily, is a new Cape Cod cat, built by Cosby, and this is her first race.

The prizes were a ship's clock, presented by the Commodore, for the first boat and a large photograph with negatives of the second boat, presented by Mr. Chas. M. Cooper. The judges on the flagship Elthilda were Com. Win. M. Ballard and Mr. Thomas A. Stoddart. Timor, Mr. Chas. M. Cooper.

### Seawanhaka Corinthian Y. C. Oyster Boat Race.

CENTER ISLAND—OYSTER BAY.

Monday, Sept. 4.

The most successful race held by the Seawanhaka Corinthian Y. C. this year was the Long Bay, for oyster boats of Oyster Bay, Cold Spring and Bayville. The conditions were as follows:

Class A, sailing oyster boats of 28ft. length waterline and over, first prize, \$100; second prize, \$50; Class B, sailing oyster boats of less waterline length than 28ft., first prize, \$75; second prize, \$25.

Course.—Cross a line between yacht club float and stakeboat from east to west, thence around Moses Point Buoy, leaving it on port hand, thence to Lloyd's Neck Buoy, leaving it on starboard hand, thence to the line off yacht club float, crossing from east to west to finish. About 11 nautical miles.

Start.—A warning gun will first be fired from the judges' boat and a red flag shown. Five minutes later the starting gun will be fired and a blue flag shown in place of the red. All boats cross at second gun. Any boat on the line before the gun must go back and recross.

Time Allowance.—Larger boats will allow smaller boats extra time at the rate of one minute per foot of difference in waterline lengths.

Rules.—The usual Government rules of the road to be observed without regard to any special yacht club rules, except that any boat fouling a turning buoy will be ruled out, and each boat must carry on the mainsail (both sides) a number which the committee will supply

and which must be returned. Working sails only to be used. The races to be under the direction of the Seawanhaka Corinthian Y. C. race committee, and their rulings and judgments are to be final and binding on all parties. The committee reserves the right to refuse entry of any boat which in their opinion is so fast as to outclass the average. Any protests or objections must be made to the committee immediately at the finish of the race and will be judged then and there, and the committee will declare which boats are the winners and will pay the prizes to the captains on board of them.

There was a good, westerly breeze and the race was in every way successful. Start at 11:11:

Oakley wins \$100, George C. Wood \$50, Lucy D. \$75, Jennie \$25.			

**St. Lawrence Y. C.**  
MONTREAL—ST. LAWRENCE RIVER.  
Saturday, Sept. 2.  
The postponed race for the Sir Donald Smith challenge cup race, for which a rolled on the squadrons lists of the St. Lawrence Y. C., open to the A, 30ft. and 15ft. classes, was sailed on Sept. 2 on Lake St. Louis. The first attempt to sail this race on July 1 failed, there not being wind enough to carry the boats over the first half of the course. The second attempt on Aug. 25 was even less successful from the same cause, there being hardly wind enough to carry the boats over the line.

This time, however, there was a strong gale from the west, with heavy puffs off the land; and it was blowing harder at the start than it has ever done, when a racing fleet was sent across the line on Lake St. Louis. The members of the sailing committee present were called together immediately before the race, and in consideration of the heavy weather, and the reported disappearance of the Chateauguay Buoy, decided to shorten the course and send the boats around a buoy off Pointe Claire, making the course practically to windward and return.

	Length.	Start.
Chaperon, E. Jarvis.	30.03	3 31 37
Valda, G. H. Duggan.	23.56	3 32 11
Molly Bawn, W. Kavanagh.	25.12	3 32 00
Dream, A. Irving.	32.36	3 32 10
Coquette, A. Hamilton.	33.08	3 32 10
Zulu, W. Ryan.	33.25	3 36 25
Udine, G. Marler.	24.11	3 34 30

All the boats carried three reefs down and No. 3 jibs.  
Valda went across the line to windward of Chaperon and Molly Bawn, and quickly passing Molly and gained steadily on Chaperon. Both boats were taking short tacks along shore to keep out of the sea, and with a fair breeze sailed on sufficiently to let all the boats shake out reefs, and the Pointe Claire buoy was rounded under all plain sail. On the run Chaperon and Coquette set spinnakers to port and Valda a balloon, and although Valda came up somewhat on the leaders there was no material alteration in their position before the finish. The summary of the race is as follows:

	Start.	Finish.	Elapsed.
Chaperon.	3 31 37	4 47 10	1 15 33
Coquette.	3 33 08	4 51 53	1 18 45
Valda.	3 32 11	4 55 56	1 23 45
Molly Bawn.	3 32 00	5 00 44	1 28 44
Dream.	3 32 10	5 03 52	1 30 12
Udine.	3 34 30	5 11 05	1 36 35
Lulu.	3 36 25	Withdraw.	

Valda did not enter a protest at the finish, but the question has been raised, whether the conditions upon which the cup is held, it is legal for the sailing committee, formally or informally called, to alter the course, and the prize has not been awarded, and cannot be until the three members of the sailing committee qualified to sit on the question have met and come to a decision.

**Corinthian Y. C. of Philadelphia.**  
The race committee beg to announce that races have been arranged for the following dates during September and October, for prizes presented by members of the club:  
The River Y. C. have extended a special invitation to yachts of the Corinthian Y. C., under 30ft. water-line length, to participate in their fall regatta on Sept. 16. The committee particularly request that all yachts of this class will be entered for this race.  
Sept. 23.—For yachts over 30ft. and not over 40ft. corrected length. Under the same rules as specified for the annual race. Prize: A silver cup presented by Vice-Com. C. H. Brock, to be awarded to the yacht winning two out of three races. The Natick won one leg for the cup in 1892, and if necessary the third race will be sailed on Oct. 14.  
Oct. 7.—Handicap race for yachts under 30ft. water-line length. Prize: A silver cup presented by Isaac W. Jeanes.  
Oct. 21.—Handicap race for yachts under 30ft. water-line length. First and second prizes: Cups presented by W. Barkie, Henry and J. C. Uhler.  
Oct. 28.—Handicap race for yachts under 30ft. water-line length. Prize: A cup presented by Com. O. D. Wilkinson.

In the above races, excepting that of Sept. 23, club topsails will be barred, and yachts must be sailed by amateurs. In the race of Sept. 23, there will be no restrictions as to sails or helmsmen. Otherwise the racing rules of the club will govern.  
The start of each race will be as near 2 o'clock P. M. as practicable. The course and other particulars will be announced one hour before the start.  
Entries for each race, and as helmsman or crew of the club boats Curlew, Petrel and Teal, will be received by the committee at the club house.  
The race committee is Addison F. Bancroft, chairman; George M. Freeman, William R. Ellison.

**YACHT NEWS NOTES.**  
Valkyrie's racing spars and sails arrived in New York on the Berlin on Sept. 11, and Lord Dunraven will sail on Sept. 16, but the yacht has not been reported since she was well clear of the English coast. She passed the Lizard on Aug. 24, and is now due, but it is quite possible that she may be delayed by bad weather. Lord Dunraven will be accompanied by Countess of Dunraven and the Ladies Wynham-Quin, the Marquis of Ormonde, Lord Wolverton, the Hon. Hercules Robert Langrishe and the Hon. Arthur Paget. The racing crews of Lord Dunraven's other yachts, L'Esperance and Deirdre will assist on Valkyrie.

16, Toronto, International Paddling. 16, Red Dragon, Delaware River. Trophy Race.

**The Ladies' Cruise and Camp.**  
This is how it was planned: The wife of the skipper of Night Hawk was chaperone and general manager, and she invited the ladies. One was to sail with her in Night Hawk, one was to go as passenger on Scarecrow, and the invalid was to come down by train to the camp on Saturday afternoon in charge of the Blooming Dude to spend one night. Mr. Night Hawk was to have a club member as helper to trim sheets. Mr. Scarecrow also arranged for a foremast hand, and the Infanta was to carry her owner, a couple of friends and considerable luggage.  
The start was to be made on Friday at noon for Cheesapeake Creek, fifteen miles across the Lower Bay, where a camp on the beach was to be made, the return trip being scheduled for Sunday afternoon.  
It was all very pretty in theory, the girls were delighted at the prospect of camping out, and the weather promised to be all that one could desire.

This is how it turned out: The crew of Night Hawk found he could not be away from the office either Friday or Saturday, and not one of four other men asked could accompany the expedition. Word was sent to the captain of the club, but he had not been heard from up to Thursday noon. The Infanta was not in commission, and the sail-maker was so far behind time that she had to remain at her moorings. Her owner, who was to be chaperone, the eleventh hour from going in the other boats. Then, finally, Mr. Scarecrow got a telegram that called him to town and his crew likewise. Thursday night everything looked blue for Mr. Night Hawk—three ladies to provide for and no one to help him. It seemed as though the long expected trip would have to be abandoned. He wandered down to the club house after dinner in a low state of mind, but was somewhat cheered when he reached there to find the captain waiting for him, ready and anxious to go on the trip, although he had the use of his left arm only, his right being in a sling and slowly recovering from a bad dislocation.

The Captain settled it. Go they would in one boat; and there was a faint hope that others would follow them later. The Night Hawk was large enough for five and all their belongings, including the camping outfit.

On Friday morning the Night Hawk was alongside the float being loaded with tents, provisions, water, extra wraps, cots, blankets and many other useless and useful articles.

The weather was perfect—bright sunshine and a gentle breeze, not enough wind to make the water uncomfortably rough, and yet strong enough to blow the little ship across the bay in three hours or less with the favoring tide.

After breakfast was made after lunch, a fond father and a devoted mother waving adieu to the little party, and unconsciously conveying to the mind of Mr. Night Hawk a full sense of the responsibility he had undertaken. Everything promised well. No one could remember anything that had been forgotten, but all knew that something had been, as is always the case on such occasions. The skipper did recollect later on, when going back was out of the question, that five cans of soup were quietly reposing in his locker at the boat house instead of being in the sail hold.

The wind soon increased in power and a reef was turned in the mainsail before reaching the main channel. Rough water was encountered running across the ship channel when clear of the point and it came on to blow harder and harder. Spray came aboard, the mast bent, the boat plunged along and rolled about uncomfortably. The skipper did not want to run even the chance of getting his fair passengers wet, and the outlook promised even worse, so he brought the boat about, eased sheets and ran back under the lee of the point.

The ladies were silent. They feared the return meant home and not camp. Not so the skipper. He had made up his mind to give them a camping experience even if the tents had to be pitched in the back yard.

"Captain, I propose we land on the beach here, put up the tents and give the girls a camp supper. What do you say?"

"All right, skipper. Then we can stay all night if the ladies agree." They all agreed with enthusiasm; the Night Hawk was run into shallow water and the anchor let go. Then the ladies were taken ashore by one in the little canoe that had been towing astern and the duffle, tents and provisions followed.

The passengers were requested to gather drift wood and build a fire and the men put up the tents, unfolded the cots, got out the blankets and cooking utensils and then set to work cooking supper.

The camp site was a suitable and pretty one, with a fine view across the bay to the west, sheltered from the strong easterly wind by a sand ridge higher than the tents, and quite out of the usual avenues of travel, although in sight of the town and the club house across the inner bay. Norton's Point is a part of Conee Island, and yet of the Conee Islands it is the least known, and the least visited, probably not over a dozen wander as far as the little camp on the Point to the northward of the inner pier. Sailboats are constantly passing the spot, people fish from rowboats anchored off shore, steamers land several times a day at the pier, but the only ones who set foot on the beach are occasional swimmers and the shore inspectors, who keep the beach clear of all refuse, except the clean drift wood that comes in with every tide. So spoke Mr. Night Hawk, and so it was arranged. The beach slopes off very gradually and at low water one can wade a long distance, thus making very safe bathing at all stages of the tide. The sand is hard, white and clean.

A good hot supper cooked over the open fire put the entire party in fine spirits, and the ladies said "no" very forcibly when the question was put to them "Shall we go home?" That settled it. The problem was solved. The camp would remain where it was. All gathered about the fire—not for warmth surely—and watched the tide go down over Staten Island. The fishing boats out for the day came sailing home past the Point. The red revolving light on the extreme point blinked regularly at the happy five seated on cushions and camp chair about the hot embers of the camp-fire, and the light of the town across the bay along shore came out one by one as darkness gradually settled over all.

"But for the fact the Invalid know where we are," exclaimed Miss Novice, "so she will not go by train to-morrow down to Cheesapeake?"

"We must send word over to-night to the other men who were to join us to-morrow," remarked the chaperone.

"And I want that canned soup in the boat house," put in the Captain, "we will relish it to-morrow."

"Isn't it fun to think that we are here in camp, right near home and no one knows it but us?" said Miss Avis, "and how surprised and amused they will all be when they do hear."

"If Miss Novice will go with me as foremast hand and the Captain will remain to guard the camp, the ladies and the contents of our precious ice box, I will sail away, notify the fellows at the boat house of our whereabouts, send word by them to anxious relatives and friends and get the soup. The trip can be made in less than an hour with this breeze." So spoke Mr. Night Hawk, and so it was arranged.

"Canoe! ahoy!" was heard by the club members gathered about the lamp half an hour later, and Night Hawk rounded the pier and came up alongside the float.

"Hello!" "Where are you from?" "Where is the rest of the party?"

"What are you doing here?" "No accident, I hope!" were a few of the exclamations hurled at the skipper even before he stepped ashore.

"Too much wind. Camp on Norton's Point. Going to stay there. Come over to-morrow. Notify the rest of the fellows. I want a jug of water and the cans of soup, that's all."

"Enough said," was the reply, "that is gay. Who thought of it? We'll be over to-morrow."

"And how do you like it, Miss Novice?"

"Oh, it is just fun. I was only afraid we would have to come home when we turned back. It is just perfect over there, and I don't believe I could stay in my sister's room."

"Is that all you need now, skipper?"

"Yes, shove us off. Don't forget to tell the Blooming Dude of our change of plan. Good night."

"Good night and good luck."

The Night Hawk slowly worked out to windward with a reefed sail, taking the big seas easily and without throwing spray on board. The camp fire, which had been a mere speck at first, grew larger and larger as the boat drew nearer, and finally the group about it could be plainly seen, with the tents for a background.

The rest of the evening was spent pleasantly in chatting and singing, and at a comparatively early hour all retired for the night behind mosquito nets under canvas roofs.

The first night in camp is seldom one of profound or restful slumber, except for old campaigners, and therefore the girls were quite ready for a morning bath at 7 when the Captain called them. It was a new sensation for them to go into the salt water before breakfast and required courage; but the exhilaration produced amply repaid them for the slight shock to their nervous systems and atoned for an hour or two's loss of sleep more or less.

While at breakfast rain began to fall and by 8 o'clock it was a regular downpour, with a strong southeasterly breeze blowing. It looked blue and the faces of the ladies took on a sad expression, and one said in a faint whisper something about home. The Captain came to the rescue, settled them comfortably in their tents, kept up a

running fire of talk, nonsense and song, taking the storm as a matter of course, something they should not miss in a camping trip, and in half an hour banished the blues effectually.

Before noon a skiff sailed up to the anchorage with the two boys on board, just returning from a ten days cruise to the eastward, and they were glad enough to come ashore and join the party, helping the Captain and Mr. Night Hawk prepare dinner.

The rain stopped, the breeze died away, and the sun shone out bright and warm before 1 o'clock. The Night Hawk was sailed over to the club house early in the afternoon for more provisions, an extra tent and fresh water. It brought back the invalid, Miss Avis's sister, the irrepressible club tenor, extra tents, blankets and camp chairs, and also word that Scarecrow was coming with her captain and crew. By supper time a goodly company had assembled, four tents were up and eleven sat down to the evening meal, after which a roaring camp-fire of drift was kept going the whole evening.

The Blooming Dude made his musical voice heard after all had retired. He had paddled over from the club, missed the camp, gone round the Point out into the ocean, and was on his way back to the club when a fishing party guided him to the camp-fire. Everybody had to come out and welcome him, which meant another hour of jokes, songs and chat around the fire.

Eating, cooking, singing, reading, sleeping and loafing comfortably under awning on the beach made up the programme for the last day of camp. Every one did as he or she pleased, talked or was silent, sailed or reclined on the sand—whatever seemed most restful and as different from every-day occupations as possible. Mr. Night Hawk kept moving, doing an odd bit of work here or straightening up something there, until his activity actually tired the other, and he was ordered to sit down, which command he failed to obey, and was promptly accused by the Tenor of having nervous pedestrianism in consequence.

Late in the afternoon the tents were rolled up and put aboard the boats, together with everything except the cushions, chairs and cooking things. A delicious supper was served at sunset and the last camp-fire started directly after it. At 9, by moonlight, the little canoes ferried the jolly party to their respective boats, sails were hoisted, and there a goodly company of a fleet of boats, happy, healthy and thoroughly satisfied party of young people, with faces burned to a rich brown, and all eager and ready to go again, though the trip had not turned out exactly as planned.

THE COOK.

**The Electra Episode.**  
CHICAGO, Ill., Sept. 5.—The yachting and canoeing editor of FOREST AND STREAM is very kind in making explanations for my being imposed upon at the W. C. A. meet by the bogus Electra canoe and her owner. Appreciating this, I still do not wish credit for a wisdom I do not possess. It is true that a much wiser man might have been imposed on under the circumstances. It should be equally wise to impose on me unquestioningly the word of the men I meet, and there I read this time never been any cause to look for ringers. Still, I wish it made plain that I would not have known Glenwood anyhow, if her name plate was off, and no one need apologize for an ignorance of which I am not ashamed.

What one must complain of is the manner and the nature of the impositions practiced. Mr. Friese told me specifically that he had the Davis Boat & Oar Co. build him the new canoe and that he gave her the name of the old Electra because he was "stuck on the name." He knew that I would credit the Davis Boat & Oar Co. with the build, and knew this after repeated conversations with me. This is the part that goes hard with me, for it is an imposition not on me alone but on the public. Say that the above firm and Mr. Ruggles build boats of exactly equal excellence, none the less each should have credit for its own work, and no others. When the imposition takes this form it becomes hard to forgive, because it has done public injustice and vitiated for the time a public record. It was known that Mr. Friese was agent for the former firm.

Yet, under these circumstances, Mr. Friese finds for his course an excuse and an apology. He owes me no apology. I can take care of myself. But he owes the public this apology and therefore to the public it must go. It should be equally wise to impose on me his letter of Oct. 24 reads as follows below. Let each reader make up his own opinion on it with such charity as he may. And then let us have no more such episodes. It was a very cheap sort of glory that was sought here. The glory of all our racing cups will be too cheap if things like this occur:

"MILWAUKEE, Aug. 24.—At the A. C. A. meet I intended disclosing that last year's 'Electra' had been built by the Davis Boat & Oar Co. You probably remember how unmercifully I was grieved at the 1892 W. C. A. meet about my canoe and poor sailing. I resolved to be 'in it' and be among the leaders, and last winter purchased Glenwood from Oxholm, of Yonkers, with whom I had a very pleasant correspondence. I kept her name dark and called her Electra, and enjoyed all the spring the criticisms aimed at her by the boys here who know all about canoes and canoeing. Hal Cook, Mercer, New York, and Oxholm and myself were the only ones who knew the truth, and I told others she was Electra, for I wanted to surprise and paralyze the fellows who had hooted at me the preceding summer, and give them the race of their lives, then go to the A. C. A. and see what the critics had to say here after they learned what canoe I had.

I did not anticipate the annoyance it might cause you, neither had I an idea that you would read it in the glowing terms in which you expressed yourself, and I apologize to you for misleading you in this matter. I felt very proud of the possession of Glenwood, for I knew she was the fastest in this country, and hoped to spur the other fellows in the club to better efforts in the racing line, which has been accomplished, as Holmes, Graw and Rogers, our best sailors, had dropped out, but are now interested more than ever before.

"Vixen writes in such a manner that readers would believe it was a scheme to hoodwink the Davis Co., whereas the new name of my prize chase until I sent her to the factory this summer before the meet to be polished and varnished. I will write FOREST AND STREAM an explanation to-morrow.—A. W. FRIESE."

E. HUGH.

**Arlington Sixth Annual.**  
ARLINGTON, N. J., Sept. 5.—The Arlington Canoe Club held their sixth annual regatta on the Passaic, in front of their boat house, near West Arlington Depot, on the morning of Labor Day, Sept. 4.

First Event.—Club fours, open canoes; won by Boggs, Stewart, Brain and Farmer, second crew being Duguid, Archibald, Douglass and Fredericks.

Second Event.—Paddling tandem, deck canoes; won by Duguid and Farmer in canoe Cricket, with Archibald and Fredericks second in canoe Ithaca.

Third Event.—Paddling, open canoes, single blades; won by Frank McLees in canoe Edna. J. T. Atwater second in canoe Snake.

Fourth Event.—Paddling, double blades, deck canoes; won by Joe Stewart in canoe Ithaca, with J. Allen second in canoe Lillian.

Fifth Event.—Paddling tandem, open canoes, was the best event of the regatta. Had five crews and was closely contested from start to finish. Was won by Duguid and Douglas in canoe Wa-ta-wah, with Fredericks and Archibald second in canoe Ianthe.

Sixth Event.—Won by Farmer in canoe Cricket with McLees second in canoe Golden Rod.

Seventh Event.—Hurry-scurry and upset, was won by Bane, with McLees second.

Eighth Event.—Swimming; was won by Bane with Room second. Among our visitors were ex-Com. Wilkin of the A. C. A., Com. Blow of Oakland, Cal., and Vice-Com. Lake of the Atlantic Division. After the regatta a luncheon was served in the club house.

**CANOE NEWS NOTES.**  
Mr. Harry Ford writes us that he is a member of the Toronto C. C., and not of the Corinthian C. C., as printed in our report of the meet.  
HARPER'S FERRY, W. Va., Sept. 7.—Messrs. Geo. N. Beall, E. Lacy Gibson and the Commodore in canoes Shenandoah, Clyde and Frankie, of the Shenandoah C. C., reached this place at 6 o'clock yesterday evening after an eventful and exciting cruise of 18 days, in which time they navigated the entire Shenandoah River from Mount Crawford to North River (16 miles above the head of the Shenandoah), and in consequence with the Potomac at this place.  
F. H. WEBB, Com.

**Rifle Range and Gallery.**  
Greenville Rifle Club.  
THE weekly gallery shoot of the Greenville Rifle Club, of Greenville, N. J., on Friday, Sept. 8, was well patronized by the regulars of the club. The honors of the night were divided between Messrs. Collins and Plaisted, each with a score of 243. Purkess, the leading man in the race for first prize in the first class, is losing his grip. He is now only 4 points ahead of the man following him, and unless he pulls himself together next week he will have to drop into second place. The scores are appended, 10 shots, possible 250, distance 25 yds.: W. C. Collins 243, G. W. Plaisted 243, C. Boag 239, Geo. Purkess 236, J. Boag 235, Capt. Robidoux 235, C. H. Chavatt 235, J. Spahn 233, James Dadds 230, John Hill 227.

## The Frankfort Tournament.

FRANKFORT, N. Y., Sept. 5.—The Frankfort Game and Fish Protection Association held its second annual tournament, which took place Labor Day, Sept. 4. The association had a reasonable expectation of a better attendance than was given them, as they had made preparation for a large number, but when the morning trains pulled in from East and West minus any shooters save W. H. Armstrong of Little Falls, the members were heard to ask each other if they had a good bank account to meet an assessment.

Shooting was begun by a sweepstakes shoot, and the first event on the programme was shot off, when the "pent up" Uticans were seen coming, in the personages of H. L. Gates, Geo. Knowlton, Dr. Kilbourn and Messrs. Scott, Brainerd and Mayhew. U. T. K. we remember you. Last but not least came the champion trap shot of central New York, which title the A. S. A. of Utica conferred on Frank Northrup, of Johnstown, at their last shoot. Frank carried off first honors of the day, after making a run of 100 straight birds.

The noon train brought J. M. Herman of the W. S. G. C. of Syracuse, also Dr. Wessels of Canajoharie, who had a business call to Utica, and on his return from Utica, when passing the club grounds, thought he heard groans coming from Bancroft, Weeks, Pegnum and Scharff in distress, so he stopped off to render professional aid to them, but the sound he heard was echo vibrating from Canajoharie, where a doctor was set about prescribing—not sugar coated pills, but lead ones for King's. The following is the score in full:

## John Watson's World's Tournament.

CHICAGO, Ill., Sept. 2.—There was erstwhile and once upon a time a great deal of talk and very little else in regard to a great big, overgrown World's Fair shoot, where solid gobbs of gold would be flying through the air, and every shooter in the land could draw a hundred at the close of any shoot. The history of this shoot is written. It is a recorded failure.

Yet there was something good in the idea of an international shoot at the trap, to be held at the World's Fair city, and the shooting public has not willingly let the idea of an international, or at least a national individual championship. It seems likely that this idea is now to have something of an adequate working out after all. This belief is fair to base upon the announcements of the programme just put out by the best known park manager in America, John Watson, of Watson's Park, Burnside, Chicago. Mr. Watson holds the dates of Oct. 2-7, offers an open tournament of exceptional attraction, "including the great World's Fair contest at 100 live pigeons to each contestant, entrance fee \$125."

## OUGHT TO DRAW.

If there is any money at all left in the country, and any "go" at all remaining in our shooters, the last announcement will bring out entries to the number, let us hope, of at least a dozen, though there should be double that number. Should there be only a dozen, the event will have a national significance not reached by any in recent times, and the winner of it will win something.

Mr. Watson, in the old-fashioned fashion, has done at a stroke what the quabbling intruders of the old World's Fair shoot could not do in a year. He has framed a unit, set a stake, made a beginning for what can be made practically an international individual championship match. Now let us hope that the rugged old Scotchman will do a little more and see to it that this championship match is one not only in name but in deed. It should be a bona fide, plucky, spirited match, fought to a finish, without a divide at any station or split in the game. The winners should win it all. The shooter who is protected by a tie draw is not shooting wholly on his nerve. Let us see who is our nerviest and best shooter in an actual match for actual money. It is long since we have had a genuine sporting event of any moment at the trap. We have had enough of

## FAKES, HIPPODROMES, DIVIDES

and fixed-quantity tournaments. Now let us have a sportsmanlike bit of sport and one shoot shot to an actual finish. If one were asked to name a man and a place which would assume this, he would naturally turn to John Watson and his well-known grounds. Perhaps we cannot even then be confident of seeing it assured, for the shooters can defeat Mr. Watson's wishes; but let us hope for the best, and look for the one thing likely to redeem the record of a year which has been singularly monotonous and dull.

John Watson announces for his tournament the American Association rules to govern (14oz. shot limit). He retains the Illinois horse-shoe boundary, perhaps because his grounds are set for that; but as to the rest, he wisely cuts loose from the absurd so-called new Illinois rules and their illusory no-handicap clause. The rise will be 3yds. for 10-gauges, 30yds. for 12-gauges, 2yds. for all bores smaller and not over 7lbs. weight.

## THE WORLD'S FAIR CONTEST

will be shot Wednesday, Oct. 4. Guns in this contest will be limited to 12-bores, weighing 8lbs., and the rise will be 30yds. to all guns, 100 live birds, entrance \$125. Highest scores to win. (Not class shooting.) Under five entries one money, five to eight entries two moneys, nine to twelve entries three moneys and over twelve entries four moneys. Note: The winner of the first money in this contest will be presented with a handsome and appropriate trophy significant of the event. In order to create a fund for the purchase of the trophy badges of admission to the park during the week of the tournament will be sold at \$1 each and the entire proceeds from the sale of these badges applied to the purchase of the trophy, and that the value of the same may not be altogether an unknown quantity the management guarantees \$100 for the purpose and all moneys secured from the sale of admission badges in excess of that amount of that amount of that amount.

This is well enough. Better yet would it be with one money, the winner to take all. Is it too much to hope for an agreement to this? E. HOGAN.

## Wyandottes at the Traps.

SOUTH BETHELEHEM, Pa., Sept. 5.—Following are the scores made at the Wyandotte Gun Club's shoot. A fine day's sport was enjoyed, and interest in trap-shooting is on the increase.

## Connecticut Trap-Shooters' League.

NEW HAVEN, Sept. 4.—The last of a series of eight league shoots was held to-day on the grounds of the New Haven Gun Club. The New Haven team won first money in the 3-man team (State championship) match, with Bristol Club and Colt Club, of Hartford, a tie for second place, Willamantic third, Moodus fourth, Ansonia fifth, New London sixth. The Bridgeport Club did not qualify in the 5 shoot. The aggregate scores of the winning teams (five best scores to count) are: New Haven 405, Hartford and Bristol 383, and Willamantic 366. The team race was won to-day by New Haven as follows:

New Haven Team.....001110111011011101110111—22  
Savage.....111111111011011111110111—26  
Longdon.....111110111011111111110111—25-73

Bristol Team.....11111100111111111110111111—26  
Mills.....111111111111111111101111—23  
Manross.....111111111111111111110111—27-76

Willamantic Team.....111111111111111111110111—23  
Webb.....111111111111111111101111—21  
Edgarton.....111111111111111111101111—23-68

Ansonia Team.....111111111111111111110111—23  
Hotchkiss.....111111111111111111110111—23  
Currie.....111111111111111111110111—20  
Sperry.....111111111111111111110111—26-68

Colt Club, Hartford.....111111111111111111110111—23  
McGinty.....111111111111111111110111—17  
Burbridge.....111111111111111111110111—30-70

New London Team.....111111111111111111110111—23  
Penrose.....111111111111111111110111—18  
"Rubin".....111111111111111111110111—18  
"C Ross".....111111111111111111110111—23-62

In the merchandise events for yearly averages the first prize was won by C. H. Burbridge, of Hartford, on a score of 73 out of 75. This was a high grade Scott gun and case (valued at \$100), which was given by the Union Metallic Cartridge Co., of Bridgeport. Frank Potter, of New Haven, scored 73 and took second prize, \$25 cash, given by E. A. Penrose, of the Standard Keystone Co., of New London. A Winchester magazine rifle was given by Frank Potter, of New Haven, to be shot for in the following conditions: Any shooter having made the highest score of consecutive shots without a miss at any League shoot during the year, to be in the tie shoot for the absolute ownership of the rifle. Those who shot in the tie to-day at 75 singles were Frank Potter, J. B. Savage and E. M. Daly, of Bristol; H. L. Edgarton, of Willamantic, and C. H. Burbridge, of Hartford. The rifle was won by Burbridge on a score of 23. C. H. Burbridge has shot at seven League shoots and won honors which any trap-shooter should feel proud of; he has made a run of 90 straight without a miss, it being the highest made in any League shoot. He has made two scores of 30 straight on the Burbridge's shoots at 7yds. hammerless 12-gauge gun; his ammunition is U. M. C. Co.'s smokeless cases, loaded with 36grs. of American E. C. smokeless powder and 14oz. No. 8 soft shot.

NUTMEG.

## Trap at Tacoma.

TACOMA, Wash., Aug. 23.—Inclosed herewith please find scores for 93 club medals of the Tacoma Rifle, Rod and Gun Club. Class A as yet undecided, Edgard and Eberhart being on a tie; straight; Garrison won in class B, Crosier in class C. Scores follow:

Class A.....111111111111111111110111—43  
Dodge.....111111111111111111111111—44-91

WARD'S NATURAL SCIENCE ESTABLISHMENT,  
ROCHESTER, N. Y.

A LONDON "predictive science" journal gravely  
affirms that the Camperdown need not have sunk the  
Victoria, had the British Admiralty consulted a skillful

Astrologer

to name an auspicious moment for the fleet to leave  
port. British professor of moonshine in y read des-  
tines of warships, but the in-rice-n asir lozer who on-  
sults the planets for auspicious moments to go shooting  
will make a bad break of it without the Game Laves in  
Brief in his outfit. The stars declare this an auspicious  
moment for all who have not that work to buy it. 5c.

## BASS IN ONEIDA LAKE.

A GOOD object lesson in protection is just now furnished by Oneida Lake in central New York, and it is Mr. Henry Loftie of Syracuse who points out the lesson.

It is but six or seven years since the bass fishing in Oneida Lake amounted to very little. It had always been a good bass water, but over-fishing and the use of nets had so reduced the supply that one might faithfully angle a whole season and yet not in all that time secure the number of fish taken in four hours on Sept. 13 by Mr. Loftie and his wife. For the last few years especial attention has been paid to the protection of Oneida Lake, and illegal fishing has been made rather an expensive pastime. Mr. Loftie and other enthusiastic anglers of Syracuse have nobly held up the arms of the State Game Protector and his subordinates, and they have made it hot for poachers. Besides this, restocking has been done in a small way, and we see the results in the splendid fishing now to be had in that beautiful lake.

Syracuse anglers are naturally desirous that this good work should be continued, feeling that all that they have said and done in the past is made good by the present condition of the waters. They hope to obtain for next season a small appropriation from the board of supervisors of the county to keep up the work of stocking and to help to pay the private protector of the local association.

No doubt the supervisors will give them this assistance, for if all be true that we hear of Oneida Lake to-day this is a real case of casting bread upon the waters and receiving it back many times multiplied in due season.

## SUNDAY ALONG THE DOCKS.

A SUNDAY stroll along the water front of a great city will interest and surprise any angler who has never before been over this ground. It will inform him of the existence of a great number of anglers of whom he has never known, and will show him how deep and how widespread among the people of the city is the love of fishing. On every dock, schooner, coal barge or tied-up steamer to which access can be had, sit the fishermen, each with his basket of bait and lunch, and managing either a rod or two or three hand lines.

There you will find all sorts and conditions of men, whose occupations are so confining that in all the week they can get only this one day off for their favorite pastime. Salesmen and clerks, mechanics and laborers, men who work at all the various trades and avocations that a great city affords, are to be seen sitting side by side, tending their lines and sharing the freshness of the early autumn air, the beauty of the river scenery, and the hopes—too seldom gratified—of a big catch. Their bait is long clams, shrimp or crabs, and they angle patiently all day long, returning home at night tired, hungry, sunburned and happy, though perhaps the basket holds only two or three little lafayette fish and a tiny striped bass or an eel. They have had their day out of doors and are better for it.

Who will grudge these hard working men their Sunday spent in the open air along the river front, one day in the seven of rest and innocent recreation?

## RAMON E. WILSON.

THE sudden death of Ramon E. Wilson, of San Francisco, Cal., was a shock to all the sportsmen of that State as well as to the business community of which he was so bright an ornament.

Mr. Wilson was one of the prominent lawyers of San Francisco, being a member of the firm of Wilson & McCutcheon, and had a wide acquaintance all up and down the coast. For many years he had been one of the leading sportsmen of California, and he had given much time and interest to all movements which had for their object the protection of game and the making popular of field sports. He was especially prominent in shooting and fishing matters, as well as in all things pertaining to the kennel. He owned high-class pointers which he ran in field trials on the coast.

Mr. Wilson had occupied many positions of prominence and responsibility in connection with sport. He was once Fish Commissioner and had only recently retired from the presidency of the Pacific Kennel Club. He was a member of the Country Club, the leading sportsman's club on the Pacific coast, which has extensive preserves near San Francisco, in Marin county, and of many other shooting clubs on the coast.

At a meeting of the Pacific Kennel Club recently held,

Mr. Briggs, the president, paid a high tribute to Mr. Wilson, and a committee was appointed to draft resolutions expressing the sorrow of the club at his untimely demise.

As a private citizen Mr. Wilson's position was exceptionally high, and he was greatly esteemed and beloved by all who knew him. His death leaves a gap in the ranks of sportsmen on the coast which will not be easily filled. He was about forty-two years old.

## SNAP SHOTS

THE game laws of New Jersey by section 12 of chapter 28 of the laws of 1893 protect insectivorous birds, and among the birds mentioned in this section as protected is the robin. We are told, however, by a gentleman in whom we have confidence that in Bergen county, New Jersey, at Fort Lee, permits to shoot small birds are issued by the local authorities as soon as the berries are ripe, \$10 being charged for the privilege of the year's shooting. It is said that robins are butchered by scores, and even by hundreds by persons holding these permits, and that such holders are protected in their shooting by the constable of the place. We do not know under what provision of law such permits may be issued by this official, and the matter appears to be one deserving investigation by the game and fish commissioners.

Arrangements have been made, we are told, for the shipment of a carload of elk from Wyoming to England. The animals are for the estate of Sir Peter Walker, and are to be furnished by W. H. Root, of Laramie, who is well known to many of our readers. It is believed that the elk will be gathered on the head of Green River, and when the shipment is ready Mr. Root will accompany it and deliver it at the park in England. As is well known, many elk have at different times been shipped to the continent, where they have done well and have freely bred with the red deer, the progeny of the two species being a magnificent animal. The results of this importation to England will be looked forward to with interest.

The remarkable success attained by the *Game Laws in Brief* shows very clearly how great is the demand for a small and handy volume which shall give in a few words the gist of the laws governing the taking of game and fish in each political division of North America. Up to the date of issue of the *Game Laws in Brief* no such small volume had ever been published. Those which purported to give abstracts of the laws were always incomplete and usually incorrect, for they were never kept up to date, the expense of making the annual changes being so great as to eat up the profits of the venture. Such a publication needs constant watching, and at the end of each legislative year a large proportion of the laws have to be changed. This requires in many cases the reprinting and rebinding of the whole work. In the recently issued edition of the *Brief* changes had to be made in the laws of more than twenty-five States and Territories. To learn of these changes required correspondence with State officials, and a copy of each new law had to be obtained, abstracted, set up in type, and printed. No doubt the attractive form of the *Brief*, with its handsome pictures of hunting and fishing scenes, and its advertisements of many of our best gun and fishing tackle houses, makes it sell more readily than the old-time form of game law publications, and it is a good thing that this is so, for the more widely our game laws are distributed and known the better they will be observed.

The meetings of sportsmen which are daily taking place at the exhibit of FOREST AND STREAM at the World's Fair are certainly very interesting, and the account of the visitors given by our Western representative in to-day's issue is well worth reading. Here beneath the big white birch sign all sorts and conditions of men from all quarters of the continent or of the globe meet on an equal footing, the footing of their love for outdoor life. This common interest gives sportsmen a common meeting ground and lovers of the gun or rod or dog or yacht are never at a loss for subjects for conversation when they come together. Not the least interesting of the visitors to the Fair during the last week, was President Woodruff of Salt Lake City, still hale and hearty and able to read and enjoy FOREST AND STREAM, notwithstanding the burden of 87 years which he carries so lightly, and in contrast to this veteran there are seen now and then in the FOREST AND STREAM space, children sent there from far away by parents who read the paper but cannot themselves come to the Fair.

## The Sportsman Tourist.

### THE MUSEUM MOOSE.

(Concluded from page 227.)

BREAKFAST over, Nuel started on his hunt for the cow moose.

When he had gone, I busied myself more particularly with the head. I was anxious if I could, to preserve the shape, and more especially the ears, as I saw them in the moonlight. I did not give such close attention to my work though, as to prevent me from looking around and noticing things more carefully than I had done. Although the night had been so cool, the day was mild, and I observed a good many yellow-rump warblers, brown creepers, ruby crown kinglets and chickadees, all around me. There were other kinds of birds, I had no doubt. I could see them flitting high up among the treetops, and occasionally the screech of a red-shouldered hawk, or the call of the bluejay would strike upon the ear. There were loons upon the lake, but they were generally silent until toward evening, while the chattering of the red squirrel was heard every few minutes during the day long. One of these lively little creatures appeared especially interested in my work.

But such a quiet day I think I never passed. I cooked and ate my dinner alone. I walked down to the point alone. I enjoyed the solitude alone, and admired the foliage in all its varieties and brilliant shades and colors alone. This was my only drawback. Oh, to have had a brother sportsman or naturalist, to admire and enjoy this fragrance and grandeur and solitude with me!

It was late in the afternoon before I saw Nuel coming. I was glad to see him, for I was beginning to feel oppressed with a sense of solitude. Then it had clouded up since dinner and there was an ominous stillness (as on our second day out) setting upon everything. Nuel's first words as he landed were, "More rain comin' me tink. You hear um loon holler soon. I mus get um blenty wood." The loons did call pretty soon—nor was it an hour after Nuel's arrival, before the glassy lake was covered with tiny wavelets.

We were snug though. There was plenty to eat, a good fire burning, and we had secured what we came for.

Hardly had we commenced our supper before he began. "Doc'or, me know where big cow moose is. Allmos' get shot at her. Too much open. She not scare do. No use fright her. She what you call um 'booty.' Fine, big, niceskin."

"Did you see her?" I inquired in pleasant surprise.

"Yes, me say me see her. Me tot she roun' here. Me have her morrow, next day. You wait um for me?"

"Yes, I will wait a week for you to get her," replied I. While at the same time I thought I would wait two, if necessary. Could it be, I asked myself, that I am to be so fortunate as to secure a pair on one expedition?

Next morning it was raining hard when I woke up, and it continued to rain off and on all day. I did not mind this, for it was Sunday. Indeed I was rather pleased than otherwise. It hindered Nuel from going after the cow moose, without any interference of mine. When he complained of the rain, and that he wanted to go for the moose, I merely said, "This is Sunday. It will do Indian good to have rest."

"You sartin, Sunday?" inquired he.

"Yes, certain, sure."

"Well, prees he say no good luck hunt um on Sunday. If fine me wan' to go do, all same. Praps better stay may be. Smoke um meat. No spoil um den."

I had given him all the moose except what we would be likely to want for our own use. This he said he would smoke for winter and eat it when he came into this region to trap.

The smoking process commenced soon after breakfast. He made his house and strung his slices between the heavy showers.

Sunday was a tedious day in camp. Had I not been able to admire the head and horns of a moose, though, it would have been far more tedious. Perhaps it was as well for me that I could not go out. The damp weather made me sensible that warmth was the best thing for my back.

It was still raining when we went to sleep. At supper Nuel had told me that he thought we were going to have cooler weather. When I asked him why he thought so, his reply was, "Saw um much bird on moose hunt. Lettle one. Berry pooty. Make um lettle noise. Very busy. Hunt um much worm. Catch um much fly."

But next morning it was fine and clear again, with a cool, bracing air. So clear was the air that one might almost have supposed that the distant hills and forests had been drawing nearer to us during the night, and every hue and shade was visible.

At breakfast Nuel commenced, "Doc'or, you no want to go wid me. Me got go berry still. Not break um stick. Not switch um bush. Not make um no noise. You see moose ne got um big ear (nodding toward the head). Hear um much quick. Hab go berry sof."

I saw that he preferred to be alone, and although I had not much to do and would feel lonely when he was gone, I said, "No, Nuel, I guess you had better go alone and I will take care of my skin."

"Yes, bes' so dis time. Woods wet. You kill um your moose. Sorry no partridge here for you hunt. Too wil'. Wan' um blackberry bush? Ole road. Stump fal' down. Grow up. Only fool partridge roun' here. On spruce tree. Kill um wid stick. Black meat. Strong. You no like um."

I understood all he meant to say. I wanted no spruce partridge, nor ruffed grouse either, while I had plenty of moose meat. And I also thought that Nuel's chances of securing the cow moose were much better if he went alone.

When he had gone I spread out my skin again and examined it carefully, cut a little more flesh off the head, and then laid it away. After that I watched the moose birds—Canada jays—that had congregated around the camp, and two red squirrels that seemed deeply interested in all my movements, and a troop of chickadees and nuthatches that came along about this time.

But by noon the hours began to hang heavily on my hands. I wanted something to do, and concluded that after I had made myself a cup of coffee I would explore a little. Before 2 o'clock I was on the point. There was very little of interest there except the wildness of the surroundings. Three loons were swimming and diving just

beyond gunshot. Then I saw a kingfisher take his strong and steady flight from one side of the lake to the other, and five bluejays, after calling for a while, then passed over. But the stillness of the place was depressing. There was nothing but lake, shore and woods all around. If a bear or a moose had walked out somewhere, or an otter had put in an appearance, or even a muskrat, there would have been something to break the solitude. But no such thing happened. I sat upon a rock and watched and thought and admired, until the sun began to decline pretty well in the west and no further signs of life appeared.

After I had grown weary of the point I took a saunter along the shore in hopes that a change of place might produce some variety. In this I was mistaken. There seemed to be the same silence everywhere—space, water, woods. When I returned to the camp it was deep in the shade. All the life that I saw about it was one of my squirrels that whisked around a tree in pretended fear, and then mounted a limb and commenced chattering at me.

At sundown I had my supper, preparing at the same time enough for Nuel, whom I expected to find when I returned to the camp. But no Nuel came. Dusk settled and no Nuel. Then the moon rose up in all her quiet splendor. She shed her light right in the camp and made the moose horns appear plainer than I saw them on the night of his death. And now the silence was complete.

There is something in the daylight that seems companionable, even when we are alone; but only solitude resides in the moonbeams. It appeared particularly so this night as I watched her rising, first through the trees on the ridge of the hill opposite, then as her edge emerged above them, then as she ascended higher and higher and finally as everything around me was bathed in light and cast in shade again.

But still no Nuel. Twice as I sat listening I thought I heard a moose call, but it did not come from the direction the Indian had taken, but rather from the place we went the first night we were out.

It was nearly 10 o'clock now. I had just risen up from under cover of the shanty to replenish the fire before going to sleep, when there came a moose call from out on the lake. This I knew at once must be the Indian's, and sure enough only a few minutes elapsed before he was with me again. There is something humanizing in a man's company, though he be not of your own race, provided he is friendly. And so I found it now. It seemed to me that I would not have been more pleased to see one of my own blood than I was to see Nuel.

He looked tired, and I had no doubt he was, and hungry, too. I had everything prepared for him, even to his tea poured out and his meat cooked. The meat, though, was drier than I would have preferred it. It was broiled when I cooked my own.

"Ugha!" said he, coming up the bank, "How you do, Doc'or. You tot me loss or sumfin happen, I s'pose. Ugha, you got um supper for me. Me glad."

With this he sat down; and I was glad, too. I think I enjoyed seeing him eat as much as he did eating. He had not eaten long before he said, "Me hab um no luck, Doc'or. Cow moose gone 'way from dat place. Gone look for dat bull you kill. No fine track. Mus' go nudder place in mornin'. Me get um yet. 'Tink me hear call from ober dare."

I told him what I thought I had heard twice, and then he said: "Sartin dat cow callin'. I look um in mornin'."

What was my astonishment the next morning, in looking out, to see everything covered with snow at least four inches deep. The hills and woods of yesterday, with their beautiful colors and dark backgrounds, were all white; and if the landscape of yesterday was monotonous, what could we say of to-day?

Nuel's first remark was (I suppose as he saw my astonishment), "Rabbit snow. All gone in hour, maybe two hour. Good for me. Track um moose. Mus' make hase."

What he wanted me to do was this: "Doc'or, me goin' 'cross where we were first night. Now me wan' you go on shore—go up through wood to barn. Look um if you see moose track goin' dat way where you kill moose. An' if you fine um, you shoot um gun two time—bang! bang! You un'erstan'? You do it?"

"I understand. I will do it."

"Snow not mel' much," he continued, "until sun come out. Den you be at camp."

This was the arrangement we made, and before the sun commenced to scatter the snow clouds that lay in the east, Nuel was off.

I went soon after he did. I saw that he was determined, if possible, to secure another moose, and I was just as anxious as he was.

Donning my thick coat, I marched out, following the course by which I had returned to camp the afternoon before. It is not necessary to say that I found the woods both cold and wet. Pick my way as I would, the snowy limbs would brush my hands, and in spite of my cap-peak my face would get some, and occasionally a dash would find its way down the back of my neck. Every leaf and twig and bough that would hold any was loaded with it.

But I found the place; and first through the hardwood belt and then through the evergreens (spruce and fir) I made my way. Not a track did I see of anything but wood mice and squirrels and rabbits. Not a fox track (no wolves where we were) nor a mink, nor a marten nor an otter. Any one might have supposed that such things were utterly unknown in that neighborhood. Before 10 o'clock I was at the camp again, and not sorry to be there either. There was a little life around this. There were my squirrels and jays, and before long the chickadees and nuthatches looked in upon me.

As Nuel had said, before noon the snow had all melted; but I had not escaped its melting, and was only too glad, after making up a good fire, to change and dry my clothes. In the morning, from the camp, I had looked out on a dreary waste of snow. Now the scene was entirely changed. There was a beautiful and peaceful lake in front, and beyond this a foliage of yellow and scarlet and brown and green, that seemed to look all the brighter in the sunlight now from the snow bath it had received. The stillness and wildness and beauty of the scene were there, but not the dreary desolation of the woods in winter.

Time wore on. I tried to occupy myself in drying my clothes, doing some extra cooking, cutting up a tree that was lying on the beach, and fixing up a little round the camp. I was engaged in this latter occupation when all at once Nuel came running up the bank. I saw he had

something pleasant to tell me, and I did not interrupt him with inquiries. "Ugha, 'Who-rie!' white man say. Me got um, Doc'or, sartin. Big cow moose. Big for cow as you's for bull."

"Have you? How glad I am."

"Me 'tink me'se glad. Blanket! clof! crowns."

"Yes, and you shall have all, and one crown more, if we get all home in safety."

"We do it. An' now we hurry. Mus' eat firs', do."

While he was eating I learned that he had killed the moose more than an hour before, and had at once set off for me. His story was: "When me saw um dead, me said, now go for Doc'or. He wan' measure skin careful, save bones. So me come. We go right 'way, w'en belly full, if you say so. We get dare fore berry dark. Make fire, sleep. Nice place for sleep, right by moose."

We were not long in making our preparations and starting off; and the sun was just leaving the treetop on the highest point around the lake when we landed on the opposite shore.

After taking the baggage out and turning the canoe over among the bushes, Nuel said: "Now, Doc'or, walk fas'. Get dare fore berry dark."

And we did walk fast so long as there was any chance to do so; but long before we reached the place where the moose was lying, I tumbled and scratched my face more than once. It seemed to me that the distance must have been a good five miles from the canoe. Just before we got there Nuel said, "Wait um minit. Where big tree? Ole limb in crotch. Spruce bush near it. Log close by. Ugha, me see um." And so we walked up near the place he indicated; sure enough, there was another moose, and it seemed to be nearly as large as the one I had killed, only without horns.

"Dat please you, Doc'or. Dat good, what you call um pessimism?"

"Yes, that is a fine one, I suppose; that is a good specimen."

We soon had a fire going, and by its light the Indian cut boughs and made a rough camp for me, while he preferred for himself to lie down on some brush with his feet, as usual, toward the fire.

By 9 o'clock the next morning the skinning was completed, and soon after 12 I was preparing my second skin for transportation. Meanwhile Nuel went for the meat, and in the afternoon of the next day all that he wanted of it was at the shanty. He was very talkative now, and told me how he had secured the animal. So far as I can recollect his account and could understand him, it was this: "You know w'en me lef' you, me wen' 'cross where we go firs' night. Walk um straight into wood may be two mile. Look up sharp for track. Happen to look down close by little clear—you call um—an' dare sartin moose track. Den me walk um careful. Me know track berry fresh. See where he bite bush. See where he step in bog. See where he knock snow off tree. Me creep um, creep um. Me stan' um still. Me look um moose sharp. Jus' come to edge of barn, little bush tree in barn, not far away. Win' blowin' from trees to me. Dare moose stan'in' eatin'. Not see me. Not know me dare. Say um prayer. Take good aim. Bang. Moose give great jump. Run berry fas'. Me 'fraid me not hit him. Go see. Blood all roun'. Berry red on snow. Sartin, me say, me get um. Follow long way, mile, two mile. Blenty blood. Not run well. Stag like drunk Inglin. Fall down on knees. Get up, only walk. Me comin' to you, me say. Go careful. Shoot again if hab to. You say not if can help. Berry good. Me ready. Look um, look um. Not see moose head. 'Tink strange. Walk um right up. You know where. Fine um like you's, stone dead."

For five days we remained at our camp. When Nuel was not smoking meat it seemed to me he was eating it. Indeed, I doubted at one time whether he would have much to smoke.

Had the weather been pleasant we would have broken camp sooner than we did. We had two days of rain after our work was completed, that kept us housed. The morning of the sixth day was pleasant. There had been a great change in the weather. It was much cooler than when we came in and a little ice had made around the edge of the lake the morning we started.

The day of our departure took us as far as the camp on the peninsula. Here my back began to trouble me again and I concluded to rest for a day. That long portage and the damp woods had nearly used me up. We had a great deal of carrying to do, with moose meat and skins and traps and canoe. Indeed, the canoe was much deeper in the water than when we set out on our expedition.

I was not sorry, then, when just at sundown we marched into our peninsula camp and Nuel said, "Now, Doc'or, you rest. Me make um fire. Keep um you warm. Take um care of eberyting."

Whether it was the Indian's care, or the rest, or the hot tea, or all of them combined, I could not tell, but I only knew that when I woke up next morning I was feeling as fresh as a lark, and concluded to start again for home at once, while the weather was so pleasant.

This day took us half-way home. The Indian ran one rapid, but not with the precious skins in his canoe. The next day he ran another. "No 'fraid," said he, "Water high. No touch um rock."

However, I preferred to land my skins again, though no harm came to the canoe.

We were at Nuel's camp before noon. By night the two skins were where I could go to work on them. Nuel came to the village with me and secured his blankets and cloth and crowns. As he left me, with his treasures in a bundle strapped on his back, he said, "Doc'or, sposum you ever wan' to go 'nudder time for calleboo, me wan' go wid you."

I promised him he should, and that I would have no one else—if I could get him.

But to conclude. The moose were set up. They are said to be a very fine pair. Hundreds have admired them; and we suppose as the race perishes from the crust hunters and a want of protection, they will be a greater curiosity in the world.

### The Cyclone at the Sea Islands.

PARIS ISLAND, S. C., Sept. 13.—The tidal wave which accompanied the cyclone on Aug. 27-28 inundated most of the Sea Islands and has probably destroyed the greater portion of the birds (quail), which were very abundant, as well as other game, and probably the deer on the outlying islands. I have heard, however, of a few small

and scattered coveys of birds, and if left unshot this fall another year will probably renew the stock.

As nearly all of the boats were lost fishing is at an end. The FOREST AND STREAM comes down here. Can't you suggest to the sportsmen of the vicinity to leave the birds alone this fall?

PISECO.

# OUR HUNTING AND FISHING TRIP.

If there are any women who read FOREST AND STREAM and have never been with their husbands on a fishing or hunting trip, they do not know what pleasures they have missed. For five years I have been my husband's companion when traveling with his gun or rod around his favorite lakes.

Last fall we started out for a two days' trip, my husband, our boy, myself and his dogs. It was one of those beautiful days early in November when it seems as though one must make the most of the few remaining pleasant days, and fairly live out of doors. The first frosts had touched the foliage, tinting it in gorgeous colors, and the birds seemed to be out for one of their last concerts.

We started Friday afternoon, intending to stay until the next evening, but on reaching our destination, Sand Lake, found everything closed for the season. We had half expected this, and so started on toward Wampler's Lake, where the woods are thick, intending to stop if possible with an aged lady who lived with her son and a niece. We knew that they lived somewhere near one of the lakes, and that if we could not get lodgings at the hotel, the season being over, we could with grandma, as we called her.

It was quite dusk when we arrived at their home, for it took us some time to locate their house. But at last, after a 17-mile drive we were there, and when we had unpacked our lunch basket and spread the contents on the table with a good cup of tea, we felt refreshed and ready to make plans for the next day, but first we gave grandma her usual gifts of new pipes and tobacco, and had the satisfaction of seeing her settle down to her long smoke.

The men planned to have an early breakfast and then start out, get some squirrels and come home in time to prepare them for dinner. Then in the afternoon they were to go out again and get enough for us to bring back home for our Sunday dinner.

The morning dawned bright and pleasant, and off they started, each man with a gun and ammunition, and the two boys carrying each a game bag, which they promised to bring back full. Jennie, the niece, and I followed, hoping to keep up and help pick up the squirrels if they fell too fast. But we soon saw that the hunters could outwalk us, and as there were already several rail fences between us, we turned back, determined to try our luck at fishing. A beautiful little lake, about half a mile across and said to be full of fish, lay directly opposite the house.

We had nothing handy in which to catch minnows for bait, so I took the old shovel and went to the garden and dug a can of worms. Then taking our light bamboo rods we went down to the lake. When we reached the boat we found that one oar was gone and the other broken. This put a check on our expectations, and we were about ready to give up and go back to the house when a trapper, who had been setting his traps for muskrats, seeing our dilemma, came to our assistance and offered us the use of his boat. We gladly accepted it, promising to leave it for him at his boat house. We asked the trapper if he would kindly tell us where we would find the best fishing and were informed that it was too late for bass, and that probably we would fish till noon and not get a bite. This was comforting.

We had gone too far to give up, however, and after rowing into deep water we anchored and baited our hooks and threw in. We were not disappointed in our hope. By noon we had thirteen large bluegills and half as many perch, all good sized, and I think we might have had as many more had we not been in a hurry to reach the house before the hunters, so as to have a fish dinner instead of squirrels.

Hurrying home I made the fire and got the potatoes and other things ready for dinner, while Jennie scaled and cleaned the fish beautifully, and after washing them and dipping them in flour we soon had them frying, and were just taking them off when the tramp of the hunters was heard outside.

We all went out, even grandma, with her pipe held securely in both hands, to see what and how many they had. Not one. They had just missed everything. On this we invited them in to a tempting dinner of mashed potatoes, cream gravy, and the handsomest platter of fish they ever sat down to. Of course they wanted to know at first "Who we bought our fish of," but we would stop them by taking the game bag and looking for the squirrels which were not in it.

Just as we had finished our dinner, we were startled by the neighbors' children crying, "Mr. Bordman, come quick, the woods are on fire." One little fellow had traveled so fast to be the first with the important news, that he could not tell it after he got there. All he could do was to point and gesticulate wildly as he gasped for breath. The men were not slow in taking shovels and hastening to the woods.

The woods being very dry, had burned a circle of a quarter of a mile or more, licking up dry grass and leaves in its course, and leaving in the center half burned trees and stumps. The men and boys succeeded in putting the fire out at the outer edge of the circle, confining it to the center, and after smothering it as much as they could, left it to the care of some farmers, who promised to watch until they returned. They then proceeded to a strip of wood bordering on the little lake, where Jennie and I had caught the fish in the morning.

This time they did not come back empty handed, for they had in a little over two hours shot and killed eight nice large squirrels. By this time the wind, which had been blowing a little all day, had become a perfect gale, and they were obliged to hasten back to the fire and work for a couple of hours, which made it too late for us to return home that night. And what with our tramp and rowing, together with all the excitement of the day, I had become too nervous and weary, and all were too tired to ride seventeen miles that night. I was very glad when we could all gather in the evening around the fire and tell of our day's sport.

And so ended our two days' sport, and the next morning we bade them good-bye and started for home, taking squirrels enough for a Sunday dinner. Mrs. H. L. W.

# "COAHOMA'S" WALKING STICK.

THE last time we had the pleasure of a call from our frequent contributor "Coahoma," who is a chief engineer in charge of a Mississippi River levee district, he told us the story of his walking stick, which he had recently cut on the site of an exciting war-time episode. The story was so interesting that afterward we wrote and asked him to write it out for the FOREST AND STREAM; and here it is:

I have not until now found time and opportunity to notice your very kind note in which you asked me to give some particulars of a little war episode I once mentioned to you. I scarcely know what I can say on such a subject that will be suitable to notice in FOREST AND STREAM, but I will briefly give the particulars.

In December of 1864, I arrived as one of Gen. Hood's army in the vicinity of Nashville, Tenn. Being a sergeant of artillery I was detached with two small Parrott guns—we had no commissioned officer available—to report to a cavalry commander on our extreme left, and took position on the bank of the Cumberland River, where we remained until Hood was defeated by Gen. Thomas. We were in this position for about ten days or two weeks and had frequent fights with Federal gunboats.

On the last day of our occupancy we had a regular duel between one of the little Parrott rifles (10pdr.) and an ironclad monitor having two heavy guns in an iron turret, the distance between us being about 200yds. The gunboat lay directly under the other Parrott, which, being on a bluff, could not bear upon her. The gun which I fought was in a small barrette work, less than 3ft. high, the ground being dug away so that the natural earth formed part of the parapet. We had the advantage over the gunboat of being about 40ft. above the water. Our plan of fighting was to train the Parrott to the gunboat's port-holes, and as soon as she opened them to thrust her heavy guns forward, our order to fire was given, when we sent our little percussion shell clattering against her turret near the edge of the port. I don't think we succeeded in sending one into the turret, but I suppose we disconcerted her gunners by the racket we made about their ears, as they never hit us. As soon as we fired, all hands went flat upon the ground until her thundering projectiles passed, or struck the bluff, when in a twinkling we were up, had our gun loaded and sighted, waiting for her ports to again open, when bang! we went at her.

These tactics were kept up for about half an hour, when the gunboat apparently got tired of it and withdrew. The only casualty on our side was a dent in the gun axle made by a fragment of shell or a large grape shot; and I don't think we hurt the gunboat, except that we knocked off some of her woodwork. We were backed by only a handful of badly scared cavalry, who had dug a ditch too deep to shoot out of, except up in the air, and lay in the bottom of it. If the commander of the gunboat had known it he could have landed his men and captured us.

Later in the day a cavalry soldier appeared on the opposite bank of the Cumberland and shouted to us to help him over, that he was one of Forrest's scouts. I sent two men on a stage plank of a captured transport (the stage plank we used as a ferryboat). The scout stripped himself and his horse, placed his clothes and saddle on the stage, and mounting his horse rode into the stream and swam across, though it was a cold, bleak day. He came over shouting, and came out as red as a boiled lobster.

While getting the scout over I received orders to move out to the pike, about a quarter of a mile from the river. Not supposing there was any need to hurry I waited for the two men to return and then moved out slowly over difficult ground. Upon reaching the pike I encountered a column of Confederate cavalry going down the pike under whip and spur, closely pursued by Federal cavalry, who were peppering them with their carbines. Looking around, I discovered that the place I had just vacated was filled with bluecoats, who had come stealthily over a hill and swooped down on an empty nest.

We joined in the stampede for a mile and a half and then took up a position on a ridge and repulsed a cavalry charge. I then learned for the first time that the two main armies had been fighting a regular engagement for two days, and that Hood was completely routed.

I was then turned loose by the cavalry commander, and wandered across country all night, not knowing where I would find myself in the morning; but struck the flank of the disorganized Confederates about sunrise, and will here drop the curtain.

On the above occasion I saw the steeples in Nashville but nothing more. Twenty-seven years after I visited Nashville for the first time, and sought the place where I had fought on the bank of the Cumberland, six miles below the city. I found that the old field where my little barrette parapets were located, had become a forest, and I succeeded in finding the place only by the aid of a gentleman, who lived in a brick house near by, who was living there, a little boy, at the time of the fighting. His father had been killed in his own yard by a Federal bullet. His mother and her children were in the cellar when a large shell went through the house, the marks of which were still visible.

I cut the two walking canes, of which I told you, on the ground where my guns had stood; one of the sticks is before me now; the other I gave to my son.

COAHOMA.

# A Wounded Woodcock.

SANDERS, Pa., Sept. 4.—*Editor Forest and Stream:* On Aug. 18, while working a brace of young setters, I shot at a woodcock which I thought dropped dead, but I was unable to find it. This A. M. (Sept. 4) I was working a setter and pointer over the same ground, when I flushed a woodcock which acted like a cripple. Following the course it took, and sending on Dan (pointer), he caught the scent and swung round, half pointed and then jumped and caught a bird which he brought in. Its left leg had been broken twice, the upper fracture had knit straight, the lower bent, causing it to walk on the side of its foot. One shot had gone through its upper mandible, and this had healed up, it had been shot in the breast which had not yet healed, but what surprised me most was the good condition of the bird.

I carried it home, and after showing to friends, gave it its liberty, hoping it would be the means of giving pleasure to another sportsman and his dog.

R. F. M.

President Cleveland caught a shark the other day. On cutting the fish open it was found to contain a carpenter, two paper collars, a petition for appointment as postmaster at Widest City, Ga., and sixteen testimonials as to fitness and character.—*Boston Transcript.*

# Natural History.

TOLD BY A BOHEMIAN.

YOU never saw a cougar in a wild state? Then you have something to see yet. I saw a couple out on Puget Sound some years ago and wouldn't have missed the experience for a good deal. Two of us were cruising in a sloop, and anchored one night in a little bay near the mouth of Hood's Canal, and while here we witnessed a battle which would put to shame the amphitheatres of ancient Rome. A sloping beach of hard white sand shone in the moonlight, running from the overhanging cedars out to the water.

It was a beautiful evening, not a ripple stirring the surface of the water, and so still that the long-drawn, wavering cries of the sea birds came down the water with that distinct but subdued effect that night and darkness lend to sound. An occasional puffing hiss, like escaping steam, came from seaward, as some hungry porpoise, bent on hunting a late supper, came to the surface for air. Or maybe a silvery gleam and a splash close by showed a salmon, which in playful mood has leaped clear of the water. We were both on deck smoking an after supper pipe and enjoying the evening as we swung at anchor after a hard day of short tacks and tedious sailing in our big salt river, against wind and tide most of the time.

Without a particle of warning the wildest, weirdest cry that it has every been my fortune to hear, rung out on the evening air, a little to the west, where a spur of hills ran almost to the water, and so close to us that it had a clear, metallic kind of a ring about it. The echoes had hardly ceased to call back before the answer came from the northward, close enough and ghostly enough in tone to send cold chills down your back.

A few moments of deathlike stillness succeeded the screeches, the sea birds stopped their calls, and even the fish seemed to have heard those blood-stopping challenges.

Soon they called again, answering back and forth, each time a little nearer the beach and nearer our anchorage. Our pipes were out and the night glass swept the dark edge of the cedar belt which marked the beach limit. The tide was on the ebb, almost turning.

A twig snapped and clear from the cedar belt bounded an immense old cougar, or mountain lion, plowing up the sand with his feet as he stopped. He was a magnificent specimen, a splendid representation of his kind as he stood there, his tawny hide gleaming in the moonlight, every muscle taut, eyes glaring and tail twitching from side to side; the very personification of animal strength and beauty. The gurgle of the incoming tide made a subdued accompaniment to the low, ominous growl of this king of American beasts.

A rustling in the cedars announces the second one. A mighty bound carries him far out on the beach, a yellow demon full of fight.

The first is a large one, but here is his counterpart. Two wild gladiators, a picked pair and each worthy his adversary.

The moment their eyes met they crouched along the sand, with muscles drawn and set with steel-like tension, feet bunched ready for an instant spring, glaring at each other like two tawny fiends, but made no move save a spasmodic jerking and twitching of the tail, exactly as you have seen the house cat do.

Ah! The time is ripe for action.

Of one accord, as though released by an electric button, they leap up and meet in mid air.

Such a sight is seldom within the province of humanity to witness.

Such furious fighting.

They rise on their hindfeet, clinch with the front ones, topple over, kicking, biting and scratching, sending the white sand flying in showers.

Now they separate, seemingly by mutual consent, and retire a short distance apart, where they lie a few moments licking their wounds and growling incessantly until one makes a false move and the other meets him half way, then they are at it again.

Scratch. Rip. Bite.

How the sand flies! It takes endurance to stand that very long.

Dark spots begin to show against the white of the sand. Those terrible kicks cut skin and flesh wherever the knife-like claws touch. The object seems to be to disembowel the adversary. They separate as before, but this time there is less growling and more licking of wounds, as several false alarms cause them to start up, muttering hoarsely as they lay their ears flat along the head, draw their bloody chops up and show the gleaming fangs, sharp and cruel as stilettos, alert and watchful for advantage, then slowly settle back uneasily on the sand, to lie full length with heads slightly raised, watching. The tail keeps up that incessant twitch, twitch, in a dogged sort of way that speaks volumes. This alternate fighting and resting is kept up for quite an hour without either gaining the advantage. Black spots show all about the beach, and when they lie down a dark mass marks the bed against the pale color of the sand.

They are losing too much blood to last long. Finally they seem to gather their remaining strength for a final effort and rush at it again.

Now one is forced back, fighting like a demon, and both go down, rolling, pitching and tumbling.

The flying sand nearly hides them; now it clears away and shows one standing with uplifted paw and open mouth over the body of the other, which lies very still. The one is comparatively strong, but the other is clearly done for. They both seem to realize this, too. Slowly the uplifted paw descends, the jaws close more, the ears rise a little and he turns away, watching back over his shoulder for signs of attack.

Very little growling is heard now, and what there is of a hoarse, guttural tone, more of pain than reckless challenge. In a little while the second one staggers to his feet, sways and falls back, only to make a second, and this time successful attempt.

No wonder he staggers.

The last round has literally disemboweled him, and the intestines drag on the sand as the poor brute, no longer a demon incarnate, tries to gain the friendly shelter of the dark forest. He is about 15 or 20 minutes dragging himself across the short strip of beach, and at last lurches out of sight among the dark shadows of the cedars.

The other lies on his side, still muttering hoarsely at

times, while ever and anon the tail gives a spasmodic twitch.

The incoming tide creeps, lapping, lapping, along the sand and forces him back a few feet, where he lies down, only to be forced on again in a little while.

The second time he stands for a few moments, licking two or three deep cuts, then slowly and painfully limps toward the timber, leaving only the torn sand and the spots in the white moonlight.

Everything is still save that soft, indescribable lapping made by the tide as it comes in, creeping along, higher and higher, covering the dark spots and washing smooth the great holes in the sand.

A light breeze from the north brings a mist athwart the water and a chill into the air, a loon's call proclaims a change of weather, and a slight jerk on the cable brings us back to common-place things as the sloop begins to look into the wind.

Ere we sailed at morning we found two bodies, torn and cold, within a hundred yards of each other, both sacrificed to the ruling ambition for mastery, mute witnesses to a grand but fearsome forest tragedy.

EL COMANCHO.

## WHAT AN ANGLER SAW.

### Editor Forest and Stream:

When a barefoot boy I used to go a-fishing after the Apostolic example. That is, I did fish, but perhaps that is the only point in which I resembled the great Apostle. For it is not written that he went barefoot with an alder pole over his shoulder, whereto was attached a stout cord furnished with a sinker that went "ker-chug" and a hook of avouched strength, whereon was impaled the writhing angle worm. With such equipment, and for want of bait-box carrying the worms in a fold at the bottom of my up-turned trousers, I used to patrol the banks and wade the bed of the creek whenever I could get consent, or in lieu thereof could escape the paternal eye.

On one such occasion a frog on the bank was acting in a strange manner and arrested my attention. He was scratching his back as well as he could and seemed to experience as much difficulty in that operation as we, the lords of creation. From my post of vantage he was watched closely, and I can truthfully say that the boyish impulse to give him a "whelt" with my pole was entirely overcome by curiosity.

He scratched and winked (I think he winked) and gaped, and at length the skin upon his back cracked lengthwise, then he clawed and scratched in a most lively and amusing way, until finally he stripped off his whole integument, much as a boy removes his jacket. In this case, however, jacket and trousers were one, and the former opened at the back instead of front, and perhaps this suggested the modern shirt. Well, he came forth shining in a new livery of green, and, with a triumphant croak, sprang into the water, doubtless to exhibit his new clothes to his fellows. This was many years ago, and in a far distant State. My head has become frosted, my limbs a little inactive and my memory treacherous, especially as to events of recent years, but I don't think I can be mistaken as to the fact that I saw a frog undress himself. Perhaps others have witnessed the batrachian toilet.

Near the bank of this same water I came suddenly upon a big water snake, which I should have soon dispatched, moved thereto by the scriptural injunction to "bruise the serpent's head," but for the peculiar actions of her snake-ship. She lay with mouth agape, and a streak of little threadlike things was going down her throat, and after all had disappeared she made for the water. Then the biblical command compelled her destruction, and the amateur autopsy revealed not less than forty little snakes concealed in her internal economy. They were somewhat larger than a knitting needle, and of course were all killed *eo instanti*.

A few years ago while camping in the Adirondacks—which, as your last issue says, is often called Adirondacks by well-informed people—a red squirrel used to come out of a hole in a big pine about the same time every morning, just while the guide was washing the dishes. She was accompanied on every occasion by a smaller squirrel, two-thirds grown, which she appeared to be educating in the matter of house building. She would descend the pine and come to a birch near me, which was amply provided with the light, loose, feathery bark so dear to the squirrel heart. She would gather a lot of this bark in a surprisingly short time, stuffing it into her mouth with her paws, and off she would scuttle for the hole in the pine, where, having deposited her store, she would quickly return for another load. All this time the little fellow was close at her heels, going up and down the trees, and watching the gathering, transportation and deposition of the bark with apparently the greatest interest, but gathering none himself.

Do you suppose the mother (or was it the father?) was really teaching the youngster? KENN E. BECK.

AUGUSTA, Me., Sept. 12.

### A California Vulture.

The following letter from Archibald Campbell to San Diego (Cal.) *Sun*, from Laguna, on the border of the desert, seems to refer to the California vulture, of which lately we are hearing more and more. The letter is dated Aug. 1, and says among other things:

"To-day as Henry E. Clark was riding near the laguna he noticed a large bird among some carrion crows, eating at a steer which had died from a rattlesnake bite. It flew up into a tree, where he shot it with a rifle, and the shot broke its thigh. It then flew away among some rocks, when he threw his riata over it and caught it, and it tried to get away and it nearly unhorsed him. He gave it another shot through the wing and disabled it. He brought it home and it measured 9 ft. 3 in. across the wings and 4 ft. 4 in. long from the beak to the end of its tail. Valentine, the captain of the Indians, says it is a female and not near so large as the males. The males have the under part snow white, while this is pretty dark. I think it is the California vulture, which approaches the condor in size and has wings even longer in proportion. Last Sunday, as a party of us were out on the high peaks overlooking the desert, three of the birds kept circling around overhead, and now and again by far the biggest of the birds would swoop down suddenly toward us and make such ugly demonstrations that the ladies got scared and we all left on that account. I think their young were in the cliffs above us and they wanted to scare us away. The biggest was whiter underneath

than the other two, and I think that it was one of the smaller birds that was shot. Mrs. Wiegner from San Diego, who was up here on a visit, skinned the bird, and on her return will take it with her and put it on exhibition at the Chamber of Commerce. They are very rare here now. Valentine says they used to be very numerous here when he was young. Two years ago we used to see a solitary vulture every now and again, but he disappeared, and now these three are to be seen near the same place. This one, I think, could have easily carried off a spotted fawn, a young calf or a baby."

In the report on the ornithology of the Death Valley expedition for 1891, Dr. A. K. Fisher reported this bird as moderately abundant in certain localities west of the Sierra Nevada in California. Dr. Palmer reported it from Frazier Mountain and near the Tejer ranch, Dr. Fisher and Mr. Bailey saw one near Walker's Basin in the San Joaquin Valley and at San Emigilio, and near there Mr. Nelson found it quite common in October. The same gentleman found it common along the coast near San Simeon and in the Santa Ynez Mountains.

It is said that not long ago a Mr. W. A. Burris killed one of these birds near Sargent's, San Benito county, California, with a charge of No. 9 shot. The specimen, which weighed 25 lbs. and measured 9 ft. in extent of wings, was preserved, and is now in the collection of the California Academy of Sciences.

### Black Tern in Connecticut.

MILFORD, Conn., Sept. 6.—During the heavy blow of Aug. 24 a large flock of birds made their appearance on the Housatonic River a mile or two above the railroad bridge of the N. Y., N. H. & H. R. R. The birds when seen were headed toward Long Island Sound, but could make no progress against the wind. A shot fired into the flock by a son of Mr. Clark Baldwin killed two of the birds, one of which came into possession of Dr. M. Grinnell, who preserved it. It proves to be a black tern (*Hydrochelidon nigra surinamensis*), a species not often taken in Connecticut, and so worth recording in *FOREST AND STREAM*.

### Winter Breeding of Birds.

THE article on the moose bird in last issue, by "J. C. R.," recalls to me my discovery of the breeding of the cross-bill. Many years ago, with Dave Haynes and Rufe Crosby for mates, the winter was passed in hunting on the Boundary Ridges, having a home camp at Little Island Pond. One day my mates felled a tree for firewood, which in falling dislodged a nest of five callow young. It was marvelous that they should hatch and thrive; yet they were plump as squabs and as warm as a new-laid egg. It was February and bitter cold. PINE TREE.

## Game Bag and Gun.

THE *FOREST AND STREAM* is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### Seven Devils.

CHICAGO, Sept. 4.—This week Mr. B. D. Wilson, of Dallas, Texas, one of the most ardent and most widely known sportsman of the Lone Star State, was brought into this office by a friend, and we spent a very pleasant hour together talking over things in general. Mr. Wilson meantime posting me up on where to take a winter shooting trip. He tells me that the quail shooting about his city is still as good as any one could ask, and he is a member of a club which owns a fine duck preserve not far from Dallas. For turkey and deer the Dallas shooters usually go into the Indian Nations, where also the chicken shooting is better. On these trips Mr. Wilson's six hunting associates, the whole being known to the public as the "Seven Devils," usually accompany him. The dunnage of this stalwart crowd is all marked "Seven Devils," and they are recognized throughout the countryside as a public and permanent institution.

It is an odd coincidence that of these Seven Devils each is a native of a different State, yet they affiliate so well that they make a unit when they travel afield. Their name was given to them by the Indians because of their going into and camping among that mysterious range of mountains in the lower Nations known as the Devil's Hills. This region the Indians firmly believe to be inhabited by spirits. There is a legend that De Soto and his party were betrayed and murdered here by the savages of long ago, and there are ruins of fortifications to lend color to the belief. From the crumbled battlements there once was hove the ancient culverines, which fell into the lake. Yet still, so say the children of the soil, there may be heard at times the boom of these sunken cannon. Fire flashes again along the lake as their dull boom shakes the air, there is the rattle of old musketry, and spirit forms direct a fight which shall never be concluded. None but devils, so think the Indians, would venture in this devil's country.

Mr. Wilson and his friends found that the night lights on the water were due to phosphorescence, and learned that the hollow sounds were made by the action of water and air beneath the earth. The river sinks into the ground and the whole region is honeycombed with caves. Given the trickling of water and the proper direction of winds blowing among the subterranean cavities, with a phosphorescent condition of the water, and the thing was done. This is a pretty story of a hunting name, for which let us thank the Indians.

Bass fishing is good near Dallas, Mr. Wilson tells me, indeed, one can be supplied with almost any line of sport if he has the entree of the land. Thoroughly acquainted with the entire big State, Mr. Wilson also told of the turkey hunting west of San Antonio and of the big game of the Big Thicket of the Sabine, and of the turkey shooting a score of miles from Beville. He would rather hunt turkey than deer he says.

Mr. Wilson has a dog, a big old pointer, which he is disposed to back against the world for an all-around hunting dog. He uses him for quail, chickens, ducks and all sorts of fowl. The dog will trail a turkey, bay a peccary or point a deer, and Mr. Wilson has killed (with

his shotgun) three mountain lions which the dog had trailed and treed. That is a good combination dog, and a time and money saver—what I call a practical dog. I will gamble you can run a wagon over him and not hurt him.

### Cowboy Law.

There was a certain firm of game dealers of Chicago who this season contracted to supply several thousand dozens of prairie chickens. The firm sent 200 shooters down into Texas and just before Mr. Wilson left for the Fair these men were reported to be shooting up in the Panhandle country. The greatest indignation was felt over this by the Texas sportsmen and it was proposed to raise a fund of \$2,000 to get rid of these gentry. Our Texas friend, who contributed to this fund, was very quiet and reticent, but I gather that the invitation to leave the State was to be tendered the shooters by a selected lot of cowboys. I never can get over my respect for the simple methods of Western justice, which gets there so easily and directly, and withal so accurately and usefully.

### The Deer of the Wilderness.

One more word, as saith the preacher, and I am done. Our Texas friend was in the army in the late unpleasantness, on the south side of the line I believe, and he has this incident of the war: "It was in the Wilderness fighting," said he, "one day when the Federal and Confederate lines were hotly and closely engaged. The two lines came up within a few hundred yards of each other, and the firing was very hot. At the thickest of it a big buck deer sprang out of the cover, about half way between the two lines. He was apparently confused by the firing and did not know which way to go, but ran this way and that, and at length stood still for a moment and then began to jump up and down as if he had gone clean daft. He jumped this way on a small space for fully ten minutes. I should think, in full sight of both lines, and finally made off to our right flank, and escaped unhurt, no one firing a shot at him. The incident was so remarkable that I often wonder if any one else who was there that day recalls it. Perhaps *FOREST AND STREAM* can find some one who saw it."

There would be harder quests than this. Why? Because, the other day, on the Frisco road down in the Indian Nations, a gray-haired gentleman accidentally got Mr. Wilson's seat on the car. They got acquainted, and it transpired that they had met before. In short, the gray-haired Northerner was the Yankee picket who swam the Rappahannock to trade coffee for tobacco with the Confederate picket on the other side, which Confederate picket was none other than Mr. Wilson, a little changed by thirty years of time. It is a small world, and Mr. Wilson will probably find some man who saw his deer in the Wilderness. But where shall I find another man out of whom I can get so many stories in an hour?

### Death of Dick.

Last year, when I was out at Great Bend, Kas., at the meet of the American Coursing Club, I had some very good quail shooting with Mr. Richard Taylor of Great Bend. We used his setter, Dick, which I mentioned at the time as being about my idea of a practical hunting dog. A recent letter from Mr. Taylor brings me unfortunate news that we shall never see the old dog again. His owner speaks of his death as follows, and from what he says one may judge for himself whether or not Dick Taylor had a big heart in him. He writes:

"Twenty miles south of here, in the sand hills, prairie chickens are plentiful, so I hear to my sorrow. Cal. Crilly came and borrowed my dear old Dick, Jr., a day or two to break a young dog, but instead took a party out with him twenty miles to the chicken grounds about the 12th of August. He says the dog fell out of the wagon which ran over him and killed him, but I do not believe a word of it. As I hear they killed sixty-five chickens I have concluded they ran my dog to death in the hot sun."

"It would have taken a lot of money to get that dog from me. You remember how he worked for you on the quail last year. It makes it harder to think that Crilly left the poor, faithful fellow on the prairie where he died. If I had had him home to give him a decent burial I would have felt better. I know you will feel grieved to hear of his death."

"There are a good many quail this year. I have seen a good many large flocks, from twelve to twenty in each. The reason that chickens are scarce is that a few fellows go out and kill them when about half grown."

Mr. Taylor's last sentence brings up a chain of thought. Poor old Dick died in the hot sun, hunting in the sand hills on Aug. 12, and hunting, therefore, illegal chickens. He knew no better, and he was game to the death, killing himself to oblige a fellow who was breaking the law, and who did know better than to do so—a fellow who wouldn't pick up and take the old dog home, after he had killed him, to his too credulous and too obliging but law-abiding master. That isn't a good enough end for so good a dog. Mr. Taylor is quite too lenient. He should run the wagon of the law over this fellow not only once but several times, and wear him out until he learns a little citizenship. Talk about breaking dogs! Who is going to write a book about breaking men?

### Few Greyhounds from the Bend.

By the way, Mr. Taylor thinks that there will be few of the greyhounds sent from Great Bend to the International meet at Huron, S. D., this fall, and he hears that the California men will be absent. Let us hope that he is mistaken. For my part, I shall join many others in missing Dick Taylor's face at the meet. No one more positive than Dick about a dog, or of sturdier or more honest character, as I think all will agree. Differences beyond this on canine creeds must go to the kennel department, the dark and bloody ground where most of the rows on a sporting paper go on. Have to have rows in the business, don'tcherknow.

### The Bend Again.

By the way again, speaking of Great Bend; I don't know whether or not the reporters will be glad that the big greyhound meeting of the year goes to another place this fall. We used to hail Mr. W. W. Carney's ranch as an oasis good for a square meal and a good time until Mr. Carney left and went to Portland, Ore. Just at this present writing Mr. Carney is here in Chicago, seeing the Fair, and we are all trying to persuade him to stay here. The hot chicken tamale grows nowhere else as it does here.

## More Coyotes.

OAKLAND, Cal.—*Mr. E. Hough:* In *FOREST AND STREAM* for July 22 you publish an inquiry from Mr. Martin L. Cummins for coyotes. A number of people in this State are engaged in raising coyotes as there is a \$5 bounty on every scalp. The two people most interested in this animal are Mr. Ambrose Bierce, of Berkeley, and Mrs. Madge Morris, of San Diego. Mr. Joaquin Miller, the poet, was also at one time interested, but when the rivalry between Mr. Bierce and Mrs. Morris developed into personal antipathy Mr. Miller quit. Yours for the advancement of coyote interests. C. E.

## Will Take a Sneak.

Mr. F. O. Cloyes, of Chicago, starts this fall for a long trip down the Mississippi River in a small boat, probably a sneakbox, and is reading up on the experience of his predecessor, Mr. Bishop, who wrote a book about that trip ("Four Months in a Sneakbox"). E. HOUGH.

909 SECURITY BUILDING, Chicago.

## WORTH THINKING ABOUT.

"But he who attempts to prove that it is cruel to kill pigeons at the trap while it is not cruel to kill quail in the field, has a task in dialectics which it would require more than average skill to accomplish."

THE foregoing is an excerpt from an editorial in the *FOREST AND STREAM* of June 23, 1893, and as a preliminary to what I have to say, may I inquire if any one can direct me to a better source of first-class texts on all subjects included in the realm of "Our Paper" than are to be found in the always sensible and admirable editorials that weekly for many, many years have been served in such enjoyable style for the delectation of the myriad readers of *FOREST AND STREAM*? Do these readers pause as they read, and reflect upon the amount of satisfaction and enjoyment and education there is in these editorials? Try it on hereafter if you haven't, O, readers, and let your gratitude trickle just a little. An expression of such once in a while would not, I am sure, offend anybody.

I do not intend to advocate either side of the question at issue, though I have some opinions on the subject. Webster defines cruelty as the infliction of unnecessary pain, or the act of causing extreme suffering without good reason. Each one will have his own definition of the words "unnecessary" and "good reason," and it may be possible that there are advocates of the claim that birds and animals do not suffer, as there were in the discussion relative to fishes, which had an inning in these columns some years since. Be that as it may, it appears to crop out between the lines now and then in editorials as well as in communications that possibly there may be cruelty in pigeon matches, as well as in quail or other shooting, and it is this idea, perhaps dim, undefined and unexpressed, that has appeared to me a good omen. I am glad to note it, if I read aright, not perhaps as promising an abandonment of sport afield and by alluring waters, but as pointing toward a modification, in a degree at least, of the desire to bring as much as possible to bag. "Hunting without a gun" is indulged in by a good many people, and no doubt enjoyed by them as keenly as labor by other people with a gun, and in the former case after the day is done there is, I can imagine, an added pleasure in the reflection that no pain, necessary or unnecessary, has been inflicted on one of God's creatures. It won't hurt any of us to remember occasionally that other forms of life suffer as well as ourselves. It might be that were all shooting stopped, the various forms of *ferre nature* would so increase that they would be a burden or menace to man, but it isn't necessary to wake up that fear this year.

Henry Ward Beecher once said: "In general I think the earlier instruction which prevailed in my boyhood was that the animal creation was made for the sport of man," and that seems to be the opinion now, exhibited, may be, unconsciously. I have no compunction in taking the life of bird, beast or fish when necessary, but when I review my life I fear sometimes there has been cause for regret, though I may not have boasted as big bags as are occasionally recorded in sportsmen's journals and elsewhere, and it is not, now that the shadows begin to follow me, a very satisfying reflection. It is not a pleasing thought that the most beautiful and innocent creation on earth is not safe from destruction by man, if so his idea of pastime is gratified. It has often seemed to me, when lying beneath some tree on a hillside, restfully enjoying a panorama of matchless beauty, invisibly labeled "not transferable," with the eye feasting the brain on lonely visions of variegated "field and fallow," wooded slope and sinuous stream, blue sky and drifting clouds, a silent symphony in charming colors wonderfully blended, that it were far better to utilize such opportunities oftener, even at the expense of a partly filled or empty bag; that the gun at my side may be out of place in such contemplation that leads from "nature up to nature's god." There may be as much pleasure and humanity in watching the dainty ways of the graceful squirrel yonder, as with sure and nimble foot he trips the topmost rail of the fence along the woodside, bound for the butternut tree just outside in the pasture, as there is in belching leaden death at him, defenseless—particularly as you have a string already dangling from your belt. It may evince just as true sportsmanship, with a couple of grouse in your pocket, to let the third strut away with its *quit, quit*, into its thicket while you watch the beauty, as to snuff its innocent life out suddenly.

The fisherman in his boat with a goodly string floating by the side, or warily walking the stream brink with creel fairly weighted, would better rest his arms and give his eye and brain a chance, or if he has never learned to control himself, begin practice now by returning to their element the extra catch. His is an opportunity not vouchsafed the shooter. Is there nothing better, nobler, more improving than than to add to an already sufficient catch? Is there no better feast for the eye than the struggling prey? Is there nothing more ennobling than to glut one's self? What is there more beautiful to contemplate, more wonderful in its graceful gliding, gleaming, mobility than the fretted surface of lake or stream, answering lovingly to the lightest kiss of the breeze and laughing to the sun with its myriad rippling lips. That element so common and unnoticed, is always, in my eyes, a marvelous exhibition of wisdom and power. And the music in it, too! Did you ever sit by the side of a babbling rapid in some little stream, whose stony bed evokes delightful murmurings, and listen to the ever changing, soothing, delicious undertone it sings, running through the gamut from bass to

treble? If not there is a revelation in store for you, and it may be as enjoyable as adding one more fish to an already sufficient string.

To kill, kill, kill, seems to be the only object and enjoyment of many otherwise mighty good fellows when they get out with a gun. Why, only a day or two ago some acquaintances of mine went out after squirrels. They shot three black and one gray, and what else? Well, seven woodchucks or groundhogs for one item, and a crow or two for another, and a lot of red squirrels for another, and mixed small deer for others. This, I suppose, they called sport, and I am sorry for it and hope they are. I went squirrel hunting once myself, and in the midst of a wood where the shadows were dense, the damp, woody odors tickled the nostrils and the sturdy trunks reared their umbrageous canopies in graceful arches, I came to the steep brink of a ravine, at the bottom of which was the half dry bed of a little stream. As I leaned against a tree watching and listening for movement of game, a big groundhog appeared on the opposite bank, and leisurely waddling down the incline paused a moment at the bottom as it nosed among some plant growth, and then I shot it, needlessly, uselessly, cruelly, and when the smoke lifted saw it writhing in pain, and trying, in agony, with broken back, to pull itself by its forelegs away from the monster who ran down the bank and beat the life out of it. And now it was mine, what could I do with it? Nothing. It was of no use whatever to me. It might have been a source of pleasure, had I quietly watched it, learning something of its habits and movements, reflecting that it had done me no harm, that the slaying could do no good, that the life I might thoughtlessly take I did not give and could not replace, and let it go in peace; but I slew it, and left it to rot, just as thousands of hunters are doing to other animal life all over the country. It is not a pleasant memory, trifling though it may seem, and by just so much mars the happiness of life; and as I suppose it was the intent of the Creator of all life, quadruped as well as bipedal, that as much genuine happiness as possible should be corraled in our existence here below, cruelty on my part works double harm. There is an abundance of shooting which comes under the head of "justifiable," without indulgence in that which is needless.

Come to think of it, how does this thing strike you, anyway? O. O. S.

## THREE DAYS AT PLYMOUTH.

BOSTON, Sept. 14.—*Editor Forest and Stream:* Mr. G. J. Brann, of Revere, and I had a very enjoyable shooting trip to Plymouth, and returned very well pleased with the amount of birds brought to bag, and a general good time. We were at the Gurnet during the big blow in the latter part of August, but did not score many that day.

Four o'clock A. M. generally found us on the beach with our decoys out, and our pockets full of cheese and doughnuts which Mrs. Burgess kindly put up for us the night before.

Our first day's shooting brought us about seventy good birds, principally ruddy plover, red-breasted snipe, ringed plover, a few pairs of blackbreasts or black-bellied, some turnstones and a few large peeps. We could have bagged lots of the tiny fellows, but the trouble of cooking them saved them in a number of cases.

The wind held southeast for the first three days of our visit, and the birds kept moving all the time, affording us constant employment. Occasionally a flock of coots would go whizzing by, but our most seductive calls and whistles had no effect on them. My friend Brann had a roseate tern come in to his decoys, landing in their midst and walking around among them just as if he were at home. He did not walk much further; they missed him at home that evening.

A pair of black ducks paid us a visit, flying over toward a creek. We saw them drop into the creek and made haste slowly in their direction. Brann had located them properly and put them up. Letting go his right barrel he missed, then pulled his left, and was pleased to see but one fly off. The bird was in rather lean condition, but was very palatable. I was not in at the feast.

We found quite a number of herons around on the flats, but were unable to obtain a shot; although we crawled on our knees through the grass for over 200ft. They are very wary fellows, and one has to lie in ambush for them while the tide is high and then trust to luck for a chance shot. I think this bird is the black-crowned night heron or squawk, though I am not sure, not getting close enough to recognize him.

Often in crossing from one beach to another we would come across a few of those hardly little plovers pecking away industriously among the hot sands, and we were always moved to sympathy by their industry and apparent loneliness, working hard for a livelihood, and perhaps trying in this out-of-the-way place to escape the deadly 10-bores which so cruelly empty destruction into their midst.

My friend Brann is an excellent wing-shot, and he never shoots unless on the wing; but I am not so skillful, and I had to shoot my best specimens when I got the chance. I am having my birds done in a group among rock scenery, and they shall always be a pleasant reminder of the trip to the Gurnet.

For our three days' shooting we had about 200 birds, as many as we wanted; we gave some to our friends, used some for our table, and gave the best to the taxidermist. We intend to go ducking soon and are anticipating a good time. On our way up from the Gurnet, and while passing Saquish, Brann shot a common tern, and instantly the victim in the water was surrounded by his companions, wheeling and circling and uttering their harsh cries; one could almost touch them with the hand. I am trying to acquire the art of taxidermy, and proceeded to skin and stuff that tern. But you ought to see him now; his own mother would not know him, his features have changed so much. J. P. W.

## The Time to Shoot Squirrels.

MARSH, Chester County, Pa., Sept. 7.—*Editor Forest and Stream:* Last year squirrels were with us, this year they are not. On Sept. 1 I hunted for the nimble grays and got none, not even seeing one. Three other gunners that I met on my tramp had none, and the largest bag I heard of for the day was six to two guns, every one that was seen.

On the second day a friend and I tried it again; we each succeeded in getting one, a good record to finish up the season with, but enough, and why? Well, first because squirrels are too scarce, and second because the mother

squirrels are heavy with young and therefore should not be murdered even if the law is out on Sept. 1.

Having shot squirrels in Pennsylvania for some years and during every season having seen squirrels killed which were too young to eat, I am now positive that our law opens at least six weeks too soon, and although the last hard winter is the probable cause of the late breeding this year, yet if this goes on, as it must for two years more at least, the time will come when the squirrel hunter of this State will hunt in vain for the game that he has cleared out by permission of the law.

Sportsmen, what have been your experiences with the squirrels? O. B.

## Trapping Bear in the Rangeleys.

ELLIOTT RICH, Postmaster at Lakeside, N. H., and keeper of Lakeside Hotel, at foot of Umbagog Lake, killed his first bear last Wednesday, Sept. 6. He set two bear traps about three miles from the lake near Monoligewak stream, and Wednesday tended them. One of them was sprung and gone, and after following about three miles he came upon the bear, and found that the clog was gone, which gave the bear a good chance with nothing but a light trap on his foot. Bruin started on a brisk canter, with Rich closely following; it was nip and tuck for about one fourth of a mile, when the bear got mad and faced about, rose upon his hindfeet and showed fight, making a squealing noise, lapping his face with his tongue and champing his teeth, at the same time jumping on his hindfeet toward the hunter, who was all too near the enraged animal for the nerves of a common man. Rich quickly brought his rifle to bear, but not without misgivings, for he well knew that should he miss fire, or only wound the beast, a deadly combat must ensue, with the odds against him, but he had not a moment to hesitate. He unhooked, down went the bear, the bullet passing through the brain and neck and lodging in the shoulder. A 400lbs. bear. J. G. RICH.

BETHEL, Maine.

## A Shooter For Sure.

ESCANABA, Mich., Sept. 11.—*Editor Forest and Stream:* I have before me a copy of *FOREST AND STREAM* of Sept. 9 and notice communication from Fort Bidwell, Cal., signed "G. H. A.," in which appears a statement as follows: "On the third day I killed two snow geese as the flock arose, and upon pacing the distance found it to be 105 steps. My gun is a 9lbs. 10-gauge, and was loaded with No. 6 shot. Pretty strong shooting, I thought it."

I most thoroughly agree with "G. H. A." that it was "pretty strong shooting," and if you will communicate with him, asking him to forward to me the name of the maker of that gun, you will be doing a kindly act toward a poor but deserving duck hunter, who has worn out numberless pairs of pants creeping up to within 55 or 60 paces of the wary mallard with a Greener hammerless No. 9, only to carry away experience in very many instances. If I can find a gun that will shoot No. 6 shot 105 paces, or about 20 rods, many of the duck stories told by me now, bearing only the semblance of truth, will have the true ring of warranted facts in future. W. W. McQ.

## Chickens on Red River.

THE *Kittson County Enterprise*, published at Hallock, Minn., the town which is named for the pioneer editor of *FOREST AND STREAM*, has ten separate paragraphs devoted to prairie chicken shooting and the crowds of sportsmen who have flocked to that region this season. Ex-Governor Merriam and President J. J. Hill, of the Great Northern Railroad, are among the score of notables who are mentioned among the rest, including clergymen, doctors and representatives of sundry railroads, many of whom came in private cars, chariots and other regal conveyances. The editor is much exercised at the wholesale slaughter of birds, which he says is terrific, and he believes it "safe to say that 1,000 chickens have been killed in Kittson county just prior to and since Sept. 1." Many farmers have posted their lands.

The same paper says that 1,750 harvesters are at present engaged in threshing out the inimitable wheat crop of the vicinity at the rate of 100,000 bushels per day.

## Beaver Dam Duck Club.

THE twelfth annual meeting of the Beaver Dam Duck Club was held Monday, Sept. 4. Dr. Robert W. Mitchell was re-elected President; W. A. Wheatley, Secretary and Treasurer; A. C. Treadwell, Vice-President; M. S. Buckingham, E. A. Edmonson and J. C. Neely, Jr., new members. There has been no change in officers of this successful duck club, *ab initio*, now in the thirteenth year of prosperous existence, on the Louisville, New Orleans and Texas Railroad, Tunica county, Miss., forty-three miles south of Memphis. The same keeper and cook, Andrew Jackson Bounds, has served the club well and faithfully eight years, and Queen Victoria's kitchen is famous there for roast duck, broiled squirrel, baked possum and sweet potatoes with sop, fatty bread, fish, fresh eggs, and often venison and wild turkey. It is another home for the members and their families.

The lake is a great resort for fowl and the feed yearly grows more plenty and with the feed the ducks.

## Shooting Prospects.

ELKTON, Md., Sept. 11.—The rail and reedbird season opened in Cecil county Sept. 5. Birds are reported more plentiful than for some years. R. E. Jamar was high boat the first morning with 60 rail; others report from 12 to 50. The prospect for quail shooting is very poor in this section this fall. E. S. G.

## Squirrel Shooting Wanted.

OSWEGO, N. Y., Sept. 12.—*Editor Forest and Stream:* Will you kindly inform me where I can get some good black and gray squirrel shooting in early October within 200 to 300 miles of Oswego? Canada asks \$25 for strangers shooting. W.

## A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the *FOREST AND STREAM* one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the *FOREST AND STREAM* during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## "FOREST AND STREAM" AT THE FAIR.

### Distinguished.

CHICAGO, Sept. 9.—The FOREST AND STREAM corner is getting to be a distinguished spot. It has as many visitors, and far heartier visitors, than any place of its size at the Fair. Being a bit *distingué* itself, it has distinguished visitors. One day last week it had two governors and a secretary of state, an Italian count and a Russian lieutenant, all close together, and all happy, as nearly as could be learned.

### Sport vs. Politics.

Gov. Wm. A. MacCorkle, of West Virginia, was pleased to find the breezy spot beneath the big birch sign, and declared himself ready to forsake all for the woods and streams. "There is more in sport than there is in politics," said he, "and I am a better fisherman than I am politician." If he will remember that his sins may be forgiven.

### Something of a Liar.

Gov. Geo. W. Peck, of Wisconsin, came in with his wife and his "Bad Boy." Another repentant politician. Gov. Peck has just joined the Lower Club on Horicon Marsh, and has for a long time been a member of Black Hawk Club, of Koshong Lake, besides doing much by way of fishing and upland shooting. In consideration of these facts, and of the further fact that he was once, and therefore always, a newspaper man, his past record may be left untouched.

"I hear you have got a champion liar, or a liar's medal, or something of the sort concealed around in here somewhere," said Gov. Peck. "Where's that Kekoskee man? Now, I tell you what I'll do. I'm something of a liar myself, and just as soon as I get through holding receptions over in the Wisconsin Building I am going to challenge for that medal. Chicago can't have the World's Fair and that medal too. We will just have a little lying match, and see who's the best man."

If Gov. Peck thinks FOREST AND STREAM isn't dead game, he's mistaken. No bluffs go here. He can get accommodated. But the terms of the contest must be altered. The Kekoskee fish story was not a fish lie, but a plain fish truth. As transmitter of that truthful narrative I hereby accept Gov. Peck's challenge, and may Providence protect the right. But he must surpass that truthful story not by any effort of the imagination, but by a plain recountal of actual facts, all of which must be supported by unquestionable evidence. It's dollars to tobacco tags on Kekoskee.

### A Friend of "Forest and Stream."

Secretary of State A. A. Lesueur, of Jefferson City, Mo., left his card with the inscription, "A friend of FOREST AND STREAM." Neither could have a better friend. That both are popular and deservedly so, is susceptible of easy proof. FOREST AND STREAM is secretary of the world of gentlemanly sport.

### Came from Europe.

Count di Frasimetto, 3 Via Palestro, Florence, Italy, wanted to get a better idea of American sport and carried away a copy of the g. p. o. e. with a pleased expression on his countenance. Count di Frasimetto was looking at the pictures before he got out of the colonnade.

Lieutenant K. L. Chirinskine, Serdobsks, Russia, of the Czar's army, also left his address, and will also duly have the opportunity of seeing what a good paper the greatest paper on earth is.

### Treated Just as Well.

It must not be supposed that these names are offered in any spirit of pride at all, or any other spirit but that of matter of course. The fact that a man has become a governor does not bar him from FOREST AND STREAM, nor is a political career laid up against any one. All these will be treated just as well as anybody else. A jock can get as good a run for his money at the sign of the FOREST AND STREAM as anybody else, and the man down on his luck can come in and sit down till he learns how to quit hating himself.

### A Friend of Nessmuk.

Mr. J. W. Mather, of Wellsboro, Pennsylvania, signs himself "A friend of Nessmuk." Mr. Mather was much with that wildwoods genius and saw the MS. of his "Woodcraft" before it was published. It was with affection that Mr. Mather, after his published writings, looked on the tiny Sairey Gamp, Nessmuk's best in memoriam.

### Redheaded.

Years ago, when we were looking forward to our last university commencement day as the end of all things, when he was in the baseball nine and I was on the football team, I used to have a redheaded, small and wicked classmate by the name of Arthur Goshorn, who was always at the rear in Latin, and at the front in devilment. The first thing Arthur Goshorn did after leaving college was to go as cook to an outfit out in Montana, and I recall the letters he wrote of the sport out there, though I never have seen him since. And now comes one and leaves at the FOREST AND STREAM desk this card: "The Winterset News, Winterset, Iowa; A. E. Goshorn, Prop." Arthur Goshorn could not get over his redheadedness or his big-heartedness if he lived a thousand years. He is fast color and good goods, and at this moment I cannot think of any one in the world I would rather have seen. A newspaper man, too. Sweet are the uses of this blessed FOREST AND STREAM corner.

### Good Company.

It is a goodly company that troops in here on almost any day, and any one of it is in good company. Especially delightful is the eagerness with which the friends of FOREST AND STREAM hail this visible and tangible sign of its presence in the midst of things. The friendship of the readers of a sportsman's paper is something unique in journalism. No other paper has such friends as FOREST AND STREAM has, such earnest, staunch and true ones, and of this FOREST AND STREAM would be most unworthy were it anything less than honestly and sincerely proud. All of these friends one cannot see or speak of, but let us see about a few more out of the bunch of cards in hand.

Mr. S. A. Tucker, of the Parker gun, is now in Chicago and will remain in charge of the Parker exhibit till the

end of the Fair, Capt. DuBray going again on the road. Mr. Tucker will meet thousands of friends here.

Mr. John W. Milam, Frankfort, Ky., maker of the Frankfort reel, dropped into a chair at FOREST AND STREAM's space, and said with a sigh of relief, "This is the most restful spot I have struck in the Fair."

Mr. Jos. W. Irwin, proprietor of the Hotel Richelieu, Little Rock, Ark. (in a mighty good sporting country, too), drifted in, and he and Mr. Carney, of Portland, and the writer drifted out together.

"Harry Hunter," of Highland Park, Ill., an occasional correspondent of earlier days, left word that he is with us.

Mr. Ivers W. Adams, of the American Net and Twine Co., Boston, added to the documentary evidence that FOREST AND STREAM is a good thing.

Mr. C. C. Jones, of Sandwich, Ill., called and said "FOREST AND STREAM is surely the leading paper in the West. The boys all talk about it more than all the others." So everywhere. If there is any man who thinks there is a better sporting paper published than FOREST AND STREAM, I would like to get his address. He will have to change his mind.

Mr. J. B. Battelle, editor of the *Business World*, Toledo, O., has come and has went, and I have not saw him. He daresen't to do it again.

Mr. W. Taylor Birch, of Washington, D. C., left his card, but was not caught in flagrante.

Mr. Harry A. Laughran, of the Ormsby Hill Gun Club, Pittsburgh, Pa., shot out before discovery, but we have his entry ticket.

Mr. St. Marc Merle Mundy, of Louisville, Ky., stops for a time on his way home from the St. Clair Flats. The last time I saw Mr. Mundy he had sprained his leg in the Mississippi mud at New Albany field trials.

Mr. Wilford Woodruff, of Salt Lake City, Utah, is 87 years old, but he is at the Fair and enjoying it. "Well!" said he, thankfully, the first thing as he came in and sat down. "Well! I have been looking for FOREST AND STREAM." FOREST AND STREAM is looking for more men like Mr. Woodruff, and can't find too many of them. May they all live long and prosper.

If you look on the FOREST AND STREAM register you will see the name of Thomas D. Noyes, Portsmouth, N. H. Mr. Noyes is not here, but at home, and he has not been here. But he sent a young lady, his niece, and told her to go to the FOREST AND STREAM place and register his name for him, and to explain that though he could not come himself, he wanted his name to be among those of the other friends of the paper.

Friends! Was ever any paper that had such friends and so many of them? It is the most beautiful and sometimes almost the most touching thing that ever was in the newspaper business. FOREST AND STREAM succeeds because it is founded on a right theory of the principles of human bodies, and hearts and minds, and because it never is unworthy of its friends. Never before this season did it ever have the opportunity for personal contact with so many of its friends, and in so short a time. Too many of them it cannot meet, and of more of them it will tell later.

909 SECURITY BUILDING, Chicago.

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### About Fishing

CHICAGO, Ill., Sept. 8.—Our fishing season is about over, not because the fish do not bite, for they are just beginning to bite their best, but because the fall does not seem to most men the natural time to fish. Especially to those anglers who love a gun as well as a rod is the fall a time to put away the latter. Yet from now on the lake country of the pine woods, the rivers of Indiana, the lower lakes of Wisconsin, such as Geneva and the Madison lakes, will improve and reach their best in warm October, when the biggest bass of the year are usually taken.

There is of late a tendency among our anglers to deprecate extremely large catches of fish, and to lean toward the more skillful and more delicate ways of taking them. The art of the fly-rod grows apace. The first step in the love of this poetic tool is to kill out the desire to catch a great lot of fish. This is to be evidenced when the angler has the courage to leave his bait-rod at home, and to depend solely on his fly-rod and flies. That is a great step, and few there be of the fishers who take it. They take both rods, and if they do not get some fish early in the day on the fly, they lose heart and go after a frog; whereas, if only they would stick patiently to the fly all day, they would catch at least some bass, and go home far happier.

It is popularly supposed that there are few bass waters about Chicago where a good catch can be made with the fly. Nothing is more of a mistake. The bass will take the fly on almost any, probably on all, of the waters in common mention hereabout, the Fox, the Kankakee, the Tippecanoe, the White, even the nearby Des Plaines, and even also the lower Wisconsin lakes, which afford most of our big-mouth fishing. Fly-fishing for bass, however, is pleasantest when one can wade, and wading water is not over-abundant.

#### A Bit of Wading Water.

Some time ago I discussed, and have perhaps mentioned, a bit of wading water which is worth the while of the fly-fisher of Chicago. Not long ago, feeling that I wanted a day out of town, I determined to have a run out to this spot, and not caring much whether I caught any fish or not, I took along no tackle except my lightest fly-rod and a book of flies.

To reach this spot, you get on the Wisconsin Central Railway, at the Grand Central Station, and go north eighty-six miles, passing through a quiet and restful stretch of farming country. You get off at Mukwonago, and heeding not the charming of any hack driver who would spirit you away to other lands, you saunter down the village

street to the big white mill you saw from the car window as you came in. Above you is the weediest, nastiest looking (and really fishiest) mill pond you ever saw. Below you, and below the mill dam which makes this pond, is a broad, shallow creek, the so-called Mukwonago River. This stream is also full of long ribbons of weeds. Its shores are the banks of rushes and flags which cover a wide marsh. The stream looks uninviting, boggy, miry, treacherous. Never mind about that. Pull on your waders (hip boots are just a bit too short) and step in. You will find the bottom to be of hard sand and gravel, quite belying the marshy look of the shores. You will find also, before you go far, that the gravel, and the crawfish, and the minnows were not there for nothing. The creek is fairly alive with small-mouth black bass, which average very large. They will not only take the fly, but do it gladly and cheerfully.

My friends had always told me that it would be impossible to kill a bass in that weedy water on a light rod, arguing that one must lift them out of the weeds. I wanted to know, you know, whether or not a fellow really could kill a good big one there on a 4oz. rod. To cut it short, I could and did, and so can anybody who knows how to wade and use a fly-rod. I caught three bass before I got below the last wire fence, and before I stopped, less than a mile from the mill, I had seven nice ones, every one a fighter. At first I got nothing over a pound, then I took a 2-pounder. Though I knew there were not so many in the creek as on my last trip there, in early July, I still wanted that big one for the little rod.

#### It Didn't Get Away.

The wind was blowing a gale, and I could hardly cast, but I picked out an open stretch of water near the bank, and let my fly blow over it. Biff! he came, and was over on the other side of the creek in the same breath. I knew I had my big one then. To my surprise, he did not foul my line in the weeds (I used only one fly) but found some way of his own of cutting around near the surface without getting tangled up. He was swift as a trout, and went everywhere at once. Of course the click reel was useless, and I worked the slack with my left hand as fast as I could. Even this would not do, and I had to use my legs as well. Following him when he ran away, running away when he broke for me, I kept him on, though he went out five times elegantly. At last he got mad or scared, and went to the bottom. As the weeds of course all pointed down stream, I took a wide circle around him, got below, and hauled him out with the grain of the stream. This puzzled him a lot, and after we had done that a few times he gave it up. This fish weighed 3lbs. 4oz., and it took eleven minutes to land him, as well as I could figure it. I have taken a good many bass this season, but remember that fight more clearly than any of them.

I had been guying Mr. Chas. F. Johnson about the gaudy make-up of his pet fly, the Johnson Fancy, and often asked him if he ever did really catch any bass on it, though he assured me it was really a good bass fly. I had just one of these flies in my book, and I used it. One could ask nothing better, though I tried no other, but quit soon after I lost my fly on another heavy strike, which I half believe was a pickeral. I took in an hour or so 7 bass on the fly, and that satisfied me, so I quit and went home, and have since apologized to Mr. Johnson.

In an earlier article I believe I have mentioned what fine fly-fishing we had on Phantom Lake, just about a mile from this same mill. It is now too late for the fly in this lake, but one could take bass on the fly in the creek even yet, though the vegetation is pretty rank at this time, and the creek bottom softer with the sinking weeds than it is in early summer. We have always found small-mouths here. So have the natives, who spear and net here unhindered. All I ask in return for publishing my discovery is that no one will go in there with a bait-rod. I want a promise that no one shall use this wading water for anything but straight fly-fishing. Then we can all have fun there.

#### A Well Merited Failure.

The dam on this little Mukwonago River is not 10ft. high, and a fishway there would not cost \$150. A fishway there would let the small-mouths up into the whole chain of waters above, where not one is now to be found. Is there any fishway? Oh, no; but the spearing and netting goes on all the time. So does the ice-fishing in the winter time. No waters are richer than these, and none is more abused.

Meantime, a local company put up a hotel on Phantom Lake, just out of the village, expending in all over \$30,000 on it. Nearly all the summer it has stood idle and deserted, eating money for its owners. It is intended to catch the trade of the city anglers and city summer people. It is a failure, and a veritable failure. No hotel ought to succeed which deliberately robs its guests in their absence, and which makes false pretenses. All winter long the village proprietors of this hotel see their future guests robbed by the ice-fishermen, who kill down the bass as fast as they can breed. No fishway on the creek, no restraint on the ice-fishers and a beastly little cent steamer to stir up the sand over the spawn on the tiny lake, and so kill the last chance the fish have to live. That's a pretty prospect for a \$30,000 investment, isn't it? It has failed, and it ought to fail, of any financial success.

And yet every one of the above causes of failure could be removed in one season, and for a cost of less than \$200. The ice-fishing could be stopped, the fishway could be put in and the useless steamer removed, and in a couple of years they would have one of the most beautiful and desirable spots about Chicago for the sportsmen or the summer folk. Will these investors have the wisdom to protect their investment? If they do not, they will only be adding to the old, old story. But I submit to them that they are behind the necessities of these days.

Sept. 9.—Mr. E. A. Kimball, a gun and tackle dealer of Tacoma, Wash., writes me as follows:

"At the beginning of the season I offered a fine bamboo rod to the person catching the largest trout, and have received a number of fine specimens, but to-day we received the boss, a 'bull trout' caught by E. V. Muller, of Hoodsport, Wash., in Lake Cushman. It weighed 8lbs., and measured 29in. long. It was taken on a No. 1 brown-hackle. Will have it mounted. Yours in F. and S."

This may be a good-sized fish for bait, but it isn't in it with the FOREST AND STREAM's World's Fair trout lent by Mr. La Rue, which is 33in. long and weighs 13lbs.

909 SECURITY BUILDING, Chicago, Ill.

E. HOUGH,

## THE VIVIPAROUS PERCH.

ONE of the most interesting fish brought from California by the U. S. Fish Commission and now living in its aquarium at the World's Fair, is a species that brings forth its young alive. This characteristic is shared in common with most sharks, stingrays, sawfish, some of the family of killifishes, the rosefish, the eel-pout and others.

The family of viviparous perches, or surf-fishes, includes about twenty species, one of which inhabits Japanese waters and the rest are found in California. All but one of the species live in the sea; the exception is the river perch of the Sacramento and San Joaquin. Common names applied to these fish are: Perch, pogey or porgee, sparada, moharra, minny and surf-fish, most of which originated in a fancied or real resemblance to other and very different species.

The geographical range of the family extends from Cretos Island to southeastern Alaska, the center of abundance being on the coast of California. The largest member of the family reaches a length of 18 in. and the smallest seldom exceeds 5 in. Nearly all are used as food, although, as a rule, the flesh is inferior in quality.

There is great variety in the colors of the various species; some are plain and others brilliant. Their food consists of sea weeds, crustaceans and small fish. In the aquarium the young and old are fed on chopped clams, which they take freely.

Concerning their reproduction Dr. Jordan writes: "Impregnation probably takes place in the fall. In January most of the species have the young half-grown as to length, and when the parent fish is caught the young readily slip out from the ovary. From January to June the fish-stalls where these fishes are sold are littered with these foetal fish. Little is known of the place of spawning, but I suppose that the young are simply extruded in the water just outside the breakers and left to shift for themselves."

\* \* \* Dr. Blake thinks that the fleshy thickening on the anal fin of the male is to give the female something to hold to with the ventral fins, and that the two sexes approach each other, ventral surfaces together, and with their heads in opposite directions."

Dr. John A. Ryder has informed me that the eggs are few in number, minute, and rather widely separated from one another in the folds of the uterus. The young are not numerous; in the species illustrated by the artist, one of the females gave birth to nine and the other to eight only. Some of the larger fish produce about twenty.

Five specimens were brought to Chicago from Monterey, June 20, and two of these spawned on July 9. Nine were born between 3 and 5:30 P. M. and on the next morning the school numbered 17. The larger female was scarcely 5 in. long. One of her young was prematurely born dead and could not be shaken off until seventeen hours after spawning begun. The mother died, probably as a result of this abnormality.

Two of the young were born at one time. The tail makes its appearance first. The female swims around the tank and occasionally makes a quick jerking movement by which the young is forced out to a distance of nearly 1 ft. The young swim at once and school together a day or two and then begin to scatter in all directions to pick up food. They are about 1½ in. long at birth and resemble the parent very closely in color and form. Their movements are quick and they have the characteristic lifting motion of the adults. The species lives in the famous sea anemone tank apart from other fishes; it is the "shiner" or "sparada" of the fishermen, the *Micrometrus aggregatus* of the books.

T. H. B.

## "Driven Out by Black Flies."

QUEBEC, Sept. 9.—Editor *Forest and Stream*: Under the above caption a letter signed "Silver Doctor" appeared in your issue of the 2d inst., complaining of the flies and scarcity of fish in the preserves of the Triton Club.

Although nothing can be easier than to write in a different strain upon these subjects, such is not my desire, which is simply to ask "Silver Doctor" to kindly declare his identity; because, upon examining the record of the visits made by the members and guests to the waters of the above club, I fail to find any which can possibly be taken as filling the description he gives of his own.

I know of only one party of three, and this not in August but in the first part of July, and as these three gentlemen, both personally and since by letter, have expressed in warm terms the gratification they derived from their visit, it is fair to presume that "Silver Doctor" cannot be one of this trio. So also, as all those who were there at the time of this reputed visit, have equally expressed their great satisfaction with their trip, I am again at a loss to see upon what data "Silver Doctor" has constructed his complaint.

It seems evident that "Silver Doctor" cannot be either a member or a guest of the Triton Club, but I should regret to think that he had either manufactured the whole thing for reasons best known to himself, or that he is a gentleman poacher, like one of those who, "with his brother," was convicted and fined before a Quebec magis-

trate for poaching upon these self-same preserves some two years ago. This conviction was made upon information laid by the present president of the club, who at that time was in sole possession of the tract in question.

WILLIAM SEATON,

Sec'y of the Triton Fish and Game Club.

## ANGLING NOTES.

## State and Supervisors' Fish Laws.

ONE of the staff of one of the leading New York newspapers has written an article which was printed in his paper two Sundays ago about "some things that hunters and fishermen will like to know." The letter is dated at Schroon Lake, N. Y., and with some excellent illustrations fills nearly a page of the newspaper. The writer of the article is a gentleman who has traveled extensively and written comprehensively, clearly and well upon many subjects, from international complications, political upheavals, manners, customs and conditions of sister republics, to notable murder trials. That such a master of the pen should devote time to writing of shooting and fishing for one of the daily papers is one of the signs of the growth of these healthful recreations, for any one who reads can see that the daily journals are devoting more and more space to fishing and field shooting, and if there was not a demand for such information it would not be given. The article I refer to is one of the best that I have read, for often this class of articles shows too plainly the 'prentice hand to be thoroughly enjoyed by sportsmen. They have a syndicate flavor or guide-book aroma that may pass current with the tyro, but are not relished by the veteran, although after all they serve a purpose. The

crops, and other matters peculiarly within their province.

## Pharaoh Lake.

One of the illustrations in this same article bears the title, "Pharaoh Lake, where the Big Trout Bite," and this is the reference to it in the text: "There is a noble mountain near Schroon—Mount Pharaoh—under the brow of which, far up in the air, and in a basin formed by the precipitous sides of the mountain, is a small, but very deep pond, where big trout are to be had in about 85 to 90 ft. of water. They are to be caught by trolling with a gang hook freighted with about half a pound of sinkers. You feel as if you were pulling a ton, anyhow, when your line is out, and when a 15 lbs. fish fastens himself on it and starts off for the cold springs at the veriest bottom, it is well enough to have a care that he doesn't carry the lucky fishermen with him."

Had the writer of the quoted paragraph been to Pharaoh Lake and fished in it, I am satisfied that he would have written something entirely different, for he then would have been able to give facts instead of patching up information that must have filtered through several hands before it got to him. This same writer says in the beginning of his article: "People who give advice are especially glib on the subject of the books one should read and the places one should visit on his summer vacation. It is odd with what assurance and carelessness these peculiarly delicate questions are handled." I assume that he means in the daily newspapers. As to Pharaoh Lake, there are no trout in it except speckled trout, and they average from ½ to ¾ lb. in weight. Four years ago "Cash" Ross, who lives in the house at the lower end of the lake in summer and until the close of the shooting season, caught a trout from the lake that weighed 5 lbs. The lake is 110 ft. deep, and it is about 1,300 ft. above sea level, or about 400 ft. higher than Schroon Lake. This is a description that I set down in my notebook one day while I was fishing in the lake: "On the northwest is Pharaoh Mountain, about 1,700 ft. Next is Bluebeard, sloping down to the lake's shore; east of north is Treadway Mountain; on the west Thunderbolt; south, Mt. Stevenson; southeast, a grand old mountain nearly as high as the others, which is known only as Big Hill." As to the fashion of fishing in Pharaoh, it was so often said that the trout would not take a fly on its surface that many people came to believe it; but they will, as Dayton Ball, of Albany, has abundantly proved during more than one spring when the fish were at the surface. Another belief was that the trout would not bite during the day, and so fires were built on the shores at night to attract the fish, and large scores were made in this way. The truth is, that the trout of Pharaoh are very like the trout of other mountain lakes. The most common way of fishing for them in summer is to bait a buoy and fish in thirty to forty feet of water with hooks baited with earth worms or pieces of sunfish such as are used to bait the buoy.

A few years ago Alec Taylor, a professional fisherman of Bolton, on Lake George, went to Pharaoh and trolled a gang after the manner practiced in Lake George for lake trout. There was, however, this difference. Very fine tackle was used, and a small sinker was put on to sink the gang from 10 to 25 ft. below the surface. Except brook trout there are no fish in the lake but sunfish, suckers, bullheads and minnows. The trout when first taken are the most beautiful in coloring that I know. When I first went to Pharaoh I was told that it was useless to fish before 7 o'clock in the morning in summer, but I went out at daylight and had good fishing, by which I mean that I caught as good trout, and as many, as during the day. I was at this lake two years ago, and two days before I arrived there had been a terrible storm. Cassius A. Ross or "Cash" Ross, for short, was sitting inside his door during the height of the storm, when a panther suddenly appeared in the clearing before his door, near his calf pen. The animal with two or three leaps disappeared back of the house before Ross could get a rifle from the rack. Pharaoh Lake is one of the comparatively near-by places, where there is good trout fishing and deer shooting, that the city sportsman overlooks to go further into the woods. It is reached by the D. & H. C. Co.'s railway to Saratoga, and from there by the Adirondack railway to Riverside station. Stage to Chestertown and private team to Pharaoh by the way of Brant Lake. One can leave Albany in the morning and reach the lake in the afternoon.

A. N. CHENEY.

## Worms for Montana Trout.

ONE of the best known residents of Cinnabar, Montana, is old Mr. Smith, a most enthusiastic fisherman. The soil of the region is very dry and alkaline and contains no earth worms.

Mr. Smith had a theory that the old fashioned worm would prove a killing bait for the red-throated trout of the country, and he asked Mr. G. H. Lambson to bring him a jar of worms from the East on one of his trips with the Fish Commission car.

In August, 1890, Mr. Lambson was able to comply with the angler's request and the worms were safely landed at Cinnabar. The bait proved all that was expected of it and great was the delight of Mr. Smith.

T. H. B.

THE VIVIPAROUS PERCH (*Micrometrus aggregatus*).

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

NEW ORLEANS, La., Sept. 11.—Yesterday at the Rod, Reel and Gun Club, Rigolettes Station, 30 miles east of New Orleans, Mr. Chas. F. Frink and Mr. John Ross caught 80 green trout (large-mouth black bass) in the ditch along the railroad. Major Wagstaff and Dr. Jowers in another boat caught 60 green trout and a large number of perch. Mr. John Rawlins and Dr. J. A. Sampsell, fishing in deep salt water at the same place caught 60 large sheephead, a weight of over 200lbs. Some of the sheephead were full of roe. Incidents—A voracious sheephead took both baits of the two latter gentlemen; either hook would have held it. A snood carried away early in the morning was found in the mouth of a catfish caught in the afternoon. Another snood lost on a piece of spilling was accidentally brought up several hours afterward. J. A. C.

KIPEWA LAKES, Province of Quebec, Canada.—August.—Passed 15 days in canoeing about these lakes, a wild region not much visited except by lumbermen, which can be reached from Mattawa, C. P. R. Fishing for pike (1 to 6½ lbs.) with troll excellent, by same method some pickerel and chub will be taken. At foot of Big Pine Shoot took as many game pickerel as we wanted with flies. Signs of big game, that is moose and bear, plentiful and a very likely country for ruffed grouse. Complete outfit can be obtained at Mattawa. C. B.

MUSTASSINI RIVER, Lake St. John, Canada.—September.—Fair sport was had with ouananiche at foot of fifth fall, but we could do nothing with flies. Got our fish by trolling with small troll, and with pork below fall and at the foot of same. The journey to this spot takes two days by canoe. Too many tourists are visiting and fishing these waters to permit of the sport remaining good. C. B.

BELLEVILLE, Ont., Sept. 12.—Duck shooting has been better than usual. Bass fishing has been rather indifferent, but a party of three caught a nice lot of forty-two on a recent afternoon. The three best ones weighed 8½ lbs. R. S. B.

### Weekly Fly Cast of the Chicago Club.

THE fourteenth weekly contest of the Chicago Fly-Casting Club came off at the World's Fair grounds in front of the Walton House to-day, Saturday, Sept. 9. There was a smaller attendance than usual, smaller, in fact, than at any previous contest of the club. The first and most important event, long distance and accuracy combined, was won by J. E. Isgrigg, of Montgomery Ward & Co., with a total of 88%, making the fifth time he has won the medal this season. Following him in order came Babcock, Wilkinson and Johnson. Isgrigg used a Leonard rod, the others using Kosmics. The long distance medal was won by Wilkinson with a score of 80ft., Isgrigg and Johnson tying for second place. Wilkinson also used a Leonard rod. The bait-casting contest was declared off owing to the fact that but two bait-casters were in attendance. Mr. J. E. Strong was time-keeper and B. W. Goodsell judged both events.

At a meeting of the tournament committee of the club held Saturday, the matter of closing the entries on Sept. 16, in the World's Tournament, was fully discussed and it was wisely decided to keep the entries open until the time of starting each contest, this was done at the solicitation of a number of Eastern gentlemen who expected to be in attendance, but could not, so far ahead as the 12th or 13th fully determine as to their coming, therefore it was decided to allow entries on the grounds, which has always been the custom at tournaments. E. HOUGH.

### Michigan Trout and Grayling.

BROOK trout are plentiful and large in Cedar Run, at Lake Ann, about 148 miles north of Muskegon. A barber named Decker, catches many fine brook trout in White River, near White Cloud. Grayling are abundant and of excellent quality in Bear Creek.

One of the best trout streams in Michigan is Kinney Creek, now owned and preserved by the Flint and Pere Marquette R.R. The club house is near Wingleton, which is three miles west of Baldwin. From Oct 6 to 8 last year, Mr. Frank Clark and Mr. G. H. Lambson of the U. S. Fish Commission, with Mr. Bache and two other persons fished this stream by permission. Although they fished only part of the time, they caught nearly 700 brook trout and took 415 fine, large, beautifully colored trout on the car to the Northville station.

In the Au Sable this season, a great many beautiful grayling were obtained for the aquarium at the World's Fair, and with them a splendid lot of brook and rainbow trout. Few streams can show such a combination. T. H. B.

### Pretty Good Place.

HUNTSVILLE, O., Sept. 13.—*Editor Forest and Stream:* Fishing is excellent at Indian Lake at present, and the reports that the severe winter and break in bank of reservoir had depopulated the lake were without foundation. Ring perch and sunfish are being caught and hauled away by the bagful by farmers and others for miles around. Black bass are biting minnows, frogs and flies, and some very fine strings are being taken. Dr. Wm. H. Kelley and Mr. Joseph C. Fennell, of Covington, Ky., caught 98 in four days, averaging fully 2½ lbs., and fishing from one boat. Some 5-pounders were among their catch. Their string the last day was 35. Dr. C. S. Mathews and Mr. Al Reber, of Upper Sandusky, O., caught 51 bass yesterday, using a "bucktail" for lure. This is the largest catch thus far this season. Dr. Mathews holds the record with 73 bass in one day last year, but he says the fish are larger this year. E. P. R.

### What Protection Has Done.

SYRACUSE, N. Y., Sept. 14.—*Editor Forest and Stream:* I send you a box of small-mouth black bass taken from Oneida Lake yesterday, this being part of fifty bass taken by Mrs. Henry Loftie and myself between 2 and 6 P. M. We lost only four and threw back six that were under size. We used crabs for bait, for the fish would not take flies. Twenty-five weighed 49lbs. Many catches have been made of from fifteen to forty-seven in a day's fishing. I am expecting many more catches better than

this. I have taken more large bass on Oneida Lake this season than I have done for the past fifteen years. I have taken during the last four weeks fifty that would weigh from 3 to 4½ lbs. each, all of the small-mouth bass. Five years ago it was impossible to get a good catch of fish; this shows the good work of protection. All anglers should feel very grateful to Supt. Pond and his lieutenants for the work done on this lake. If this good work is continued Oneida Lake will excel any water in New York State for angling. HENRY LOFTIE.

[The box of fish was received in good order, and when opened its contents made a fine show.]

### The Fish Run in Washington.

A WHITE RIVER farmer brought into Seattle a 400lbs. sturgeon which he killed with a spear in that stream. The fish was over 7ft. long, and is probably the largest ever caught in White River.

Salmon have been running up the rivers and streams in the vicinity of Port Angeles in enormous numbers during the last few weeks. In one haul of his net on the river Elisha S. Goodwin caught 3,000 large salmon. It took a team of horses and eight men to drag them out of the water, and it took nine trips of a large farm wagon to carry them away.

The smelt are now running, and there is no excuse for any one being hungry at New Whatcom. The other day on the beach below Uncle John Bennett's place the unusual sight was presented of men fishing with garden rakes and with their hands. The smelt were so thick that they were almost crowded up on the sandy beach and were easily pulled out with rakes or anything else. About a dozen men and boys were after them. It only took a very short time to put about 1,000lbs. on dry land.

### Trout in California.

NORTH ONTARIO, Cal.—The trout fishing in the San Antonio and Cucamonga streams has not been as good as usual and there is a movement on foot to stock both with several varieties from the State hatchery, the success of which will depend largely on the efforts of Messrs. Frankish and Stamm. I.

### Where to Go.

ANYBODY desiring information with regard to the hotels advertised in FOREST AND STREAM, such as rates, routes, fishing and hunting opportunities, should address FOREST AND STREAM Information Bureau, where all reasonable inquiries will receive prompt answers.

## The Last Series of Cheap-Rate Excursions to the World's Fair via the Pennsylvania Railroad.

ADDITIONAL DATES FOR THE POPULAR EXPOSITION TRIPS.

As the period of the existence of the World's Columbian Exposition draws to a close, the demand grows stronger for the economical and satisfactory means of reaching Chicago provided heretofore by the Pennsylvania Railroad Company. Recognizing the urgency of this popular need, that company has fixed a few additional dates on which excursions of the same character as the previous ones will be run. September 19th, 23d, 25th, October 2d, 11th, 17th and 21st are the days selected from New York, Philadelphia, and points east of Pittsburgh and Erie and north of York.

The special trains will be composed of the standard coaches for which the Pennsylvania Railroad Company is noted, and the arrival in Chicago at an early hour the following afternoon obviously gives ample opportunity for the securing of accommodations at that place. The trains leave New York 9:00 A. M., Jersey City 9:13, Newark 9:25 Elizabeth 9:32, New Brunswick 9:53, Trenton 10:23, Philadelphia 11:30, Frazer 12:09 P. M., Downingtown 12:22, Parkersburg 12:41, Coatesville 1:02, Lancaster 1:25, Conewago 1:57, Harrisburg 3:00 P. M., Lewistown Junction 4:30, Tyrone 6:00, Altoona 7:00, and Pittsburg 10:40 P. M. The excursion rate, good only on the special train and valid for return within 10 days, is \$30 from New York, \$18.25 from Philadelphia, and proportionately low from other stations. Return portions of tickets are good for ten days.

These trains will be run on fast schedule, and will be provided with all modern conveniences with the exception of Pullman cars.

Many expressions of complete satisfaction have been made by people who have availed themselves of this excellent opportunity of visiting the greatest and grandest exhibition the world has ever seen.—Adv.

### A City Hall Eagle.

A QUEER, long-legged bird alighted on the roof of the City Hall at 3 o'clock yesterday afternoon and made an ornithological show of itself. The show was well attended by a crowd of several hundred persons.

"He's a woodchuck," declared one learned ornithologist from the Fort Ward.

"Naw, he ain't," retorted his companion, "You mean a woodcock; but he ain't. He's a South Carolina thrush blown here by de cyclone."

"You fellows are all wrong," said a politician just returned from Saratoga. "That's the eagle bird. I've seen his picture."

"When Marty Keese quits pulling the string and yanks in that stuffed parrot I s'pose you will clear these walks," called out Park Policeman Tommy Thompson.

The crowd did disperse when one of Janitor Keese's assistants tried to capture the bird and it spread its broad wings, tucked its long legs under its tail, and, with its long, sharp beak pointed toward Seacucus, took its flight over the new Postal Telegraph building.

The bird was neither a heron nor a crane, but was of the family of the waders.—New York Sun.

### The "Sunol" of Railroads.

The New York Central is the "Sunol" of railroads; 145 miles in 131 minutes was its last record-breaking feat. Whew! If you want to "get there" go by the New York Central—that's sound advice for World's Fair visitors—for by that line you will get there more speedily, more comfortably, more safely and more luxuriously than by any other.—Drygoods Chronicle.—Adv.

Forest and Stream's  
exhibit at the World's Fair will be  
found in the Angling Pavilion of  
the Fisheries Building. You and  
your friends are invited to visit us.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Sept. 19 to 22.—Mount Holly, N. J. H. I. Budd, Sec'y. Entries close Sept. 11.

Sept. 19 to 22.—Rhode Island State Fair Ass'n at Narragansett Park Cranston, R. I. D. C. Collins, Sec'y. Entries close Sept. 4.

Sept. 26 to 29.—Ottawa, Canada. Alfred Geddes, Sec'y.

Oct. 3 to 6.—Minneapolis K. C., at Minneapolis. H. T. Van Duster, Sec. Nov. 21 to 24.—New Jersey K. L., at Newark. Dr. W. F. Seidler, Sec. Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

#### FIELD TRIALS.

Oct. 20.—National Beagle Club trials, at Nanuet, N. Y. Geo. Lalch Tarrytown, N. Y., Secretary.

Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.

Nov. 7.—New England Beagle Club trials. W. S. Clark, Linde Mass., Secretary.

Nov. 7.—International Field Trial Club's Fourth Trials, Chatham Ont. W. B. Wells, Sec'y, Chatham.

Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lelling, Sec'y.

Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. M. Brumby, Sec'y, Marietta, Ga.

Feb. 19.—International Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

## THE MANITOBA FIELD TRIALS.

A GOODLY number of sportsmen assembled in the two hotels at Souris, one owned by Mr. J. H. Brown, the other by J. B. Roberts, both alike in the fondness for field sports.

The start was made on Tuesday morning, Sept. 12. Mr. W. Tallman judged alone. Owing to missing connections he was too late in Winnipeg to catch the morning train to Souris; he therefore went to Brandon and drove the twenty-seven miles across country, arriving at Souris about 3 o'clock in the morning.

The grounds were parched, the weather was hot and dry and chickens were not quite plentiful enough for field trial purposes.

Souris is 158 miles southwest of Winnipeg. It is difficult of access if one is hurried, as there are but three passenger train each way per week.

The sportsmen were most genial and enthusiastic. They had originally planned to camp out and entertain visitors at their guests, but the plan was abandoned. Everything was done to make the visit pleasant to all. On Tuesday and Wednesday evenings dinners were given to the club members and visitors, which were most enjoyable.

The trials were followed by an orderly crowd of spectators. On the second day about twenty carriages followed the running. Two or three ladies graced the event with their presence part of the time.

### The Derby.

#### TUESDAY.

The start was made not very far from the northern outskirts of the town. The cool morning hours had passed, hence the work of the forenoon was not under the most favorable conditions for the best display of well sustained pace and range. A mild dry wind blew steadily all the forenoon. In the afternoon it was stiffer and steadier.

There were birds enough for a fairly good test, gentle, in dolent birds, easy to work on, until toward night, then they were a bit wild. When flushed, they displayed no alarm. Their flights were short and with no motive of seeking concealment. No easier opportunities could be afforded dogs to make good scores, so far as tame birds on open ground could contribute to them. The weather was hot and close. Frequent watering of the dogs was necessary.

Owing to the delayed arrival of the judge, the drawing did not take place till this morning. There were thirteen starters as follows:

J. Simoneau's orange and white setter bitch Maud a Ros (Bruce—Frost), owner, handler,

against  
Avent & Thayer Kennels' black, white and tan dog Rod B (Rodgerio—Topsy Avent), J. M. Avent, handler.

W. T. Ellis's liver and white setter bitch Zuleika (Duke o Manitoba—Cora), owner, handler,

against  
F. W. Smith's liver and white pointer bitch Spotted Bell (Spotted Boy—Bow Bells), W. Pickering, handler.

L. W. Smith's black, white and tan setter dog Duke o Veragua (Rodgerio—Fannette), owner, handler,

against  
F. W. Scott's black and white setter dog Bob Wilson (Dad Wilson—Lurline Lady), W. Pickering, handler.

Avent & Thayer Kennels' black, white and tan dog Solitaire (Roi d'Or—Tory Diamond), J. M. Avent, handler,

against  
W. T. Ellis's black, white and tan setter dog Hoodoo (Duke o Manitoba—Cora), owner, handler.

Avent & Thayer Kennels' black, white and tan setter dog Tate (Jean Val Jean—Mamie Avent), J. M. Avent, handler,

against  
E. McKenney's black and tan ticked setter dog Jingo (Duke o Manitoba—Cora), John Wootton, handler.

R. Adams's liver and white and ticked pointer dog Virder Prince (Ightfield Upton—Patsy Bang), absent,

against  
Avent & Thayer's black, white and tan setter bitch Thalié (Jean Val Jean—Lucy Avent), J. M. Avent, handler.

Roberts & Young's liver and white pointer bitch Molitor May (Saddleback—Molton Broom), a bye. Charles Young handler.

MAUD A ROSE AND TOPY ROD were cast off at 8:46. Rod took the lead at once in wide range and high speed. His range was too wide betimes, a quarter of a mile or more away and sometimes out of sight in the distance. Rose started a bit slow but as the heat progressed she improved in her range. She ran weakly, as was to be expected from a bitch thin in flesh and vitality weakened from maternal care the previous month. Rod made a point; nothing found. Rose refused to back. Rod, a quarter of a mile away, made a firm point, then moved on and resumed his ranging. At the same time Rose, in the grass, roared and located a bevy which she pointed well. It was a good find for her. The birds went but a short distance in the open prairie. Rod pointed one and Rose backed. Both were steady to shot. Rod excusably flushed a single bird. The heat ended at 9:22. Rose kept diligently at work though her stride was weak. She showed good judgment. Rod was fast and a very wide ranger. He ran without much reference to working to his handler's orders.

ZULEIKA AND SPOTTED BELLE were started at 9:32. Soon after starting an irate owner ordered the party off his farm and his orders were obeyed. Zuleika pointed by a bunch of willows and a single bird flushed wild from the opposite side.

Belle did not honor the point with a back, which was excusable since Zuleika on the point was wagging her tail. On the scattered birds Zuleika pointed and Belle went by and flushed, then flushed another bird; this after again refusing to back. Belle next roared to a point and was steady to shot. Both were narrow rangers and in locating they were lacking in quickness. Each showed fatigue at the close of the heat, which ended at 10:02. The morning was then warm and very dry.

DUKE OF VERAGUA AND BOB WILSON started at 10:10. Bob awkwardly flushed a bevy, then moving on flushed some remaining birds. He then appeared to be apprehensive, and came in to his trainer, who had some friendly trouble in getting him to resume work. Duke was the better ranger, he heating out his ground more regularly, sustained his speed more uniformly and had more confidence. The dogs became so warm that they were disinclined to work. The work on birds was inferior.

SOLITAIRE AND HOODOO began at 10:50. On a bevy marked down by spectators, a bird was flushed excusably. Hoodoo seemed a bit over-cautious. He roared to a point, and Solitaire, going in ahead, took up the roading a few yards and pointed the bird. Sent on. Hoodoo pointed a bevy and was steady to shot. The birds flew but a short distance. A vent got Solitaire to them first. Solitaire roared awkwardly, and the birds flushed, either wild or by being pressed too closely. It was directly up wind, and was a poor piece of work. Up at 11:21. Except a wide, irregular fling or two early in the heat, both were narrow rangers.

TATE AND JINGO were started at 11:44, and ran about four minutes. The party then returned to town to lunch.

The heat was resumed at 4:07. A stiff, steady wind blew all the afternoon from the south. There was an intense warmth and dryness in the atmosphere. The dogs became overheated after a few minutes' work. Tate going across wind near the edge of stubble made three excusable flushes. On the scattered birds he made a good point and was steady to shot. After flushing a single, he pointed the remaining birds which flushed wild. He showed a wide and good range, much better than Jingo's. The latter was diligent, but irregular in pace and range, and, though there were many opportunities, he had no success in finding. Up at 4:27.

MOLTON MAY AND THALID ran next, Verdon Prince not having arrived. May soon flushed some outlying birds of a bevy. Thalid passed the birds close enough to catch scent, but failed to do so. The rest of the heat was a succession of flushes. May seemed to feel a constraint in her work on birds. Tate got two good points. On a bird which May saw running on the ground, she led Tate off in a merry chase. Up at 5:05, with range and speed largely in Tate's favor. May showed a great deal of possible merit if properly trained. She needs some birds killed over her, and less repression.

The judge announced that Maud & Rose, Duke of Veragua, Topsey Rod, Hoodoo, Solitaire, Tate, Jingo and Thalid would run again.

MAUD & ROSE AND DUKE OF VERAGUA began at 5:31. Before any birds were found both dogs had a sharp chase after a jack rabbit, Rose being most persistent in her efforts to catch it till she was unsighted, and in trying to hit off the trail afterward. She worked with less interest and seemed fatigued when the heat was resumed. Down 24m.

TOPSEY ROD AND HOODOO began the heat of the day at 5:59. Rod took wide casts and sought with judgment, yet he could not be guided at all in his ranging by hand or whistle. He took a long cast and pointed by the edge of stubble, holding his points staunchly while the bevy ran away in plain sight on the short stubble. Hoodoo backed. Rod held his point perfectly staunch till his handler went up, flushed and shot. Both dogs steady. On the opposite side of the stubble Rod made another good point on two or three remaining birds, Hoodoo backing well. Up at 6:10.

SOLITAIRE AND TATE started at 6:12. All the work was done on a stubble where birds were in abundance, but they were somewhat wild. Solitaire had flushed once and Tate twice, when a large bevy or small pack was marked down in a hollow. Tate was taken up and Solitaire started on alone. He flushed a single, then roared on carefully and pointed with precision, yet lacking in quickness. Tate was much the better worker. Up at 6:20.

JINGO AND THALID were next given a 28m. run, beginning at 6:30. Thalid pointed two birds nicely and was steady to shot. Jingo was drawing continually, birds or no birds. A single bird lighted near him which he saw and pointed. Thalid backed. Both were steady to shot. Thalid had much the better of the heat in every particular.

TATE AND THALID were run 6m. without finding and the day's running then ended.

### WEDNESDAY.

A light rain fell in the early morning hours. The sky was overcast till midday, when the weather cleared up, all signs of rain disappeared, and the afternoon was again hot and unfavorable for prolonged exertion. A still, dry wind blew all day. The birds were irregularly distributed, which sometimes made long searches without finding and sometimes too many birds when a find was made. Some of the finds were small packs, others were bevy's. The quality of the work was inferior taken in its entirety. There was much of it sloppy, particularly the point work. A start was made three or four miles from town.

TATE AND THALID resumed their unfinished heat at 8:25. Both took wide casts, fully an eighth of a mile to right and left. Tate the wider and better ranger. Tate flushed. Down 18m.

HOODOO AND TATE started at 8:46. Hoodoo across wind flushed two birds. Tate pointed a bird in the edge of a thicket and was steady to shot. Hoodoo next pointed as a single flushed. Tate again pointed a bird in the edge of a thicket. He next took a long cast and pointed a bevy in a hollow, locating it well and pointing it before it flushed wild. Up at 9:00. Hoodoo showed a bit of overcaution in roading.

THALID AND HOODOO began the last heat of the Derby at 9:05. Hoodoo pointed a bevy, Thalid joining in point. Hoodoo flushed into birds. They were down 21m.

Topsey Rod ran with great dash. His range was wide and his speed fast and uniform. He was stylish in action and on point. He did not beat out his ground badly, though he did it to suit himself, he paying but little heed to whistles or signals. He showed good bird sense.

Tate's work was good and ordinary mixed. He went with dash and spirit. His range was wide and conducted with judgment.

Thalid and Hoodoo divided third, the latter belonging to Mr. W. F. Ellis, of Manitoba, Man. The other three winners belong to Avent & Thayer Kennels. Thalid showed good speed and range, but her work on birds was meagre and inferior.

Hoodoo showed good range, speed and bird sense, a good nose, but some overcaution betimes in using it.

The judge then announced the winners as follows: First, Topsey Rod; second, Tate; third, Thalid and Hoodoo. First prize, \$160; 2d, \$115; 3d, \$75.

### The All-Age Stake.

There were 17 starters in this stake. The competition began immediately after the conclusion of the Derby. Owing to the absence of Dow, it was understood by consent of the handlers, that the brace in which he was drawn, would be run later out of the regular order. When the stake was begun, it was found that several braces of it had been left in town. The running in the first series was thoroughly disarranged in consequence. The braces were run regardless of the order of drawing.

The work in this stake on Tuesday was in respect to point

work quite inferior, save that of two or three dogs. The grounds were very dry. The conditions so far as birds were concerned were unequal, some sections being barren while other sections had too many.

The winners of the All-Age Stake are all owned by the Avent & Thayer Kennels. Count Gladstone, winner of first, had improved greatly in reliability and obedience since last December, when he ran at Lexington, N. C. He is a wide, fast ranger, displays good bird sense and finds well. He puts intelligence in his work. On point he drops, which mars his style. He won his honors easily.

Chevalier, second, was fast and a wide ranger, but he lowered the quality of his work by pointing on false scents betimes, or at least pointing where no birds could be found. Still he showed good capabilities.

Bettie S., third, ran a creditable race. She did not beat out her ground as carefully as some of the others, but she had good speed and ranged wide. Mr. Avent's winnings in this trial amounted to \$763.50.

Following is the order of drawing:

J. H. Brown's black and white setter dog Rush (Cable-Della), owner, handler, against

W. F. Ellis's black, white and tan setter dog Hoodoo (Duke of Manitoba—Cora), owner, handler.

Avent & Thayer Kennels' black, white and tan setter dog Chevalier (Jean Val Jean—Lucy Avent), J. M. Avent, handler, against

J. H. Brown's black, white and tan setter bitch Vesta (Cable—Della), owner, handler.

W. T. Barrett's liver and white pointer dog Don (Royal—Lion), absent, against

John Kane's liver and white pointer bitch Diana (Ightfield Dick—Cleop), J. S. Carter, handler.

J. H. Rose's black and white setter dog Ranger, W. Pickering, handler, against

Avent & Thayer Kennels' black, white and tan setter dog Lochinvar (Chance—Bessie Avent), J. M. Avent, handler.

Avent & Thayer Kennels' black, white and tan setter bitch Bettie S. (Roderigo—Bo-Peep), J. M. Avent, handler, against

Roberts & Young's red Irish setter dog Zero (Rover—Rose), C. Young, handler.

L. W. Smith's black, white and tan setter bitch Atalanta (Jean Val Jean—Shena Van), owner, handler, against

John Wootton's black, white and tan setter Dick Bondhu II. (Dick Bondhu—Manitoba Belle), owner, handler.

T. T. Ashford's black and white pointer dog Kent Elgin (King of Kent—Vera Bang), J. M. Avent, handler, against

Tom Montgomery's liver and white pointer bitch Ightfield Bunt, J. Simoneau, handler.

John Kane's liver and white pointer bitch Ightfield Blossom (Ightfield Dick—Bloom), J. S. Carter, handler, against

J. B. Roberts's lemon and white setter dog Joe (Cable—Fan), C. Young, handler.

Avent & Thayer Kennels' black, white and tan setter dog Count Gladstone IV. (Count Noble—Ruby's Girl), a bye, M. Avent, handler.

### The Running.

CHEVALIER AND VESTA began work at 9:40. The former made a point about 200yds away on a ridge, then began roading up wind. He drew and pointed alternately about 200yds. Vesta refused to back. It seemed as if Chevalier had taken the back track up wind, but a cast down wind failed to find birds. Chevalier seemed disposed to point on false scents sometimes. He made a good point on a bevy. He was much the faster and wider ranger. Vesta was fat and slow in speed Up at 10:13.

Don was absent, therefore the next brace was called.

RANGER AND LOCHINVAR at 10:24 began their heat. Ranger made a good find and point on a bevy, which flushed wild. Sent on both roaded quite a distance down wind, pointing every few yards. Ranger flushed a bevy as he roaded down wind and was a bit unsteady. Up at 10:57. Both ranged well, Ranger a trifle the better.

KENT ELGIN AND IGTFIELD BUNT were started at 11:17. The former showed far away the better qualities of speed, range and accuracy in work on birds. He has an easy, speedy stride, does not potter, ranges wide and is searching for birds all the time. Up at 12:00.

Lunch was eaten in the field. All the dogs were ready to start after lunch, they having been brought out from town in the intervening time since starting. The sun was so hot that the dogs were permitted to rest during the hottest hours.

RUSH AND HOODOO were cast off at 3:21, the latter being permitted to run out of the regular order of drawing in consequence of having been run in the morning in the Derby, and therefore in fairness deserving a rest. Some birds were found near scrubs. Hoodoo got two or three points. Rush refused to back. He also flushed twice. Neither ranged wide. Rush was ordered up at 3:46, and Hoodoo was run alone three minutes when he was ordered up.

BETTIE S. AND ZERO started at 3:57. Zero stopped twice to singles as they flushed. After running 21m. they were ordered up to be put down again, they having sought diligently without finding, the heat being great and distressing to the dogs.

ATALANTA AND DICK BONDHU II. were cast off at 4:25. Dick ran far below the good form which he exhibited at Morris the previous week. There were numerous opportunities to secure good points during the heat, both dogs failing to take advantage of them fully. Atalanta made a good point on a bevy and previously had made some doubtful work on birds in thickets.

IGTFIELD BLOSSOM AND JOE were cast off at 5:10. Both dogs did some sloppy work on birds. Joe made three points. Blossom got a point on a bevy in a thicket. Both ranged well. Up at 5:49.

IGTFIELD DIANA AND COUNT GLADSTONE were started at 6:05. Count ranged wider and faster than any dog yet started. The pointer soon shortened her speed and appeared much oppressed by the heat. Count ran strong and with endurance notwithstanding the hot weather. He pointed a bevy well and was steady to shot. Ordered to retrieve he attempted to obey and the bird flew away in a crippled manner. Count attempted to catch it but stopped to order after going about 100yds. Sent on again Count pointed a bevy which flushed wild. D flushed one and made two points on single birds. Count got two more good points. Up at 6:36.

ZERO AND BETTIE S. were cast off at 6:46 to complete their unfinished heat. Each made two good points on singles, after which they did some rather indecisive work on birds. Each dropped to point and Zero had little animation in his way of working. Up at 7:07 and the day's work ended.

In the Amateur Stake there were eight starters, and Zero won first, Joe second and Zenlika third.

B. WATERS.

We are pleased to acknowledge receipt of admission ticket to the Mount Holly show. This courtesy is noteworthy, for we find that most secretaries of fairs and shows are very derelict in this respect.

### TORONTO DOG SHOW.

ANOTHER Toronto show has come and gone. While the gathering of dogmen and their dogs was not quite as interesting or numerous as in former years, still it was sufficiently so to prove that, like unto that of New York to dogmen of the States, is the Toronto event to those of the Dominion. Held in conjunction with the Industrial Exhibition, it is without doubt the most interesting event of the year to those who show dogs. Dog shows, as a rule, in this country are uninteresting affairs, after the judging is over, to the average dogman. But at Toronto it is different. The exhibition of live stock taken all round is without doubt the finest held on this continent, and the many other attractions, some of them quite elaborate, such as the fireworks, the storming of Tel-El-Kebir, the "Little Barnum" performance in front of the grand stand, afford opportunities for the visitor to amuse himself throughout the week. As at the New York show, the Toronto show week is the one chosen for annual meetings of the C. K. C. and the Fox-Terrier Club, thus affording excuses for annual "roundups," of which the Canadian dogmen are not slow to avail themselves.

The show this year was not up to former years in point of numbers, nor yet did we find the quality in many of the breeds on a par with that of '92. Mastiffs and St. Bernards show no improvement, rather a falling off, and Canadian breeders must exert themselves a little more and improve their present stock by importation if they wish to make much headway. Greyhounds also showed a falling off in quality and numbers. Mr. Purbeck's team alone proving more than mediocre. Deerhounds and wolfhounds were not represented at all. Great Danes I thought showed a slight general improvement, though there was not a Melac or an Imperator, as in former years. Still, the Wolverton Kennels showed some good ones. Pointers fell off in entries, but the character of the exhibit was about the same, to Mr. Davey again falling the principal honors. English setters were about the same, but Irish setters showed a distinct falling off, both in numbers and quality from last year, when Seminoles Kennels' rival, the Oak Grove, also exhibited their full strength, but this year showed but two, one in each challenge class, thus allowing the Seminoles a bloodless victory. Gordon setters were neither better nor worse, and collies were not, on the whole, up to the form of previous years, neither in numbers or quality. Bulldogs had but two entries and those only mediocre. Bull-terriers, while falling off in numbers a little, showed a good deal of quality, thanks to Mr. Higginson's exhibit, which kennel took the place held by Frank Dole in former years. The rough terrier classes I think showed improvement in general quality, especially the Scotch terriers, Mr. Henry Brooks showing that his breeding operations of the past year have not been for naught. In Dandies Mr. E. Brooks held, as of yore, the winning hand. Black and tan terriers show a sad falling off in quality, Sultan being the only worthy representative of this handsome terrier present. Poodles improve in numbers, but are sadly off in quality. The spaniel exhibit on the whole was not up to former years, there being much diversity of type, but competition was more open. Beagles fell off in numbers, and had it not been for the Hornell-Harmony exhibit the classes would have been almost bare of quality. Fox-terriers, while advancing in numbers, did not show a corresponding improvement in good looks, with perhaps an exception in favor of wires, thanks to recent importations by Mr. A. A. Macdonald and Mr. A. D. Stewart. Yorkshires were extremely poor compared to former years, when Messrs. Smith, Symonds and John Campbell used to show. The pug classes were very poorly filled, and with the exception of Bob Ivy, Midget and Royal Dusky, showed very little merit. Toy spaniels are not improving, competition being left entirely to the old local winners.

Though we have not been able to award unmeasured praise to the quality of dogs present, it is a duty and a pleasure to call attention to the vast improvement in the management of the show. This compared most favorably with any of our best shows. Last year we and others strongly criticised this part of the show and pointed out the remedy, which Mr. Stone this year put into effect, by taking the reins of government into his own hands.

Perhaps he got a wrinkle or two in New York last spring; who cares? All the dogmen knew and cared about was that the aisles were swept regularly and dirty bedding removed. The building, one of the finest for the purpose in the country, is naturally well ventilated, but unless disinfected the atmosphere in the most airy show building will become foul. This essential part of the show was attended to by the agent for Jeye's disinfectant, a well known preparation on the other side, but which we have never seen used in this country before. It seems a good thing. The rings were particularly well attended to and attendants were abundant. The benching and stalls Mr. Stone had well whitewashed and "carbolicized" some days before the show opened. Another objectionable feature of last year's show was also done away with; there were no puppies or bitches with litters allowed in the building, a most commendable improvement. The feeding was good and in the hands of an old Englishman who seemed to know his business and prepared Spratts biscuits in a most acceptable manner. In fact, this time Mr. Stone deserves congratulation, and he was ably assisted in his efforts by his son and Mr. Wilkie and J. G. Mitchener, members of the committee, and Dr. Mole. Messrs. Donovan and Williams and W. P. Frazer also lent efficient aid as stewards in the rings.

The attendance, excepting the first day, which is called "Citizen's Day," was scarcely up to former years, still there was always a good crowd present in the afternoons. Judging commenced about 2:30 P. M. on Monday, and Messrs. Davidson, Krueger and Wilmerding had completed their duties by Tuesday afternoon, but Mr. Mason did not finish his work until Wednesday evening. There was a good deal of complaint on this score. The dogs were ready, but, as usual, Mr. Mason consulted his own convenience, not commencing on Tuesday till after 12 M. Exhibitors like to get the agony over in good time and not be kept on the *qui vive* for nearly three days.

The catalogue was a great improvement on last year's attempt, though it should have been a little more carefully edited, several typographical errors occurring, and the numbers in the pet dog classes getting a little mixed. Judging was in four rings, Messrs. Mason and Davidson in the main rings down stairs and Messrs. Wilmerding and Krueger in the two gallery rings, and on the whole was well done.

MASTIFFS (Mr. Mason, Judge).—These classes were poor, the only really good one being Lady Coleus, whose warts, some of them bleeding, do not add to her appearance, and she was not in the best of coat. Ethel has lost all her old corpulency and is now in light marching order. Cardinal Beaufort's absence in the open dog class (8) left the verdict in favor of Grimsby Caution, a familiar face at these shows; he is small, skul and bone best parts. Raleigh, second, a son of the winner, is also small, light of bone, light full eye, head small but well shaped. Lord Grimsby has a fiddle head, poor pasterns and feet, while Baron of Chester, fourth, should have more substance throughout, one ear curls in a most peculiar manner and he is a bit straight behind. The others were only poor. Attraction was the only winner and entry in bitches, and the puppies shown should never make winners. Mr. Forbes won the kennel prize.

ST. BERNARDS (Mr. Mason, Judge).—There were only about three in the show that could claim a second glance in passing. No challenge entries. In open dogs (8), Lord Dante won with a little in hand from Lord Wilton, whom he excels in depth and massiveness of head, muzzle especially, though skull should have more volume, has a nice eye and

expression, should be better in feet and have more rib; Lord Wilton is rather long faced, nice expression, good bone and front, but was not in show condition either in coat or flesh. Captain Worts, third, is a brindle headed one, light in body and with little to commend but his coat. Dauntless, fourth, turns his open toes out, a better skull than muzzle, good bone, nice coat, though in body it is all white. Safety, reserve, has brindle markings, a nice all round little dog if muzzle were deeper and stop not quite so pronounced, should have been higher up. In bitches (2), the winner proved to be Maypole, whose front is a study, her body fair, but out of coat and her head is long and snipy, ear and eye good; second prize was withheld. The puppies were of no account.

Smooths had no challenge representatives, but in open dogs were introduced to the new crack St. Augustine, whom we were sorry to see make his debut in such light condition. He should not have been shown. A dog that has a reputation should be more than careful to appear to the best advantage when he makes his debut in a new country. He is a capital colored dog with an excellent type of head, especially muzzle, the skull being somewhat narrow proportionately; he has great depth through the head and perfect marking; if he was shaded a little more he would be vastly improved. His legs are good but feet could be a little truer set, but he moves well, his body is dark, but as he will carry 20 lbs. more flesh little can be said in this connection at present, he will be shown at New York and then he will probably be in good shape. Second was withheld from Roscoe and Senator, two poor ones; Roscoe's coat may by some be said to be a little long for a smooth, but we found little fault here. Glenwood Goldy, first in bitches, has little type and is small. When I say that Captain Worts won in novice dogs (8), the character of the others may be inferred, and Maypole won in the corresponding class. Kennel prize did not fill.

There were no bloodhounds.

**NEWFOUNDLANDS (Mr. Mason, Judge).**—Only two of these turned up, and Rover was a cheap dog at catalogue price, \$75. He beat Carlo, that should have won at Lexington, handsly in size, bone and especially in massiveness of head; coat good and right in texture, hocks and tail a bit faulty, but a better sort than we generally see at shows.

**GREAT DANES (Mr. Mason, Judge).**—The Wolverton Kennels deserved the credit in these classes. Minerva's Fawn, Ottawa's heroine, was alone in challenge class; she looked in tiptop shape. Open dogs saw Lord Wolverton, a nice up-standing dog, an easy first; he should have more arch of loin and toes should be closer, but he has a good head and neck, ribs well formed, good behind and an active mover. Senta's Brutus, from the same kennel, is a very likely pup, with a well-shaped head for his age. Royal Minor, third, is bowed in front, straight behind, should be cleaner in neck, is nicely ribbed, but muzzle should be deeper. Fourth went to Royal Major, flat-faced and snipy, good bone, but not such good type as the winner.

The winning bitch, Senta, is a very good one, as her picture shows, excellent head, clean neck, good legs and feet, capital body and an active mover; when shown in the East she will be found a hard one to beat, as she is not at all of the heavy sort, but a most symmetrically built bitch; she showed her bag badly, having just weaned a litter. Norimburga, second, we thought was the one shown under that name at Lexington, Ky., but Mr. Davison, of the Bay City Kennels, says she has not been out of his charge for three weeks, and though entered at Lexington did not go there. Then what bitch was shown in her stall at the Kentucky show? Norimburga is cheeky, dips behind the shoulder a little, but stands on good legs and feet. Ruth, third, is a coarse, common bitch, not deserving recognition. Melina, fourth, is a better sort, though snipy. Lenta's Brutus won in dog pups, and a most promising bitch, Senta's Mascotte, did the same in her class; if all signs do not fail she will push her dam Senta very hard when she matures. Senta's Rheda, second, loses to her in head and body. Wolverton Kennels took the special for best kennel and Mount Royal Kennels that for best Canadian kennel.

**RUSSIAN WOLFHOUSES (Mr. Mason, Judge).**—There was no representative of this breed, Mr. Hanks sending the only entries, but they failed to put in an appearance. In deer-hounds also there were no entries.

**GREYHOUNDS (Mr. Mason, Judge).**—Gem of the Season and Bestwood Daisy supplied the challenge winners, both looked well, though Gem seems to be going off a bit. Open dogs (7) showed little quality when Cheeky, the Leamington winner, came out first over Misterton, who, like the winner, is heavy in shoulders and a little long cast; Ranger, third, might, with no impropriety, have been placed first, as he beats the winner in shoulders, body and feet, though he also has faults such as short neck and not bend enough of stifle; Never Quit, reserve, is rather shelly, flat in loins, but good behind; Johnny Stringer, v.h.c., I would like better were he longer in neck and not so thick, and his set on of stern and quarters are not correct; Master Mennon is a narrow one throughout, but shows some quality; Lord Northcroft has big drop ears and is an undeveloped youngster yet. In bitches there was somewhat of an upset. Wild Rose, who was never considered more than passably good, having put on flesh, has covered some of her most serious defects, and shown in excellent shape, was placed over Southern Beauty, who was drawn a little fine and was a bit bare on quarters. Condition was said to be the cause of defeat, but if the judge allows this to throw a good dog out in one class he should be consistent and carry the same idea out in all his breeds. This was not done by any means, and gave rise to much grumbling. Wild Rose loses to Beauty in depth of rib, neck, stifle and shoulders, skull, eye and muzzle, straightness of bone, but has better pasterns and feet. Bridget, third, is flat in loin, long cast and heavy in shoulders, nice head. Ermine should be closer in toes, is faulty in quarters, but loin good. Flyaway is a nicely modeled one; should be stronger in pasterns and have more rib; nice loin and quarters, too fine in muzzle, one that Dr. Van Hummel would turn from in disgust. Lord Northcroft won in dog pups and Neversettle in bitches, a young one, but straighter in front and better feet than second, Pee-dee-kee, good in every part but there. Mr. Purbeck took the open kennel prize and Toronto Kennels that for Canadians.

**FOXHOUNDS (Mr. Krueger, Judge).**—They have got these dogs all mixed up here. The dogs shown as English hounds were, many of them, more like American hounds, and with one exception the American hounds (?) are pure English and bred from English stock, and they show it in their character and heavy build. The winner in English dogs was Spartan, whose weak hocks should throw him out for first, but his well-shaped head, expression and fair front deserve recognition. Bounce is a niceish hound with fair front and so has Sportsman, Jr. Rush, the only and winning bitch, is not true in front, hocks turn in a bit and stifle should be more bent. In American class for dogs the Lexington winner Commodore won; this was all right as far as it goes, but if he was best the others should have been turned out without anything, as they were purely English in type and build. Commodore is not a good hound by any means, and his lack of rib was plainer here. Clinker has an excellent front, a much better body than winner, but not so good in skull and ear but better muzzle, the winner being dish-faced. Genius II. has capital forelegs and is better behind than any of them, skull a little too broad and full. Ringwood was third at Toronto last year. I liked the order, Clinker, Genius II. and Ringwood considering hound qualities irrespective of what the class called for, American hounds, and in this Commodore was the only one. A capital bitch, Maud, was alone in her class and won; she has good running gear and body and nice hound coat; little faulty in head. Fan, supposed to be a harrier, was given second; she is a loin, beagle, Messrs. Smith & Clarke took the kennel prize.

**POINTERS (John Davidson, Judge).**—Many of the winners in this breed were shown last year. One of them was Count Graphic, winner of challenge heavy dogs, he looked in good shape, his hind parts are faulty. No challenge bitches. In open heavy dogs the winner proved to be Molton Banner, whose heavy shoulders and rather flat loin are his worst faults. Boxer, second, was at Indianapolis; he has a plain head. Donovan, third, has been commented on before, his loin and muzzle are faulty and quarters could be improved. Lord Graphic's Star, reserve, is a bit flat in back, cheeky and not clean enough in neck, good on his legs, with nice bone. Josie Brackett, Fanny Graphic and Spotted Girl was the order in heavy bitches, the winner gets it in feet and head, but gains little anywhere else. Girl loses in head and front to the others, also in shoulders and ribs. Glamorgan and Lady Gay Spanker were alone in the challenge light-weight

MR. C. A. STONE.  
Superintendent Toronto Show.

classes. Glamorgan is improving in condition, but I thought the bitch a little above herself in flesh. Mr. Davey won in open dogs with Ridgeview Comet, a son of Ridgeview Lass and Lad of Kent, his light stary eye mars his expression and his skull should not be so broad, and were he cleaner in neck and shoulders he would be better, he is good from there back. Admiration has a better head and forepart. Beppo's Boy has a plain face, not stop enough, turns feet out and falls away a bit in quarters, body and ribs are his best parts. Beppo Graphic, v.h.c., had a large lump under chin and should not have been shown. Miss Rumor, well known, then won in bitches. Count Graphic's Baby, second, seemed in whelp, a little plain in muzzle and feet should be better, good in hind parts, ear and skull. Chaira, third, is heavy in shoulders,

GREAT DANE "SENTA" (IMPORTED).

First, Toronto Show, 1893. Owned by Wolverton Kennels, Detroit, Mich.

pasterns and feet could be improved, and is snipy in muzzle. Novice winners were a repetition of the open classes. No puppies were shown. Mr. Davey won both the kennel prizes.

**ENGLISH SETTERS (John Davidson, Judge).**—The only challenge entry was Victress Lewellyn, who looked in fair flesh but out of coat. Worsley Dude continued his winning career by beating Forest Rex, whose heavy shoulders and rather short neck hurt his chances; his ears are flat and carried high. Baughman's London, third, is not very straight in front, fair head, but throaty, ears faulty. Roy of Colerhill, fourth or reserve, I think was overlooked somewhat, as he shows more character and breeding than any in the class excepting the winner, stands on good legs, is well boned and ribbed up, has a well-shaped head, but perhaps a trifle strong in skull; in fact, he is a heavy dog throughout and will do better another time. Royal Dan, of the v.h.c. lot, is rather a nice headed dog, dips behind shoulder a little and is throaty. The Sultan, winner last year, seems to have been lost in the shuffle this time; last year we said of him, "probably sees now his best days"; he was all out of shape. Ponto has not stop enough. In bitches Lady Patch repeated last year's victory; is a little straight faced. Nita Gitana is not true in front; is plain in quarters and very light in eye. Rose Rapid has a nice front, with a rather well-shaped head, but not very pleasing eye. Starlight B. carries her ears back and muzzle is not square enough, and should have more bend of stifle. Lady Howard, v.h.c. I did not see. Forest Trippo is heavy in shoulders, well ribbed and head

commendable, stands back on pasterns and quarters are not above reproach. Novice entries about followed the open awards and but two pups were shown. Dr. Kime won the kennel prizes.

**IRISH SETTERS (John Davidson, Judge).**—The display this time was far behind that of last year. Ch. Tim repeated his last year's victory, but over different material, his nearest opponent being Pride of Patsey. That good bitch, Queen Vic, scored easily over the moderate-headed Elfrieda in the corresponding class. Open dogs, with only six entries, proved a repetition of a week or two ago; Toronto Jim, reserve, has an English setter head; Toronto Little Phil is a little broad in skull, excellent body, color, hind parts and shoulders, might have been placed over the other. Toronto Parnell has a plain head. In bitches honors fell to Toronto Mollie and Nona, the latter from Mr. Bishop's kennel; the winner is faulty in feet, plain head, shoulders rather straight, faulty tail, too short; Nona is quite a nice quality bitch, excellent color, good type of head, though a little too much out before the eye and might have been higher; Delphine, third, is well known; Madcap II. throws her elbows out a little and should have more rib; Alannah has been described before, and so have Mollie and Lady Cleveland, all in the v.h.c. division. Nona has a light, plain head and no rib to speak of, and was out of shape. The novices were chiefly repeaters, Toronto Sport's head is noticeable, but faulty in pastern and quarters. The puppies were small. Seminole Kennels took the open kennel prize, and Chambers & Douglas that for Canadian.

**GORDON SETTERS (John Davidson, Judge).**—Outside of Dr. Dixon's team and Heather Lad there was little to commend here, and most of the winners have been repeatedly before the public. In open dogs Homer S. loses much in head, tan and legs to Heather Lad, and is fat and throaty. Mount Royal Kush should have beaten him, better body, head and legs than coarse-headed Duke of Wellington, v.h.c. Princess Louise had a narrow squeeze in bitches, Dundee but for smallness coming very near the top; better head than the Princess, though both are plain. Dundee is good behind the head. Wanda loses in head and tan, and so does Mount Royal Floss. They have not enough type about them. Novice as in open and no puppies shown. Dr. Dixon took one kennel prize and Mount Royal the other.

**COLLIES (Mr. Mason, Judge).**—By no means up to last year's gathering. Seminole Kennels just formed the challenge classes with The Squire, Roslyn Dandy and Metchley Surprise. The open dogs saw Wellesbourne Charlie add another win that, had rules counted, would have placed him in the challenge class. He was well shown and in excellent coat, there is no doubt about that. Mr. Elliott here showed his Chesterfield Marvel, a better one than his Hero which we noted at Lexington show, better size, head and action. Finsbury Dnde is coarse in head but excellent coat and a useful sort all over. Hero was reserve; though Caron, v.h.c., looked very light and rusty coat, he can beat the other dog as it was shown. Yardley Fox is short in body, faulty in loin, rather nice head and front, faulty carriage of tail and no undercoat. The winner in bitches proved to be Nora, who shows a lot of quality and a good coat, very dense for this time of year, a little fine in muzzle and ears are carried wide. The well known Bertha II. followed close up. Then came Dawn who, had she a coat on, would best the winner; better head and carriage of ears and size. Mattie, spoken of before, came in reserve. Auchin-Cairnie Judy, fourth, has fair head, little full in skull, nice coat; the name of this bitch is enough to make it shed its coat. Bernier is faulty in skull, and ear heavy and carried down. Novices were about as in open. Puppies were fair in dogs; bitches poor. Seminole Kennels took the open kennel prize and Saunders & Mighton the local one.

**BULLDOGS (Mr. Mason, Judge).**—A mediocre exhibit, only two, Romance, a new one, is a fair sort, not broken up enough in face, and skull should be fuller; it is rather flat, front not very good, well out, but legs crooked. Lady Winnie, a daughter of Don Solano, is plain faced, nice body and well out at shoulders, good legs. Bulldogs do not seem to go here.

**BULL-TERRIERS (Mr. Mason, Judge).**—Quite a fair lot of home-bred ones. Entries were smaller and quality not so good as last year. Crisp won in challenge dogs, looking none the worse for his trip south. In open dogs Duke of Rochester, a 9mos. pup, was wrongly placed first, he is promising, has a long, narrow, round, puppy head, is out at elbow and down behind shoulders a bit. Chatham Bob, second, has an almost yellow eye and is cheeky, a better front than the winner, good bone and body. John L. Sullivan is faulty in head and front. Billy Bulger, in excellent shape, was hardly dealt with, a trifle thick in skull, but his front, good body and well carried stern might well have earned him premier honors. In bitches Edgewood Robin was placed over Vesper Belle, who beats her in head, muzzle and especially in front. Lady Velme, described at Lexington, third. In light-weight dogs Principio won nicely from Ted Pritchard, whom he beat last year, a nice looking pup, Earl of Rochester came next, promising head, in fact a good one, but his chances are spoiled by a tan patch on body. Pearl of Rochester, a sweet little bitch, rather like a white English terrier, was first, beating Kathleen Mavourneen in head and front, but losing behind the shoulder, she is a pup and will mature yet. Lady of Rochester is another nice pup, a little straight behind, but good forepart. Mr. Higginson just swept up the puppy awards with those mentioned and took the open kennel prize and Wentworth Kennels the Canadian one.

**IRISH TERRIERS AND AIREDALES (Mr. Davidson, Judge).**—Only one Airedale showed up, a fine one, good coat, head fair, a little broad in skull. Jack Briggs and Galtees furnished challenge winner in order named, there is no competition between these two. Open dogs (6), the winner was that capitally made dog Brickbat Jr., who is, however, a little on the large side. The Canadian Ambassador, described before, came in for second; he is large in ear, and muzzle should be squarer. Southborough Paddy, third, I did not see. Jack, has black on head, good body and coat, but is light in bone. Ben, c.h., has no ears at all, a most cruel act on some one's part. Killarney Girl has poor ears and her eye is too light and full for a terrier, and she should have more rib. Judy I liked better in head and body. Nora II. is faulty in head and front. Rugby Tim, the winning pup, is a leggy, shelly, sulpy dog, and Mick was at Lexington.

**DANDY DINMONTS (Mr. Davidson, Judge).**—Mr. Brooks showed the only specimens that were at all meritorious with the exception of Raglan Sandy. Amphion is head and shoulders above Raglan Sandy, better head, body and coat, Inkoski is not so good in coat and body as Sandy, but is better in quarters, but was not well shown, having sores. Anisy Daisy won nicely from Thirsty, better in head and coat, the others were only moderate. Heather Peggy II. will never be as good as her mother. The Heather dogs were shown in good coat.

**BEDLINGTONS (Mr. Davidson, Judge).**—An ordinary show of these dogs. Jack, the winning dog, was just good enough to beat Peter Jackson, as the latter excels in head and ears, but loses in texture of coat and something in body, legs equal, but second has advantage in bone and muscle. Tally-ho is snipy and woolly-coated. Tibbie, the winning bitch, was second last year; her coat is liny and she has many other faults. Mattie, second, has a snipy muzzle and is bowed in front, coat soft. Jenny, third, has the best body and coat, correct texture of the lot; should have won. Polly III. is a weedy, shelly, flat-loined bitch, with little pretension to form.

**SCOTCH TERRIERS (Mr. Mason, Judge).**—This was an excellent display, and several native bred ones from the Wankie Kennels are coming forward. Three beat Kilroy in the

challenge class. In open dogs (7) Runanam was lucky to win from Kilree, who could do no better than third, there were times when he showed himself sufficiently to secure the verdict, he is by all odds the best in the class and was in good shape. Wankie Ted is a nice young one, spoiled by a bad front. Wankie Tam is stronger in quarters and better muzzle than Ted, but is not so good in eye and coat, and also has a dachshund front. Jock's coat is his best feature. In bitches Mr. Brooks swept the deck with Diana, Careta and Zembra in the order named. Compton Belle loses in head and body to these. Puppies saw Wankie Tam an easy winner. Wankie Kennels took the kennel prize.

**SKYE TERRIERS** (*Mr. Davidson, Judge*).—Sir Stafford and Sir Thomas furnished the winners. We did an injustice in our report of Lexington show to the latter dog, it must have been another dog we had in mind, as Sir Thomas is little if any inferior to his sire.

**BLACK AND TAN TERRIERS** (*Mr. Mason, Judge*).—With

should be longer; feet are faulty too. In novices Stardale Belle won from Vixie, beating her in head and front and body. Other awards follow open classes.

The wires were an improvement. Partney Cornet, the new dog, is heavily boned and coated, fair front and body, big ear, skull a little coarse, beats Venom in head slightly; the latter is not true in front and should have more depth of chest. Dark Eye, another new one, has nice ears, is a little bowed in front, good coat and body. Tinder Box is an old winner, that loses in head and front to most of the others. Bruiser is light in body and round in skull. Bonnet was clearly the best bitch; her fore bone is not clean enough, ears not well carried and muzzle should be stronger, but a nicely made bitch behind the shoulder. Suffolk Tassel came next and My Queen brought up the rear; the latter loses in length of head and front. Novices followed the others.

The different breeds of pet dogs scarcely demand extended notice. Yorkshires were poor with one exception, Minnie,

cision, but Black Duke could not be denied, and amid much excitement received the coveted blue, with the second edition of King of Obos, second. Spaniel men wondered at the change in this old timer. "What!" they said. "A new set of teeth?" "Well, well, what will friend George be able to turn out from his world-renowned cocker factory next?" But alack-a-day! subsequent demands for the recipe showed that "Uncle Dick" had got the Bell entries mixed and brought the wrong dog to the show, and the second prize winner was Black Jacket, an unknown quantity, with nothing but the afore-mentioned set of teeth. Mr. Bell's attention being called to the case, he withdrew Black Jacket and the award was cancelled. Black Duke, the winner, is well known, a shy dog in the ring, he does not show himself to the best advantage. He looked better than I have ever seen him before, and the good work he has done in the stud, he having sired Woodland Prince, Oban and many others, will always leave his name on the roll of fame as one of our best cocker sires. In challenge bitches, I Say, not looking in her usual good condition, was alone and added another blue to her long string of prizes.

In challenge cockers other than black that good red dog Red Jacket won well in hand from Red Roland, second, beating him in head, body and cocker character. In challenge bitches other than black Jessie C had a walkover. Open dogs (black) competition was very keen and the issue long in doubt. The judge finally selected Pickpania for first, Black Dufferin second, Woodland Prince third, and Black Brant fourth. The winner shows much quality, has filled out nicely in head, and was properly placed first. The third prize winner, Woodland Prince, should, however, in my opinion have been a very close second, beating Black Dufferin II. in head, muzzle, body, in front and behind. The last-named is not right in skull or muzzle; his lips do not set right, giving him a poor expression. Black Brant, fourth, is a taking little dog of quite some quality, but loses to the three first placed in head, body and front legs. Beau Kay, reserve, ran him closely for fourth honors. In open class black bitches competition was also very close. Rideau Reine, Realization, Kitty and Cora II. were selected for the honors in the order given. I looked this class over very carefully and agree with the placing of the first three, but am of the opinion that Cora II. should have given place to Lady Dufferin, who more closely resembles the winner in head and general formation. Realization is not at her best and did not show to advantage, moving very sluggishly. Had she moved freely and not been quite so heavy in flesh she would, I think, have run the winner very closely. Kitty, third, is a good little dog of much quality and moves well. She will, I think, improve.

In open class, other than black, Hamilton Jack was awarded first, Red Obo second, Red Justice third and Golden Rod fourth. The winner loses in head and body to the second winner, does not move so freely and should have been, in my opinion, second, with Red Justice third and Brantford Red Star fourth; he beat Golden Rod in head and front. In corresponding bitch class Tonito was selected for first honors, with Bessie Warner second, Gipsy Queen third, and Raglan Russette fourth. I cannot see how the judge arrived at this decision. The issue, it seemed to me, lay between the second and fourth prize winners, the winner losing to them in body, eye, legs and feet. Between the second and fourth it is very close, but I think that although Raglan Russette loses to Bessie Warner in coat and a trifle in head, in other points she shows such excellent quality, nicely ribbed body, better colored eye, good legs and feet and moves so freely she should have won, with Bessie second, Tonito third and Gipsy Queen fourth. In the novice classes the winners are to be found in the open classes. In novice dogs Woodland Prince, second, should have won over Hamilton Jack, who was, I think, wrongly placed first. Cocker puppies were not a very promising lot, but cockers change so much in the days of their youth it is hard to say. Black Dufferin, who was second in the open class, was first in puppies. His head will, I think, improve as he matures.

In Irish water spaniels the challenge dog prize was withheld from Trouble, who, although shown out of coat, might have had the ribbon. Although not altogether a good one,

MR. HARRY NORTHWOOD'S ENGLISH SETTER "WORSLEY DUDE."

First, Lexington and Toronto, 1893.

the exception of the challenge winner these were only a moderate lot. Sambo, the winner, beats Oolah in body and markings, muzzle and front, but showed badly. The Black Earl, shown better than any other, is too full and round in skull, markings good, shelly body and leggy. Rochelle Lord is not straight in front, not flat enough in skull, and was in poor shape and should not have been shown. Bob is light in tan and out at elbow, coarse tail. Betsy, the winning bitch, was distinctly lucky to win over Gypsy Girl, is a big, coarse, cloddy bodied bitch, wide in front, and not in the best of show shape; Girl is worth two of such stock. Grit, third, is quite as good as the winner, though faulty in loin, good front and fair head. Topaz is a big-eared nicely marked little thing, on the whippet order.

**POODLES** (*Mr. Mason, Judge*).—There was nothing new in this breed, Dr. Dixon taking most of the prizes, but two or three of them were in poor show condition, scabs on some of them, and should not have been allowed in the building. A poodle coat covers a lot of sins, and should be carefully examined. Dr. Vair, in loin, was in good shape and won in what was said to be a Russian class, but he is more of a French.

**RETRIEVERS** (*Mr. Wilmerding, Judge*).—The only entry, Loyal, a pretty fair smooth, was sent out of the ring by the judge as an ordinary black setter. Whether this dog was judged or not we cannot tell. Several judges were asked to do it, but I don't think they accepted. Mr. Wilmerding candidly confessed he knew nothing of the breed, and did not know he was to judge it.

**BEAGLES AND DACHSHUNDS** (*Mr. Krueger, Judge*).—The dachshunds shown were not up to form. Frida was the best, beat Lenn in head and chest and length.

**Beagles**—The Hornell-Harmony Kennels brought out their full strength and saved the credit of the breed. In challenge dogs over 13 in., Tricotrin, who has filled out in body, is a much improved dog. He beats Doctor in front and quality. Champion Elf looked much better than at Elmira, is cleaner round the neck and shoulders, and more after his Brooklyn form. That good little dog Sherry beats his kennel mate, Rodger W., in eye, ears, body and pasterns, but is beaten in carriage of stern. Ilwaco, reserve, is a little leggy and long cast, tail up, and forelegs should be straighter; sweet head and ear, but little full in eye. The others need no mention. In bitches, Daisy Corbitt is quite a good one, barring she is a little long cast. Pipelo, second, is not true in feet and loin is too flat, long body with no symmetry. Snow Flake is another long cast one. Lillie, reserve, has a pretty fair front, but flat ears spoil her appearance, and her muzzle is too fine and long. Vashta, vhc., could be improved a little in front, body needs furnishing; skull should not be quite so broad and muzzle squarer, and ears do not fold nicely to the head. Tony Weller II., light and shelly, was first in puppies, beating a sort of beagle-basset. Champion Royal Krueger, champion Ava W., looked well and filled their respective places in the small-sized challenge classes. The winner in dogs was Little Wonder, shown before; his head is the best part, legs not straight and body should be deeper. Kester, second, is broad in front, but better to-day than winner, also skull and muzzle. The winning bitch is snipy in muzzle, but very sweet in expression and has a good, cobby body. Evangeline is a nice sort, showing lots of quality, but a little long cast, and toes should be closer. Sly Lass, third, is light in body, faulty in ears, fair front. Hornell-Harmony took the kennel prize.

**FOX-TERRIERS** (*Mr. Mason, Judge*).—Dusky Trap and Blentum Trump came out for the challenge dog prize, and Trump not showing himself, added to his rather coarse appearance and was smartly beaten by the older dog, who himself was not shown in very good coat. Grouse II. was absent from her class. The new dog Holston won nicely in open dogs, a little strong in skull, and should be longer in muzzle and is cheeky, good front and body, but scarcely enough terrier character about him; seems to be a dog that has gone off a little; Poverina runs him close and beats him in expression and character. Tom Tom has gone coarse in skull, nice ears, good bone and front, and deserving his position. Calchas is coarse in head and cheeky now and heavy in shoulders, and otherwise good. The winning bitch was the well known Lady Roseberry, followed by Cambridge Girl, pinched in muzzle and round in skull. Policy is a bit straight-faced, muzzle should be stronger, faulty in body and big ear, fair bone. Cairnsmuir Solo is heavy in shoulders and not flat enough in skull. King Joe won in dog puppies; a fair sort. Vixie, the winning bitch, is too wide in skull and muzzle

who was the only one with a semblance of type, and many awards should have been withheld.

**PUGS** (*Mr. Mason, Judge*).—Bob Ivy and Midget furnished the challenge winners. A new one, Royal Dusky, won well in open dogs, gray muzzle, little coarse in coat, nice ear and wrinkle, muzzle not deep enough, cobbily built, mixed in color. Cherub II., winner in bitches, the only one entered, has a good skull and fair muzzle, no curl to speak of. Banker II. has been spoken of before. The toy spaniels were the winners of last year, most of them. Le Roi, by Royal Duke, has a pretty good head, but muzzle should be shorter. The Prince Charles is far too big. A nice little Italian greyhound in Dairty Lass was shown, a little full in skull, but nice size and form. Miscellaneous awards were withheld, a rather arbitrary proceeding, as the same judge had passed dogs in much worse condition than two such well known dogs as the white English terrier Blink Bonny and Boston

JOHN R. OUGHTON'S GORDON SETTER "HEATHER LAD."

First, Lexington and Toronto, 1893.

Model, the whippet, were shown in. It is straining a point in the wrong direction. Sheffield Lad, the "Pom," was relegated to the selling class, where he won. H. W. LACAT.

**SPANIELS** (*A. C. Wilmerding, Judge*).—[SPECIAL REPORT]. In field spaniels, challenge dogs, Judex scored another win. He looked well and had no difficulty in beating Samson, who had to be content with bc., rather hard on him, I think. No entries in corresponding bitch class. Open dogs (black) first prize withheld and second awarded to Pedro, a medium specimen whose poor head and short, cocker body will always handicap him; Nig, third, shows no quality. In open black bitches Mona was first and rightly so, beating Grace, second, in head and body. Both show their cocker breeding. In liver dogs and bitches, Napoleon first, Queen second, third and fourth prizes withheld, was the order. I cannot agree with the placing of this class, Queen scored in head, muzzle, set on of ear, legs and feet, about equal in coat, but losing in condition. Any other color dogs and bitches, Workman won with some to spare, beating Antique, second, in head and set on of ear, both have well-ribbed bodies; Leslie, third, is high on leg and coarse headed.

In challenge cockers, only two entries, Black Duke and King of Obos. The judge was very careful in making his de-

he is above the average shown in this country, and shows enough quality to entitle him to be more kindly treated. We must encourage this useful breed, and withholding the ribbon on account of the dog not being in the best condition does much to dishearten an exhibitor. In open dogs Musha won, with second to Dan Price, who loses to the winner in head, topknot, coat and condition; neither are good ones. In bitches Shellia won, with Rose O'Neil second; both bad in front; the winner gains in coat, head and curl.

Two Clumbers were shown, one in each class. Darby winning in challenge class and Rake II. in the open class. The former is well known; Rake II. has a good body and coat and moves well; his head is somewhat poor and lacking in type.

The field spaniel cup was won by Judex, and this being Mr. Foster's fourth victory for this honor, the cup is now his property.

The kennel prize was awarded to Mr. Laidlaw's team. To my mind the more even team of blacks shown by Messrs. Luckwell & Douglas should have won.

On the whole, spaniels were a fair lot, not showing much improvement, but about holding their own. Mr. Wilmerding, the ever popular, did well except in the cases I have referred to. He did not "raise them up," as he was expected

E. M. OLDHAM.

**BULL-TERRIERS.** CHALLENGE 1st, Luyrborg Kennels' Crish-Open-Eds. and Vandyke; 1st, W. J. Higginson's Crish-Open-Eds.; Duke of Rochester and Billy Bulger; 2d, MacMorris's Crifanham Bob; 3d, Brodie & Lyndon's John L. Sullivan. *Bitches:* 1st, Wentworth Kennels' Edgewood Robin; 2d, Lansdowne Kennels' Lady Velmor; 3d, W. Hannam's Vesper Bell. *Under 30 lbs.—Dogs:* 1st, Wentworth Kennels' Crish-Open-Eds.; 2d, W. J. it until our return from Toronto, and claim indulgence from the cognoscenti.

## DOG CHAT.

### The Ashmont Trophy.

We scarcely remember, even in the old pointer squabbles of years past, when so much rancorous feeling was created at a show as that caused by the manner in which the "Ashmont Trophy" was awarded at Toronto. No one begrudged such a good dog as Ch. Tim the victory that was unexpectedly his, but it was the peculiar change in the conditions which govern this special. A correspondent in another column, whom we may at once say stands high in the estimation of dogmen, asks several questions. The answers to most of them are apparent. We understand that the managers of the Toronto show applied several times for the conditions, etc., applying to this "Trophy," but received no answer. The "Trophy" was not mentioned in the catalogue. The conditions under which this "Trophy" has been given stated that competition is restricted to dogs and bitches which Mr. Mason has judged. There was no harm in this, and as the "Trophy" was a handsome one, it gave rise to much rivalry and considerable interest attached to the final outcome. Now all this is changed, and the sooner the competition is ended the better it will be for those most interested. The way in which this special was judged was a presumptuous insult to the other judges whose breeds Mr. Mason called into the ring. Again the increased competition was unfair to those of the owners and dogs that had already a claim on the "Trophy" through previous wins under the original conditions. Any way we look at it, it is bad.

The fact that Mr. Mason judged all breeds for the trophy implied that the other judges were not competent to have a voice in the matter, and this was the feeling among the exhibitors at the show. And evidently a similar feeling exists in the office of the *Fanciers' Journal*, of which Mr. Mason is the editor, judging from the following in their last week's issue: "As we go to press we learn by dispatch from Toronto that the 'Ashmont' trophy was won by Tim, with Lady Gay Spanker reserve. From this we are led to believe that Mr. Davidson could not have been present and that Mr. Mason took his classes. This we are unable to verify owing to lack of time." The character of this special now partakes more of the hippodrome, and we are surprised that the donor should lend himself to such a scheme or rather farce. Mr. Holly, as our correspondent suggests, will probably see the finish. And it would be well.

### Toronto Show.

There were many visitors at Toronto show. Among them we noticed A. D. Stewart, fresh from England; Dr. Foote, who is on his way to Chicago, but looking far from well; A. W. Smith, having his semi-annual fling and full of jokes and chaff, as usual; Dr. Mills, planning improvements in dogdom; E. M. Oldham, keeping tab on spaniel type; W. J. Higginson, proud as Lucifer of his terriers; German Hopkins sighing for a string of good ones; George Bell thinking of "what might have been"; John Davidson, looking as spry as a two-year-old after many miles of travel lately; F. H. F. Mercer, looking very legal; Ed. Wixom, a little quieter than usual, but "Uncle Dick" made up for it; James Green, with quite a Scotch accent; George Thomas, looking very tired after the Ashmont trophy judging, and T. A. Dewey, quite reserved in manner from the same cause; Ben. Lewis, mourning the decadence of dog shows from a pecuniary view; Will. Conners, too pleased to express himself when Tim got the blue. Others we saw were Jas. Lindsay, A. M. Hughes, W. D. Forbes, H. Massey, W. S. Jackson, C. J. Bousfield, W. J. Tuik, J. D. C. Glynn, A. A. MacDonald, C. E. Ireson, F. B. Carlisle, Fred. Hobart, John F. Scholes, Joseph Smith, E. B. Clark, Hes. Milken, Dr. J. R. L. Van Zandt, E. B. Elliott, Dr. Griffin, P. J. Keyes, S. Glass, A. Murdock, H. L. Kreuder, Wareham Whitney and a party from Rochester; Dr. Bamber, Harry Yates, Henry Brooks, C. M. Nelles, A. Laidlaw, Jas. Luckwell, George Douglass, J. Kennedy, Tom Blake, Joe Spracklin and many others.

### The Irish Setter Club Trials.

We call attention to the advertisement of the third annual field trials of the Irish Setter Club, which appears in our business columns. After many trials and tribulations all arrangements have been completed. The grounds are located near Thomasville, N. C., and board can be obtained at the Mock House for \$2 per day, including everything. Saddle horses are \$1 per day, single teams \$1.50 and double teams \$2.50, including a man. The prizes are not as large as it was desired to make them, but if the entries warrant it they will be increased. A special prize or two may also be given. Entry blanks will be ready for distribution by the time this is in print. The club is fortunate in securing the services of Mr. W. S. Bell, so favorably known in connection with the Central Field Trials, as judge. Dr. Davis writes: "Now that everything is ready I hope the Irish setter men will come forward and make these trials a success. Every single entry counts, and we would like to see the man with a single dog come and try his luck as well as he who has several. These reunions are always very pleasant and I hope to have the pleasure of meeting at the coming one many of those with whom I have corresponded but never seen."

### A Commendable Innovation.

Mr. J. E. Isgrigg, of Chicago, has set an excellent example by refusing to indulge in a newspaper controversy with a trainer with whom he has had unsatisfactory dealing. Mr. Isgrigg tells us that he will resort to the American Kennel Club, the field trial clubs and the courts for the remedies provided by each. Such a course is likely to prove as satisfactory to every aggrieved individual personally as it surely will to the public. The day has gone by when questionable dog transactions should be made topics of protracted discussion in the papers.

### Death of Richmond Olive.

Mr. Donovan tells us that Mr. Heald writes him that "poor old Nancy," as he calls her, but known to show goers as Richmond Olive, the celebrated fox-terrier bitch, died at Mr. Thayer's kennels on Sept. 3. Her list of winnings is a long one, commencing at Toronto, in 1884, where she won first and three specials. There was probably no fox-terrier in this country in which dog lovers were so interested several years past as in Richmond Olive, and until the appearance of Rachel and Lucifer, held undisputed sway in the prize lists, and she "kept herself" much longer than the average terrier.

### Pug Killed.

Uncle Dick is full of trouble over the loss of his pug dog Peoria Jerry while on the way to the Toronto show. While he was exercising the dogs outside the station at Buffalo, Mr. Fellows tells us that a truckman drove deliberately over the dog and crushed his life out. Uncle Dick thinks it lucky he did not have a pistol, as he might now be awaiting a verdict of manslaughter in some degree or other. Our Hornellsville friend avers that the pug curled his tail so tight he couldn't shut his eyes, and this makes the loss so much more serious.

Libels and rumors of libels were flying thick and fast at Toronto. Mr. Mercer was very busy trying to serve a summons on Dr. Mills in a suit for \$10,000 damages for alleged libel contained in his address that we reviewed last week.

Dr. Mills did not care to assume any direct responsibility in the matter, and we must say the manner of service was scarcely in accordance with our notion of a Chevalier Bayard. Whatever therein, the show ring is no place for such action among dogmen. All this sort of thing must stop and at once. The whole kennel interest of the country is suffering from it.

It has been a subject for surprise that Wellesbourne Charlie was not shown for the Ashmont trophy at Wissahickon when The Squire won. It seems in the earlier part of the show during the other special judging when the collies were brought in for the special for best in show Mr. Mason announced that he would not judge them then but would leave it till the last day, when he would award the Ashmont trophy. Mr. Jarrett was not pleased with the arrangement and withdrew his dog from further competition.

Mr. Wixom felt pretty proud of his kennel record at Toronto, and well he might, when we find that ten out of the thirteen winners he showed were bred by himself. Is it not about time he donned the ermine according to some precepts?

Our contemporary hardly got that great Dane tale right. When Mr. Glynn, owner of the Wolverton Kennels, was bringing in his great Danes on Monday one of them got away, and being chased by boys took to the lake, near the Fair grounds. He swam round for some time and then came out and made his way to the gate again, but the gatekeepers sent him off several times, not thinking he was one of the show dogs. Finally Mr. Glynn heard of it, and captured him in time for judging, where as Senta's Brutus he won first in puppy class. Toronto papers worked up a weird story on the subject, and implied that if he had not stopped he was swimming yet.

### Canadian Fox-Terrier Club.

The display of trophies made by this club at Toronto show was a most surprising one—four large pieces of silver, upward of 2 ft. in height, surmounted by a bowl, under which stood a capital representation of a fox-terrier that should be a guide to the fortunate winner to breed one like it in type, were flanked by numerous fine cups donated by different members. We hope to give a picture of this display to show Americans what our consins over the border are capable of doing on short notice.

George Thomas says Paddy Doolan, the Northcroft Irish terrier, can do that Badger at Philadelphia, and he is getting him into training. Be careful, the badger game is a hard one to beat.

### Cockers for Medford.

During the Toronto show Mr. Brooks bought the cocker Woodland Prince; third in open black dogs and second in novice dogs, also the winning bitch puppy Ina. We hear the Misses Brooks are devoting some attention to this part of the Wankie Kennels, and the kennel is expected to be pretty by the time New York show comes round.

Toronto is proverbially stiff-necked in the matter of admission tickets, but surely there is some lack of management somewhere when a judge has to pay to get in, though he shows his badge. This occurred to Mr. Davidson one morning during the show. Tom Blake was also a sufferer because he preferred to get his meals outside the grounds. There were several complaints from others over similar treatment. The idea seems to be when they get you in you must stay for the rest of the day and spend your money and ruin your constitution on pie and red lemonade and such delicacies.

### Cribbage.

This crack wire-hair arrived on the steamship Spain shipped to Mr. H. W. Smith by Mr. Fred Mansell. Cribbage will make his debut at Cranston this week. Surrey Janet carries awhile longer. The English papers deprecate several things that have been said about this bitch and congratulate Mr. Smith on owning her. *Stock-keeper* mentally remarked on seeing her, "Cheap at a hundred," and pounds, not dollars.

### Other Importations.

With Cribbage came the Irish setter Signal for Dr. Jarvis, also the pugs Dong and Haughty Madge for L. C. Nims, Somerville, O., from Mr. Houldsworth, of Bradford, England.

Our Quaker contemporary should know better than to crow over a little "wire" from Morris, Manitoba, and suppose we should attempt to snatch the glory from them. Of course the editorial talent is young yet, but probably they will find out in course of time that there is such a thing as the Associated Press, and further, that New York papers are not slow to avail themselves of its benefits, and such a dispatch was the one spoken of.

We received a call yesterday from Mr. J. B. Martin, of San Francisco, Cal., a well known fox-terrier breeder. He will attend the Cranston show and judge for himself how Eastern shows compare with those on the Pacific slope.

Dr. O. S. Bamber, of Rochester, N. Y., has transferred the beagle Jack Rowett to a friend in Cuba, N. Y.

### Death of Obadiah.

The well-known cocker, Obadiah, is no more. He was run over by a cab and killed. At the time of his death he was owned by Mr. Harry Yates, of Rochester, who had purchased him from Dr. O. S. Bamber. Obadiah is principally known as the sire of Fascination.

We know that Mr. Leslie must feel much disappointment as well as regret in the death of his pointer bitch Cora of Lynn. She broke away from her kennel and making straight for the railroad, met death by being run over by the cars. She was in charge of Mr. W. B. McClood, owner of Liberty Kennels, Hyattsville, O., who was preparing her for field work in which she gave great promise. Cora was by Tempest ex Nady of Naso and a full sister to Duke of Kent II.

### Ottawa Show.

The Canadian Kennel Club diplomas will be competed for at Ottawa this year. J. Otis Fellows will judge all classes.

Any one in search of good bull-terriers is likely to drop on a winner in the litter Chatham Kennels offers this week in our business columns. All bull-terrier men know what White Wonder is, and Queen of the Dale is the dam of True Blue and grand dam of Prince Gully and Mermaid, familiar names in prize lists. Queen of the Dale has always been a matron of merit; for one litter in England an offer was made of \$1,500 and refused.

Mr. G. W. Patterson is exceedingly pleased with a large litter of twelve that his St. Bernard Lady Lomond has by Mr. Moore's Alton, Jr. They are said to have remarkably large heads and are all lively and well. Alton, Jr., Altoner and such dogs are bound to improve our St. Bernards if judiciously used.

### California Notes.

E. K. Benchley, of Los Angeles, reports a litter of winning pointers, by Kan Koo, out of Kioto.

While FOREST AND STREAM will ever be received with a cordial welcome by sportsmen throughout America, the new candidate for honors, *The Breeder and Sportsman*, with "Namquoit" at the helm, will be in the front rank.

There are a number of very fair English setters on the coast that, judging from the tales told of them, were stolen in the East, as their owners know nothing of them. Any one losing a dog would do well to drop us a line, and if there are any who answer the description their owners could recover them. By working quietly many stolen dogs would be recovered—too much bluster only warns the thief.

The quail season opened on September 1, but the weather has been such that but little shooting has been done. T.

### Providence Dog Show.

NARRAGANSETT PIER, R. I., Sept. 19.—*Special to Forest and Stream*: The show opened with a capital collection of 467 dogs, from the principal kennels in the East. Pointers, setters, spaniels, mastiffs, St. Bernards, fox-terriers, Irish terriers and rough terriers show much quality. The rain falls heavily, but the building is good and well arranged. A large number of prominent dogmen are present.

H. W. LACY.

### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

M. S., Pittsford, Vt.—I have a Laverack setter puppy, about 16 mos. old, that I have tried to train by your "Practical Dog Training," and have been quite successful, but until this summer he never tried to chase chickens, although he always pointed them, and I unfortunately did not realize the necessity of following your advice about chickens. This summer he has developed suddenly a wild frenzy for killing them. He has the hunting instinct very strongly, and when he sees a chicken is perfectly blind to everything until he has killed it. If you know of any way of curing him, I will be very much obliged if you will write and tell me. We have whipped him severely every time he has chased one and tied him up, but with no effect. Ans. The next time he kills one, whip him and let him know what it is for, and then tie the chicken securely round his neck in such manner that he cannot get it off or bite it. If that does not cure him, nothing will. Allow the burden to remain on the neck as long as possible, and it is more than likely such continuity of chicken will create a distaste for the fowl.

## Hunting and Coursing.

### FIXTURES.

Oct. 3.—International Coursing Meeting at Huron, S. D. J. Herbert Watson, 26 Court street, Brooklyn, N. Y. (chairman).  
Oct. 17.—Kenmore Club meeting at Goodland, Kan. Frank L. Webster, Sec'y. Entries close Oct. 16.  
Oct. 24.—American Coursing Club. Ira D. Brougher, Sec'y.  
Nov. 7.—The Cowley County Coursing Association, Winfield, Kan. J. R. Ballard, Secretary.

### Is Shooting the Fox Assassination?

"F. W. H." takes exception to my use of the word "assassination." I used it advisedly. With a lucid idea of its definition I employed it to characterize the act of a man who lay in wait with a shotgun upon the path of his vulpine enemy, and from ambush wreaked that revenge which he was unable to obtain in a fair field. He confesses "we Northern fox hunters shoot the fox"—why? Why—because "it is impossible to get him otherwise." Does not his description fit the case—"alone on the stand behind a friendly boulder or tree stump you await your chance for a shot at the 'dog' who stole your wife's chickens." If that is not assassination then I confess to having been brought up in sublime ignorance of the labors of Noah Webster. If he will consult that neglected authority I think "F. W. H." will make the *amende honorable* as to my correct use of the word.

The fact that "F. W. H." dislikes to have his method called by its true name, more than the palpable paucity of his attempts at justification shows where the shoe pinches. His description more than anything I could say annihilates the claims of the shotgun policy to the consideration of the sportsman. It is the utter abnegation of cheer, of excitement, of everything embraced in the word sport. Solitary, cold-blooded, premeditated murder, you stand for hours with nothing to cheer you or inspire your flagging energies but an occasional bar or two of hound music conveyed on the blast that chills you to the marrow, or the echoing report of a gun in the hands of a luckier aim a mile away to your right." Barred of human companionship, the hours thus spent moodily treasuring the hope of shedding blood can be conducive of neither health nor happiness, but are calculated to make a misanthrope of a man mentally, while physically the seeds of colds and rheumatism are sown in his stagnant blood.

Contrast this method, depicted by himself, with the action, the stir, the enthusiasm, the joy of the chase. It may not make a man nobler, but it does make him feel nobler to have a noble animal beneath him, to feel embodied in himself the power and strength of the powerful animal he strides, to feel that his hand is the hand of fate as he rushes into space upon the wings of the wind, to see a staked and ridged fence rise up and rush at him, to mount into the air, higher and higher yet, while space opens up before him as a strange devouring void, to plunge madly back to earth and onward in a career which knows no obstacle—it is the very ecstasy of existence, it is the intoxication of action, it is life, one instant of which outnumbers years of uneventful waiting by the runway. But how feeble are words to describe sensations! If, my New England mentor, you have never known the exhilaration of soul and sense which fires the most fearful to deeds of daring, you are hardly qualified to discuss fox hunting.

Without vanity, but to disabuse you of your opinion that I am one of those narrow bigots "who think their sport the right one and their way the only one," I think I may fairly claim to have exhausted the variety of vicissitudes within the field of legitimate sport. I have even lain in wait, with malice prepense, and I can testify to the truthfulness of your cheerless description of the tedium of the long and lonely vigil. Slowly the moments linked themselves into minutes which dragged their slow length along until the shadows stole adown the steep and savage slope of the Shoshones on which I was ambushed, and gloomed until the huge carcass of the elk before me grew vague and indistinct to sight, and there in the gloaming over the dead body of the antlered monarch of the mountains I have faced—no fleeing fear-stricken "chicken thief," but the grim and grisly king of the wilds, *Ursus horribilis*, the grizzly bear.

A few days later I met a sheep herder who was hunting the same royal quarry but with a more deadly weapon than my Winchester—strychnia. When I suggested that his method was not sportsmanlike, he answered with the same cogent reasons that "F. W. H." has advanced, and since their object is identical, the destruction of an animal which stole the one's wife's chickens, and the other's master's sheep, it seems to me that the poisoner's method is the best. How would it be to let strychnia lay in wait and toy with those chilling thoughts and look for the fox that never came?

The only reason, I suppose, that it has not already superseded the shotgun is because the fox is too smart for it.

But of all the misconceptions, the one most prevalent among the shotgun fraternity and most erroneous, is the idea that New England has a monopoly on rough country and that we "kill our foxes by running into them because the country is open and the hounds can be followed in the good old way."

What geographies do they study down East that they have located the Western prairies in the Southern States? There are in this State regions as mountainous as any in all New England, and the fastest foxhounds and the best in America to-day, hounds that have proved their superiority in the Brunswick trials as they have everywhere else, were bred and born in a country of hill and valley, and have run the red fox to his death through jungles of brier, along the face of precipitous bluffs and up hillsides too steep and stony for horse to follow. I do not know a section in Kentucky where even a Kentucky thoroughbred can stay with a pack through all the devious ways of a red fox chase. In fact it is physically impossible to follow the hounds here as in England. In sight and hearing of the hounds we frequently can, and do, keep by taking advantage of every turn, anticipating the route of the fox, and cutting across, but the majority of hunters are content to maintain a point of advantage central to the fox's circuit and thus note the progress of the chase as it sweeps around them. The methods that prevail here are practicable in New England as in Kentucky. That fact has been demonstrated by the Brunswick Fur Club. Sections 19 and 20 of the field trial rules prohibit the shooting of foxes under a fine of \$5, and an infraction of them is further penalized by debarment. No severer penalty could be fixed. And yet this advocate of the shotgun policy "would like to know how 'F. J. H.' would circumvent sly reynard in the hill country where the last Brunswick Fur Club trials were held." That organization in its progress has answered the question in a practical manner. Its members originally devoted to slaying foxes have found the superiority of hunting them, and its last trials was a meet of fox hunters as distinguished from fur hunters.

### New England Beagle Club Trials.

Editor Forest and Stream:

In accordance with a special vote passed by the executive committee of the New England Beagle Club on Sept. 9, the following special prizes and sweepstakes will be added to our already large list of regular prizes: Sweepstake No. 1.—Pack Stake, four beagles to constitute a pack, open to all beagles, whether entered in regular stake or not; entries close Nov. 9, at 8 P. M.; entry fee \$15; prize, 75% of purse to winning pack, which must be the property of one exhibitor or kennel. Sweepstake No. 2.—Brace Stake, open to all beagles whether entered in regular stake or not; entries close Nov. 9, at 8 P. M.; entry fee \$10; prize 75% of purse to winning brace, which must be the property of one exhibitor or kennel. Sweepstake No. 3.—Endurance Stake, open to all beagles whether entered in regular stakes or not; entries close Nov. 9, at 8 P. M.; duration of heat to be not under four hours; entry fee \$5; prizes 50% of purse to first, 25% to runner-up. These sweepstakes will be run after the regular stakes and beginning with the Pack Stake. Specials (awarded only to dogs competing in regular stakes): Prize a souvenir ribbon—Special No. 1, for most musical voice. No. 2, for most accurate trailing. No. 3, for most effective ranging. No. 4, for most stylish worker. No. 5, for best starter. No. 6, for greatest sustained speed. No. 7, for best Derby entry bred by owner. No. 8, for best All-Age entry bred by owner. The club desires by these specials to give to each and every dog a token of his individual superiority, thus enabling breeders to mate their dogs intelligently when breeding for any special quality, such as speed, starting abilities, trailing, etc.

### Curious, Very.

CHICAGO, Ill., Sept. 14.—I venture to intrude in kennel matters so far as to make a little journalistic parallel. Mr. Waters is out of town.

### CURIOUS, VERY.

From this week's *American Field*:

A New York contemporary that has for the last seven years referred to the principal stake at the American Coursing Club's meeting as the "All-Age Stake" has suddenly become aware of the fact that its name is the *American Field* cup. Curious, very.

### CURIOUS, VERY.

From last week's *FOREST AND STREAM*:

From two or three reliable sources I learn of the intention of some prominent coursing men not to enter their dogs at Huron, in the International coursing meeting. It is rumored that the American Coursing Club has not paid some of the prizes won at the last meeting. The *American Field* "cup," so-called, which is a cup or \$100 cash at the option of the winner, I am told remains unpaid, though repeatedly applied for by the winner of it at the last meeting. My informant tells me, further, that letters on the subject are ignored by the "cup" donor.

Curious, very. In fact, not only curious but a trifle queer. What glory, sissy, do you find in that?

### N. B. C. Field Trials.

Editor Forest and Stream:

Mr. Joe Lewis, of Moodus, Conn., and Mr. Bradford S. Turpin, of Dorchester, Mass., were invited to officiate as judges at N. B. C. field trials, and both gentlemen have consented to act.

NANUET, N. Y., Sept. 15.

We are sorry to hear that Mr. A. H. Smith has lost one of his best foxhounds, the loss of which will seriously affect the strength of his train at the coming Brunswick Fur Trials. The dog was shot by some miscreant.

## Yachting.

LAST week was fruitful in news of the "important if true" sort, among the more sensational and startling reports in the daily papers being the death of ex-Com. Gerry, a challenge from Vigilant to Jubilee for a match for \$5,000, and a base attempt on the part of the Royal Yacht Squadron to cheat Mr. Carroll out of the Brenton's Reef cup after he had fairly won it. Unfortunately for sensational journalism, Mr. Gerry telegraphed a denial of his death, Gen. Faine and Mr. Iselin denied all knowledge of the \$5,000 challenge, and the R. Y. C. committee gave a prompt hearing to Mr. Carroll's protest and awarded the race and the cup to him.

While the conditions—a reaching course each way—suited Navahoe well in the first race, it seems that she has been improved by the reduction of her sail area. One of the odd coincidences of the season is the placing of Capt. Crocker against Capt. Carter, the two having sailed against each other eight years ago in Puritan and Genesta respectively.

The owners of the 30-knot steam yachts are still talking and writing letters, but no definite arrangements for a race have been made. It now appears that the mysterious "Mr. Davis, of Brooklyn," who has

purchased Vamoose for \$10,000, is an employee of Norman L. Munro, who is the real owner of the boat. Mr. Munro has issued a characteristic pronouncement, challenging the Harreshoffs or Mr. Hearst to put a picked crew in the yacht at his expense and speed her against time, he doing the same with Norwood.

THE first piece of good luck which has yet attended Navahoe was in the race for the Brenton's Reef cup, which, according to the conditions drawn up by Mr. Bennett over twenty years ago, must be sailed for without time allowance. By any modern rules Britannia would have easily saved her time off Navahoe, the latter winning by only a few seconds. In the race for the Cape May cup, which Britannia won by 36m. elapsed time, there is no restriction as to allowance, and presumably the usual allowances hold good, thus increasing Britannia's lead.

### Lake Geneva Y. C.

THE match races of the Lake Geneva Y. C., best two out of three, which have just been sailed between Vanadis, C. K. G. Billings and W. S. McCrea, and Rival, Benjamin Carpenter and C. R. Corwith, have resulted in a decisive victory for Rival. Vanadis on Sept. 2 won the first race in a drifting match, finishing one and one-half minutes before the time limit of four hours. Rival won the second race, on Sept. 4, by eight minutes, corrected time, wind S.W., light and steady, conditions favorable. Rival won the third race, on Sept. 9, by four minutes fifty-

MASTHEAD OF JUBILEE.

five seconds, corrected time, wind N. E., freshening throughout the race.

Rival will be remembered as the crack 21-footer which for three years vanquished everything of her size on the Sound. Mr. Benj. Carpenter and Mr. W. C. Corwith, of Chicago, bought her from Mr. Francis Burritt early this year, and she is still to be beaten by a boat of her inches under equal conditions.

The L. G. Y. C. has a fleet of about 100 boats, many of which have come from Long Island Sound, among them Tattler, Expert, Lorna, Rival, Possum and Precept.

### South Boston Y. C. Open Regatta.

SOUTH BOSTON—BOSTON HARBOR.

Saturday, Sept. 9.

The special open race arranged by the South Boston Y. C. in commemoration of its twenty-fifth season was sailed on Sept. 9, the wind being light and hazy. The times were:

FIRST CLASS.			
Length.	Elapsed.	Corrected.	
Harbinger, Wm. Daly.....	23.00		
Hansdel, J. R. Hooper.....	33.02		
Violet, H. J. McKee.....	33.06		
*1m. 52s. over the 5-hour limit.			
SECOND CLASS.			
Beatrice, J. Cavanaugh.....	26.03	4 46 27	4 00 10
Stanley, W. L. Colson.....	36.01	Withdrew.	
Wild Duck, E. Morton.....	37.10	Withdrew.	
Quisset, W. P. Taylor.....	37.09	Withdrew.	
Mattie, W. A. Garrett.....	37.09	Withdrew.	
Hiladee, S. N. Small.....	37.06	Withdrew.	
Moondyne, L. J. Shaw.....	37.08	Withdrew.	
Lena, H. P. Cook.....	37.09	Withdrew.	
SPECIAL CLASS.			
Vanessa, A. Bigelow, Jr.....	21.47	2 19 47	2 40 55
Eulalie, E. S. Hunt.....	21.10	2 26 08	2 46 40
Exile, J. F. Small.....	22.08	2 25 50	2 47 33
Thrush, W. L. Bachus.....	22.10	2 27 23	2 49 20
THIRD CLASS.			
Gleam, P. J. Lowell.....	21.01	3 19 05	2 38 31
Romance, Loring Sears.....	23.00	3 30 13	2 49 23
Good Luck, J. B. Farrell.....	21.10	3 35 02	2 45 34
Black Cloud, Thayer & Putnam.....	23.04	3 39 52	3 02 29
Wapiti, J. Bertram.....	23.06	Withdrew.	
Sport, D. B. Pierce.....	23.07	Withdrew.	
Judith, W. B. Pigeon.....	23.06	Withdrew.	
Adolph, J. J. Moebie.....	21.08	Withdrew.	
Gypsy, H. K. Drinkwater.....	23.04	Withdrew.	
FOURTH CLASS.			
Opeeche, W. P. Barker.....	19.07	1 15 55	1 48 36
Attempt, Thine & Freeman.....	18.04	1 26 26	1 57 39
Arab, W. F. Scott.....	19.01	2 27 50	1 59 58
Astrea, R. M. Benner.....	20.11	Withdrew.	
Wraith, L. H. Higginson.....	19.05	Withdrew.	
Coot, Thos. Murphy.....	18.00	Withdrew.	
Triple, J. F. Cashion.....	18.07	Withdrew.	
FIFTH CLASS.			
Alpine, C. J. Blithen.....	15.08	2 26 42	1 54 38
Mina, Chas. White.....	16.11	3 15 31	2 45 04
Bud Bug, T. O. Gillett.....	15.03	3 35 19	3 02 24
Snakehead, H. B. Faxon.....	16.11	3 35 43	3 05 16
Ado, H. Butler.....	17.05	3 38 25	3 08 36
Jackdaw, R. B. Williams.....	17.08	Withdrew.	
SIXTH CLASS.			
Laurel, J. K. Hutchins.....	13.10	1 25 10	1 05 10
Ann, E. H. Ritch.....	12.11	1 30 40	1 09 45
Tantrum, F. D. Perkins.....	14.07	1 29 29	1 10 11
Leure, G. W. Walsh.....	14.00	1 32 50	1 13 00
Tyrant, F. A. Oldham.....	12.00	1 35 36	1 13 30
Grace, B. Cooper.....	12.00	1 35 56	1 14 00
Growler, Purcell & Curson.....	13.09	1 34 42	1 14 37
Seaweed, S. C. Higgins.....	14.08	1 34 53	1 14 39
Marion, H. E. Yerxa.....	14.08	1 37 01	1 17 47
Princess, C. L. Gay.....	14.03	1 37 49	1 18 13
Nellie, H. O'Leary.....	14.08	1 48 01	1 28 47
Kismet, F. A. Lynch.....	14.00	Withdrew.	
Ann R., M. Ryan.....	14.08	Withdrew.	

The judges were Thos. Christian, W. H. Godfrey, Hubert Pope, F. W. Parsons.

On Sept. 2 the steam yacht Elfrieda, W. Seward Webb, when off Plattsburg, Lake Champlain, blew out a tube in her boiler, scalding Chief Engineer Peter Mott quite badly, while Fred Hunt was less seriously injured. The yacht was towed into Plattsburg by a tug.

### Shrewsbury Y. C., Second Regatta.

RED BANK, N. J.—SHREWSBURY RIVER.

Saturday, Sept. 9.

The second open regatta of the Shrewsbury Y. C. was sailed on Sept. 9, at Red Bank, with great success, notwithstanding that it was originally fixed to be sailed two weeks ago, just after the two disastrous storms, and had to be postponed because of them.

The usual large crowd of ladies attended at the beautiful house of this club (described in a recent issue of *FOREST AND STREAM*), and many spectators accompanied the racers over the course in steam and naphtha launches.

The courses were the regular ones of this club, for classes A, B, C and D from an imaginary line off the club house to stake No. 1 at Gun's Point, No. 2, Boyd's avenue; No. 3, Brown's Dock; No. 4, Fair Haven; No. 5, at head of Flats; then to Nos. 4, 3, 2, 1 and finish. Classes E and F went around Nos. 1, 2 and blue flag stake at McCle's Creek to No. 2, to No. 1 to finish; and repeat twice around 1 and 2 to finish.

When the preparatory signal was given at 2:30 P. M. a nice breeze was blowing from the southeast, which before the finish got very light. The starting signals for classes A and B were given at 2:55, for C and D at 3:40, and E and F at 2:45. The most interesting race was that in class D, where the new Arrow, owned by John Sawyer, Jr., was pitted against Clinton James's well-known Undine, and Forman Smith's Irma T. Arrow finally winning by 40s. from Irma T. Undine being third. Mr. James sailed this race with a smaller sail than he usually carries, having carried his mast out a week or more ago, and in consequence did not have a spar sufficient to hoist his large sail, which handicapped him somewhat, though Arrow is very speedy. The following are the full times:

CLASS A—CABIN SLOOPS.			
Length.	Elapsed.	Corrected.	
Edla, M. P. Sherman.....	37.07	1 55 48	1 26 23
CLASS B—OPEN JIB AND MAINSAIL.			
Augusta, Edward Kemp.....	32.02	1 51 36	1 16 16
Myra B., Charles Allen, Jr.....	34.00	2 04 16	1 31 04
CLASS C—CATS 20 to 23FT.			
Lassie, Stewart Good.....	22.04	2 02 00	1 26 47
Irma T., Forman R. Smith.....	22.00	1 53 17	1 17 38
Undine, Clinton R. James.....	31.10	1 54 51	1 18 50
Arrow, John M. Sawyer, Jr.....	32.09	2 00 47	1 19 37
Tip Top, Geo. W. Gillig.....	20.09 1/2	1 53 51	1 21 39
Shrewsbury, Carl Wagner.....	31.09	1 56 16	1 20 16
CLASS D—CATS 17 to 20FT.			
Tam O'Shanter, B. A. Fliess.....	19.11 1/2	Did not finish.	
Mayruss, E. D. Miller.....	19.10	1 43 30	1 09 51
Gertrude A., S. W. Roof, Jr.....	28.05	1 45 02	1 04 03
Anna, W. J. Parsons.....	18.04	2 00 47	1 19 37
Pauline, J. Frank James.....	18.00	1 49 21	1 07 46
Gertie Brown, Joseph Carhart.....	17.00	Did not finish.	
CLASS E—CATS UNDER 17FT.			
Clytie, Delphord M. Fisher.....	16.02 1/2	Did not finish.	
Little Silver, Harry L. Powers.....	16.02	2 01 13	1 16 18
Yum Yum, Vantini & Chadwick.....	16.01	2 08 17	1 23 12
Louisa, Frank Taylor.....	15.01 1/2	2 22 09	1 26 06

In class A the Edla came down and sailed in class B. The Augusta is the winner in this class. In class D Arrow won first and Irma T. second. In class E Gertrude E. wins first and Pauline second prize. In class F, Little Silver won first and Yum Yum second prize. Second prizes were given where there were four or more entries. The judges were George E. Garland of the New Jersey Y. C. and Henry C. Miner, Jr. of the Shrewsbury Y. C. After the race there was dancing at the club house.

### Keystone Boat Club.

TAOONY, PA.—DELAWARE RIVER.

Saturday, Sept. 9.

THIRD annual fall race, twice over a triangle from the club house to a buoy off Wright's Point, thence to a buoy off Straight Ditch; distance, 11 miles. Weather fair and cool. Wind westerly. Tide ebb.

FIRST CLASS—START 1:30 P.			
Length.	Finish.	Elapsed.	
McGinty, Le Sage.....	15.01	1 37 00	2 01 00
Elsie, Shalcross.....	15.00	1 40 00	2 04 00
Mina, A. Pedlon.....	14.08	1 43 00	2 07 00
Yuca, Fisher.....	15.00		
Say When, McCully.....	14.06		
SECOND CLASS—START 11:11.			
Anna V., McKane.....	14.06		
Nellie Bly, Van Camp.....	14.06		
Anna T., Thuring.....	15.00	1 44 00	2 33 00
Willie and Mary, D. Pedlon.....	15.00	1 43 00	2 32 00

Jennie D., Stockton.....	14.06		
Ella, Long.....	15.00		
May, Neild.....	14.07	1 45 30	2 34 30
THIRD CLASS—START 11:48.			
Chas. S. Austin, Austin.....	15.00	1 51 30	2 06 30
Jesse W., Neal, Hill.....	15.00		
Mascot, Knight.....	15.00	1 53 30	2 05 30
Jacob S. Disston, Dingee & Thuring.....	15.00		
FOURTH CLASS—START 10:51.			
Keystone, Richman.....	17.00	1 17 30	2 26 30
Maggie, Ayres.....	17.00	1 18 00	2 24 00
Sinbad, Coster.....	17.00	1 38 30	2 47 30
Nigger, Elean.....	15.00		
Winners: Class 1—McGinty first, Elsie second. Class 2—Effe first, Willie and Mary second, Anna T. third. Class 3—Austin first. Class 4—Keystone first.			
The McGinty won again, making it the fourth successive regatta she has won.			
The Nigger, after being two minutes in the lead and short distance from the buoy, carried away, and thus lost the race.			
The prizes were a handsome pair of field glasses to the four first boats, and a pair of opera glasses to the second boats and a small pair of opera glasses to the third boats.			
Regatta committee—Geo. LeSage, J. D. Knight, J. W. Metz, J. Hirst, S. G. Dingee. Judges—Jas. Neild, Benj. Pontius, Chas. S. Austin.			

### Beverly Y. C.

The 20th race, second championship, was sailed at Marblehead on Sept. 8 in a good southwest by west breeze. Courses, ten miles for second class, nine for third and fourth, four and a half for knockabouts. The times were:

SECOND CLASS.			
Length.	Elapsed.	Corrected.	
Susie, W. W. Kieth.....	28.02	2 01 28	1 63 34
Ariel, J. Barrett.....	25.05	2 10 20	1 58 33
Korbay, E. M. Horton.....		2 13 40	
THIRD CLASS SLOOPS.			
Reaper, Com. Bengon.....	24.00	2 01 52	1 50 05
Break, E. D. Cochran.....	25.07	2 06 43	1 56 35
THIRD CLASS CATS.			
Maggie, H. G. Otis.....	22.04	2 19 02	1 58 29
Koorall, R. C. Robbins.....	23.04	2 17 17	2 04 51
FOURTH CLASS.			
Bonita, C. O. Hood.....	20.09	2 27 13	2 11 45
Shearwater, Thos. Stevenson.....	18.04	2 33 51	2 16 04
KNOCKABOUT CLASS.			
Olatsu, F. O. North.....		1 14 55	
Susan, H. Taggard.....		1 16 02	
Karl, C. H. W. Foster.....		1 17 10	
Nancy, J. Sargent.....		1 38 16	
Nina, Eastern Y. C.....		1 20 51	
Francis, G. M. Wheeler.....		1 24 59	
Nancy protests Olatsu and Karl, subject to this Susie, Reaper, Maggie, Bonita and Olatsu take first prizes and Susan takes third.			
In account of second championship White Fawn's name was accidentally omitted. She takes second and leg for championship credited to Maggie belongs to Koorall, as Maggie was not sailed by a member of the club. This makes Koorall champion of the class.			

While running from New York to Oyster Bay in the Sound on Sept. 13, the steam yacht Allegra, owned by Col. S. V. R. Cruger, met with an accident in her stateroom, the explosion killing the fireman, James Gill, and badly injuring the engineer, E. D. Barrett. The yacht caught fire, but aid was sent from the Helvetia and the flames extinguished, the yacht being then towed to Hart's Island, where the engineer was sent to the hospital, after which she was towed to City Island. Col. and Mrs. Cruger were on board, on their way home from New York. The engineer died next morning in the hospital. The boiler and engine were uninjured, and the exact cause of the explosion is unknown.

American Model Y. C.—DeWolf Cup and Clapham Prize.

BROOKLYN—PROSPECT PARK.  
Monday, Sept. 1.

The races for the DeWolf cup and Clapham prize were sailed on Labor Day in a N.W. wind, which held all day, but being intercepted by the big hill on the northwest it was deprived of some of its strength, eventually dying out altogether. A windward course was laid off, the distance being 1/4 mile. Considerable delay was caused by the slowness with which the owners of the competing yachts made their appearance, and those that were ready in season were somewhat annoyed by the delay.

Finally the second class yachts arrived at the line for the DeWolf cup race at 11:15, Florence winning one heat and Giroflé the other, Florence's skipper becoming winded decided to withdraw in favor of Giroflé, this boat thereby obtaining a place in the final.

Third class came to the line at 12:15, Star qualifying for final, beating Mischief by 27s elapsed and 12s corrected.

In the first class Neola won, beating Ohyesia by 1m. 41s, elapsed and 1m. 41 3/4s, corrected, the final and race being won by Neola from Star by 37s, elapsed and 2s, corrected.

The postponed final for the Clapham prize was started immediately

In the second class Gymnote was an easy first, Anonyma giving Agawam a close call for second. Come On broke her throat haliard block twice and withdrew.

In the third class Gilt Edge beat Nobska fairly from start to finish. Kaloola would have beaten Doris for third if she had not run into a calm at the finish. Tycoon and Buzzard for some unaccountable reason sailed the wrong course, Buzzard getting slightly the best of it if anything.

In the fourth class Squall and Edith had a very close race, passing each other three times on the first leg to windward. Squall gained considerably on the second leg before the wind, and held her lead to the finish.

In the fifth class the catboats were badly beaten by the jib and mainsails, who took all three prizes. Raccoon sailed well and was a good first. There was not windward work enough for P. D. Q., who finished third, Axe second.

There has been considerable dissatisfaction with starting the race inside of Sippican Harbor on account of the wind's being much lighter there than outside. Another year the races will probably be started outside the harbor. The summary:

FIRST CLASS—COURSE 15 MILES.

	Length.	Elapsed.	Corrected.
Hector, E. C. Stetson	24.06	3 04 55	2 46 13

JUBILEE AT ANCHOR.

after, Neola and Star coming to the line, Giroflé being withdrawn. Star won from Neola after three stubborn heats by 1m. corrected. Among the noted yachtsmen present were Thos. Clapham and son, C. G. Clapham, who are now members of the above club, as is Mr. Chas. Mallory, of steamship fame, who being pressed by business, could not attend.

SECOND CLASS—FIRST HEAT.

	Length.	Elapsed.	Corrected.
Florence, E. W. Rogers	47.6	11 45	11 50
Giroflé, H. H. Michaels	45.4	Outside flag.

Edith, B. Clark	17.00	2 11 36	1 53 03

FIFTH CLASS—COURSE 3 MILES.

	Length.	Elapsed.	Corrected.
Edith, W. R. Peabody	11.04	1 10 44	...

Nobska and Squall win championships. Hector, Come On, Cheemann and Kid win legs; Come On tieing Gymnote.

Judges: D. H. Coolidge, J. S. Whiting, J. D. Jenney.

The open race was sailed Aug. 26 in a moderate S.W. breeze, which flattened almost to a calm for the finish of the larger boats. The light breeze of the morning prevented Sequel, Myrtle and Rustler, who had entered, from arriving at the starting line.

In the first class Flight ran out a safe lead, but ran into a calm at the finish, and Hector came within her allowance.

	Length.	Elapsed.	Corrected.
Flight, I. E. Hiller	26.07	3 03 04	2 47 40

SECOND CLASS—COURSE 15 MILES.

	Length.	Elapsed.	Corrected.
Gymnote, W. E. C. Eustis	33.09	3 02 41	2 42 33
Agawam, J. G. Young, Jr.	33.08	3 04 06	2 43 49
Anonyma, F. L. Dabney	33.08	3 04 20	2 44 03
Uhula, W. H. Winship	33.08	3 13 00	2 51 03
Come On, W. W. Phinney	33.06	Disabled.	
Bonita, R. Lincoln	33.02	Withdrew.	
Hoyden, D. Jennings	33.06	Withdrew.	

THIRD CLASS—COURSE 11 1/2 MILES.

	Length.	Elapsed.	Corrected.
Gilt Edge, D. L. Whitmore	19.07	2 21 11	2 01 22
Nobska, A. A. Beebe	19.11	2 23 46	2 04 29
Doris, John Parkinson	19.07	2 26 36	2 06 47
Kaloola, H. W. Richards	19.08	2 31 29	2 11 48

Trana, M. Crane	13.01	1 53 07	1 30 56
Grace, D. Kuowiton	Withdrew.		

First prizes won by Hector, Gymnote, Gilt Edge, Squall and Raccoon. Second prizes won by Agawam, Nobska, Edith and Axe. Third prizes won by Anonyma, Doris and P. D. Q. Judges: J. S. Whiting, George A. Strong, R. S. Ryder.

Yacht Racing in Southern Waters.

Editor Forest and Stream:

The boom that yachting received all over the country this season by the challenge of Lord Dunraven for the America's Cup and the voyage of Navahoe to England has, as a matter of course, made itself felt in this way. The wise judgment displayed by the Southern Y. C., of New Orleans, in adopting the Seavanhaka sail area rules has proven quite satisfactory and caused the appearance of many open boats that for a while looked very much as if the only way they would ever leave their boat houses would be in the shape of rotten kindling wood.

The class of open boats since the advent of Mr. Richardson's Burgess 40-footer Nephente in 1893 had entirely disappeared, with very few exceptions. Since the new rules went into effect the number of hollow spars, racing sails and other first-class racing rigging ordered out from the North, from the best of makers, would surprise some of the old "befo' de wah" yachtsmen. This improvement has sent the open class to the front with a rush, making that class a big attraction in all regattas, this state of affairs being entirely due to the adoption of the length and sail area rule, giving everybody a fair chance under every style of rig.

All adjacent towns invariably run their regattas under the rules of the Southern Y. C. but there still exists one great disadvantage to all yacht owners participating in the sport in the short and shallow courses. All the courses are mere guesswork as to distances left en-

tirely to the judgment of single individuals, who generally start out with the markboats an hour or two before the race and anchor them when and where they please, making no allowance whatever for the condition of the atmosphere and often forgetting how deceiving distances are on water under various conditions. Now all of these courses are triangular, supposed to be 1 1/2 nautical miles each way, and three times around making 15 nautical miles. What judge of distance can come within three miles of such a course?

Take the last regatta at Waveland, Miss., for instance, where Montauk beat Nephente 27s. on time allowance. Nephente draws about 6ft., centerboard up, and allows Montauk 5m. 3s. in a 15 nautical mile course. This allowance is based on nautical miles calculated by Herreshoff. The course was certainly not over 12 nautical miles, if that. Nephente was forced to allow time for 15 miles, besides plowing her way through the bottom most of the way. What chance has any large boat that allows time in these respective classes to win under such conditions? The case of Nephente will apply to all. There is no question that Nephente can allow Montauk the time her measurement requires over any 15 nautical mile course with a depth of 10ft. and win easily.

That more consideration should be given to the minor details in the management of all regattas in the South is quite apparent, and a great deal more to be done before we attain the place in yachting that we should hold.

New Orleans is more than favored by nature for the sport of kings, and the Southern Y. C., which prides itself on being the second oldest yachting organization in America, has as fine facilities as can be found, anywhere to encourage and maintain the sport in perfection.

A great deal of good would be accomplished by weeding out some of the obnoxious features of the rules, especially the rule appointing a regatta committee for each race. The regatta committee of a yacht club is naturally the most important of all committees, and should be selected from non-boat owners, thoroughly acquainted with every requirement of the yachts, and should have entire control of all races, taking the time of all contestants, fixing the conditions, classes and be the sole interpreters of the racing rules of the club.

Judges are entirely unnecessary when the regatta committee are so empowered. Judges down this way are specially selected for their good fellowship, not much attention being given to their capabilities as yachtsmen. An instance of one of their decisions is given as follows: The race for the Littell cup—a very handsome one, by the way, was sailed under a set of conditions that would puzzle an admiralty judge of 50 years' experience. The Lufki Humma, a creation of Mr. Walton Glenn, clearly winning under the conditions of the deed of gift, as decided by the *Spirit of the Times*. The judges awarded the race to a rube outsider 10 minutes after the finish and before one-half of the contesting yachts had finished the race, thereby ignoring any chance for protests, good, bad or indifferent, closing up their books and leaving the club house with the smoke of the finishing gun for the first boat.

Our papers also have some very peculiar ways of writing up regattas, etc., the scribe evidently being well up in horse racing. I quote from one of the leading papers the day before the race for the Littell cup:

"As it is, however, there have been enough entries to give promise of an interesting contest. In fact, from a spectator's standpoint, ten yachts are quite enough to start at the same time, for they make a fleet of which the careful and experienced observer can easily keep track from start to finish, while a large number is apt to confuse even the most experienced yachtsman, causing him to mistake one boat for another, and gradually lose interest in the contest as it progresses and wait for the finish to determine the relative positions of the contestants."

What can one think of this for a notice of a regatta. We see all the New York papers speak with pride of the large number of entries, and special mention was made of the magnificent fleet that participated in the cruise of the New York Y. C., some one hundred or more yachts, and nobody got mixed up keeping tab of their movements.

Our course is sailed on Lake Pontchartrain, twenty-two miles wide, by about thirty-five miles long, plenty of room for all and not like a race track, where the large fields jostle and knock one another around trying to win. This is quite a sample of how things are managed in yachting circles down in Dixie.

There has been quite a number of new yachts launched this season, embodying the various types of local amateur designers, of which Lufki Humma is far the best. This boat was designed by Mr. Glenn, an enthusiastic young yachtsman of the S. Y. C., and built by Fourchy Bros., being about 31ft. waterline, plenty of overhang forward and aft, shallow draft, narrow beam and two centerboards of tobir bronze. Lufki Humma has not proven quite up to Mr. Glenn's expectations, always meeting with some unavoidable mishap when contending against the 22ft. IlyerNyanza, a sandbagger of the old type.

The Southern Y. C. is very fortunate in having several fine cups donated this season to be contested for in the various classes.

Cup races should meet with favor by all true yachtsmen, the club especially, as cup races save a great deal of money to yacht clubs that have to give regattas and offer the prizes to keep up the sport. Taken as a whole the yachting in the South is improving slowly but surely, especially in New Orleans, Mobile and the adjacent watering places along the Mississippi Sound. The Mobile yachtsmen are all young but

experienced sailors, who always manage and sail their own boats independent of oystermen, shrimp catchers, etc., a plan that could well be emulated by others. Almost all yachtsmen in this vicinity are pronounced admirers of Vigilant and wish her success in every particular.

J. E. B.

Navahoe.

An interview with Mr. Carroll, which is apparently authentic, has been cabled to America, in which, after admitting that the yacht is a disappointment in windward work, though he considers her faster than Britannia in running and reaching, he continues:

"I don't see how to remedy the trouble, except by allowing the builders to work the Navahoe up. The reports sent out about the danger of her capsizing were absurd misrepresentations. I knew she was a good sea boat the moment I stepped aboard. But there has been some mistake in her design. She does not carry so much sail as expected, and she has not sufficient stability; her weight and ballast are not properly adjusted. She wants her ballast put lower down to make her stiffer and faster in strong weather, although that is likely to be a detriment in light weather."

"I can sum up her merits I may say that she is fast in a fresh breeze just enabling her to carry her clubtopsails. She is sluggish in light weather, as she is unable to carry her sail properly. When it blows hard she reaches as fast as any vessel that has sailed this year, except the Satanita. Sometimes she has been poorly handled, and sometimes well handled; taking the average, I think there could not have been much improvement in that respect. I am satisfied that the boat and not the handling has been at fault."

"She might, however, have won the Royal London match on the first day if she had been better handled. I never in my life saw a boat better handled than the Britannia was then."

"I consider the English courses, where so many marks are rounded, exceedingly bad for big boats. Starting the boats in the crowded fairways is almost like starting an important horse race among a lot of cabs and coaches. The way English crews handle sails under these circumstances is something I never seen in America."

"I regard the Brenton Reef decision as beyond question regarding fairness. The judges' mistake was purely unintentional. All the races here are conducted in the fairest manner."

"I think the Valkyrie will have a poor chance against the Vigilant in

the race for the America's Cup. The Vigilant is faster than any boat over here. I hope they will make a good race, however, as I should be disappointed if the race was a walkover for either boat. I intend to start for the United States in about a week or ten day."

A yachting correspondent in writing to the *Model Yachtsman and Cnoceist* speaks as follows of Navahoe's first races:

"Thursday, Aug. 3, opened with a strong breeze from W.S.W., and as the principal match was for the Cowes town cup, value £100, and a second prize of £50, another chance was afforded us of seeing how Navahoe would behave herself in a good breeze.

"Britannia had sprung her mast yesterday, so of course she was out of it, but Satanita, Navahoe, Valkyrie and Calluna were ready at 9 a.m. 10 A.M. all had a reef in the mainsails, and Valkyrie had her mast hoisted, it was a close haul up to the first mark, and a very level start was made by all, Satanita leading, Valkyrie next, then Navahoe and Calluna, Navahoe rather best position to windward. Before they had gone one mile they all caught the full force of the wind off Egypt Point, and all got through the first squall comfortably, except Navahoe, which curled up to it in a very dangerous degree, so much so, that they had to lower away mainsail and run back to Southampton for repairs; on-lookers really thought that she was either going to capsize or fly and sink, however, it was not quite so bad as that, but it proved clearly that she was both over-spurred and over-cannased for such a breeze. It had been rumored at Cowes that all her owner wanted was plenty of both wind and sea outside the Needles. Whether she would have done any better out there, is open to doubt, but it certainly did look rather singular, that the very first real squall she got in English waters, should have, vulgarly speaking, 'knocked her into a cocked hat.' All the others got through the squall comfortably and they sailed a splendid race. Satanita, however, had at last got another day to suit her, and finished 8m. 13s. ahead of Valkyrie in the fastest time on record over this course, viz.: 3h. 40m. 5h. equal to 12 knots an hour, over the whole course.

"Navahoe only got one second prize at Ryde, and even that she would not have had if Calluna had not burst her jackyard topsail when she was near the finish of the match on Aug. 8, as Calluna was quite close to her when the accident happened. It will thus be seen that Navahoe only got two first prizes when she had neither Valkyrie nor Britannia to contest with, so that it may safely be assumed that she is not so good an all-round vessel as any of ours.

"Her best performance was certainly in her first match on July 31; on that day she seemed to have exactly the breeze to suit her as when there was either less or more wind she was beaten on every point of sailing by all the others. So unless the others they have turned out to contest against Valkyrie for the America Cup are considerably better than Navahoe, Valkyrie should have a good chance of regaining that much coveted Cup.

"Navahoe had other two opportunities of showing what she could do in a strong breeze, on the 19th at Weymouth and on the 21st at Torquay, and at both places she failed to improve her reputation; so she must now be looked upon as a complete failure, in English waters at all events, as all our big ones have beaten her in all sorts of weather, from drifting to half a gale."

### The Brenton's Reef and Cape May Cups.

The race for the Brenton's Reef Cup, taken abroad by Genesta in 1885 and challenged for by Mr. Carroll, was sailed on Sept. 14, the challenger of course being Navahoe, and the defender Britannia. The conditions called for a race from the Needles, at the west end of the Isle of Wight, across the English Channel to Cherbourg, rounding the breakwater of Cherbourg Harbor from west to east, and return, one hundred and twenty miles.

The two yachts were at the line off the Needles early on Sept. 13, and were sent away at 11:15, the start being timed, instead of from the gun, as in all British races. Britannia led over the line by 64 seconds, both carrying jibs and single reefed mainsails. The wind was strong from the east, working a reach both ways. Navahoe passed Britannia early in the race, and was just ahead at Cherbourg, where there was a short beat through the harbor. They were within a few seconds of each other when they started for home, and Britannia then took the lead. Both housed topmasts and set small jibs, the wind and sea increasing. The pair held close together all the way home.

The sea was so rough off the Needles that the committee steamer went into Alum Bay, just inside the Needles, and anchored in smoother water, making a finish line east, or inside of the light. The yachts finished so close together that Britannia was declared winner by 2 1/2 s., the finish being timed: Britannia 10:37:35, Navahoe 10:38:32.

Mr. Carroll made a protest on the ground that the finish line was not correct, the committee boat having sailed from a position, and not crossed the true finish line within half a length of Britannia. At a hearing to consider the protest, the committee declared Navahoe the winner, admitting that the finish line had been changed, as the steamer had to run in for shelter and had not run out again, the yachts getting back sooner than expected. Navahoe's rating had been reduced to 100 tons, but it was not until 10:32 A. or New York Y. C. allowances Britannia would have beaten her.

Owing to heavy fog on Thursday night it was 9:30 A.M. on Friday before Navahoe and Britannia left Cowes in tow for the start for the Cape May cup. The first plan was to lie over night in Alum Bay and start at 7 A.M., but the fog caused a change of plan and it was 12:45 when the start was given, the line this time being in Alum Bay, two miles further east, making the course the same as on the 14th but four miles longer. The wind was light S.W. with a smooth sea. Both carried clubtopsails and jibtopsails. Britannia crossed too soon and was recalled, crossing again with Navahoe. Off the Needles they were timed: Britannia 1:03:37, Navahoe 1:05:15.

There was a fog in the Channel, with a light wind, and it was 5:29 A.M. on Saturday when Britannia reached Cherbourg, Navahoe being timed at 5:57:15. The return trip was made with a light east wind until the Isle of Wight shore was picked up, when the wind came in ahead and the two were compelled to trim sheets. On the windward work Britannia made a gain, and the finish was timed: Britannia 12:57:14, Navahoe 1:33:32. Britannia wins by 36m. 18s. elapsed time.

Navahoe thus brings home one of the three cups for which she started.

### Larchmont Y. C. Schooner Cup.

LARCHMONT—LONG ISLAND SOUND.

Saturday, Sept. 16.

The second annual race of the Larchmont Y. C. for a special schooner cup, valued at \$500, was sailed on Sept. 16 in very variable weather, a heavy rain falling before the start, with a light wind. As the rain stopped the wind came in heavy squalls from the west, blowing fresh all through the race and at times hitting very heavily. The starters were:

	Racing Length.	Time Allowed.
Dauntless, Caldwell N. Colt.....	110.04	11 11
Lasca, John E. Brooks.....	93.17	11 11
Emerald, J. Rogers Maxwell.....	83.42	11 11
Ariel, G. H. B. Hill.....	83.53	11 14

The course was from off Larchmont, around markboats off Eaton's Neck, Stamford and Hempstead, 3 1/2 miles, naut. The start was timed:

Lasca.....	11 05 46	Dauntless.....	11 12 07
Ariel.....	11 05 56	Emerald.....	11 13 17

Both jibtopsails and mainmast staysails were set, Emerald swinging a clubtopsail and the rest carrying jibheads. With a light but freshening wind all reached for the Eaton's Neck mark, but when near Center Island a strong and vigorous N.W. squall came up, and Emerald and Ariel were soon head to under mainsails, Dauntless and Lasca carrying lower sails, Dauntless lowering her main peak. Lasca jibed over, and sailing away on her course. Dauntless jibed, but the other two lurched around in the squall, the leg was covered in good time before the squall, the times at Eaton's Neck being:

	Turn.	Elapsed.
Lasca.....	12 31 40	1 25 54
Dauntless.....	12 36 30	1 26 20
Emerald.....	12 43 25	1 34 23
Ariel.....	12 44 49	1 34 36

The wind now headed on the stretch across the Stamford, being still fresh. Only Lasca was timed, at 1:42:35. Ariel passed Dauntless on the close reach from Stamford to Hempstead, the times at the latter mark being:

Lasca.....	3 35 03	Dauntless.....	3 59 25
Ariel.....	3 35 12	Emerald.....	3 50 30

The last reach home was made against another squall that sent them all well over. The final times were:

	Start.	Finish.	Elapsed.	Corrected.
Dauntless.....	11 12 00	3 33 44	4 21 44	4 21 44
Lasca.....	11 05 46	2 59 35	3 59 49	3 42 38
Emerald.....	11 13 17	3 33 33	4 20 16	4 05 25
Ariel.....	11 08 59	3 30 00	3 59 54	3 50 20

Lasca beats Ariel 7m. 42s., Emerald 22m. 47s., Dauntless 30m. The regatta committee included Messrs. J. F. Lovejoy, Otto Sarony and G. M. Barretto.

On Sept. 9, the steam yacht Intrepid, Mr. Lloyd Phoenix, struck the rocks on Hog Island Reef, near her Isle, on the Maine coast. She was backed off at high water and though looking considerably made Bath under her own steam, where she was docked. Her bottom was pierced in several places; the repairs will be made at Bath.

### Wasp at Chicago, and Her Discoveries.

CHICAGO WAS DISCOVERED.

Chicago, Ill. Aug. 17.—Capt. John Prindiville, otherwise and best known all over the Great Lake as "Capt. John," was the first man to discover Chicago. He located it by means of the binacle on his dug-out a good many years ago. It was some sandy around here then, and all the buildings were one story, and all the Clark street merchants were Indians. Capt. John got along pretty well with the Indians, and his business prospered. He discovered Lake Michigan, too, and built many boats, and as households grew and gave it a chance, his name became a household word. He built many ships for commerce, and gradually got in the habit of building things that sailed.

Some little time ago Capt. John built a boat for fun, not for business. He called her Wasp. She was sloop rigged then, but was a goer, and even then "her forefoot always crossed the line ahead."

DISCOVERY OF CLEVELAND.

Meantime, Cleveland was discovered. It was discovered by Commodore G. W. Gardner, or, rather, plain Com. Gardner. Commodore Gardner was a commodore when he discovered Cleveland, and always has been ever since. The Cleveland Y. C. at that time consisted of

STEAM YACHT "FEISEN."  
View of Broken Bow.

one birch canoe, with a pole in it. It is larger now, and Cleveland is larger, and Com. Gardner is larger, and his earthly goods, that is to say, his "pile" is larger. From having been sachsen of the village he rose to be commodore of the—but we are ahead of the story.

DISCOVERY OF THE WASP.

Com. Gardner heard of Capt. John, of course and he heard of Wasp. He bought Wasp, and made her the flagship of Lake Erie. He put another stick in her, and made some other little changes, and turned her loose in the eastern lake, and still her forefoot always crossed the line ahead.

DISCOVERY OF AMERICA.

In the meantime, Columbus discovered America, and Chicago being already discovered, it was decided to hold a World's Fair at Chicago. So the Santa Maria, and the Pinta, and the Nina, and the Viking ship, and others, all went to Chicago, and Com. Gardner thought the Wasp ought to go too. About two weeks ago Wasp left Cleveland, and after a leisurely cruise in all sorts of weather and a number of stops at good places, arrived at Capt. John's town last Monday, running the last 225 miles in less than 24 hours. Wasp had aboard Com. Gardner and son, Curt, Gardner, Col. J. R. Bartlett, of Fremont, O.; Mr. M. H. Dodge, of Cleveland, and Mr. Eugene Sullivan, of Detroit. She was

STEAM YACHT "FEISEN."  
View of Stern and Screw.

sailed by Capt. Arch. Petty and full crew of seven. "I came very near losing a man or two in rough weather one night," said Capt. Petty. He took plenty along, in case he should lose one somewhere.

DISCOVERY BY THE NATIVES.

The savages who used to inhabit the Chicago C. C. house (before it was burned down), have an eye on them like an eagle. The Wasp had hardly dropped anchor at the foot of Randolph street viaduct (where the harbor master said she was the prettiest sail that came into port this season), before word was passed among the savages that there was a new ship in town. Com. Gardner, to save his vessel, discussed that he was also a chief by previous adoption in this tribe, namely, a commodore of the W. C. A., and he proposed peace. The matter was finally compromised by Com. Gardner offering to take the whole tribe out for a sail, Thursday afternoon. To this the tribe agreed, and at 2:30 of said day they swarmed aboard. Dr. Henshall was late. It was 3 o'clock when he hove in sight on the dock. He was out of breath, but made signs for the ship's boat. "You needn't mind rowing," he said to the oarsman, "I'm blowing enough to take you right along." Then Capt. Petty weighed the anchor and found it wasn't losing flesh, and at the boom of the cannon the good ship, with every inch of her canvas early run aloft, leaned over just a little in the gentle breeze and started off for the World's Fair. Who was at the wheel? Why, who should be, but Capt. John himself, the builder of the ship, proud of this courtesy as any king ever was of a newly upholstered throne. As he went along, Capt. John told the boys just how deep it was, every foot under the vessel, and told what the bottom looked like. Capt. John knows every hoopskirt and tin can on the bottom of the Great Lakes, and this was dead easy for him. Com. Gardner smoked and looked happy. All the tribe was happy, too.

DISCOVERY OF A CUSTOM.

"There is one custom in the Wasp," said Com. Gardner after a while, "which I must ask you all to observe. Every one aboard ship is expected to go below and register. So everybody went below and registered, and called it a pleasant custom. The list of those present as guests was as follows: Capt. John Prindiville, his son Thos. J. Prindiville, Dr. Jas. A. Henshall, Messrs. Chas. W. Lee, J. Herbert Ware, N. B. Cook and son N. H. Cook, A. W. Kitchin, P. F. Munger, A. J. White

James B. Keogh, W. H. Eckman, E. Hough and B. Waters, of FOREST AND STREAM.

Com. Gardner proposed a health to Captain John, "the father of yachting on the Great Lakes." This met applause, with the refrain "Many happy days."

DISCOVERY OF THE VIKING.

Everybody has heard of the Viking ship, the plucky open boat built on the model of a boat discovered in the burial mound of an old Norse king. Everybody knows that this boat, under the command of Capt. Magnus Andersen, crossed the ocean this summer and arrived safely at the Fair by way of the Lakes. At Cleveland it was the Wasp which met the Viking, and before Capt. Andersen ever got ashore he had gone aboard the Wasp and had a welcome. Not everybody knows that since the Viking arrived at Chicago she has never left her moorings, never until Thursday, when she was out taking a run for exercise. She was about three miles out in the lake from the water front of the Fair, when the Wasp lookout spied her about the same distance away from the latter vessel. In an instant, as the naval novelist would say, all was confusion. Com. Gardner at first gave orders to run up the skull and crossbones, but concluded to fly the Viking flag instead. With the latter peak, Wasp, which had been sailing close to the wind, under order of her clear swung on her heels and laid a course to intercept the Norseman. The latter, seeing himself pursued, went about and fled for the neutral waters of the Fair. In turn the Wasp wore and again laid an intersecting course. It was all over then. The big square striped mainsail of the Viking, even though helped out by an un-Viking jib, availed nothing against the lofty canvas of the flagship. We sailed feet to her inches forward the officer of this having come aboard, Com. Gardner found him to carry a message from Capt. Andersen asking him to come aboard the Viking. This he did, both vessels laying to. Shortly Com. Gardner hailed his own ship, saying that Capt. Andersen invited some of the Wasp party to come aboard. In a moment one of the Wasp boats was lowered and filled with a goodly contingent, and the Viking was boarded after a brisk pull.

DISCOVERY OF THE MAGAZINE.

Captain Andersen is a man of few words. After the first salutes and introductions he said something that sounded like, "Em man ved det sig selv," and then happened a very singular thing. A brown sailor man, bearing a corkscrew, stepped at. He sawed the corkscrew into the deck, or the bottom of the boat, and with a heave brought loose a section of the same, discovering the ship's magazine, well stocked with ice and things to eat and drink. Then mutual felicitations followed, Capt. Andersen toasting Com. Gardner and Com. Gardner toasting Capt. Andersen, and the trio giving cheers for the Viking and her crew.

Having learned how to pronounce "Viking," which, by the way, is properly to be called "Veek-ing," the visitors swarmed all over this curious craft, caressed the great dragon heads on prow and stern, inspected the stocky mast and the great square mainsail, saw the crew straddle the great rowing benches and handle the vast oars, and looked at the odd rudder, lashed on one side at the stern and hung by means of a great iron knot tied in the end of the supporting rope. Very strange indeed is this craft, but not badly planned as a sea boat, and with room between her sides for quite a lot of storage. Under the rude awning midships were the bunks of the crew and forward was the swinging galley, with beautiful iron crane chains, made in exact imitation of similar Norse boat furniture known to be a thousand years old. It was hard, indeed, to believe that this craft, out of another world and another day, was really here on Lake Michigan, near this prosy, matter of fact town of Chicago. As it was, the encounter made a singularly pleasant denouement to a very pleasant afternoon.

DISCOVERY OF AN EDITOR.

Capt. Andersen is a hustler, or he couldn't have brought the Viking ship across in 28 days. He handed me his card and announced that he also was a newspaper man. This did not surprise me at all, in fact one might have inferred it. The card reads: "Magnus Andersen, Master of Viking editor *Norges Sjøfartstidende* (Norw. Daily Shipping Gazette), Christiania."

This I send on to the archives of FOREST AND STREAM, but retain for the FOREST AND STREAM exhibit the souvenir label taken from a bottle of Viking special brew which made part of the ship's supplies while coming over the ocean. Some of those who tasted underneath similar labels said it was no trouble to cross an ocean on such diet, and made light of the voyage. All the Viking supplies were made specially for the voyage.

"It took us twenty-eight days to cross the Atlantic," said Capt. Andersen, "and we shilled all the way, not rowing in calm weather, as some have said. We had the oar holes plugged, and had out floating fenders, so that she would not sink if she filled. You can see she is altogether open, not decked at all. Yes, we had weather rough enough; but it is all pleasure here, and I am sorry I must go back before the Fair is over."

There were on board the Viking the following: Capt. Magnus Andersen and his secretary, Alfred Holm; Commissioner Chr. Ravn, Royal Commissioner for Norway, and his secretary, A. Berle; Consul Lindgren, at Chicago for Sweden and Norway; Col. Canute Matson, ex-Sheriff of Cook county and Chicago; Mr. Armandy and Mr. Leffer, Swedish Commissioner; Mr. N. Grovstad, editor of the *Skandinaviske* Messrs. N. Novik and W. Hansteen, of Norway; also Messrs. S. T. Gundersen, P. W. Chaulant, M. Freiburger and M. Sewall.

At length the pleasant meeting must come to an end. With parting compliments, Com. Gardner ordered his men into their boat, and with three cheers they pulled for the Wasp, which, as the Viking dipped her colors, gave the Viking a parting gun and a head back for the harbor, with music all the way from savage throats and instruments, and cheers at anchor-fall for the Wasp and her hearty commander.

909 SECURITY BUILDING, Chicago. E. HOUGH.

### International Racing.

WHATEVER anxiety may have been felt over Valkyrie's arrival has been dispelled by the report of Capt. Griffiths, of the National Line steamer Spain, which arrived on Monday afternoon. Capt. Griffiths sighted Valkyrie at noon on Saturday, being then in lat. 41°30', long. 82°30'. The yacht was some 3 miles distant, carrying a topmast sail and making a speed of 10 1/2 knots as estimated from the steamer, keeping up with the Spain for several hours. She was about 435 miles from New York, and will probably reach port this evening. Mr. Kersey went out in a tug this morning to meet her.

Mr. G. L. Watson, the designer of the Valkyrie, and Mr. T. W. Ratsey, of Ratsey & Laporte, sailmakers, arrived on Monday morning in the Furze, from Glasgow.

"Vigilant is now at City Island, where she is being overhauled most thoroughly, every part being strengthened and duplicate spars, etc., being provided. Sawyer & Son are making a new jib and staysail for her. She will probably haul out late next week at Downing & Lawrence's, South Brooklyn. Valkyrie will go into the big Erie Basin docks, where Genesta and Thistle were prepared for their races. Colonia is lying at Tebo's wharf, Jubilee has been stripped and hauled out at Lawley's, and Pilgrim is out of commission but has not yet been laid up.

### The Cup Races.

The late arrival of Valkyrie makes it impossible to sail the first race on the proposed date, Sept. 23, and, though not officially announced, the race will probably take place on Oct. 5.

### YACHT NEWS NOTES.

The race of the Royal Canadian Y. C. for the Prince of Wales' cup was sailed on Sept. 9, with but three starters, Zelma, Vedette and Vreda. The wind was fresh at the start, but soon fell light. Vedette, the smallest of the three, withdrew, the others being timed, 12:13 noon:

	Finish.	Elapsed.	Corrected.
Zelma.....	4 07 58	4 07 58	3 50 59
Vreda.....	4 02 20	4 02 20	4 02 20

The result of the trial races has been to expose the true character of the fake stories set forth in big headlines through the early part of the season of the phenomenal speed of the new boats. This objectionable feature of yachting journalism has attracted the attention of the *Yachtsman*, which indulges in the following:

BOSTON GLEANINGS.

"The following items are improved extracts taken from the yachting columns of the Boston (U.S.) *Daily Enterprise*: "At a special meeting of the Society for the Perpetuation of the Peerless American Rig, it was unanimously decided to call Colonia a sloop so long as there is possibility of her being chosen to defend the cup."

"Pilgrim took a spin down the harbor yesterday. As she had a party of ladies on board, only the lower sails were carried. Yet, despite short canvas, she made over 13 miles an hour in the wind. In running back the fin keel covered 14 miles in 43m. 37s., and

would have done better if she had not been obliged to heave to several times in order to allow the weary wind time to catch up."

"After following Jubilee for twenty minutes yesterday the log came on board, and after wiping the sweat off its brassy brow entered a protest with General Paine against being towed at a speed exceeding its makers' guarantee."

"The United States inspector has notified Mr. Oliver Iselin that he must not under any circumstances allow Vigilant to exceed a speed of 16 knots when passing through narrow channels, as her wash is liable to prove dangerous to small craft."

"We learn that the Cunard Steamship Co., have offered to purchase Jubilee after the races are over. The company will use her to take Campania's place during the winter season. She will carry the mails and a few first class passengers. Pilgrim, it is rumored, has been sold to the British Admiralty, who will commission her as a torpedo catcher."

"Answer to 'Anxious Inquirer'—Yes, there was a yacht of that name in the American Yacht List; but at present Nayahoe is not mentioned."

The inquest in the fatal disaster at the house of the Chelsea Y. C. last month, merely served to disclose the fact that no one was to blame. Incidentally it was proved that the tenon in the balcony, the immediate cause of the disaster, had been made but 5x2 in place of 10x2, as it was intended, and that the plans were very loosely drawn and the work never inspected.

The Midget Y. C. of Marblehead, held its "Ladies' Day" last Saturday, the event being thus described in the Boston Globe:

"There was a serial race in which Fred. Smethurst, Arthur Whittemore and Willie Gillie each won a leg. Then six little girls raced six of the best fin-keelers. Jennette Standley sailed Johnnie Giles' boat, the reputation of which is established and was upheld to-day by its fair skipper. Flora Sweet managed the Smethurst race winner perfectly."

"Pretty little Adelle Knapp was skipper of Arthur Hennessey's craft. The Whittemore boat was handled by Miss Leo Day. Belle Patey had charge of Ollie Doherty's 30-inchers and Alice Denning of Harold Litchman's."

"The start was most exciting, and a breeze just strong enough for the little models blew across the pond. The first leg was won by Jennette Standley, the second by Adelle Knapp and the third by Miss Leo Day."

Among the British yachtsmen who will attend the Cup races is Mr. Alfred H. Brown, the designer of many of the larger English steam yachts. Mr. Brown arrived last week in the Furst Bismarck, and will spend several weeks here. He has with him models and designs of some of his best yachts.

The Seawanhaka Corinthian Y. C. has secured the steamer Al Foster for the first three Cup races.

In order to accommodate their rapidly growing business Messrs. Tebo have just launched a fine large balance dock, built by themselves. With dock and the new pier now nearly completed, the yard will be able to accommodate the whole steam fleet of New York.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

OUR correspondent, Mr. Vaux, calls the racing men to account this week for their habitual indifference to matters in which they, of all men, are the most deeply interested. This indifference, which prevails in yachting as fully as in canoeing, is one of the curious paradoxes of sport. It will be found on looking up the subject that the leaders in all reforms and improvements in rules are not the men who own and race the boats, but those who, while keenly interested, for one reason or another neither own racing craft nor sail them. The average racing owner is supremely indifferent to all complaints and criticisms of rules so long as he gets along well in the racing, and he is more than apt to resent as a meddlesome interference the attempts of the non-racing men toward better rules. At best he declines to take any active part in a discussion, or to give a little thought to the merit of any proposed change.

Some day or other he happens to run up against a rule which bears hard on his own particular boat, and then he is suddenly awakened to the pressing necessity of a change, but as long as he fares fairly well and continues to win prizes, the evil tendencies of a rule and its effect on the general good of the sport are matters that have no interest for him.

This state of affairs has been most marked in the matter of measurement and classification in yachting of late years; the various proposals which have been made for changes of rule have originated entirely with the non-owners, and have been treated only with contempt and ridicule by the majority of yacht owners, who have dismissed them without taking the trouble to find out what they meant. The case has not been quite so bad in the A. C. A., many old racers, like Oliver, Vaux and Gibson, have lent their hands to the improvement of the rules, but there has been a good deal too much neglect for some time, and it is most necessary that many defects should be corrected at the November meeting, and that the men most interested in good rules should lend their aid.

For some time past the Field has advocated the removal of the long existing limit of beam in canoes, and the substitution of a rating rule, by length and sail area, with some additional limits on dimensions, but of such a nature as to encourage a larger and wider canoe than the present universal standard of 16x30. The reasons for this change are not very clearly stated, but the Field considers that the main cause of the present scarcity of entries is the racing machine with its narrow beam.

So far as our observations go, and we have followed the course of canoe racing in England and America for a good many years, the trouble, which is present here as well as there, has nothing to do with rules or dimensions, but is entirely due to the over-improvement and specialization of the sport; just as in yachting. We can speak with certainty for this country, and the same applies to British canoeing, that the limit of beam has had nothing to do with the retirement of the old racing men and the failure of new men to take their place. The true cause of the decline is, that while five years ago a man could buy or build a good canoe and race her successfully with only a reasonable expenditure of time, the art of canoe building and sailing has since advanced so much that the construction of the canoe and spars and the rigging has become a special study in which very few can hope to compete with such a skilled veteran as, for instance, Mr. Butler. The hull, spars and rigging must be perfect, and must be kept so by constant study and labor; and the man who wishes to win races must devote a very large part of his time to it and to nothing else, whether at home or in camp. Racing has become not only more expensive, but less of a pleasure task and more like very hard work; and when it comes to the question as to whether it pays, the majority of young canoeists decide in the negative.

For this state of affairs we can see no remedy through legislation; at one time our influence was thrown toward the retardation of the over-development of the racing canoe, but the time for all such measures has passed, and the only possible course is the exact reverse of that which the Royal C. C. has persisted in following—the retention of absurd and obsolete limitations which hinder speed and yet do not encourage good qualities. The same causes and results are visible in yachting and many other sports which have passed a certain stage of development, and no remedy has yet been found.

As regards the proposal to enlarge the beam of the canoe, it would

merely substitute a slightly different type of small racing boat, fully as expensive, elaborate and complicated as the canoe, more difficult to house and to transport, of no more use outside of match sailing and in no way superior to the 16x30-racer. Even if any temporary interest were awakened by the mere novelty of the class, which we doubt, it would be offset by the harm which would come through the destruction of that peculiar individuality which has always been the charm of the canoe and the strength of canoeing.

True, there is not much in common between the modern sailing racer and the old all-round cruiser and racer, but what little is left is well worth preserving. Once the canoe ceases to be such and is classed as one more variety, good or bad, of the large family so indefinitely known as "boats," there will be an end to canoeing. In this country efforts have been made again and again to call into existence a class of wide canoes, of about 33in. beam and lighter than the regular English canoe-yawl; but every attempt has failed, and there is no reason for the belief that the racing of such boats can ever be made what canoeing was.

Racing Rules and Courses.

Editor Forest and Stream:

I have observed that the racing men of the A. C. A. are a patient, quiet, long-suffering and silent set of good fellows, who would rather bear any ills they know of than rub pen to paper in an attempt to right them two inches to the windward. The executive committee will meet in November, and yet no one has taken any steps to correct vital errors in Racing Rule No. 1, which defines what a racing canoe is. These same racing men may indulge in a mild sort of kick while at the meet, but when they return home a solemn silence comes over them. Would that another MacKendrick could come to life and rattle around among the old dry bones as one William did four years ago. Probably there is no man who has ever come within sight of the sailing trophy who is satisfied with the present racing course. I will venture the opinion that if they were asked individually, one and all would agree that a half-mile-sided triangle is the most unfair and unsatisfactory course that could possibly be chosen to test the merits of canoes and men. Yet you never hear a racing man complain or suggest any different arrangement. The best yacht races are sailed to windward and have little to do with the result, but if there has been no such race on our A. C. A. programme, I can prove conclusively that more than three canoes cannot start or sail on even terms over a half-mile-sided triangular course. How absurd then to attempt to start fifteen or twenty. A mile-sided triangle would be far better in every way except one—the spectators on shore would not get quite so good a view. Are the races sailed then solely for the amusement of the onlookers? It would seem so.

A course three miles to windward and back would be a far better course for a canoe race than any number of times round that small triangle. Every boat would have an even chance of winning and of keeping out of the way of its rivals.

You need not expect, Mr. Editor, that this letter will call forth any views from the racing men; but a note from you asking certain questions on these points addressed to individuals might bring out some valuable information. This would be a good thing, for the committee to undertake. Any change in the laying out of courses would mean a little more work for the regatta committee and it would make the hiring of a tug imperative—but these can hardly be considered objections.

The racing at the meets for two years has been poor compared with earlier regattas in point of number of entries and starters at least. The racing men have little to do with the result, but it certainly has contributed to the general opinion that has gone abroad, that only two or three men have even a chance of winning.

I hope to see a great revival of the racing interest next year, and therefore I look to the officers of the A. C. A. to do all in their power to promote this result. Has any one else anything to say on this subject? I hope so.

C. BOWYER VAUX.

Cruising Canoe Yawls.

In considering the subject of canoe design, especially when dealing with the larger type of canoe yawl, every bold attempt toward speed, beauty of form, large accommodation, great stability, and other desirable perfections seems barred at birth by the necessity of compromising with other elements equally important, but antagonistic. For instance, stability has, to a large extent, to give way to the requirements of shallow water navigation; it is quite easy to so ballast the boat by a fin and bulb keel as to make her absolutely uncapsizable; but ability to work in shoal water to haul ashore, to be towed on carts or train, or steamer's deck—step in and demand a movable keel in the nature of a center plate. No doubt it may be said by some that all depends on the nature of the water to be navigated, but there again a canoe yawl should be ready for any kind of waters; and, unless a dinghy be always taken in tow, or collapsed and carried on board, landing becomes a great difficulty, except at piers, if the draft exceeds about a foot.

As an instance of the advisability of complying with the compromise between the dictates for stability and those for shallow water navigation, we may mention two incidents which occurred in one day's cruising to the Nautilus, canoe yawl, last week on the south coast. Nautilus under whole sail, sloop rigged, mainsail 130ft., and foresail 36ft., had been running with a moderate quarterly breeze, which had kept her in direction at a labor level for nearly two and a half hours; and her course lay about a mile and a half off the main land, with wind off shore. Suddenly, and without any visible sign on water or of clouds, a whistling noise from somewhere, or from nowhere, was heard, and then in a moment the boat came upright in a sudden lull, and next moment was laid on her beam ends in a tearing gust of wind. The Nautilus, handy as a top, luffed of herself, for her skipper was up on the weather bilge and the tiller under water, and she came up to wind in shoal waters of spoon-drift, which seemed to be cut off the comparatively smooth surface of the sea by the savage squall. The peak of the lug (there being heel halliards as well as yard halliards, or peak halliards) was let drop, a reef hauled down, and, with the mainsail thus scantled, Nautilus was put off and scudding within about forty seconds or a minute of being struck; and in ten minutes more there was nothing but the old breeze and somewhat bumpy water, and during the next six hours the wind continued quite moderate and steady; no water had been shipped.

The Nautilus is fitted with a heavy center plate of composite construction, blocks of lead dropping into a double plate "board," and she has 250lbs. of lead inside her, making a total of about 450lbs. A steady, strong breeze may lay a boat down and necessitate reefing, where the ballast is considered to be of use, but in the margin of safety is best found in a squall, sudden and unexpected, with a bulb keeler would probably also have been laid flat by the white squall, with, however, the certainty of righting by luffing; Nautilus had just sufficient weight to do so, and, moreover, to carry way on and be under command, but an unballasted skimmer would almost certainly have been blown over again with no way on, for the sails were shaking like thunder claps on canvas, and the boat was in the question of whether she would float or sink, and thereby hang questions of construction and of the keel to fill a page of the Field. There can be no doubt that, for such rough treatment by wind, ballast on the keel and bulb fin-keels are the acme of security; but a bulb fin-keel may prove the reverse of safety in other circumstances common to small boat single-handed sailing.

The day having passed with pleasant, almost drifting sailing, sunset came on while yet some 18 miles had to be sailed. The breeze freshened up, and by 10 P. M. the sea became lumpy and uneven; the jumps in the dark from sea to sea were so wild that the lamp was put out three times by the jerks, and was so left, as the single hand's attention was fully needed at the tiller and foresheet. Compass bearings and course were simply impossible in the getting into port was preferable to the prospect of being blown out to sea, and the question of whether the course for the lights could be taken, but with the possibility of passing very near the tail end of a shoal shingle bank, with the wind blowing on to shore. Here came the advantage of a centerboard and the lead line, or even the centerboard versus lead line, in so small a boat. The lead gave no bottom at two fathoms time after time; then one fathom, and, before the lead could well be hove again, the center plate struck at 4 ft. draft. In a couple of seconds the hand chain gear lifted the plate a couple of feet, the helm was put down and in five seconds the boat was standing off to sea for a reasonable offing, and then put about to her course again for the distant lights. Where would a fixed bulb keel have been in those circumstances? Probably stranded, and, further, lying on that shingle bank at this moment, with or without the boat attached to it, for a second bump would have been a nasty one.

Sobering year would have proved far too slow in its action for lifting a keel before another sea could drop her on the bottom. It shortly comes to this, that, for racing only, the boat should have a fin keel, and keep to the deep, even if extra miles of sailing are thereby entailed. For cruising, and convenience of landing, housing, and transporting, have a center-plate, just as heavy as can be hauled up by chain gear ashore. Of course, then, the question of the keel for racing only applies to the single-handed sailing of canoe yawls; for in such craft, properly fitted, deeds can be done with impunity which would be seriously risky in yachts of twice their size not similarly fitted and handleable.—W. Baden-Powell, in The Field.

The Passaic River Regattas.

The three canoe clubs about Woodside and Arlington, on the Passaic River, the Orange, Arlington and Ianthe, held their annual celebration on Labor Day and the preceding Saturday, each club holding a regatta. A number of canoeists were present from Saturday to Monday, the intervening day being spent pleasantly on the river. The first event of the regatta of the Orange C. C. on Saturday afternoon, held off the club house at West Arlington. The sailing races went off better than usual on the river, the wind being quite strong. The events and winners were:

Paddling, any canoe: G. W. Petty, Rutherford C. C., won; Frank McLees, Rutherford C. C., second.

Sailing, seniors: George Douglas, Ianthe C. C., won; George Manley, Orange C. C., second. Manley's boat filled early in the race and Doug won with ease. He offered to resail the race, which was done, and he won the second time.

Sailing, for cruising canoes: Wm. Smiley, Orange C. C., won; B. R. Roome, Arlington C. C., second.

Sailing, juniors: Geo. Manley, Orange C. C., won; B. R. Roome, Arlington C. C., second.

Paddling, club fours: Ianthe crew, Harry Farmer, Barron Fredericks, H. B. B. and Joseph Stewart, won; Rutherford crew, G. W. Petty, Frank McLees, D. W. Bain and W. D. Barkley, second.

Sailing, maneuvering and upset: Geo. Douglas, Ianthe C. C. won; Geo. Manley, Orange C. C., second.

Paddling, seniors: Geo. Douglas, Ianthe C. C., won; Mark Freeman, Ianthe C. C., second.

Paddling, juniors: Geo. Petty, Rutherford C. C., won; H. Allen, Arlington C. C., second.

Paddling, tandem (canoes of 30in. beam or over): Harry Farmer and Geo. Douglas, Ianthe C. C., won; Fred and J. C. Collins, Bayonne C. C., second.

Hurry-scurry and upset: W. D. Barkley, Rutherford C. C., won; D. W. Bain, Rutherford C. C., second.

The regatta committee was W. H. Smiley, chairman, H. M. Anderson, secretary, and the reception committee was J. E. Rogers, chairman, George and W. E. Smithanson.

After the races the ladies present were taken on a trip in the war canoe, and in the evening a reception was held at the club house. The regatta of the Arlington C. C. was held on Monday morning, resulting as follows:

Club fours, open canoes: Joseph Stewart, E. B. Boggs, J. H. Braine and Harry Farmer, Ianthe C. C., won; J. Duguid, A. Archibald, Geo. Douglas and Barron Fredericks, Ianthe C. C., second.

Paddling, tandem, decked canoes: J. Duguid and H. Farmer, Ianthe C. C., won; A. Archibald and B. Fredericks, Ianthe C. C., second.

Paddling, open canoes: Frank McLees, Rutherford C. C., won; J. C. Atwater, Arlington C. C., second.

Paddling, decked canoes: J. Stewart, Ianthe C. C., won; J. Allen, unattached, second.

Paddling, tandem, open canoes: J. Duguid and George Douglas, Ianthe C. C., won; B. Fredericks and A. Archibald, Ianthe C. C., second.

Standing paddling: Harry Farmer, Ianthe C. C., won; Frank McLees, Rutherford C. C., second.

Hurry, scurry and upset: D. M. Bain, Rutherford C. C., won; Frank McLees, Rutherford C. C., second.

Swimming, 100yds.: D. M. Bain, Rutherford C. C., won; B. R. Roome, Arlington C. C., second.

The regatta committee was I. V. Dorland, R. Ellis, and B. R. Roome. In the afternoon followed the regatta of the Ianthe C. C., at the club house on the Newark side of the river, resulting as follows:

Sailing Seniors.—George Douglas, Ianthe C. C., won; J. Stewart, Ianthe C. C., second.

Paddling, Open Canoes, Single Blades.—William J. Stewart, Ianthe C. C., won; Frank McLees, Rutherford C. C., second.

Paddling, Senior Decks, Sailing Canoes.—M. A. Freeman, Ianthe C. C., won; George Douglas, Ianthe C. C., second.

Paddling, Juniors, Decked Sailing Canoes.—Alexander Archibald, Ianthe C. C., won; J. E. Hedenberg, Ianthe C. C., second.

Paddling, Tandem, Decked Canoes.—F. L. and J. B. Collins, Bayonne C. C., won; J. Duguid and George Douglas, Ianthe C. C., second.

Sailing, Tandem, Open Canoes.—Barron Fredericks and Alexander Archibald, Ianthe C. C., won; W. and J. Stewart, Ianthe C. C., second.

Club Fours, Open Canoes.—J. Stewart, H. Farmer, J. H. Braine and E. B. Boggs, Ianthe C. C., won; J. Duguid, W. Stewart, A. Archibald and B. Fredericks, Ianthe C. C., second.

Paddling, Any Canoe.—C. V. Schuyler, Arlington C. C., won; G. W. Petty, Rutherford C. C., second.

Paddling, Senior Decks, Sailing Canoes.—B. W. Bain, Rutherford C. C., won; W. D. Barkley, Rutherford C. C., second.

Tournament.—H. Farmer and B. Fredericks, Ianthe C. C., defeated G. W. Petty and Frank McLees, Rutherford C. C.

The members and visitors spent the evening at the Ianthe club house.

A. C. A. Membership.

EASTERN DIVISION: John E. Bradley, W. M. Freeman, Worcester, Mass. Northern Division: George Emert Gross, Whitby; George Herbert Dartnell, Buffalo, N. Y.

CANOE NEWS NOTES.

The annual fall regatta of the New York C. C. will be held at Bensonhurst, Gravesend, foot of Twenty-second avenue, on Saturday afternoon, Sept. 23. All races will be open to members of any canoe club or the A. C. A. Programme: 1. Unlimited sailing race to be called at 1:30. 2. Handicap sailing race, to be called at 2:30. 3. Cruisers' sailing race, to be called at 3:30. Open to boats of not over 18ft. l.w.l.: 4. Paddling, decked canoes, to be called at 4:30. 5. Paddling, tandem by hand, to be called at 5:00. 6. Tug of war, to be called at 5:30. The regatta committee includes Jas. R. Lake, John E. Plummer, and H. C. Ward.

Rifle Range and Gallery.

Independent N. Y. Schuetzen Corps.

The grand prize shoot and summer night's festival of the Independent New York Schuetzen Corps at Washington Park on Tuesday, Sept. 12, brought together a large gathering of the corps' members and invited guests. The programme of the close corporation order, being open only to the members of the society.

The bulls-eye target offered 25 prizes ranging from \$75 to \$300. The prizes to be won by the best center shots on a 4in. disk in a 12in. black. There were 10 premiums for the most red flags ranging from \$20 to \$300. Scores: E. Fisher 154 1/2, Geb. Krauss 29, Gus. Zimmerman 34, Geo. Lower 34 1/2, J. Bittschier 35, Alex. Stein 54 1/2, Ignatz Marten 54 1/2, W. Waether 56, B. Waether 58 1/2, H. D. Miller 68 1/2, A. Hoffman 73 1/2, F. W. Hofele 75 1/2, G. Bauer 85, E. Greiner 88 1/2, F. Simon 92, H. Kuhn 97, J. Lower 98, H. Weber 100, A. Roedler 102 1/2, Dr. Herold 121, A. Begerow 138, W. Soll 139, F. C. Halbe 163, M. Herman 167, L. Dreyer 172.

Premiums, most red flags: Gus. Zimmerman 44, E. Fisher 39, Geb. Krauss 24, Alex. Stein 34, B. Waether 24, Ignatz Marten 16, G. Greiner 12, F. Simon 10, F. D. Dreyer 10, F. W. Hofele 9.

Target of Honor: On the target of honor each member had two shots on the ring target, the best shot to count, the low shot to decide the ties, if any; prizes to consist of donations by members and friends. August Begerow, a member from the Newark contingent, captured the first prize. The scores are appended: Begerow 24 20, Ch. Rieser 24 17, I. Marten 23 23, B. Waether 23 23, E. Fisher 23 20, F. Kuhn 22 17, Greiner 22 11, Ch. B. W. 22 9, Zimmerman 21 21, J. Volz 21 15, W. Hayes 21 18, Geb. Krauss 21 16, H. D. Müller 21 15, E. Dreher 21 11, Ed. Hotz 31 0, W. F. Baab 31 0.

King target: This target was a 12in. disk (black), and each member had one shot; the best center shot to count; the member making it to be crowned king of the society for the year 1893-4. Strange to relate that, large as the target was, there were few bulls-eyes made. It was said the responsibility of the position caused many of the competitors to become afflicted with an acute nervous attack. Henry Weiler, however, was one of the exceptions, for his shot was an almost perfect center. He was crowned king of the society with great pomp and ceremony.

Harlem Rifle Club.

At the weekly gallery shoot of the Harlem Club on Sept. 8, Val. Krayer distinguished himself by outshooting the other members and putting up the fine score of 248 out of a possible 250. The scores are appended, 10 shots, possible 250, distance 25yds.: Val. Krayer 248, J. Bodensstab 244, C. Hutch 243, E. Bushy 241, W. Weeks 230, W. Taylor 228, McGe 227.

Ohio Rifle Shooting.

BELLEFONTAINE, O.—At the regular practice shoot on the 9th the following scores were made, conditions, 300yds., off-hand, open sights, Creedmoor target: O. Leidigh 35, J. S. Rea 37, W. H. Hele 29, J. F. Fisher 31, P. Rutledge 31, H. Dushane 33, P. Leidigh 39.

The weather conditions were very unfavorable, but nevertheless the score is an improvement over the last.

### Hamilton Gun Club Shoot.

HAMILTON, Ont., Sept. 12.—Since my last communication the club  
has selected new grounds in the vicinity of the magnificent driving  
park known as Hamilton Race Association, with the club house within  
50 yds. of Mr. John Hammell's commodious hotel, so that in future  
we can insure the best accommodation to shooters visiting this city.  
Our first shoot on the new grounds took place yesterday, with beau-  
tiful weather and a large number of spectators. Among the latter we  
noticed Chief of Police McKinnon and Mr. Symonds, of Philadelphia.  
The shooting was most successful, and the four winners, two of  
which had to be decided by shooting off the ties. In coronets, the  
winner of Captain Spencer winning the challenge medal the club will have a  
war suitably engraved and placed thereon. As the cool weather  
approaches our boys are looking forward to some live birds at our  
regular shoots. The following are the scores:

Handicap shoot, entry four, money prizes and 100 cigars:	
Wilson.....0111011110	— 8 Graham.....111111111—10

DULUTH, Minn., Sept. 10.—The third medal shoot of the Central Gun club was held on their club grounds at Spirit Lake on Aug. 31, and it was a friendly and exciting contest. The conditions were that the

As a friendly and exciting contest, the conditions were that the marksman who succeeded in three successive shoots to defend the club medal would become its owner, and naturally there was some excitement on, for Dodge, the loser, defended it twice and was prepared to give the winner a good score to beat him. But Nelson, his best competitor, had blood in his eye and his score of 20 took it from Dodge by the same number of birds as Dodge won it on in the two

The Hulberg Brothers medal was also hotly contested for, and a better showing would have been made had it not been for the high winds which came up during the shoot. This medal is a perpetual one, being held by the winner only so long as he can defend it. Nelson was always wrong until this shoot, when he lost to Moore. Following are scores:

Ont., Sept. 12.—Since my last communication the club

HAMILTON, Ont., Sept. 12.—Since my last communication the club has selected new grounds in the vicinity of the magnificent driving park of the Hamilton Racing Association, with the club house within 50 yds. of Mr. John Hammell's commodious hotel, so that in future we can insure the best accommodation to shooters visiting this city. The new grounds took place yesterday, with beautiful weather, and a large number of visitors. The undersigned, as noticed Chief of Police McKinnon and Mr. Symonds, of Philadelphia. The keenest interest was manifested in all four contests, two of which had to be decided by shooting off the ties. In commemoration of Captain Spencer winning the challenge medal the club will have a contest in the afternoon, and indeed the weather is so good that we approach our boys are looking forward to some live birds at our regular shoots. The following are the scores:

Handicap shoot, \$1 entry, four money prizes and 100 cigars:

### Hackettstown Shoot.

HACKETTSTOWN, N. J., Sept. 14.—In spite of a drizzly, disagreeable day my shoot went on at noon. A strong southeasterly wind prevailed, which drifted the smoke and particles of powder directly in the faces of the shooters; the birds were an excellent lot, and with the wind in the north or west would have tried the mettle of the best. Those present came to stay. The shooting commenced at 1:30 o'clock and continued until evening. It rained persistently the last two hours. Those present were Capt. A. Money, who was shooting in excellent form throughout. M. F. Lindsley and wife, shooting in good style in all events, but handicapped by using different guns, for his own gun was broken at Allentown; after two days' hard shooting the lever coupler gave way and of course could not be used. Mr. Borland, chemist of the E. C. powder works, tried his novice hand at live birds, for birds only. T. W. Morfey, of Paterson; Will Spicer, of Danville, Pa., and M. H. Ruple, of Milford, N. J., came on from Allentown shoot on the afternoon train; W. S. Cannon, of Newark, N. J., the noted one-armed shot, who never misses an opportunity to come here, because he "always gets good birds and plenty of them;" J. W. Hoffman, of German Valley, N. J., sick in body, but full of shoot and fun as ever; "Doc" Howell and J. J. Drake, of Chester, N. J. Mr. Thos. Young filled the place of referee and scorer in a very satisfactory manner. The scores, except the last, which was a \$5 entrance miss and-out, all the events were held under Association rules and boundary.

No. 1, 5 birds: M. H. R. 5, Money 4, Morfey 5, Lindsley 2, Smith 3, Spicer 5, Hoffman 5.  
No. 2, same: Money 5, Morfey 5, Canon 3, Spicer 4, Lindsley 4, Smith 4, Hoffman 3, Drake 3.  
No. 3, same: Money 5, Spicer 4, Morfey 5, Canon 5, Lindsley 4, Smith 3, Hoffman 4, Drake 3.  
No. 4, same: Money 5, Morfey 5, Canon 3, Spicer 4, Lindsley 4, Smith 5, Hoffman 5, Howell 3.  
No. 5, same: Money 4, Morfey 5, Canon 2, Spicer 5, Lindsley 3, Smith 5, Hoffman 4, Howell 3.  
No. 6, same: Money 5, Morfey 5, Canon 4, Spicer 3, Lindsley 3, Smith 5, Hoffman 4, Howell 3.  
No. 7, same: Money 5, Morfey 5, Canon 4, Spicer 3, Lindsley 3, Smith 5, Hoffman 5, Howell 4.  
No. 8, same: Money 5, Morfey 4, Canon 5, Lindsley 4, Smith 4, Hoffman 5.  
All moneys were divided except second in No. 7, which Canon and Hoffman carried through Nos. 8 and 9 and then divided.

JAMES L. SMITH.

### Unknown Gun Club.

THE regular monthly shoot of the Unknown Gun Club was held on Thursday, Sept. 14, at Dexter Park. Fifteen members competed for the club's championship trophy and three extra prizes; each shot at 7 birds from H and T traps, modified Long Island rules, bird to be on wing when shot at with first barrel. Louis Miller had a good lot of birds and the shooting of the veterans was lively. Elv Hyde and J. Boyd tied for first prize and divided. Eight tied with 5 each for the second prize, which was finally divided between J. Flynn, E. Vroomer and P. Sweeney. The third was also divided. In a sweepstake shoot that followed a lively race took place between J. Flynn and P. Sweeney for the first money in the second sweep. Each killed 14 out of 15 and then had to divide. The scores:

J. Flynn.....121111—7  
J. Boyd.....121111—7  
J. Hynde.....201122—6  
J. Sampson.....111021—6  
E. Vroomer.....210121—6  
H. Skidmore.....222102—6  
G. Marlborough.....222120—6  
J. Aekhurst.....101112—6

C. Roesch.....10121210—8  
H. Otter.....1212212201—9  
L. Lehning.....0211021000—6  
J. Vagts.....2102111110—8  
C. F. Offerman.....11101211—9  
A. J. Chester.....11102011—8

\*Arrived too late to compete for the Class A medal.

### The Jeannette Gun Club.

THE members of the Jeannette Gun Club held a very pleasant day's outing on Friday, Sept. 15, at Dexter Park. It was the shoot of the fall season but only eleven members were present to compete for the three gold medals of the club in the several classes. Each shot at ten birds. If the second barrel was used only a half point was scored. H. Otten won the class A medal with nine, H. Hoops being too late to shoot for it, he also scoring nine with the first barrel. C. F. Oppermann and C. Mohrman tied for the class B medal with nine each. On the shoot off the former won, L. Lehning taking the class C medal with six. Some good sweepstakes were shot off during the afternoon. The scores:

C. Roesch.....10121210—8  
H. Otter.....1212212201—9  
L. Lehning.....0211021000—6  
J. Vagts.....2102111110—8  
C. F. Offerman.....11101211—9  
A. J. Chester.....11102011—8

### Coney Island Rod and Gun Club.

FOURTEEN members of the Coney Island Rod and Gun Club competed for the Plate diamond badge and five cash prizes at Woodlawn Park, Gravesend, L. I., on Wednesday, Sept. 13. Each man shot at 7 birds, club handicap, American Association rules.

Dr. Van Ord was the fifth contest for the badge and had been previously won by Dr. Van Ord and J. Laird. Six tied with straight scores of 7 each, including the two previous winners. H. McLaughlin had drew and left the others to shoot off the tie. A good race took place,

and F. Pfander won the badge and first money with 15 more straight, just beating W. Laird on the last round. J. B. Voorhees won the second cash prize from D. Lynch and C. Plate. The third and fourth were divided and F. Graft took the fifth with a score of 3. The score:

Club shoot at 7 birds, club handicap, Plate diamond badge:  
W. Laird.....212121—7  
W. Scheeljes.....101021—5  
Dr. Van Ord.....212122—7  
J. A. Eppig.....111121—7  
S. Schlemann.....012301—5  
F. McLaughlin.....012301—5  
J. B. Voorhees.....121201—6  
Referee and scorer, Mr. J. C. De Fraine.

### Keystone vs. Woodbury.

WOODBURY, N. J., Sept. 16.—To-day the challenge match between the Keystone League and the Woodbury Gun Club took place on the grounds of the latter club. Of the Keystone League only seven members turned up in time to shoot.

The Woodbury boys had made preparations for a good crowd and certainly gave those present a good feast and a very pleasant reception. They had a large bus at the station to meet the visitors and gave them a good drive through the town to the shooting ground, where we found everything ready for the match, and from the pile of large watermelons on hand it puzzled some of us to know which we were to shoot at, watermelons or bluerocks. It was soon decided to shoot at bluerocks and eat watermelons, and we certainly did justice to both. Mr. S. Merchant was master of ceremonies in charge of the feast, and any one that left the grounds hungry it was because he was too bashful to eat before a crowd. Messrs. G. W. Cattell, E. Cattell, and W. Pack, in fact all the members of the club did everything in their power to make the League boys enjoy themselves and they did it with a vengeance. Conditions, 25 targets from 5 unknown traps:

Keystone.

H. Thurman.....1111101110111110110101—19  
W. Garvin.....11001011111101011110000—16  
W. Thomas.....0111101111111111111111—24  
J. Hack.....1011111111111111111111—22  
A. J. Rush.....1101001111110101100011—17  
John Tredway.....1101001111111111100111001—17—133

Woodbury.

J. D. Green.....0011011110111111111111—21  
J. Eastham.....101011100110011111011—17  
G. Thackara.....1000000100000100111111—12  
J. Henderson.....0101100100100100000—8  
J. Miller.....111111101010101010101—18  
G. W. Cattell.....1111111110111011111110—21  
E. O. Cattell.....0111010001011101010111—16—118  
After the club match two sweeps were shot of 9 targets each. The ties were divided, as it was getting dark and almost train time. With a hearty shake of hands all around and wishes that the same dose would be administered soon again the Philadelphia boys left on the 6:09 train for home.

Sweep No. 1, 9 targets: Rust 5, Green 7, Thomas 5, Miller 8, Treadway 8, Merchant 7, Hack 2, Geo. Cattell 5, Mr. Pack 3, Thackara 4, Garoni 6, Thurman 8, Dougherty 7, E. Cattell 4, Hudson 3.

Sweep No. 2, same, rapid firing: Rust 5, Green 6, Thomas 8, Treadway 9, Merchant 7, Hack 6, Geo. Cattell 4, Garoni 4, Thurman 9.

### Parkway Rod and Gun Club.

FIFTEEN members of the Parkway Rod and Gun Club were present at the regular monthly club shoot at Dexter Park on Wednesday, Sept. 13. Each shot at seven birds, class handicap, for the club's gold medal and class prizes, the latter being oil paintings by T. Short, one of the members. J. Bennett won in Class A, E. Woolley in class B and H. Le Maire in Class C, each with seven straight. On the shoot off for the medal H. Le Maire won on the fifth round. Sweepstake shooting followed, and a good race was made between J. Bennett, T. T. Edgerton and D. Monsees, each having to shoot at sixteen birds for first money, and then having to divide on account of darkness. The birds were a good lot and American Association rules were adopted. The Parkway's annual clambake takes place on Thursday, Sept. 21, at the treasurer's residence, corner of Van Siclen and Belmont avenues, East New York. The score of shoot:

Class A, 28 and 30yds.:  
A. Botty.....212211—6  
E. Helgans.....222223—6  
J. Bennett.....222121—7  
D. Monsees.....211101—6  
Class B, 25 and 27yds.:  
T. Short.....021021—5  
L. Moeller.....021111—4  
M. Ellis.....102021—5  
Class C, 23 and 25yds.:  
A. Andrews.....001112—5  
H. Selover.....210111—6  
F. T. Edgerton.....011021—5  
H. Bookman.....000001—2  
A. Waelin.....211112—6

### North Shore Gun Club.

PORT RICHMOND, N. Y.—Scores made at the monthly shoot of the North Shore Gun Club on Sept. 9, each man shooting at 25 bluerocks from unknown traps:

Scotfield.....11011011101011111110111—20  
Bartram.....101011011111011010101101—18

Howard.....0101111110111101101010—17

L. SCOTFIELD, JR., Sec'y.

### Waverly Gun Club.

THE regular monthly shoot of the Waverly Gun Club was held on Monday, Sept. 11, at Dexter Park. Nine shot for the club's gold medal, at 10 bluerocks each, 2 traps. Otto Hilmer was the winner with 9. R. Mohrman was second with 8. A sweepstake shoot followed, Otto Hilmer being the winner with 5 out of 6. The scores:

O. Hilmer.....1110111—9  
H. Van Staden.....01010101—8  
G. Helmstead.....00101000—3  
M. Schulz.....01010100—4  
A. Fehleisen.....0000010001—2

### Newark Gun Club Shoot.

THERE was a slim turnout at the September shoot of the Newark Gun Club, but the shooting was first-class, as were the birds. Of 184 shot at 104 were killed. There were three 10-bird events; No. 2 being the club shoot. In No. 3 second money was decided by a miss-and-out by Castle and P. Jay on the eighth round. The scores are here given:

No. 1, at 10 birds, \$5 entry:  
Castle.....111112101—9  
Hollis.....101012111—8  
Hedden.....12111111—10  
No. 2, club shoot at 10 birds for points and a nominal sweepstake included:  
Castle.....111112111—10  
Hollis.....121110211—9  
Hedden.....101201212—8  
No. 3, at 10 birds, \$5 entry:  
Castle.....111111011—9  
P. Jay.....0212221231—9  
Erb.....102211121—9

## Answers to Correspondents.

No notice taken of anonymous communications.

J. B., Lindsay, Ont.—I have seen in the FOREST AND STREAM scores made on the "Standard American Revolver Target." Will you kindly inform me what the "Standard" is, also the values of shots thereon at 20yds. or 25yds.? Ans. The "Standard American Revolver Target" referred to is the standard American target used in rifle shooting. For 25yds. shooting with the revolver the regular 100yds. target is used. The possible for 10 shots is 100.

W. B. T., Philadelphia.—Can you advise me of any method of making a chokebore gun scatterer sufficiently for brush shooting at woodcock or quail? Ans. To load chokebore guns so as to scatter the shot at close quarters, diminish the thickness of wadding between the powder and shot, and increase it over the shot. The scattering may still further be increased by separating the shot charge by a wad. See "The Breachloader and How to Use It," \$1, postpaid.

H. L. W., Adrian, Mich.—1. Is there good hunting in Texas such as quail, partridge, ducks, and other birds, and in what part of the State? 2. Is there good fishing there, and what kind of fish and whereabouts? 3. Which is considered the best State in the South or West for hunting and fishing? Ans. 1. Go to Dallas, Texas, where you will find bird shooting all you want. 2. Good fishing near Beeville, 3. Texas, we presume. See "Chicago and the West," this week.

C. H. B., Buffalo, N. Y.—Kindly inform me as to the best shooting grounds for large, also small, game within thirty hours' ride west of Chicago. Ans. Neligh, Neb., and the counties adjoining make an excellent objective point for chickens this year. Kennedy, in northern Minnesota, will offer entirely satisfactory sport on grouse, with moose and big game not far off in season. Tamarack Lake, Minnesota, is good for mallards. Ottentail county, Minn., is full of lakes which usually afford good duck shooting, though not so good as formerly. For deer, go to the north peninsula of Michigan, say at Saunders, Basswood or points further north. The Brule country is full of deer this year. Call on our Western representative for fuller particulars, as you go west.

F. P. V., Delaware, Ohio.—Please give us in your next issue plain directions for making the very best and most secure preparation used in snelling fish hooks; also state how it should be applied, and whether it should be applied to shank of hook as well as to wrapping thread? Ans. A good varnish is made as follows: "Take a quantity of the best gum copal, and pick out the lightest colored and clearest nodules. Test them for their fitness by touching each with a drop of the oil of rosemary. If the gum becomes at once sticky where the oil touched it will serve your purpose. Put these pieces on one side. When you have enough, say three or four ounces, pulverize them in an iron or glass mortar and spread the dust over a shallow dish in a thickish layer. Next pour oil of rosemary over the layer of gum till it is just covered. Let it stand a little time till the gum is permeated and then stir the whole mass together. It should form a plastic sticky paste. Now add alcohol gradually, and it is well if you place the dish over a water bath, to aid the mixing and solution, and as soon as possible pour the whole into a bottle, adding alcohol as you think it is required to form a sufficiently thin varnish. This is a very superior varnish and will resist water much longer than shellac, though it does not dry quite so quickly." You should have J. Harrington Keene's "Fly-Fishing and Fly-Making for Trout." Price, \$1.50.

## SAVE YOUR TROPHIES.

## ARE YOU JUDGMATICAL?

The word is not found in Webster's, but it's good for all that. He is judgmatical who acts with good judgment. That is judgmatical which is sound and good judgment. The Game Laws in Brief is prepared on a judgmatical plan. FOREST AND STREAM publishes it at a judgmatical price (25 cents). It is sold by all judgmatical dealers. It is to day in the hands of thousands of judgmatical sportsmen. Are you judgmatical?

## Notice to Fishermen! Cut Prices for 1893

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.58 until all are sold. Rods are all nickel mounted, solid reel seats, silk wound, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand.

Length and weight of the Bass rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 13oz.; 11ft., 14oz. Reel seats above hand.

A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 90 cts.; 60yds., \$1.00; 80yds., \$1.10; 100yds., \$1.20.

Any of the above reels sent by mail for price and 10 cts. extra for postage.

Brass Click Reels, 40, 60, 80 or 100yds., 28 cts. each; 5 cts. extra for postage.

One lot of Multiplying Raised Pillar Reels with Balance Handles and Lifting Drag: 40yds., 38 cts.; 60yds., 48 cts.; 80yds., 58 cts.; 100yds., 68 cts.; 150 yds., 78 cts.

A special lot of Trout Flies at 30 cents per dozen assorted, sent by mail 1 cent per dozen extra for postage.

A special lot of Bass and Pickerel Spoons at 5 cents each sent by mail, 1 cent extra for postage.

All kinds of Hollow Point best quality Hooks snelled to single gut 10 cts. doz.; double gut, 15cts. doz.; treble, 20 cts. doz.; four ply, 25 cts. doz. 1 cent extra per dozen for postage.

300ft. Braided Linen Reel Line on Block, 41 cts.; 300ft. of Hand-Made Linen Reel Lines on Block, 9 thread, 38 cts., sent by mail 3 cts. extra for postage.

Brass Box Swivels, all sizes No. 1 to No. 12, 15 cts. per dozen, sent by mail 1 cent per dozen extra for postage.

Single Gut Leaders, 3ft., 4 cts., 45 cts. per dozen. Double Gut Leaders, 40in., 5 cts. each. Treble Gut Leaders, 32in., 7 cts. each. Four-ply Leaders, 32in., 8cts.

Special lot of best quality 100ft. Linen Reel Lines, 8 cts., 300ft., 15 cts.; 300ft., 22 cts.; 3 cts. extra for postage.

Send 2-cent stamp for Illustrated Catalogue.

Open Evenings until 8 o'clock.  
Saturday Evenings 11 o'clock.

J. F. MARSTERS. 51, 53 & 55 Court St., Brooklyn, N. Y

## Hotels for Sportsmen.

## FAME AND BIRD SONG.

In a paper read before the Linnæan Society, of this city, Mr. Tappan Adney gives an interesting list of bird names current among the Melicete Indians, who occupy the valley of the St. Johns River in New Brunswick. Many of the names have reference to some habit or the character or song note of the species to which they are applied, and show that savage and civilized man follow much the same methods in making language. Thus our "whippoorwill," which is in mimicry of the bird's note, has its equivalent in the Melicete *hwipolis*; and the pied-billed grebe, which baffled shooters have nicknamed "hell-diver," is called by the Melicetes *azops*, akin to *zobeyu*, meaning smooth or slippery; for, the Indians say, it is a bird "sartin, very hard to hit." The name *nana-mikteus*, "rocks-its-rump," answers to the white boy's "teeter" and "tip-up;" and the "hammer-head" woodpecker becomes in Melicete *abakwises*, "bird-that-butts-its-head." Catbird in English is catbird in Melicete, though Mr. Adney suggests that the name could not have been given before the white man brought cats to America. Another name which has been adopted since the coming of the whites is that of the *wainokteis*, "little-white-man," applied to the winter wren. There was once a certain little white boy, who used to whistle like the wren, so that in time, hearing the bird, the Indians used to exclaim, "The little white man."

But the most interesting of all the Indian bird names here recorded is that of the hermit thrush, with the interpretation of its call, *Tanelain*—"Where-are-you-going?" *Tanelain*, *Nikola Deni-Deni*—"Where are you going, Nicolas Denys?"

Who is or was this Nicolas Denys? Only an Indian answers to the name now, an Indian who has inherited it through many generations from an ancestor who appropriated it from the original Nicolas Denys of America, a white man, a Frenchman. He came to New France in 1632, and in time advanced to the governorship of the entire St. Lawrence territory, over which floated the *fleur-de-lis* of France. Trading posts were established by him, whither the tribes resorted to barter; and here the Melicetes became familiar with that name which ever since their thrush has been calling in the woods, for three centuries and more. It must have been an honored name in New Brunswick in those days when the Indians adopted it for themselves and heard it in their bird songs. Good governor and shrewd trader that he was, Monsieur could never have dreamed of the immortality his patronymic should achieve thus set to bird music, so that never a hermit thrush should call to its brooding mate without uttering that name anew. Verily, for security of fame Nicolas Denys were a good name, and rather to be chosen than great riches.

But what is in a name, and what is fame itself when only an empty name prated by wild birds in New Brunswick forests? For Mr. Adney tells us that the Nicolas Denys known to the Indians is not the Frenchman who was a great man in the Seventeenth Century, but the Melicete of to-day. For all that there is in it of reminder

of the original bearer, the thrush might as well call it in remote solitudes unheard of human ear.

Equally empty and quite as meaningless is the proclamation heard in our own fields, when the quail whistles his call and pronounces the name of Bob White. For while the Melicete has forgotten the original Nicolas Denys, his white brother too has ceased to remember that Robert White, whom his friends knew as "B.b," and whose name was so familiar to them that, like the Melicetes they recognized it in the cry of a bird. The first to hear the quail call Bob White, told it to a friend, he to another and the third to a fourth, until all the neighbors knew it, all the quail in the settlement called it, and Mr. Robert White awoke to find himself famous; all the quail of the continent were calling Bob White. More than this, from time immemorial, remote, prehistoric—for generations back of generations—the quail had been piping the name uninterpreted until, Robert White—this one particular individual special baby White, was born and was baptized Robert and nicknamed Bob. For generations after generations the quail will continue to call it. Robert White's fame is assured. He has a security of the recognition of posterity more enduring than stone or brass. But his fame too, like that of the Canadian Frenchman, will be only the empty and unmeaning repetition of a name. Who Bob White was, when and where he lived—this is already forgotten. Of the original Robert White we know as little as we do of that Will, whom one bird calls Poor-Will, for whose chastening another exhorts whip-poor-will, while yet a third unfeelingly cries Chuck-Will's-widow. We know as little of the original Bob White, indeed, as of the original Katy, and whether she did or she didn't.

## FOREST DESTRUCTION IN THE ROCKIES.

In the early days of the settlement of this continent, when the Americans were few in number and the continent stretched away unknown and uninhabited to the illimitable West, it was thought that there was no need that any one should be careful in his use of the natural products of the country. There was land enough and to spare for every one; there was timber enough, the forests were best cut down and burned; there was game enough, let each one kill what he pleased. Perhaps it is the survival of this old idea which leads the average American to view with equanimity the plundering by individuals of the general Government. This is done in a thousand ways, and by many people is considered entirely legitimate. In no form is it more common or more far-reaching in its evil effects than in stripping the Government timber lands of their trees. This has taken place on a vast scale for many years, and its evil effects have long been seen in the East and in the West.

In the East our mountain sides, no longer protected by the roots and branches of trees and underbrush, are torn and gutted in spring by the rush of waters down their slopes. The spring freshets which so often spread death and destruction along the banks of our great rivers, also deposit in the beds of these same streams the soil torn from field and hillside, making their channels each year more shallow and more difficult of navigation. The tributaries of these rivers—the brooks and creeks, once forest-shaded and fed by springs and swamps—now dry up in summer, as soon as they have served to carry off the melting snows of spring.

In the Western mountains things are even worse, for there the timber growth is more scanty than in the East, and the work of destruction proceeds more rapidly. The mountains of New Mexico, Colorado, Wyoming and California have in many sections been stripped of their forests with a rapidity and a thoroughness which is almost beyond belief, and as a consequence of this denudation the water so much needed by the farmer for irrigation on the dry plains becomes each year scarcer and more difficult to obtain.

In the northern Rocky Mountains on their western slope lies the beautiful Flat Head Valley, a region of abundant rainfall, of pleasant lakes and of swift-flowing brooks and rivers, abundantly fed from vast fields of snow and ice far up among the mountain peaks. This valley has only recently been opened up by the building of the Great Northern R.R., and is now dotted with new towns and with the ranches of new settlers. Here in this lovely valley the work of timber destruction is now going on as recklessly and as wastefully as it went on years ago further to the south. Fires set by careless

travelers, by homesteaders who wish to clear their claims, or by hunters red or white; shingle mills set by every stream, contracts for railroad ties or for snow-shed timber are destroying the vast forests of the Flat Head Valley at a rate which, to the experienced judgment, makes the end of the timber there seem near at hand.

The protection of these forests lies in the hands of the General Land Office, and from time to time its inspectors pass through the country, gather in a very general way what information they can about the forest and make their report to headquarters. As has elsewhere been the case, so here, action can seldom be taken in time to stop any particular piece of destruction. After the ruin has been accomplished, suits may be instituted to recover the value of the timber, but even if the value be recovered, this does not restore the great trees which shaded the mountain slopes, in summer and winter, which protected the springs and retarded the melting of the winter's snows. Decades must elapse before nature can replace what man destroyed in a few brief months.

The present system of forest protection by the Land Office is entirely inadequate and inefficient, because it sends out strangers to gather information about a country of which they know nothing. In many localities a few local agents at small salaries with some allowance for expenses could, while pursuing their usual avocations, collect definite and detailed information with regard to forest destruction, and when the traveling inspector presents himself, would be able at once to inform him as to the condition of affairs, to show him their evidence and to let him see with his own eyes how matters stand.

If our forests are worth preserving—and about that there is no question—the antiquated and inefficient methods of the Land Office, which have nothing to recommend them except their age, should be discarded. The Land Office should get out of its rut and make a vigorous and determined effort for real forest preservation in the Rocky Mountains.

## SNAP SHOTS.

With his remarks on spring reed birds as food, Mr. Fred Mather sends us the *menu* on which these birds are entered as one of the courses, and from it we learn that the hotel where the dinner took place is one that has since failed and been seized by the sheriff. Some enthusiastic game protectionists may look on these two events as cause and effect, and may conclude that the failure is due to the hotel's disregard of the game laws. We fear that there is no connection between the two, for if all the hotels in this city which violate the game laws should fail, there would be very little accommodation here for the strangers who have occasion to visit New York. No class of citizens stand more in need of active missionary influence, so far as game laws go, than hotel proprietors here and elsewhere, and no class—if they could only be induced to rigidly respect these laws—could do so much good protective work.

As promised last week, we print in this issue the first half of Mr. Owen Wister's graphic contribution to the "Book of the Boone and Crockett Club." Those who have never followed the shaggy white goat among the rocky fastnesses which he inhabits cannot fail to be interested in the vivid account which Mr. Wister gives of this strange animal and his home, while to those readers who have hunted it the article will be not less enjoyable, for it will call up to the mind a hundred memories of toilsome but happy days spent among the rugged mountains of the Main Range or of the Pacific Slope. Mr. Wister is keenly observant, has abundant humor and deep sympathies, and a most happy gift of painting a picture so that his readers can see what he himself has seen; so he writes easily and well, and we are glad to be able to present this contribution from his pen.

The "national convention of sportsmen" met in Chicago last week, six strong. Four of the six were from Chicago, the two others came from Wisconsin. The meeting was a convention only in name, and was national only in the imagination of the individual who originated the scheme and has been its chief promoter. The committee appointed by the Illinois State Sportsmen's Association to call the convention appears to have done what it could to make the movement a success, but the fiasco which has resulted was from the first seen to be inevitable, for reasons which have already been pointed out in these columns. Nothing further may be expected from the impracticable and futile scheme.

### THE WHITE GOAT AND HIS COUNTRY.

From advance sheets of "American Big Game Hunting," the Book of the Boone and Crockett Club.

In a corner of what is occasionally termed "Our Empire of the Northwest" there lies a country of mountains and valleys where, until recently, citizens have been few. At the present time certain mines, and uncertain hopes, have gathered an eccentric population and evoked some sudden towns. The names which several of these bear are tolerably sumptuous; Golden, Oro and Ruby, for instance; and in them dwell many colonels and judges, and people who own one suit of clothes and half a name (colored by adjuncts, such as Hurry Up Ed), and who sleep almost anywhere. These communities are brisk, sanguine and nomadic, full of good will and crime; and in each of them you will be likely to find a weekly newspaper and an editor who is busy writing things about the neighboring editors. The flume slants down the hill bearing water to the concentrator; buckets unexpectedly swing out from the steep pines into mid-air, sailing along their wire to the mill; little new staring shanties appear daily; somebody having trouble in a saloon upsets a lamp and half the town goes to ashes, while the colonels and Hurry Up Eds crouse over the fireworks till morning. In a short while there are more little shanties than ever, and the burnt district is forgotten. All this is going on not far from the mountain goat, but it is a forlorn distance from the railroad; and except for the stage line which the recent mining towns have necessitated, my route to the goat country might have been too prolonged and uncertain to attempt.

I stepped down one evening from the stage, the last public conveyance I was to see, after a journey that certainly has one good side. It is completely odious; and the breed of sportsmen that takes into camp every luxury excepting, perhaps, cracked ice, will not be tempted to infest the region until civilization has smoothed its path. The path, to be sure, does not roughen until one has gone along it for twenty-eight hundred miles. You may leave New York in the afternoon, and arrive very early indeed on the fifth day at Spokane. Here the luxuries begin to lessen, and a mean once-a-day train trundles you away on a branch west of Spokane at six in the morning into a landscape that wastes into a galloping consumption. Before noon the last sick tree, the ultimate starved blade of wheat, has perished from sight, and you come to the end of all things, it would seem; a domain of wretchedness unspeakable. Not even a warm, brilliant sun can galvanize the corpse of the bare ungainly earth. The railroad goes no further—it is not surprising—and the stage arranges to leave before the train arrives. Thus you spend sunset and sunrise in the moribund terminal town, the inhabitants of which frankly confess that they are not staying from choice. They were floated here by a boom-wave, which left them stranded. Kindly they were, and anxious to provide the stranger with what comforts existed.

Geographically I was in the "Big Bend" country, a bulk of land looped in by the Columbia River, and highly advertised by railroads for the benefit of "those seeking homes." Fruit and grain no doubt grow somewhere in it. What I saw was a desert cracked in two by a chasm 65 miles long. It rained in the night, and at 7 next morning, bound for Port Columbia, we wallowed northward out of town in the sweating, canvas-covered stage through primeval mud. After some 18 miles we drew out of the rain area, and from around the wheels there immediately arose and came among us a primeval dust, monstrous, shapeless and blind. First your power of speech deserted you, then your eyesight went, and at length you became uncertain whether you were alive. Then hilarity at the sheer discomfort overtook me, and I was joined in it by a brother American; but two Jew drummers on the back seat could not understand, and seemed on the verge of tears. The landscape was entirely blotted out by the dust. Often you could not see the roadside—if the road had any side. We may have been passing homes and fruit trees, but I think not. I remember wondering if getting goat after all—But they proved well worth it. Toward evening we descended into the sullen valley of the Columbia, which rushes along, sunk below the level of the desert we had crossed. High sterile hills flank its course, and with the sweeping unfriendly speed of the stream, its bleak shores seemed a chilly place for home-seekers. Yet I blessed the change. A sight of running water once more, even of this overbearing flood, and of hills however dreary, was exhilaration after the degraded, stinging monotony of the Big Bend. The alkali trails of Wyoming do not seem paradises till you bring your memory of them here. Nor am I alone in my estimate of this impossible hole. There is a sign-post sticking up in the middle of it that originally told the traveler it was 35 miles to Central Ferry. But now the traveler has retorted, and three different handwritings on this sign-post reveal to you that you have had predecessors in your thought, comrades who shared your sorrows:

"Forty-five miles to water."

"Seventy-five miles to wood."

And then the last word:

"Two and one-half miles to hell."

Perhaps they were home-seekers.

We halted a moment at the town of Bridgeport, identified by one wooden store and an inchoate hotel. The rest may be seen upon blue print maps, where you would suppose Bridgeport was a teeming metropolis. At Port Columbia, which we reached by a landslide sort of road that slanted the stage over and put the twin Jew drummers in mortal fear, we slept in one of the two buildings which indicate that town. It is another important center—in blue print—but invisible to the naked eye. In the morning a rope ferry floated the new stage and us travelers across the river. The Okanogan flows south from lakes and waters above the British line, and joins the Columbia here. We entered its valley at once, and crossed it soon by another rope ferry, and keeping northward, with the river to the east between us and the Colville Reservation, had one good meal at noon, and entering a smaller valley reached Ruby that evening. Here the stage left me to continue its way to Concoally, six miles further on. With the friends who had come to meet me I ascended out of Ruby the next day over the

abrupt hill westward, and passing one night out in my blankets near a hospitable but limited cabin (its flowing-haired host fed us, played us the fiddle and would have had us sleep inside), arrived bag and baggage the fourth day from the railroad at the forks of the Methow River—the next tributary of the Columbia below the Okanogan.

Here was a smiling country, winning the heart at sight. An ample beauty was over everything nature had accomplished in this place; the pleasant trees and clear course of the stream, a fertile soil on the levels, the shapes of the foothills varied and gentle, unencumbered by woods, the purple cloak of forest above these on the mountains, and rising from the valley's head a crown of white, clean frozen peaks. These are known to some as the Isabella Range and Mount Gardner, though the maps do not name them. Moreover, I heard that now I was within twenty-five miles of goat; and definite ridges were pointed out as the promised land.

Many things were said to me, first and last. I remember a ragged old trapper, lately come over the mountains from the Skagit River. Goat, did I say? On top there the goat had tangled your feet walking in the trail. He had shot two in camp for staring at him. Another accurate observer had seen three hundred on a hill just above Early Winter as he was passing by. The cabin dwellers on the Methow tied their horses to the fence, and talked to me. So I had come from the East after goat, had I? And in the store of the Man at the Forks I became something of a curiosity. Day by day I sat on the kegs of nails, or lay along the counter devoted to his dry goods, and heard what passed. Citizens and denizens—for the Siwash with his squaws and horses was having his autumn hunt in the valley—knocked at the door to get their mail, or buy tobacco, or sell horns and fur, or stare for an hour and depart with a grunt; and the grave Man at the Forks stood behind one counter while I lay on the other, acquiring a miscellaneous knowledge. One old medical gentleman had slain all wild animals without weapons, and had been the personal friend of so many distinguished historical characters that we computed he was nineteen about the time of Bunker Hill. They were hospitable with their information, and I followed my rule of believing everything that I hear. And they were also hospitable with whatever they possessed. The memory of those distant dwellers among the mountains, young and old, is a friendly one, like the others I carry, whether of Wind or Powder rivers, or the Yellowstone, or wherever Western trails have led me.

Yet disappointment and failure were the first thing. There was all the zeal you could wish. We had wedged painfully into a severe country—twelve miles in two days and trail-cutting between—when sickness turned us back, goatless. By this time October was almost gone, and the last three days of it went in patching up our disintegrated outfit. We needed other men and other horses; and while these were being sought, nothing was more usual than to hear "if we'd only been along with So-and-So, he saw goats" here and there, and apparently everywhere. We had, it would seem, ingeniously selected the only place where there were none. But somehow the services of So-and-So could not be procured. He had gone to town; or was busy getting his winter meat; or his married daughter had just come to visit him, or he had married somebody else's daughter. I cannot remember the number of obstacles lying between ourselves and So-and-So.

At length we were once more in camp on a stream named the Twisp. In the morning—new stroke of misfortune—one of us was threatened with illness, and returned to the Forks. We three, the guide, the cook and myself, went on, finally leaving the narrow valley, and climbing four hours up a mountain at the rate of about a mile an hour. The question was, had winter come in the park above, for which we were heading? On top, we skirted a bare ridge from which everything fell precipitously away, and curving round along a steep hollow of the hill, came to an edge and saw the snow lying plentifully among the pines through which we must go down into the bottom of the park. But on the other side, where the sun came, there was little or none, and it was a most beautiful place. At the head of it was a little frozen lake fringed with tamarack, and a stream flowed down from this through scattered birches and pine, with good pasture for the horses between. The park sank at its outlet into a tall impassable cañon through which the stream joined the Twisp, miles below. It was a little lap of land clear at the top of the mountains, the final peaks and ridges of which rose all around, walling it in completely. You must climb these to be able to see into it, and the only possible approach for pack-horses was the pine-tree slant, down which we came. Of course there was no trail.

We prospected before venturing, and T., the guide, shook his head. It was only a question of days—possibly of hours—when snow must shut the place off from the world until spring. But T. appreciated the 3,000 miles I had come for goat; and if the worst came to the worst, said he, we could "make it in" to the Forks on foot, leading the horses and leaving behind all baggage that weighed anything. So we went down. Our animals slipped a little, the snow balling their feet; but nothing happened, and we reached the bottom and chose a camp in a clump of tamarack and pine. The little stream, passing through shadows here, ran under a lid of frozen snow easily broken, and there was plenty of wood and on the ground only such siftings of snow as could be swept clean for the tent. The saddles were piled handily under a tree, a good fireplace was dug and we had a comfortable supper; and nothing remained but that the goats should be where they ought to be, on the ridges above the park.

I have slept more soundly; doubt and hope kept my thoughts active. Yet even so, it was pleasant to wake in this quiet and hear the bell on our horse, Duster, occasionally tinkle somewhere on the hill. My watch I had forgotten to place at T.'s disposal, so he was reduced to getting the time of the day from the stars. He consulted the Great Bear, and seeing this constellation at an angle he judged to indicate 5 o'clock, he came back into the tent and I heard him wake the cook, who crawled out of his blankets.

"Why it's plumb night," the cook whined.

"Make the breakfast," said T.

I opened my eyes and shut them immediately in despair at the darkness that I saw. Presently I heard the fire and the pans, and knew that the inevitable had come.

So I got my clothes on and we looked at my watch. It was only 4:30 A. M. T. and the Great Bear had made an hour's miscalculation, and the face of the cook was so grievous that I secretly laughed myself entirely awake. "Plumb night" lasted some time longer. I had leisure to eat two plates of oatmeal and maple syrup, some potato-and-onion soup, bacon and coffee, and digest these before dawn showed.

T. and I left camp at 6:40 A. M. The day was a dark one. On the high peaks behind camp great mounds of cloud moved and swung, and the sky was entirely overcast. We climbed one of the lower ridges, not a hard climb nor long, but very sliding, and often requiring hands and feet to work round a ledge. From the top we could see the open country lying comfortably below and out of reach of the howling wind that cut across the top of the mountain, straight from Puget Sound, bringing all that it could carry of the damp of the Pacific. The ridges and summits that surrounded our park continually came into sight and disappeared again among the dense vapors which bore down upon them. We went cautiously along the narrow top of crumbling slate, where the pines were scarce and stunted, and had twisted themselves into corkscrews so they might grip the ground against the tearing force of storms. We came on a number of fresh goat tracks in the snow or the soft shale. These are the reverse of the mountain sheep, the V which the hoofs make having its open end in the direction the animal is going. There seemed to be several, large and small; and the perverted animals invariably chose the sharpest slant they could find to walk on, often with a decent level just beside it that we were glad enough to have. If there were a precipice and a sound flat top, they took the precipice, and crossed its face on juts that did not look as if your hat would hang on them. In this I think they are worse than the mountain sheep, if that is possible. Certainly they do not seem to come down into the high pastures and feed on the grass levels as the sheep will.

T. and I hoped we should find a bunch, but that was not to be, in spite of the indications. As we continued, I saw a singular looking stone lying on a little ledge some way down the mountain ahead. I decided it must be a stone and was going to speak of it, when the stone moved, and we crouched in the slanting gravel. T. had been making up his mind it was a stone. The goat turned his head our way, but did not rise. He was 200 yds. across a split in the mountain, and the wind blowing hard. T. wanted me to shoot, but I did not dare to run such a chance. I have done a deal of missing at 200 yds. and much nearer too. So I climbed, or crawled, out of sight, keeping any stone or little bush between me and the goat, till I got myself where a buttress of rock hid me, and then I ran along the ridge and down and up the scoop in it made by the split of the mountain, and so came cautiously to where I could peer over and see the goat lying turned away from me, with his head commanding the valley. He was on a tiny shelf of snow, beside him was one small pine, and below that the rock fell away steeply into the gorge. Ought I to have bellowed at him, and at least have got him on his legs? I know it would have been more honorable. He looked white, and huge, and strange; and somehow I had a sense of personality about him more vivid than any since I watched my first silver-tip lift a rotten log, and, sitting on his hind legs, make a breakfast on beetles, picking them off the log with one paw.

I fired, aiming behind the goat's head. He did not rise, but turned his head round. The white bead of my Lyman sight had not showed well against the white animal, and I thought I had missed him. Then I fired again, and he rolled very little—six inches—and lay quiet. He could not have been more than 50 yds. away, and my first shot had cut through the back of his neck and buried itself in mortal places, and the second in his head merely made death instantaneous. Shooting him after he became alarmed might have lost him over the edge; even if a first shot had been fatal, it could not have been fatal soon enough. Two struggles on that snow would have sent him sliding through space. As it was, we had a steep, unsafe scramble down through the snow to where he lay on the little shelf by the tree.

He was a fair-sized billy, and very heavy. The little lifting and shoving we had to do in skinning him was hard work. The horns were black, slender, slightly spreading, curved backward, pointed and smooth. They measured 6 in. round the base, and the distance from one point to the other, measured down the horn, along the skull and up the other, was 21 in. The hoofs were also black and broad and large, wholly unlike a tame goat's. The hair was extraordinarily thick, long and of weather-beaten white; the eye large and deep brown. I had my invariable attack of remorse on looking closely at the poor harmless old gentleman, and wondered what achievement, after all, could be discerned in this sort of surprise and murder. We did not think of securing any of his plentiful fat, but with head and hide alone climbed back up the ticklish slant, hung the trophies on a tree in a gap on the camp side of the ridge and continued our hunt. It was not 10 o'clock yet, and we had taken one hour to skin the goat. We now hunted the higher ridges behind camp until 1 P. M., finding tracks that made it seem as if a number of goats must be near by somewhere. But the fog came down and shut everything out of sight; moreover, the wind on top blew so that we could not have seen had it been clear.

We returned to camp, and found it greatly improved. The cook had carpentered an important annex to the tent. By slanting pine logs against a ridge-pole and nailing them, he had built a room, proof against wind and rain, and in it a table. One end was against the opening of the tent, the other at the fire. The arrangement was excellent, and also timely. The storm revived during the night, and it rained fitfully. The roar of the wind coming down from the mountain into our park sounded like a Niagara, and its approach was tremendous. We had built up a barrier of pine brush, and this, with a clump of trees, sheltered us well enough; but there were wild moments when the gust struck us, and the tent shuddered and strained, until that particular breeze passed on with a diminishing roar down the cañon.

OWEN WISTER.

[TO BE CONCLUDED.]

It is reported that a buffalo bull was seen recently by a stage-driver on the desert near Rawlins, Wyo. It is supposed to be one of a small herd that is still running wild.

Natural History.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

A SUMMER'S DAY IN IOWA.

*Editor Forest and Stream:*  
That a stupid day will follow one of pleasurable outing is as sure as the laws of the Medes and Persians, and I know no better way to dispel its depression than by re-living, through the medium of the pen, its varying incidents.  
With this intent permit me, through the columns of FOREST AND STREAM, to give vent to my enthusiasm for invigorating, outdoor sports. Enough cannot be said for the excellent sanitary results to those delicate or enfeebled women, who join the field sports of husband, father or son whenever practicable. To get the best good out of such days is to give care to the winds, and open the mind to an entirely different set of too seldom used facilities, and one is surprised to see how soon the "button is touched" to the entrance to another world.  
To wish to escape the noise and smell of powder on Independence day may appear unpatriotic, but patriotism may lie sleeping, say I, when there is no other use for it. A little party of five, consisting of a doctor, a newspaper editor, with their wives and a son of the doctor's, a lad of twelve years, determined to have something more satisfactory than smoke for the day, and planned a fishing trip six miles out on the Maquoketa—the stream the waters of which turn our mill wheels and make possible our manufactories.  
The day opened with rain and a bad promise, but by 8 o'clock it had spent its force, leaving the atmosphere cool and dustless, and loading an open wagon with fishing tackle, bait, baskets of provisions and other necessary baggage, we took the reins and started out.  
The prospect of getting out of town safely through firing cannon and playing bands was anything but certain, but the doctor's persuasive voice calmed the fears of the spirited horses, and we were soon flying along through a country which in the summer months is as delightful as any known to man. As some one has said, "Doubtless God could have made a better, but He never did," and if any of the readers of your breezy paper are thinking of taking a trip to Iowa, let me urge them to come in June, before the reaper has touched the fields, and when "corn is king," in height for the time of year, in color and in the prospective beauty of an abundant harvest.  
No touch of any color is visible as far as the eye can reach, save studies in green, and one may travel for days along the same magnificent thoroughfares, enlivened by the song of the black-throated bunting, flying up from the roadside or meadow grass, singing on the wing or alighting on the fence with his back toward you, and flinging back his song with a ventriloquial effect of its having come from another direction. The Western horned lark and the bobolink divide the honors of greeting, and if a kindly farmer will allow the barn swallow to build under his eaves, you may encounter this beautiful bird gathering mud for its nest from a wayside puddle or in busy flocks going and coming on the same delightful errand.  
The Western wild flowers, sown broad-cast upon every foot of uncropped or untilled ground, will catch the traveler's eye as another feature of interest, but to me they are mostly "what are you's?" awaiting names and habits for other days. But I must not linger by the way, but tell you of our too speedy arrival, for our fishermen were in a hurry to unreel the line and throw the shining bait.  
Alighting at the wooded banks of the river, the party soon separated, the fishers to cast their lines and the women to explore the "fretted aisles," where nymphs of woods and waves might still have danced and sung and fed on aerial honey and ambrosial dews, as in the valets of Menalus. The trees were vocal with bird chatter and song, and the ash-throated flycatcher, the most elusive of birds, led us a chase to catch a glimpse of his personality. A field glass brought him down for a first sight to one of us who had hitherto known him only by his voice. His is a wood voice as much as that of the hermit thrush, and he must be sought in his favorite haunts if one would see him. Chewinks refused to be disturbed by our intrusion, and pursued their usual occupation of scratching among the leaves or walking about the grounds. One treated us to a few bars of song in a quality of voice clear and sweet. Song sparrows did the most of the real singing, pouring out their heart of glee from bush and brake. The singing season is beginning to wane, and it is apparent even now that many voices are stilled; but the song sparrow will sing for some time to come.  
Thus the morning sped for us, and the demands for dinner called the party together, when it was revealed that the experienced fishers had not had a bite, and Paul had caught the only fish. The Doctor dressed it, and we cooked it over a fire of fagots, made coffee, and spread our cloth on the lap of mother earth. The man of the quill enlivened the dinner with anecdotes from his private drawer, and the flow of wit from the assembled company effervesced into thin air, a great loss to posterity. We were all of one mind, that coffee cooked out of door was no less than the distilled nectar of the gods, and though the fish was beyond compare it needed the miracle of numbers.  
There was not much ceremony in the leave taking of the fishers after dinner, and when the "work was done up" the lonesome wives concluded to go to the river and take lessons in fishing. From here we saw the doctor and Paul whipping the stream with their lines, and the sage editor intently scrutinizing a depression filled with water near the mill dam. The old mill was still standing, a picturesque object to an artist's eye, but its usefulness was its departed glory, and I involuntarily fell to dreaming over its incomers and outgoers on its palmiest days, oblivious to the fish the editor was pulling from that hole. The doctor's wife, enjoying a bit of fun turned against her sex, had brought a travesty by John Paul on Augusta Evans's "St. Elmo," and while deep in the analytical exposé of nonsensical and unreal characters, we heard a muffled call from the editor for a fish string whereon to hang his trophies. The alacrity with which the request was complied with lost the doctor his gold-

bowed glasses, but that was of small moment compared with the finding of fish.  
Paul and the doctor immediately turned to the pool, and for the next two hours the fun was lively. After they had caught twenty black bass, the doctor concluded that he had enough and came tugging his string to camp, but the editor was as tenacious of another bite as he is of giving no quarter to an opponent in politics. I will not relate how long we waited for that fishing editor. At length we sent Paul after him, and then the doctor went after Paul, but they brought him finally between them, with more fish, and we turned the heads of the restless horses toward home, arriving at 8 o'clock in the evening.  
By the road side we passed three men, one playing an accordion, one dancing, and all enjoying the hour—suggestive of the rambling life woven into the romances of the troubadour days—perhaps never before had we felt so close a sympathy with vagabondism, or been quite so ready to excuse all exuberance of spirits.  
And thus was passed one gala day, beneath pictured skies and among woodland draperies, where the belted kingfisher screams his delight, rattles his castanets and waits not to bait his hook to catch his fish, vowing that more days of the same sort should hereafter grace our calendar.  
MARY L. RAME.  
MANCHESTER, IOWA.

Eagles and Other Things.

TATE SPRING, Tenn.—In the office of the Tate Spring Hotel is to be seen the stuffed remains of a magnificent American eagle which was shot some time ago on Clinch Mountain, near this place. The bird, which measures 7ft. 3in. from tip to tip of wing, was shot by Sandy Butler, who is widely known among the native populace as a crack marksman. He uses the old-fashioned muzzle-loading squirrel rifle, familiarly known among the mountain sportsmen as the "Long Tom."  
This proud bird of liberty was in the act of bearing away a 20lbs. goose from a barnyard when he was killed. Butler made a good shot according to his own statement. The bird was 300yds. or better away and the shot was made at an angle of 45 deg. The bullet went direct to the heart. The eagle had been making inroads on the poultry yards and sheep folds of the neighborhood for several weeks previous, and several attempts had been made to bring him down. The dead bird was sold to Capt. Tomlinson, proprietor of the hotel, and was stuffed by a taxidermist in the employ of Geo. W. Vanderbilt at Asheville, N. C. In this connection I may say that Mr. Vanderbilt is making a collection of the game and song birds of this section, which will be one of the leading attractions of his fine million-dollar place near Asheville.  
The eagle is becoming scarce in this section, although one of the golden variety, measuring 6ft., was killed just across the line in Scott county, Va., a few months ago. In 1885 an American eagle was captured alive near Morristown which measured 7ft. 6in. from tip to tip and which was sent to President Cleveland as a Christmas present by Capt. Tomlinson. The bird became known as "Old Grover" and he was given a soft berth in the Zoo, where he recently died, as the Washington papers say, because he preferred death to confinement.  
There promises to be good quail shooting in the valley of East Tennessee this fall, notwithstanding that thousands of birds were frozen to death during the cold weather of last January.  
W. D. P.

Hybrid Quail.

NEW YORK, Sept. 22.—*Editor Forest and Stream:* In your issue of last week, Dr. R. W. Shufeldt, in his article upon American quail, in speaking of the Bob White, California and Massena quails, states that he has never seen an hybrid, or cross, between any of these varieties.  
While living in Concho county, Texas, where I resided some six years, Mr. J. A. Loomis, of that county, and I killed a quail which we took to be the result of interbreeding between the California quail and the Bob White. We sent the skin to the Smithsonian Institution and received a letter in return, thanking us for the specimen, and stating that we were right in our conclusion as to the probable genealogical tree of our quail.  
In all probability the skin of that bird is still in the Smithsonian Institution. This skin was sent to Washington in the fall of 1889, I think. We hunted faithfully for another specimen of like general appearance, but, although we practically exterminated the bevy from which we secured the above mentioned bird, we found the rest of the family to be Bob Whites pure and simple.  
I mention this case thinking Dr. Shufeldt might like to investigate the matter further.  
H. L. B.

Seabirds Ashore.

LOCKPORT, N. Y., Sept. 22.—*Editor Forest and Stream:* Under the above heading in your issue of Sept. 16 "W. McC., Jr." reports the capture at Rouse's Point, N. Y., of a bird that he identified as a stormy petrel or Mother Carey's chicken. From the fact that he first thought it was a martin I would suggest that the specimen was a Wilson's petrel (*Oceanites oceanicus*). I have in my collection an individual of this species that was taken just beyond this city's limits in 1875 by Mr. J. A. Newton while shooting plover, and which was flying about the fields with the plover when killed, apparently adopting the ways and means of living of the plover. This was immediately after a severe easterly storm. I think this is the furthest inland record of this species being taken. If I am mistaken in this I should be pleased to learn through FOREST AND STREAM of other inland occurrences.  
J. L. DAVISON.

South Dakota Notes.

VERMILION, S. D., Sept. 18.—The chickens in this part of the county are pretty well killed off, but they are still plenty back on the prairie ten or twelve miles.  
I have not seen the quail as plenty in a number of years as they are this fall, and I don't know that I ever saw them plentier since I have lived here, and that has been since the spring of 1861. There are a good many ducks on the Vermilion River, but there is not one to-day where there used to be thousands, still some say they are thick. I have seen fine shooting in this country in past years.  
I saw a large flock of pelican pass over here Sept. 10, and I saw a flock of golden plover this morning, Sept. 18. Fishing is poor here; the rivers are too low; very slough in this section is dry and the weather is still dry and hot. I am afraid the ducks and geese will not stop long with us this fall.  
J. D. S.

Game Bag and Gun.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable

IN MASSACHUSETTS AND MAINE.

THE open season on ruffed grouse or partridge and woodcock began on Sept. 15. Generally the opening of the season has not been hailed with much enthusiasm, for the reason that the birds are regarded as very scarce. The opening day was pleasant, and a few Boston gunners were out, but I have not learned of any bags of game. A gentleman was in the other day from western Massachusetts, an enthusiast in regard to bird shooting. He talked very discouragingly about his part of the State. He had seen only a very few broods of either partridge or woodcock. He scarcely expects to bag a dozen birds this season, though he has a couple of good dogs. Mr. Claude H. Tarbox, not wholly unknown to the readers of the FOREST AND STREAM as a good shot, says that there are several good broods of partridges near his house in Bayfield, and that he intends early to have the most of them. As for woodcock, he has seen very few broods this year. A couple of gunners returned from Plymouth Saturday evening a good deal disgusted. They had tried hard for partridge and woodcock on Friday and Saturday, with a result of three woodcock and no partridge to two guns. They have also found shore birds scarce in that part of the country. They obtained a few summer yellowlegs, but very few plover.  
Mr. J. F. Dwinell, of Dwinell, Hayward & Co., is planning for his annual partridge hunting trip to Upton, Me. He has been there almost every season for several years. He makes a stay of several weeks and hunts partridge in pleasant weather. With two guides, Mr. Lomin Sargent and, Aldana Brooks, he will be likely to obtain as many birds as any gunner that goes out this season. Probably few men enjoy grouse shooting in Maine more than he, and few have better luck, if luck it may be termed. But experience is better. He is fond of visiting the same locality, believing that it takes years to become well acquainted with one location for shooting, and that the better one is acquainted the better work he can do. Shooting in a new locality is scarcely pleasant to many of the best gunners. Mr. E. N. Cook, with James S. Emery & Co., is one of the most enthusiastic of Boston gunners. He has made one trip down to the lower part of the Cape already, with the result of a fair lot of birds, the lot containing more plover than other gunners have been able to obtain this season. He hopes to make at least a couple more gunning trips this fall. His idea is that the flights of shore birds of the larger varieties has been larger this season than many gunners have supposed. There has been such a succession of heavy gales, beginning even as early as July, that the birds have doubtless been a good deal broken up and disturbed in their flights, and hence the gunners have neither been able to get them nor see them. Mr. E. B. Taylor returned last week from an extended gunning trip to the Cape. He found birds scarce, especially of the larger varieties. The flocks were unusually small, though fairly frequent. His idea is the same as that of Mr. Cook—that the flights have been broken up by the recent gales.  
Mr. Wm. H. Coggin, with Dwinell, Hayward & Co., is fast becoming an enthusiast, both in fishing and gunning. He is just back from his cottage at Falmouth, where with his wife and baby he has spent a most enjoyable vacation. He went fishing for scup, tautog, or sea bass almost every day when the weather permitted. He obtained several fine bass, and an abundance of scup and tautog. He fished over the same grounds as President Cleveland. Salt-water fishing is growing in favor with him, though very fond of pickerel fishing in the ponds in Maine, his native State.  
Camp Vive Vale, in the Narrows of Richardson Lake, in Maine, has been receiving some handsome and needed additions this season. That camp, at first the property of a club of four, is all now owned by Mr. C. P. Stevens, of Boston, of printers' roller fame. Mr. Stevens wished to make a good many improvements, while the others were content with the camp as it was, and they visit only a short time for spring fishing; so he bought them out. Now they will go each spring as his guests. From being one of the most enthusiastic trout fishermen in the world, Mr. Stevens has come to delight in spending his entire summers at the camp. This year he has achieved a long-cherished purpose, that of taking Mrs. Stevens into camp also. She is much of an invalid, and has always dreaded the idea of camp life, especially the getting in and out. Early in the season she got as far as Bethel, when after getting nicely rested by a stay of several days, she was taken in to the lake by an easy buckboard, and has been able to remain there all the season, doubtless much to her benefit, and to the great delight of her husband. In the meantime Mr. Stevens has given considerable time to camp improvements. He has built guides' quarters, boat-houses and other buildings, besides decidedly improving his main camp. Late in August his nephew and manager of his Boston office, Mr. Frank H. Stevens, with his wife, paid their uncle and aunt a visit of a week or two. Mrs. Frank Stevens was delighted with the outing, and was greatly benefited by it. It was her first trip to the Maine trout lakes. Fishing was poor, however, the lake being low and the water very warm. By diligent fishing at nightfall or very early in the morning, a few trout could be taken. But the sport was little like that which the Stevens party usually gets in the spring. They are almost always the first sportsmen to be off in the spring, and their record would scarcely be believed, if published.  
Travel to the World's Columbian Exposition is drawing heavily upon the ranks of sportsmen this fall, heavier than in the spring even. This is right, and as it should be. The World's Fair is a feature of 1893, and cannot come again, in its present form and magnitude. But we can go fishing and shooting each year for many years, we hope. Allow me to suggest, when at the World's Fair, that we look into the exhibit the FOREST AND STREAM has prepared for us, in the Fisheries Building. From accounts published, together with the fine work of the photographer and the half-tone process, we may judge that the exhibit is one that it will pay to spend time upon, and that it will be of lasting benefit to the lover of the gun and rod.  
SPECIAL.

## A NOT-VERY-NATIONAL CONVENTION.

CHICAGO, Ill., Sept. 21.—At its last annual convention the Illinois State Sportsmen's Association appointed a committee to take in hand the matter of a call for a national convention of sportsmen, the same to assemble at Chicago some time during the World's Fair, to discuss and formulate plans for uniform game laws, etc., in the several States of the Union. The committee took due action and gave wide circulation to a printed call asking for a general meeting at Chicago on Sept. 21, Sportsmen's Day at the Fair. Individual responses and signatures to the call were received from some scores of sportsmen, resident in 20 different States. It was, therefore, fair to expect that there would materialize some support, and that there would occur an event of some note.

What actually did occur can be told briefly. The meeting was called for 2 P. M. at the assembly hall of the Agricultural Building. At 3:30 P. M. there were present just six persons besides the two representatives of the sporting press. The six were as follows: Mr. W. N. Low, president of the Illinois State Sportsmen's Association; Messrs. M. R. Bortree and F. S. Baird, of the committee appointed to issue the call; Mr. E. H. Bisbey, of Daphin Park, Chicago; Mr. F. E. Pond, of Milwaukee, and Mr. J. P. Barnum, of Prairie du Chien, Wis. All but two were from Chicago. The representation being so small, discussion came up whether or not to take any step toward preliminary organization. At length it was decided to do so. Mr. W. N. Low, of Chicago, was chosen as chairman, Mr. F. S. Baird, of Chicago, being chosen secretary. An executive committee on preliminary work was appointed, consisting of Messrs. F. E. Pond and J. P. Barnum, of Wisconsin; M. R. Bortree and C. P. Richards, of Chicago, and S. Northcott, of McGregor, Ia. The question of raising working funds was left to this committee.

The printed call for the convention was read, and a resolution setting forth objects and purposes of the movement and deciding upon formal organization of a "National or American Sportsmen's Association" was duly passed. Numerous letters expressing "heartily sympathy," "ready coöperation" and "sincere belief" were also read. A vote of thanks was passed for Mr. Pond for his labor in the attempt to get together a convention. It being thought that perhaps the World's Fair had hurt and not helped this meeting, as had been the case in so many other events of the present busy season, it was decided to make another attempt to hold a convention. The adjournment was therefore made till Thursday, Nov. 3, at 8 P. M., at the Sherman House, Chicago. It was hoped that, the Fair being then closed, a powerful source of counter attraction would be removed, and that sportsmen in the city to see the Fair would, the Fair being over, attend the convention.

The resolution as presented names national organization to prevent the extermination of fish and game, the destruction of forests; the unnecessary pollution of waters and the killing of song and insectivorous birds, all of which things are declared to be "carried on or done in many if not all the wild portions of the United States." Probably the next meeting will give a fairer decision as to the fate of such a movement, which is not new in the history of sportsmanship in America. At present what seems most necessary is a day when the lion and the lamb shall lie down together, get up, separate—in short, a change in human nature. If this movement can slowly work that change, it is a good one. That it will do so would be better evidenced by a larger attendance than of six persons. That the attendance at this national convention was just short of half of a baker's dozen, remains the mournful but undeniable fact, and in it lies the gist of the news. The next meeting will have pleasanter news if it has a larger attendance.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## SPRING REED BIRDS.

Editor Forest and Stream:

Last May I attended a very swell dinner in a hotel on Fifth avenue, New York, but not the one named after that avenue, and well down on the menu were "Reed birds with water cress." My code of personal game laws does not permit the shooting of the tuneless bobolink at any season, and a long cherished prejudice against their tiny bodies being used as food has prevented me from ever tasting them; therefore, you may imagine my disgust at having them offered me in May.

The birds were, of course, left untouched, but a thought has just entered my thick skull, and in sloshing around there the echoes seem to say, "Perhaps the birds were European sparrows!" In this, if so, I did good and evil came of it for the protection of the joyous bobolink, no matter what the rice-planter may say of him, and the extermination of the foreign sparrow are things to be desired, by me at least.

Another afterthought says that the birds should have been pocketed for an examination of skeletons, but the plate was indignantly refused and not even the bills of the birds were noticed. I inclose you the menu card that you may see just when and where the dinner occurred, and you may print it if you wish. I may be cranky on the subject of shooting birds that are not big enough to eat, and I don't know of a songbird that is large enough for me to take its morsels of flesh, the muscles on each side of its breast-bone that move the wings and try to think that they are food. As a boy, I regret to say that I have killed robins, thrushes, little sandpipers or "teeter-snipe," and this is my reason for saying that no boy should have a shotgun until he is ninety years old. To-day, at two-thirds that age, the smallest birds that I will shoot are the "Wilson's" snipe, the woodcock and the larger plovers, yellow-legs, etc.

This is a law laid down by myself for myself, and with which no man may find fault, but I despise the shooter of songbirds, and if he shoots for market, will not eat his so-called game. That the "reed bird" or "rice bird," as it is variously called, may be destructive in the winter when it visits Southern fields cannot be used as a defense for its killing in the North, where it is a most hilarious songster, nesting in the meadows and doing no harm. If the rice-planter finds the bird a nuisance there is no objection to his protecting his crops from injury by any means in his power, but I earnestly protest against the killing of this sweet singer in the Northern States, and back up my protest by refusing to taste of its morsel of meat at any time of year. As a soldier I may, or may not, have killed men "in the trade of war," and have felt no sorrow for it because they were shooting at

me, but last week when I shot into a flock of European sparrows that have wrecked my crop of grapes, and among the eighteen dead found a robin, I could have cried. I could only smoothe his feathers, and like Poor Joe, say: "I didn't mean for to do it."

It is said that the European sparrow is good to eat. I hope it may be good for something, but it is entirely too small for me unless, like the smaller smelts, they can be eaten bones and all. The city sparrow, with its stereocarian habits, would seem to require a stereocary dressing to bring out its full flavor, but that will, naturally, be a question of taste. Still if this ornithological pest can be utilized to spare our bobolink, which should never be killed in Northern States, it will have served one useful purpose.

FRED. MATHER.

COLD SPRING HARBOR, N. Y.

## IT WAS LONG AGO.

TARPON SPRINGS, Fla.—Rain, rain, a regular old-fashioned rainy day. The clouds hang low and heavy, while an occasional rumble of thunder reminds us that the end is not yet. The birds have hushed their songs and with sodden plumage are vainly seeking shelter under the dripping trees. My special pets, the mockingbirds, have declared a truce with their inveterate enemies, the jays, and are moping under the veranda, each as disreputable as his neighbor. Two mourning doves are sounding their doleful call under the rose arbor, while the chickens are huddled near, too demoralized to even scratch.

Days like this are all too rare in Florida, and are prized accordingly. They give one a chance to overhaul old record, review the past, and speculate on the future. To read our old book, to remember our old friends, and to recall those red-letter days of boyhood, when we caught the big fish or shot the cock grouse on his drum log. My FOREST AND STREAM library is a never ending source of enjoyment to me on rainy days. To-day I have been with "Sam Lovel" and "Antwine" on the Slang. What a world of meaning to us old fellows there is in the closing sentence of "Sam Lovel's Camps." "Care-free days of youth once spent are gone forever." True, but we can live them over again and again, and when my memory fails to bring back the days and scenes of boyhood, may I go over the river.

Reading of Drive's encounter with the fox bitch reminds me of a little episode of my own, or rather, Buff's and mine. It happened a good many years ago, when I was not more than eight or ten years of age, but is remembered as if it were but yesterday.

As a scholar I was a failure; lessons I could not abide; the air of the schoolroom stifled me. But I knew where the biggest chestnuts grew, where to find the reddest apples, and the sweetest wild grapes. The birds and squirrels were my friends. I could tell where every brood of partridges was hatched, every woodchuck's hole, and every hollow tree that held a woodpecker or a high-hole's nest. Red-breast robins were my special care. Nothing pleased me better than to watch the home-making of the old birds, count the eggs as they were laid, and, when the young were hatched, it was fun to see the old birds bringing food.

I often used to supplement their care by stopping the little gaping mouths with ripe berries or fat worms till they could hold no more. No doubt I often killed with kindness, but the intent was good. The old birds never feared me when I climbed up to look at their treasures (which I did every time I went near their nests); they would sit on a near branch, their bright eyes watching me, but never screamed or made any fuss. But this is not the story. First I will introduce Buff.

Buff was a little wire-haired dog, with no particular characteristic save his unswerving devotion to his master, and his indomitable grit. In fact his courage was much better than his judgment, and often got him into serious trouble, as well as myself, for I could never see him in a scrape without taking a hand. We shared alike our dinners, our bed and our fights.

In the northern part of my native town, among high rocky hills, lies a small pond. The outlet runs through a deep narrow cut in the hills called the Gulf. One day in the long ago Buff and myself were scrambling along the steep rocky sides of the Gulf. We came out on an overhanging ledge of rock, beneath which was a small level space, where the wash from the hill had gathered enough soil to support a scanty patch of grass, with a few stunted bushes. Back of this space and under the ledge was a fox den. The old lady was at home with a family of cubs.

As we approached the edge of the ledge she appeared at the mouth of her den, snarling, and with every hair on end. I leaned over to get a better look. I leaned a little too far, and the loose rock giving way under me I fell eight or ten feet, landing on my back directly in front of the fox. She made a charge toward me, which brought her into sight of Buff, who was peeping over the cliff. Buff never knew what it was to hesitate where an enemy was concerned, and with a flying leap he joined the procession. Then there was a circus. Dog and fox were about equal in size, and neither was lacking in disposition for the fight. Catching up a dead branch I joined in the melee, but they were so mixed up that poor Buff got hit quite as often as the fox. My club soon broke, and not finding another, I joined the fight with bare hands. Making a dash, I caught the fox by the neck, but so far back that she managed to set her teeth into my wrist. This created a diversion which Buff took advantage of by fastening to her lower jaw. Yelling to the dog with all my might I danced around trying to find something to strike with. Some thin pieces of rock I had broken off in my fall lay near. I seized the largest I could find and with all my strength went for that fox. Buff had a good hold and kept it, and I soon got in some heavy blows, which decided the battle. We won the fight, but honors were easy. Buff was bleeding from a dozen wounds, blood was flowing from my wrist, while my clothing was hardly in condition for Sunday school.

But we got the fox, and the glory of it. Shall I ever forget how proud I was as I tugged home that fox. And Buff! Buff marched at my side, head and tail erect, saying to all we met, as plain as a dog could say, "See what we have got."

Well, well; I am older now, but I wish I could feel half the joy I did then, and could have the confidence in my friends of to-day that I used to have in Buff. Poor Buff! like "Nessmuk's" Pete, he had no pedigree. Good bye, Buff. "Once spent, gone forever." S. D. KENDALL.

## A RETRIEVER ON TWO LEGS.

ON Sept. 15 I assisted Mr. Enos Hawks, of this place, in formally opening the shooting season on timber grouse locally known as partridges. Hawks is a noted dog breaker and trackman. He once owned the trotting horse Hardware, who had a record of 2:20, or better. His shooting wagon has a convenient case for his gun built into the body fore and aft, and his whole outfit is in man respects ingenious. He is a good hunter on foxes and game birds.

We two drove out east about three miles from Hadley first working a choice bit of alder and laurel cove betwixt here and Amherst, where Hawks thought they might be woodcock. We put up two birds and Hawk got one; the other got away. Afterward we struck into a piece of hardwood forest, not too dense, interspersed with pines, where trees are now being cut and sawed a logging firm which measure from 20 to 30 in. in diameter at the base of the trunks. This is worth mentioning as occurring in Massachusetts at this day. Sticks, forsooth, are being cut now on the headwaters of the Connecticut and driven down the river to the saw mills below Northampton which are but hop-poles in comparison to size.

This exact bit of woods had a pretty fringe of underbrush, interrupted with tangles of blackberry vines and rose bushes in seed, which bordered the very best farming lands in this section. Few in Dakota surpass them in fertility and superlative cultivation. Corn fields and apple orchards flanked the forest on each side. They were some tamarack thickets which were traversed by small run of clear bright water that headed in a spring pond two rods wide, which was inclosed by a barbed wire fence, perhaps to prevent incautious gunners from falling in and getting mired. Clematis and the bright crimson berries of the "bitter-sweet" clustered about its borders. Grape vines of two kinds climbed to the tops of the birch trees and hang out their bunches of purple fruit. All this in a region that has been settled since 1651! Yet this was always a crack region for game. It is on record that wild turkeys were killed on the Holyoke range near here as recently as 1851. One cleft in the ridge bears the significant name of "Turkey Pass" to-day. Deer were always numerous up to the beginning of the present century.

Partridges in Hampshire county seem ineradicable. Broods are everywhere, on the bottoms and among the hills. On the Sunday before the law was off, I flushed a bevy of twelve close by the roadside in some cut poplars. A half mile further on I bounced an old cock from a stone wall. He was all by himself. That was twenty miles from Hadley, however, up in the hill country.

What a lovely country that is at this season, with all the foliage aglow with autumn tints! Torches of crimson flaming at intervals on all the hillsides. Rugs of old gold russet and bronze, with dead green mottlings, spread over the pasture lands which slope to the forests. A yellow flush suffusing all the landscape, which looks in the rain as if it were burnished richness and ripeness bursting out in a ruddy glow, wherever the eye rests. In the low river bottom at Hadley there is not so much color. The summer fades out in a somber sort of way and disappears like a stream in the desert sands, leaving only dull browns and yellows—which may be all quite satisfactory to the thrifty tobacco planters here, but lovers of the autumn hues worship in the high mountains.

The record of our grouse hunt, which I commenced to write of, has not yet crystallized into public memorabilia and the result may possibly never appear in print. But no matter; it was not my specific purpose at the outset to set forth our prowess as shooters, but simply to tell of an adventure which befell our dog, involving a remarkable canine exploit, which indicated great presence of mind and promptness in expedients. His name was Winkle out of respect to Mr. Pickwick. He was a massive live pointer, with broad forehead like Daniel Webster's, an expansive chest and muscular loins. Exercise of his inventive faculty doubtless saved his life. Hawk had him on chain under the wagon seat, where he usually lay passive and expectant. The chain had about six feet scope. As it happened, the pace of the horse had been rather too rapid for my comfort and equanimity, and I was speeded somewhat under protest. Remonstrances were more especially emphasized when the turns in the road were short. There were several of these at crossings, and at one of them the dog must have been thrown out, unobserved by us at the time. Meanwhile, the repeated assurance of my driver that he was an old trackman, used to the sharp curves of the racecourse, and not to be uneasy. All this must have been some consolation to the dog, if at all intelligible to his comprehension for we suddenly discovered that he was missing from the wagon box, and on looking behind we found the brave fellow with his forepaws and breast over the axle, running on his hindfeet alone, without an audible whimper and keeping up to the three-minute gait without visible distress. He must have grabbed the axle as he went out and thus saved himself from being dragged or choked by the chain. Bringing the vehicle to an abrupt stop, the good dog was permitted to come down on all fours, as he was naturally built to run, and after a brief respite for pulling himself together, he gallantly leaped into his place in the wagon without help, clearing the rim of the box without touching it, as neatly as an acrobat. The "devil on two sticks" couldn't have done better. *Tout cela.*

Mr. Editor: You may put this communication down as a hunting sketch or a dog story. It will serve my purpose in either class; but one assertion I venture to make, to-wit: No one ever before heard of a pointer dog making a mile in three minutes on his two hind legs.

Veracity is the Spice of Life.

Next week I go up to the delectable hills again for an open hunt with Tim Lyman, of Goshen, and Charles E. Gabb, of Cumington, who have dogs with good reputations as hunters, if not as roadsters. If likely to interest your readers I will send you a sketch of the outing, and a brace of grouse, if we get them, and they should fall to my personal allotment in the division of game.

HADLEY, MASS.

CHARLES HALLOCK.

## Iowa Prospects.

ALGONA, Ia., Sept. 18.—The prospects for the fall duck shooting hereabouts are very unsatisfactory. For a long time the weather has been hot and dry, and I look for poor shooting for ducks this autumn. S.

## A REPORT FROM MAINE.

BOSTON, Mass.—*Editor Forest and Stream:* We arrived in Ellsworth, Hancock county, Me., Sept. 7, and on making inquiry as to ruffed grouse and woodcock we were informed that shooting had been going on openly for more than a month, and that the doctors, lawyers, merchants, and in fact everybody who had a gun had been shooting game out of season and selling it in open market. Partridges brought \$1.50 per pair, woodcock \$1 each, for Bar Harbor market.

Now, I want to ask why they have any law in Maine, if a majority of its citizens care nothing for it.

Poachers were found not only in Ellsworth but all through the county, in Waltham, Amherst, Aurora and in townships 21, 22, 28, 16, 10. In those places partridge, woodcock and duck shooting was indulged in as lawlessly as at Ellsworth—even more so, for every boy has his Winchester—and there are a large number of trained deer dogs, and dogging deer was one of the sports that was practiced every month in the year. At Great Pond I was told by several reliable persons that they killed deer every month in the year, and that there had not been a day this summer but that some person could find venison steak at this place.

In the west branch of Union River, about four miles from Great Pond Village, we found a dead buck, nearly eaten up by bears; at Morrison Pond one more dead deer was found, shot through the body; at Great Pond it was the talk of the place that Senator Hale's son had killed deer out of season; at Spectacle Pond poachers had been dogging deer more or less all summer; at Alligator Lake deer have been killed out of season; and at almost every place where we stopped from Ellsworth to Lead Mountain we were invited to take a deer hunt. Almost every person riding or walking from Pine Hill to Waltham had a Winchester with him. It was open time with them the year round, and at several places where we stopped we had fried deer meat. I traveled eight days and saw but few indications of deer; and no live ones except one tame one in Aurora. Deer are dogged so much that they are not so plenty as in most other parts of the State. Between Blue Hill and Surrey I should judge that deer were plenty. Should not advise sportsmen to go to Hancock county for good shooting, as the deer are being driven from there to other parts of the State.

Partridge and woodcock shooting is not equal to many places in Connecticut. Trout fishing has been good, though they will soon "kill the goose that lays the golden egg" if they continue the use of nets and dynamite bombs. Only one person, so far as I could learn, had been prosecuted for taking fish unlawfully. If the wardens of the State would see the law enforced for a few years, Hancock county would become the finest hunting and fishing country in the world. Her immense forests and innumerable ponds, lakes and streams would become the hunter's paradise. BLODGETT.

## TWO BLACKTAIL BUCKS.

IN my journal, under date of a certain Oct. 10, I find a memorandum of an afternoon's hunt on Mt. Zahn, in the far-away Wyoming Bad Lands.

Twice a week the stage left our mail at a little post office eight miles down the valley, and Rob or myself rode down after it. When I made the trip I usually left the ranch about noon and went around through the hills in search of blacktail deer to furnish fresh meat for our larder, and that is what I did on this occasion. The country was very rough, being cut from north to south by many cañons washed deep into the hills. The Bad Lands are a dreary place at best, but they had a peculiar rugged beauty under the warm October sun which would command the admiration of the outdoor man in spite of himself.

This particular afternoon was warm and still, a drowsy time that makes one feel contented with himself and everything about him, and brings his nerves into the proper shape to accept everything that may happen as a matter of course, which causes no shock nor disturbs at all his mental inactivity. I remember noticing the contrast between the sun-cured grass, of a buckskin hue, and the somber blue of the cedar patches, noting the scarlet of the killiknick leaves and the bright ochre color of the quaking asp thickets, with their delicate tracery of white and brown-barked limbs, which seems to make them cousins of the birch rather than the cottonwood. The fantastic lava boulders, too, came in for a share of my mental notes, and I marked the peculiarities of formation and color they displayed as I rode among them, turning this way and that to avoid a patch of prickly pear or thorny soaproot stalk with its daggerlike leaves. I had already passed through the best deer country on the route, slipping off of my horse where it was too rough to ride, peering with the glass into thickets, across cañons, and stealthily gaining a vantage point above a thicket, Indian-like, before showing myself; but had seen no living thing. A big buzzard had startled me into jerking the Winchester up to my shoulder, by sailing along so his shadow slipped out of sight after giving me just enough of a glimpse of it to know it was something moving before it sailed up the other side of the cañon.

I had gone through the cañon where "there ought to be one" but he wasn't there, so I concluded they had all gone across the Little Cottonwood on the other side of Mt. Zahn, where the feed was better, and that I would have to go there for my meat until further notice. This I was so convinced of that I lit my pipe, and lowering my rifle across the saddle pommel let the horse, a trusty hunter, take his own gait and follow his own trail toward the mail ranch on down the valley. I had jogged along this way for perhaps half a mile before I turned into a small cañon in order to cross a low pass in the hills at its head and save considerable travel. In following this ravine I almost walked the horse on top of two big bucks and a doe. The horse snorted and shied "to port," giving me just time enough for a snap shot at the worst scared deer in the hills, and I got him the first crack without having the gun at my shoulder. It was one of those accidents which every hunter experiences, but it killed the buck and brought him to grass, shot square through the points of the shoulders, high enough to break his spine. The doe ran up the main cañon and I paid no more attention to her but watched the other buck, which ran to the head of the cañon I had started for and then crossed the pass I had intended to use as my road. I cut the first one's throat, glanced at the sun, and concluded I would kill the other one too, as the season was late and the meat would "jerk" very nicely and be a good store against cold

weather, when I couldn't get out into the hills. Accordingly I rode up the cañon just about the same course the buck had taken until I got to the pass, then got off and tied the horse, as his hoofs would make too much noise for a member of a scouting party, and went on foot. I leveled the glass, inspecting every foot of the country as it opened up as I advanced, but saw no deer until I brought the lenses to bear on the cedars of a cañon head just below me on the hill. Then I saw him, and through the glass could even make out the color of his eyes, he seemed so near. On looking without them I found he was lying down in a bunch of short cedars quite a long distance away and down hill, with only his head and neck showing above the brush. It was a hard shot, and I missed him clean as he lay there, but the minute he got up and began to run I began to talk business to him with the Winchester, and three shots convinced him he had no further use for life, so he just lay down and died before I got to him. I now had two dead deer, one on each side of the mountain, and my horse on the top, an awfully rough country for five miles to the ranch and no pack saddle. I must get them in before night or the "loafer" wolves would save me the trouble before morning. I went to work on the last one and soon had him skinned out without loosening the forequarters or the saddle from the hide, then cut away the tenderloins and flanks from the carcass and rolled them in my "slicker," which I tied behind the saddle. Then I slit the legs and the skin between the lower jaws and passed my "riata" through the whole business, bunching it in convenient form for hanging over the saddle horn. The first one killed was served in the same way, and one was suspended on each side. The sun by this time was nearly down and I still had a rough road to travel before reaching the trail for home, which lay about a mile to the south. It would take too much space to tell how the horns would slip around and "jab" my horse when he went down hill, and how he bucked every time he did, how the pack got misplaced and had to be fixed over and over, how the big gray "loafer" wolves smelled the fresh blood and serenaded me all the way home, circling and gliding around like phantoms in the white moonlight all too close for comfort, and how young Rob, who was a tenderfoot, thought Sitting Bull had hung another scalp at his belt, for it was just before the Wounded Knee fight and we were in "Injun country." However, I got in at 11 o'clock that night safe with my meat but utterly worn out with the tramp. EL COMANCHO.

BEATRICE, Neb.

## Susquehanna Notes.

CAMP HUMMEL, Bainbridge, Pa., Sept. 8.—We, the undersigned, are ranged along the platform of the Pennsylvania railroad station, waiting for the east-bound train to Lancaster, having just broken a successful week's camp on the foot of the island opposite this town. For the past four days the river has been in fair condition. We have managed to take a few bass, have seen other fellows take more than we, and we have had a royal good time. Our commissary department excelled, far surpassing the ordinary, aided by unusually good melons from Hummel's island field. Yours faithfully, Galbraith, Griel, Jeffries, Schaum, Schupp, Tomlin, Megeehen, Rhoades, Eberman, Trissler and Martin.

Sept. 12.—Parties just leaving here for Reading, Pa., with hampers packed full of bass. Several rods have averaged 10 fish to the rod, three days' fishing. Bait brought along, mostly small catfish. To-day Kuntzelman tried flannel rag on spoon as a lure for pike perch; one strike, no fish.

Sept. 13.—Doyle found three small "salmon." Barney says they are not biting freely, and "I'll be hanged if I understand it." George Ashton says "they're too thunderin' lightning sharp."

On Sept. 3, and for several days, the river at this point was black with coal culm; it is a wonder that any fish are left. At Steelton and on the opposite side of the river tons of coal have been taken from the bed of the river during the extremely low water this summer. It seems incredible that such quantities of coal could be washed down for so great a distance; a great deal of it is chestnut size.

Squire Bare tells me that hardly ever before in his experience has the river been so low as during the present summer.

On Sept. 14, going down the Port Deposit road from Columbia, many rods were noticed on the river; from McCall's Ferry to Fite's Eddy they were literally thick. Many good strings of bass have been taken along this portion of the river during the present season. BART.

## Rochester Doings.

ROCHESTER, N. Y.—Messrs. J. C. Hart and C. H. Babcock have gone to Idaho for a month's shooting on big game and birds. C. A. Hayden and W. S. Kimball have returned from a week with the wildfowl at Currutuck, Chesapeake Bay. It is fair to presume that Mr. Kimball's Chesapeake Bay dog Drake had several opportunities to show his training and delight his owner.

Mr. and Mrs. Martin Cook are at Stony Lake, Canada, for the bass fishing and ozone. Mr. Lawrence Davis is at Clear Lake, Canada, and we have positive evidence that his bait has proved a killing one, said evidence being four bass of good weight.

Anglers report an improvement in the fishing at Irondequoit Bay this month, some very good catches of bass, lake perch and pickerel having been made. It is certain that when the great east side sewer is completed and the sewage which now goes into the bay is diverted into the river, that the bay will afford the best fishing in this section, being as well the most pleasant place easily accessible to Rochesterians. O. S. BEER.

[We imagine that the wildfowl pursued by Messrs. Hayden and Kimball were bay birds, since the wildfowl (duck, goose, etc.) season does not open in North Carolina till Nov. 10.]

## Poaching in Ontario.

BELLEVILLE, Sept. 18.—A "sport"—not a sportsman—from Albany, in your country and State, lately invaded our territory and deliberately broke our laws by killing a moose in the Mattama District. The occurrence was published in the Brockville Recorder of the 7th inst. without a word of reproof, but more may come of it, as I have, through Mr. H. K. Smith, our local warden, called the attention of Mr. A. D. Stewart, chief warden, to the matter. Mr. Stewart is already at work on the case. R. S. B.

## A 'LONG SHORE ACCIDENT.

THE readers of the FOREST AND STREAM have often seen the name of Mr. Claude H. Tarbox, of the Boston Chamber of Commerce, mentioned as a good shot and a lover of fishing. They will be interested to know that the same gentleman himself has been shot. But he is yet alive and really but little hurt. His brother-in-law, J. Orin Bailey, also a good shot and a lover of woods and water sports, though having but one leg to get about on, was gunning with him for shore birds the other day. Let me say right here that the nature of the accident is the only good reason for telling about it, in order that other gunners may avoid exactly the same thing. They ambushed behind some rocks up quite a distance from the shore. Mr. Tarbox had already had good luck, having taken four black ducks out of a flock of six. They had a plover for a decoy, down on the shore some distance in front of them. They were also whistling for the occasional plover that flew past, and making some good shots. At length Mr. Tarbox got tired of his position and suggested that he would walk along the shore, partially concealed by some low bushes from his companion up in the rocks. As he was walking past the rocks a plover whistled, and he and Mr. Bailey both called. The bird circled around and was coming down evidently. Mr. Tarbox crouched partially behind the brush. Just then another gunner had passed up the shore, suggesting to Mr. Tarbox that he would not stop to frighten their birds. The plover came down and Mr. Bailey fired, shooting the bird, but also giving his companion about the full advantage of the scattered and partially spent charge of shot—about No. 8 in size. He received several shot in his hip, where they barely punctured the skin. One shot pierced the upper lid of his right eye, going completely through the lid and striking on the eyeball, but most fortunately without force enough to puncture the eye. Other shot hit Mr. Tarbox in the face, but were readily picked out by the doctor. Mr. Bailey was terribly shocked by what he had done. He thought that the other man moving away was his companion, as their shooting coats were of about the same color. He declared that he was done with a gun forever. But Mr. Tarbox is satisfied that he would have done exactly the same thing, under the circumstances, and that the most careful hunter would. He was about his business the next day, though wearing a patch over his eye; which organ is now out of danger. Moral: Always be sure of the location of your companions when gunning in the woods. The above-mentioned gunners had made a splendid bag of birds, when the accident sent them home in a hurry. They had taken the 4 black duck, already mentioned, 13 plover, a ringneck and a peep. The peep they had shot just for luck. But under the circumstances they will scarcely shoot another, though they now think that it was extremely good luck that kept them from consequences more serious.

L. W. DePass, assistant secretary of the Boston Chamber of Commerce, Dr. W. B. Cutter, of the South End, and C. W. Hodgkins, are on a two weeks' gunning trip on the Cape. These gentlemen have shot together for several seasons, and they may be expected to make a good record. SPECIAL.

## A RANCHMAN'S VIEW.

SEDALIA, Col., Sept. 15.—*Editor Forest and Stream:* In your issue of Sept. 9 I read "Tenderfooting in the Rockies" and take the liberty to jot down a few ideas that occurred to me during the perusal of that narrative.

Already in 1886 there existed in Colorado a law entirely prohibiting the killing of beaver. But our learned sages of the law from New York disregarded such laws and killed a beaver in the Elk Mountains.

The complaint they make about being refused feed for their burros by a ranchwoman shows that ranch people do not care to encourage oafing, and no ordinary ranch people will be able to distinguish learned sages of the law under the guise of foot travelers with burros. In Colorado in the ranch country a man on foot is looked upon with suspicion. I, for instance, make it a rule never to sell or give away anything at my ranch because I have had the experience that sneak thieves will come in the daytime to buy a few cents' worth of watermelons so as to spot the location and rob the field during the night. I have my land posted with signs, but notwithstanding this people continually trespass to shoot anything from a robin upward; game laws and laws of trespass do not exist for the majority of city people, and I cannot wonder at it when New York lawyers will kill game out of season and shoot on inclosed land without previously asking the permission of the land owner. It is to such that the destruction of the game is due.

I would propose as the best game preserving law to make and enforce strict laws of trespass and to hinder anybody from killing any game without a written permit (to be paid for) from the land owner, private owner, the State as owner of lands, and the U. S. Government as the owner of the Government lands.

City people may think that crossing inclosed land, although trespass according to the law, does not damage the proprietor. I say it is not for them to judge; they ought to obey the law, because they may cause damage they know nothing of. They shoot promiscuously, and in hilly country they shoot live stock without seeing them. Another instance: When ranchmen keep in their pasture range beef steers that hardly ever saw anybody on foot, they may get so stampeded by the sight of a pedestrian as to break through the fences and be lost, for that season at least, when the small profit the ranchman depends on for a living is gone. I should therefore advise all sages of the law that may like to travel, to stand up as models to the average of mortals by more strictly and literally obeying the laws of the country through which they pass without all the time trying to argue within themselves about the intention of the law giver and taking upon themselves to judge if, and when, they cause damage by trespass or not.

I like to travel myself and like to see others enjoy traveling. I would like to be able to be hospitable to every traveler, but I might easily gather about me all the tramps in the country and never enjoy the pleasure of welcoming congenial people, therefore if I am like others, inhospitable, it is owing to circumstances, not to choice. I think that when the day comes that every educated man will lay particular stress on the strict obedience to the law, beginning by doing so himself, lower class people will recognize an educated man as such and treat him accordingly. RANCHMAN.

## Notes from Northern Minnesota.

PELAN, Minn., Sept. 17.—*Editor Forest and Stream:* The first regular Manitoba wave of the season arrived here on the 15th, and brought with it a generous flight of ducks and geese. The lakes and sloughs in the central and eastern portion of this (Kittson) county are bristling with the squawks and flaps of feathered game and long V's pointing southward are still coming in.

Grouse shooting continues good and I am inclined to recall the prediction I made in my letter of the 6th, as to the early clearing out of the sharp-tails, for on a long exploring trip since made through the Lake of the Woods and Red Lake region, I found them abundant on every prairie and on the borders of every muskeg. This is a dense wilderness with a settler to only every ten or twenty miles of trail, and in some instances you may travel a hundred miles without seeing a cabin. Most of the region is within the Red Lake Indian reservation, and as your red Indian never shoots at the birds, and as this region is inaccessible to the average sportsman, this will remain a safe and extensive breeding grounds for sharp-tails and ruffed grouse for many years to come.

Enough of the birds will come out into the Red River valley each season to afford fair shooting if only the market-shooter will not pursue them too industriously. Pinnated grouse, however, which live wholly in the open country, will soon disappear.

On the exploring trip mentioned I saw and heard a good deal of big game, some account of which I may give you *mañana*. G. O. SHIELDS.

## Adirondack Notes.

NEW YORK, Sept. 20.—*Editor Forest and Stream:* In your issue of Sept. 16 I read with much pleasure an article headed "They Clank Their Chains." It went to the spot. I fully appreciate it after fourteen months of enforced retirement from my late illness.

I could not, however, resist taking one more trip to the old North Woods, from which I have just returned feeling much better. The Adirondack region is now looking its best; the maples are in their full glory of scarlet and gold and the bucks are mostly turning blue, and I never saw woods and waters looking more beautiful. I felt very sad to have to return to the noise and bustle of the city.

The hotels in that section have done remarkably well, and the Antlers, the Prospect House and other famous resorts have been well patronized all through the season. I think the game laws have been well observed, and did not hear of a doe having been killed this season.

I saw Dr. Webb, who is now busy fencing in his great preserve. As soon as this is done he will begin stocking it. His neighbors, Cols. Brandreth and McAlpin, are doing their best to increase their stock of deer, which suffered severely from the hard winter. They discourage hounding and the killing of does.

A week ago Sunday the mercury dropped to 30°, and the cold drove home many who were not prepared for such weather; but the next few weeks will be the most charming of the season and the most comfortable for traveling. I only wish I could return there.

WAKEMAN HOLBERTON.

## First Coon of the Season.

GLOUCESTER, Sept. 14.—*Editor Forest and Stream:* One does not often enjoy a coon hunt while lying in bed, but that was my experience last night. I had just retired to my hammock, when I saw the light from lanterns playing through the treetops and I knew that the coon hunters were out. This hunt was made up by a Gloucester boy, Johnnie Pinkham, engineer, for the benefit of Boston friends. These latter, together with Rose Pinkham, George, Percy and Edward Bray, composed the party. The dog was the celebrated coon dog Pete, from West Gloucester. The dog took a track near my tent, and treed his coonship after a short run near the starting point. I could see the light of the lantern slowly ascending to the treetop, and anon five shots rang out on the night air and the coon struck the ground with a dull thud which I distinctly heard from my hammock. For a few minutes the air was full of strange sounds. The short, sharp bark of the dog and the wild cry of the coon mingled with the wilder cries of the excited hunters. The wounded coon made a desperate fight, and some of the boys will have to buy new rubber boots. He weighed 19lbs. HERMIT.

## A Growl from Michigan.

FLINT, Mich., Sept. 18.—If there is any State in the Union that has in it gun fools or gun cranks or pot-hunters, it is Michigan. You hear nothing but double-barreled shotgun, double-barreled shotgun, from Saginaw to Kalamazoo and from Detroit to Grand Rapids.

Double-barreled shotgun—I get sick of hearing it. Of all the guns to hunt with, give me a mixed gun, rifle and shot, .32-40 rifle and .12-gauge shot. One shot barrel is enough, then a man can't play hog with all the game.

All I hunt is squirrels and beasts and birds of prey; ducks and game birds I never hunt at all, though I sometimes scare them up in looking for rabbits. I always want with me one fine rifle and one shot barrel. Where is there another reader of FOREST AND STREAM that will agree with me on this matter? Now I only have a .33-20-115 Winchester repeater, and it is a lively squirrel that gets away, for with my peep sight I can find his head easy enough.

If I can have a good mixed gun it is all I want, and the others can have their double-barreled shotguns for trap-shooting. W. H. W.

## Where to Go.

ANYBODY desiring information with regard to the hotels advertised in FOREST AND STREAM, such as rates, routes, fishing and hunting opportunities, should address FOREST AND STREAM Information Bureau, where all reasonable inquiries will receive prompt answers.

## The Acme of Physical Comfort.

The very acme of physical comfort is reached when traveling upon the New York Central Roads, and nowhere upon the face of the globe can more beautiful scenery be found than that disclosed by these varied routes. One never tires of the Hudson River, and the Mohawk region, so loved by poets, is always a feast to the eye and a delight to the soul. Then as we go on and keep our eyes open we come upon some of the loveliest sheets of water on top of the earth—Cayuga Lake for one, and further on, Canandaigua Lake, uniquely and blissfully situated.—*Eleanor Kirk, Adv.*

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

## ANGLING NOTES.

## Twin Ponds.

IN a note upon Puffer Pond in FOREST AND STREAM of Sept. 2, I quoted from a letter written to me by Mr. J. E. McDonald, and commented upon it as follows: "Twin Lake, mentioned in Mr. McDonald's letter, is a new name to me for an old lake. On Stoddard's map it will be found as one of the Siamese Ponds, and so these ponds have been called as long as I can remember." Before I wrote this I consulted Mr. John L. Wendell, manager of the Freeman Lumber Company, the owner of Thirteenth Township, to know if any of the ponds had been christened Twin Ponds or Twin Lakes, and he believed as I did, that Siamese Ponds were meant, as he had not heard the other name applied to any of the waters about Thirteenth Lake. Mr. C. T. Moore, of West Troy, a well-known sportsman who frequently visits this region, writes me that Mr. McDonald was right in speaking of Twin Ponds—not lakes—and that they are on Stoddard's map, unnamed, lying S.S.E. of Puffer Pond, and nearly on a line between Thirteenth Lake and the Siamese Ponds, but nearer to the former, and that the region is a perfect paradise for deer. Within twenty-four hours after reading Mr. Moore's letter Mr. Wendell told me he had just returned from a visit to "Thirteenth," where he had asked about these ponds and found they were named as Mr. Moore stated. The Twin Ponds are one of the sources of the East Branch of the Sacandaga River, and are not far from the center of the township, while Siamese Ponds, which on Stoddard's map are put down as "Siamele," are on the line between Townships 13 and 31.

## A Hint About Salmon Fishing.

In a personal letter from Mr. John Mowat he mentions different methods of fishing a salmon river as practiced by different anglers, and his comments are so good and to the point that they should not be hidden away in a personal letter. He says that some men want plenty of water and are continually on the move. They may be fine casters and handle their fish well when hooked, but they lack patience and want pastures new. When fish do not come in one place they think another may be better, and so they move, and in moving a mile or two or three up or down a river valuable time is lost. "For the first of the fishing the rule is, if you have a lay spot, that is a holding pool, stop there, as the fish are continually moving up as long as the water is in condition. When the water is out of condition and clear, the fish run by night, and if you have then a lay pool, an hour or so at night and in the morning is all you need. If you thresh the pool for hours at such a time, even if you have seen a fish rise, you kill the pool. Don't touch it except as I have said. Such is my experience, and I think it is coincided in by those who, with a practical knowledge, have made the fish a study."

## Walton's Carved Oak Cabinet.

Among the souvenirs of the 300th anniversary of Walton's birth that have come to me is a copy of the *Daily Graphic*, London, that was sent by "Cotswold Isys, M.A.," the honorary poet of the Fly-Fishers' Club, who is about to bring out a volume of verses with the title "Lyra Piscatoria," consisting of original poems on the Nature, Habits and Mode of Capture of Fresh-water Fishes, on Flies, Fishing and Fishermen. The *Graphic* contains a number of articles concerning the celebration of Walton's birthday, only one of which I will refer to. This is "A Waltonian 'At Home'" held at the house of Mr. Elkin Matthews, Bedford Park, where the guests were shown valuable prints, illustrating the life and time of Walton, interesting and rare editions of the "Compleat Angler," including an original edition, and the carved oak cabinet mentioned in Walton's will: "To my son Izaak I give all my books, not yet given at Farnham Castell, and a deske of prints and pictures, also a cabinet near my bed's head; in which are some little things that he will value, though of no great worth." The article introduces the details of this function in these words: "To celebrate fittingly and sufficiently the memory of the gentle, we had almost said the sainted, Izaak Walton, the pious Waltonian has resource to many pleasant expedients. Sometimes it is the publication of a new and magnificent edition of the Works of the Master, sometimes the dedication of sonnets to his fame—witness the little book published by Mr. Westwood in 1883." I have a copy of this little book, presented to me by the author, and in honor of Walton's birthday I had it rebound in a new dress of leather by a clever binder in New York. Its title is "In Memoriam. Izaak Walton, Obit 15th December, 1683. Twelve Sonnets and an Epilogue." Three of the sonnets are devoted to the very cabinet that was shown to Mr. Matthews's guests the other day in England, and I would that I could reproduce all three in FOREST AND STREAM, but as it is I give one, the first of the three:

## THE CABINET.

Three sonnets suggested by the cabinet that hung at Walton's bed-head, now in the possession of C. Elkin Matthews, Esq., of Exeter:

"Just here our Izaak must have laid the stress  
Of his true hand, full oft—just here have stood  
Eying his books—Quarles, Sibbes, quaint brotherhood!  
Or his own 'Angler,' fresh from Marriott's press.  
Thus I behold him now—he turns the page  
Of 'hearty, cheerful Mr. Cotton's' strain;  
His face lights up—he sees the Dove again—  
Sees Pike-pool, and that pretty hermitage,  
The Fishing House. He marks the trout at play,  
And casts his fly—swift turns the whizzing wheel—  
A plump three-pounder pants within the creel.  
And now his dream is done—he turns away.  
Blest Shade, from out your heaven, forgive me this,  
That where your hand was laid, I leave my kiss."

No one was better informed about Walton than Mr. Westwood, and he knew well that Walton was not familiar with the fishing reel, except from hearsay, unless it was in the latter part of his life, and of which there is no record, therefore he admits in a foot note to the sonnet quoted that "swift turns the whizzing wheel," may be an

anachronism. In this connection I am reminded that a full page picture of "Pike Pool" was given in the last *Scribner's* from a drawing by Parsons, but it is called "Pike's Pool" in the magazine, as though it belonged to Mr. Pike and not to the "Compleat Angler."

## Governor Flower on Fishculture.

At the Washington county, N. Y., Fair the other day the managers had "Governor's Day," and the Governor of the State was the orator and made an excellent speech to the people largely upon the subject of fish propagation. I have not seen the entire speech in print, and only two papers have printed extracts from it, so far as I have been able to discover, but it would serve to educate the people and draw attention to this branch of State work if the speech should be printed in full and distributed throughout the State. It is quite possible Governor Flower would revise the speech in a few particulars, if he should conclude to print it, and make it historically correct, although perhaps it now matters little whether the New York Fish Commission was established ten years ago or twenty-five, as it really was, or whether the Hudson contained salmon fifty years ago, or never contained them until the United States stocked it, as the late Prof. Baird believed, from the best evidence obtainable, to be the truth. Gov. Flower pays a deserved compliment to the sportsmen of the State in these words: "Our State Fish Commission was established somewhat more than ten years ago. I presume it owed its existence to the sportsmen who wanted to see our lakes and streams stocked with fish and the game laws carefully enforced. If that was the principal object of its creation we owe a good deal to our sportsmen, for the Fish Commission has done much to preserve the fine old sport of fishing from going to decay by the exhaustion of fish from our waters. To-day, thanks to our sportsmen and the Fish Commission, our streams and waters are alive with good fish, and public officers and game associations are working hard to compel observance of the laws, which have been passed to protect our fish. The Hudson River is being stocked with shad and salmon. For the first time in fifty years salmon are now in the river above Troy. They have been caught in the last two years nearly opposite where we are to-day. They are by no means numerous yet, but by diligent perseverance in stocking and in building fishways around the dams, there would seem to be no reason why our noble river might not hold millions of this magnificent fish." Governor Flower certainly is sound on the salmon question, and all will rejoice to hear such words from the chief executive. Salmon have within two years been caught further up the river than where the Governor stood that day, because at the time the Fort Edward dam was out to be rebuilt, and the salmon ran up to Baker's Falls, at Sandy Hill, but they cannot get there again until a fishway is built in the new dam at Fort Edward, and there are other dams and falls, in which fishways must be built before the river will become a self-sustaining salmon stream, but with the Governor in favor of the work it will doubtless be brought about. A. N. CHENEY.

## CHICAGO FLY-CASTING TOURNAMENT.

UNLIKE nearly every other venture in the realms of sportsmanship, held in connection with the World's Columbian Exposition, the first annual scientific angling tournament of the Chicago Fly-Casting Club was a success. It was well attended, the different events were well filled and contested, and there was a noticeable enthusiasm pervading the meeting. It was claimed, by gentlemen present who had accurate knowledge of past tournaments, that this tournament surpassed all preceding ones in every respect.

The tournament was held within the Exposition grounds, on the north lagoon close by the Walton House, which is but a few yards east of the Art Palace. That is, the fly-casting was held there. The bait-casting took place on the north side of the Art Palace, on a beautiful stretch of ground, but a short distance from the Walton House.

The tournament, too, was well conducted and managed. The competition was spirited, yet in the best of good nature. No unpleasantness of any kind occurred to mar or impede the event.

The judges were Dr. J. A. Henshall, Chief of Angling Pavilion, World's Columbian Exposition, Messrs. Wm. C. Harris, New York, and Henry L. Stanton, Chicago. Mr. E. T. Allen, of San Francisco, Cal., was timekeeper. All were most industrious and painstaking in their duties. The president, Mr. Geo. W. Strell, and the secretary-treasurer, Mr. F. B. Davidson, attended to the general arrangements, while Mr. B. W. Goodsell made a most efficient captain. Much praise was bestowed on the judges and officers for the satisfactory manner in which they fulfilled their respective duties.

There were seven events, the first prize in each one being a solid gold medal, representing a creel suspended to a fish, a unique design worked out in skillful detail. Those for the fly-casting events had a trout for a special emblem, those for the bait-casting events were suspended from a black bass, emblematic of the special class of competition.

There were quite a number of visitors present, who watched the competition with keen interest.

The fly-casting was done from a platform, raised 3ft. above the surface of the water. The bait-casting was done on a level, grassy surface. A white cord marked the boundaries of the court which was a rectangle, 80ft. wide and of any required length. A tape line stretched lengthwise down the center of it afforded a ready indication for measuring the length of each cast. The conditions governing the competition will be more fully set forth in connection with the events.

The competition began on Thursday, September 21. An exceedingly stiff wind obstructively interfered with the efforts of the competitors. It was so gusty and irregular that the scores suffered severely in consequence. It made variable conditions in the work of the individual competitor, and also in respect to each one as compared with the others.

Had the conditions been favorable, there is no doubt but what the world's records would have been broken. On Friday far better conditions prevailed, yet there was a slight cross breeze, which came by an angle of the buildings, and which caught the water about 75ft from the casting platform and across the line of effort. While the breeze was extremely gentle, it was strong enough to throw the leader back at the end of the cast, thus re-

ducing the latter many feet, and destroying the possibility of breaking records or working up even to average form.

Expert Classes.

Event No. 1. Long Distance Fly-casting. Entrance \$10. Open to all; all casting shall be single handed; rods over 11ft. long barred, and rods shall be unconfined when casting; one, two or three flies, of a size not larger than No. 5 allowed; leaders shall be single gut and not longer than 9 nor less than 6ft.; knotting of lines, or any device to lead weight to the cast, prohibited. Three prizes; first prize, gold medal, emblematic of expert long distance fly-casting championship. First, R. C. Leonard, 96ft.; second, P. C. Hewitt, 92ft.; third, E. E. Wilkinson, 84ft.; Mr. J. E. Isgrigg, 77ft. Each of the contestants used Leonard rods.

Five minutes were allowed each contestant. No cast counted if the stretcher fly was missing; no time allowance was granted to replace a fly; the length of cast was measured from score line on the pier to the spot reached by the stretcher fly; contestants who tied were to compete three minutes longer.

Event No. 2. Fly-casting for Distance and Accuracy combined. Entrance \$10. Three prizes; first, gold medal; rest, merchandise. Three buoys shall be placed as follows: The first, 75ft. from the score line, but 5ft. to the left of a direct line; the second, 80ft. distant, but 5ft. to the right of a direct line; the third, 85ft. distant, but in a direct line from the pier stake. Any part of the leader falling across the object buoy shall be counted perfect, viz., 100 per cent.; one point shall be deducted for every foot distant the leader or nearest fly shall be from the buoy. Five casts shall be made at each buoy; sixty seconds shall be allowed at the start to extend line, and cast one shall be called on the back cast at the expiration of the sixty seconds, or sooner if the contestant calls time. The distance of the leader from the buoys at each cast shall be added together and divided by three; the total shall be deducted from 100, which shall be the percentage. The one having the highest percentage shall be declared the winner. Ties shall be cast off at the 85ft. buoy, five casts, sixty seconds to extend line, time called on back cast.

	No. of Casts.					Distance.	De-merits.	Total De-merits.	Net per c.	Total.
	1	2	3	4	5					
R. C. Leonard, New York.	75	2	3	4	0	15				
	80	3	0	0	2	5				
	85	10	4	0	2	16	36	12	88	88
P. C. Hewitt, New York.	75	1	3	5	0	11				
	80	3	0	4	4	11				
	85	10	2	7	2	21	43	14½	85½	85½
E. C. Wilkinson, Chicago.	75	2	2	3	10	27				
	80	2	0	2	10	14				
	85	1	5	10	10	36	77	25¼	74¼	74¼

Each of the contestants used Leonard rods. This event was on Friday. The buoys were set in an opposite direction from that in which the fly-casting was done, to avoid a cross current of air deflected by the large building.

The following took place on Thursday:

Event No. 3. Black Bass Bait-casting for Distance and Accuracy Combined. Entrance \$10. Three prizes. First, gold medal. Conditions as follows: The casting shall be done on land in a straight court 30ft. wide, a tape line running the full length equidistant between the boundaries. All casts shall be made single-handed, and the weight cast shall weigh ½oz.; weights shall be furnished by the tournament committee. Each contestant shall make five casts, three trial casts being first allowed; if the contestant desires he may call time on any one of the three casts; after which the four remaining casts shall be counted. The average of the five casts shall constitute the record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 126 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed.

The longest single distance cast shall be entered as a matter of world's record, recognized by the award of a silver medal with the distance inscribed on it.

	No. of Casts.					Distance.	De-merits.	Grand total.	Av.	Longest cast.

\*Out of bounds.

In the foregoing event, Mr. Davidson was handicapped by using a strange rod and by having too short a line. Twice he ran all the line off the reel. Every one heartily rejoiced when he won the medal for the longest cast made in the meeting. The rod was a Von Lengerke & Antoine split-bamboo, 7oz. in weight.

Amateur Classes.

Open to all who have a known fly-casting distance record of not over 85ft., or bait-casting, average of five casts, not over 140ft., with a half-ounce weight, or who have never won a medal in any open event. The conditions and rules of the expert class shall govern all amateur events, except where otherwise provided.

Event No. 1. Long-distance Fly-casting. Entrance \$2. Seven prizes. First, gold medal. Rest merchandise. Following are the scores: First, W. H. Babcock (Chicago), 76ft.; second, M. D. Butler (Indianapolis), 76ft.; third, Heyward G. Leavitt (New York), 75ft.; fourth, J. E. Isgrigg (Chicago), 71ft.; N. Van Blaricum (Indianapolis), 70ft.; Chas. T. Essig (Chicago), 59ft.; W. S. Head, 67ft.

Messrs. Isgrigg, Goodsell and Wilkinson tied on 71ft., and in drawing lots for the place, Mr. Isgrigg won it. Messrs. Babcock, Essig, Butler, Goodsell, Wilkinson and Murrell used the Kosmic rod.

Event No. 2. Fly-casting for Distance and Accuracy

combined. Entrance \$2. This event took place on Friday. Seven prizes. First, medal. The rest were merchandise. Buoys placed at 45, 50 and 55ft. Same conditions as in expert class.

Event No. 4. Light Rod Competition. Seven prizes, entrance \$2; first prize gold medal, rest merchandise. Conditions—The competition shall be for 5oz. rods and under, open to all amateurs who have never won a prize or had a known record of over 85ft. This event shall be for accuracy, delicacy and distance combined, the accuracy and distance to be decided according to rules governing this in the amateur class, only that the buoys shall be placed at 35, 40 and 45ft. The delicacy of delivery shall be decided by points, 10 to be considered perfect. The contestant making the highest score when the total per cent. and points are added to be declared the winner.

Mr. Babcock used a Kosmic.

The light rod event closed the tournament, the amateur club team contest not filling. However, there was an extra event at the close of the tournament between a Chicago and Indianapolis team, Mr. George W. Steele, judge, R. C. Leonard, time keeper. Test, long distance. Chicago won by 29 points:

Chicago.		Indianapolis.	
B. W. Goodsell.	80	Butler.	80
J. E. Isgrigg.	83	N. Van Blaricum.	77
E. E. Wilkinson.	83-246	McDougal.	60-217

The managers desired that the following card be published:

"The Chicago Fly-Casting Club announced some time since to the world that an open-to-all scientific angling tournament would be given at the World's Columbian Exposition, and that donations of merchandise prizes as special features, in addition to the championship gold medals offered would be appreciated. The Chicago Fly-Casting Club hereby publicly thanks dealers and others for their generous donations to the tournament, and hopes that their bread will not have been cast in vain on the waters of the North Lagoon. Such generosity certainly engenders good will and stimulates sportsmen to renewed efforts to advance all interests identified with sportsmanship."

The tournament committee held a meeting at the conclusion of the tournament.

B. WATERS.

MAINE ANGLING NOTES.

REPORTS from the Rangeleys indicate better late fly-fishing than usual. A special from J. A. French, proprietor of the Upper Dam Camps, last week, mentioned the fine fishing Mr. Hiram Blood, of East Cambridge, Mass., had been having for nearly a week past. He had then taken from the pool below the dam nine trout, the average weight of which was 5½lbs. It also mentioned the skillful fly-fishing of Mr. Blood, and indicated that he understands where the big trout hide, and what sort of a lure is the best in the hands of an expert for drawing them out. I suppose Mr. Patrick Kelly is among the happy fishermen at the Upper Dam, as he was to go early in September, and I have not seen his merry face in Boston of late. Another special from Lake Weloken-nabacook—the Middle Dam is doubtless meant—of Sept. 21, says that four trout were taken there on Thursday, the united weight of which were 21½lbs. This was the catch of Mr. E. W. Coes, R. E. Foster and Frank Breed, of Boston. Mr. Coes caught the largest fish, one weighing 6½lbs. Mr. William L. Whitney, of Fall River, and Frank Haines took two 5lbs. trout on the same day. The wonder is as to where so many large trout come from, and the question is asked by almost every rod and line sportsman as to the possibility of the supply being kept up under such fishing? Word also comes from the Moose-lucmagantic House, Haine's Landing, that Mr. Rogers has taken a trout of 5½lbs., and Nick Boylston one of 4½lbs.

But not all of the fishing ends pleasantly, or rather the disposing of the fish, after the capture is made, especially in Maine. Mr. H. T. Stancliffe, Paymaster of the U. S. Navy at Norfolk, Va., has been spending a number of weeks at the Mountain View House, on Rangeley Lake. He is a lover of that region, and has visited the location several seasons, I believe. Fishing he does not care to follow as closely as some sportsmen do. He will take his rod in hand on occasion, say after dinner or just at night-fall, but is ready to give up the sport at the slightest circumstance. The other evening he was out for an hour or two and was rewarded with a 4½lbs. trout. This increased his enthusiasm somewhat and he fished more closely for a few days, and was successful as few fishermen in that region have been of late. He landed a 7½lbs. landlocked salmon. At this he was greatly pleased. At the hotel he expressed a wish to send his salmon to a friend in New York. Mr. Harry Keyo, of the Southern Pacific Railway office in Boston, who was spending a few days with his brother at the Mountain View, innocently offered to take the fish out as far as Boston, as he was going home the next day. Mr. Keyo says that he never gave a single thought to the law against trout and salmon being taken out of Maine, except by the person catching them, although aware of the existence of such a law. He also feels quite sure that Mr. Stancliffe did not give the law a thought. The salmon was nicely boxed in ice and marked with the name of Mr. Stancliffe's friend. It was done openly and the box was on the wharf at the Mountain View till the arrival of the steamer. On the steamer Mr. Keyo noticed a couple of fellows eyeing the box inquisitively. They soon made friends with Mr. Keyo, asking about the salmon, where and how it was caught, etc. They expressed satisfaction at the capture and were inclined to congratulate Mr. Keyo on his success. That gentleman told them that he was not the happy individual, neither was he the person whose name was on the box. Later his suspicions were excited a little by observing one of them making a note of the address on the box. But the box went on board the train at Rangeley without trouble and the baggage-master gave Mr. Keyo a check for it. But at Farmington, over fifty miles from the starting point of the salmon, Sheriff Blake came down to the train and demanded the fish, saying that he had a dispatch from Warden Huntton, of Rangeley, ordering him to seize the box for violation of the statute against sending fish out of the State. At first Mr.

## THE STEELHEAD SALMON.

*Salmo gairdneri*.

In a recent copy of *FOREST AND STREAM* I think I noticed the somewhat unexpected statement that very little was known of the life history of the steelhead of the Columbia, especially in regard to its spawning habits. This may apply to people on the Atlantic coast, but here on the Pacific there is hardly a fish, except the Chinook salmon (quinnat salmon, *Oncorhynchus chowica*) that is better known than the steelhead. I also saw it reported somewhere that the spawning grounds of the steelhead had been recently discovered. This is also a misapprehension. Its spawning grounds have been known for nearly twenty years. I myself saw them eighteen years ago spawning in vast numbers below Oregon City Falls, on the Willamette. If I remember rightly they begin to spawn there in February and continue till the middle of May. It was the first week in May when I saw them spawning in 1875, and they were then nearly through and appeared almost in a dying condition. Their spawning season is at about the same time in all the accessible tributaries of the Willamette and lower Columbia. Higher up the Columbia the spawning season begins earlier, and further north it begins and ends later. The steelhead was first described by Gairdner and Suckley about thirty years ago, and their description may be found in the earlier Pacific R.R. reports of these distinguished observers. They described the fish under two different names, having the erroneous impression that the steelhead on its spawning grounds was a different fish from the steelhead in tide water. To the steelhead in tide water and below they gave the name *Salmo gairdneri*, and to the steelhead on its spawning grounds they gave the name *Salmo truncatus*, or square-tailed trout, but *Salmo gairdneri* of salt water and *Salmo truncatus* of the spawning grounds are the same fish. It acquired the popular name of steelhead from the steely appearance of its head and back. Its name when spawning, *Salmo truncatus*, was given to it because its tail at that season, when stretched, is not forked, but truncated, having a straight edge as if it had been cut off with a broad-ax. The names *Salmo truncatus* and square-tailed trout were dropped, of course, when it was found that the fish called by these names was only a temporarily changed form of *Salmo gairdneri*.

The reports of Doctors Gairdner and Suckley contained, so far as I am able to learn, all the authentic information concerning the steelhead, possessed at that time, but after the salmon canneries were started on the Columbia, the steelhead soon became a well-known fish. Thousands of them are caught every year at the Columbia River canneries, and they are very abundant in their season in all the tributaries of the river. They can be seen every spring spawning in great numbers in the Willamette, just below where the Oregon City Falls prevent them from going up the river any further. They are frequently mentioned in the earlier reports of the writer to the United States Fish Commission, and except as regards the question of their identity with the rainbow trout, concerning which a few words will be said further on, there is no mystery whatever about them that I know of.

They arrive in the Columbia from the ocean in October and November, and gradually pursue their way up the Columbia and its tributaries, toward their spawning grounds. They do not seek such small streams to spawn in as the Eastern brook trout (*S. fontinalis*), but after they have ascended a stream they are very persistent in maintaining their position in it. They ascend all the tributaries of the Columbia, and are abundant in their season in all the streams of the Pacific Coast emptying into the ocean, north of Mendocino county, and they occur to some extent in the streams of that county. They are rare in the Sacramento and south of the Sacramento. They differ from most of the other sea-going salmon of the Pacific Coast in the fact that they do not die immediately after spawning, and before they return to salt water, as the humpbacks (*O. gorbuscha*), the Chinook salmon (*O. chowica*) and the bluebacks (*O. nerka*) are known to do, but on the contrary the steelheads are very eager to return to salt water after spawning. They are then very thin, indeed, and very hungry, but their coat is still bright and silvery, and they look perfectly healthy, while the other salmon just mentioned are sick, slimy, covered with white blotches, often blind and mutilated, and very unwholesome looking, and also without the slightest disposition apparently to return to the ocean.

The reason that the steelheads are so much more desirous to return to the ocean than the Chinooks and other varieties is, probably, because they continue to feed in fresh water, while the Chinooks and other salmon do not. They get very hungry after spawning, and as the fresh water streams that they spawn in furnish no adequate amount of food for them, they want to hurry back to their well-stored, and probably well-remembered, feeding grounds in the sea.

At this period, if they can be intercepted on their return journey to the ocean, they furnish the very best possible sport to the angler. They are so hungry that they will, I believe, take any bait or fly, and they will fight like a bulldog after being hooked. I have seen fishermen reel them in all day on the Clackamas River, in Oregon, without losing thirty minutes time the whole day between casting the line and hooking the fish, or in other words, there was not a half an hour all day long when there was not a salmon on their hook, and, usually, the moment the fly touched the water a salmon caught at it. When I had charge of the Clackamas Station of the U. S. Fish Commission the army officers from Fort Vancouver used to come over to the station to fish for steelheads, and I will guarantee that they never had better sport in their lives. They would get so enthusiastic at times that they would wade in the river up to their necks, and in one instance a gentleman well known in the higher circles of national politics, and who wears eyeglasses, was pulled off his balance by a gamy steelhead and taken under water and down a dangerous piece of rapids; but he hung to his fish all the time and finally emerged to view with his eyeglasses in their place and with a firm grip on his rod, and a steelhead at the end of his line.

When it comes simply to catching fish for sport, I doubt if the angling for hungry steelheads is surpassed by any fishing in the world; but when it comes to eating them, it is another thing. It must be confessed that they are not valued here very highly as food. Boiled steelhead is pretty dry eating, and broiled steelhead is dryer yet.

They make a very good chowder, and that is about the best that can be said of them. They are all thrown away at the Alaska canneries, and they used to be at the canneries on the Columbia, but I am informed that in recent years when the catch of quinnat salmon is unprofitably small, some of the canning men have used steelheads to fill up their cans with. They are not good for canning, however, as their flesh is too white to be salable and too dry to be very palatable.

In size the steelheads average much smaller than the quinnat salmon (*O. chowica*), but larger than the humpbacks and bluebacks. As well as I can remember, those I saw in the Columbia averaged about 12lbs. in weight and did not vary very much in size. Indeed the wonderful variation in size of the quinnat salmon (*O. chowica*) is confined to that variety; I have taken ripe eggs from a spawning quinnat salmon in the McCloud River that weighed 34lbs., while in the Yukon there are spawners that weigh 100lbs. Such variation occurs in no other variety of the *Salmonidae*. The steelheads, however, like the quinnat, grow larger as you go north, and in Alaska are found weighing nearly 80lbs.

In shape, the steelhead is more slender than the quinnat salmon (*O. chowica*) and less graceful in form than the Atlantic salmon (*S. salar*), and has the appearance of being too heavy about the shoulders, so to speak, to be perfectly symmetrical. Its range is chiefly from Mendocino county, California, north to the Arctic, though stragglers are sometimes found south of this southern limit.

Its eggs are smaller than those of the quinnat, are less richly colored and fewer in number, compared with the size of the fish. At the writer's recommendation, the Fort Gaston Station of the United States Fish Commission, in Humboldt county, California, was kept up chiefly on account of the prospect of obtaining steelhead eggs. There is a branch of the Fort Gaston Station on Redwood Creek, which large numbers of steelheads ascend to spawn.

There has been a suspicion for a number of years that the steelhead is the same fish as the rainbow trout of California (*S. trideca*), and the question of their identity can hardly be considered settled yet. Dr. Tarleton H. Bean thought for some time that the two fish were identical; but I believe he does not urge that opinion now. Dr. David S. Jordan, president of the Stanford University, California, and one of the most distinguished scientific authorities on fishes, is still in doubt, and proposes soon to make an exhaustive study of the subject and settle the question whether steelheads are sea-going rainbow trout.

The following letter from Dr. Jordan bearing on this point will, I think, be read with interest:

OFFICE OF THE PRESIDENT  
LELAND STANFORD JUNIOR UNIVERSITY,  
PALO ALTO, CAL., Feb. 22, 1893.

Mr. Livingston Stone, Baird, Shasta Co., Cal.:  
DEAR SIR—The collection of trout reached us in perfect condition. The rainbow trout are, of course, as they always have been, but the question of whether they are different species from the steelhead seems still hard to determine. My present belief is that it will be found that the steelhead, rainbow and salmon trout of this coast, including the Kamloops trout, which I recently described, are forms of one species, and that there are only two really distinct species of trout on the coast—the cut-throat trout in the north and east and the rainbow trout. This of course leaves out the Dolly Varden, which is not a true trout.

It seems, however, that the trout of McLeod River have larger eyes and shorter auxiliary scales to the ventral fins as well as more profuse spotting than any of the trout of this part of the State.

The "No-See" is a decided puzzle to us. I can hardly believe that it is a different species from the rainbow trout. It is, however, different in color, having all its spots gathered together on the posterior part of the body, and its scales are much smaller than those of the rainbow trout. There are 155 in the lateral line instead of 125.

In the San Francisco market a while ago I found among a lot of so-called salmon-trout one specimen which seems to be identical with the No-See, having small scales, though not quite so small as those in the one you sent, and its black spots collected about its tail. I should be glad, if you ever catch another, to see it in order to determine if possible what degree of constancy these characters have. Very truly yours,  
DAVID S. JORDAN.

To recapitulate briefly, let me add that steelheads are rare south of Mendocino county, California, but abundant north of it; that south of Alaska their spawning season is from February to May, inclusive; that they spawn in the numberless small streams that flow into the rivers they ascend and also in the rivers themselves; that when returning to sea they are very gamy and furnish fine sport to the angler; that their flesh is dry, of a whitish color and undesirable for canning and not particularly desirable for the table; and that some doubt still exists whether they are not sea-going rainbow trout.

LIVINGSTON STONE.

## "Lake Champlain Trout."

NOT brook trout nor lake trout, nor anything in the shape of a speckled beauty, but just about as good a fish when properly cooked. That is why the natives give the above name to what we call the humble bullhead. The average angler deems him beneath notice, for he clings to the hook too honestly for much sport, and sculls himself up to the boat without the swift lunge and sharp break of the true member of the *Salmo* family. But when the summer boarder has cleaned out all the trout fit for food, then the fish hunger is well appeased by the firm, meaty flesh of the pout taken from cold waters like Lake Champlain. Mr. Charles Parrish, of Bridport, Vt., while fishing recently with two friends caught 180, weighing from a half to a full pound apiece. W. H. R.

## Mr. McCarthy's Ouananiche.

THOSE who have read Mr. Eugene McCarthy's interesting accounts of ouananiche fishing in *FOREST AND STREAM* will be interested to know that we have on exhibition in this office a fine example of this superb fish taken by Mr. McCarthy. The specimen, which weighed 74lbs., is beautifully mounted on an oak board, and has in its jaw the identical fly with the leader on which it was taken, and a foot or two of the line.

## "Forest and Stream" Fishing Postals.

THREE LAKES, Wis., Sept. 13.—Mr. W. H. Upmire, Mr. Weller and Mr. F. Sebel, of Milwaukee, caught in two days' fishing at Butternut Lake 218 black bass, largest 44lbs., total 276lbs.; also three maskalonge at Medicine Lake, largest 23lbs. F. R. F.

## Trout in Rhode Island.

PROVIDENCE, R. I., Sept. 9.—*Editor Forest and Stream*: In to-night's *Bulletin* I find this item: "Thomas R. Hewett, of New York, an owner of a trout pond in North Stonington, Conn., has been troubled by the large fish eating the trout. To do away with this evil he had the water drawn off in hope of saving what trout remained. Pickerel, bullheads and eels were found in large numbers, but there was only one trout. One of the pickerel weighed over 4lbs."

Talk about bullheads! Why, Rhode Island ponds swarm with these and eels. The preserve club recently organized here have a large pond on their premises and calculate to stock it well with trout, but if the bullheads play such havoc as the above clipping would indicate, it will probably be a case of drawing off another pond or building a new one.

There are ponds in the southern part of this little State that swarm with bullheads, but we have taken good-sized trout from them, too. There are good trout in our waters here, but with the brook-damming "Canucks" and mill dams, the fingerling fiend, and their natural enemies, the pickerel, eels and bullheads, they have a sorry time of it. That poor solitary trout in the pond above mentioned in the newspaper clipping, must have had a busy time of it. He was probably a thoroughbred fighter and deserved a better death than the inglorious way in which he was captured.

Shades of night! Are we coming to the necessity of going to the hatching farms for our trout? The man who invented that novel device for "fishing at the trap" has a fortune waiting for him if "real" fishing don't pick up in these parts. Or else we've got to have artificial ponds on our lawns, fill them with metal fish and use a magnetized hook to get them with.

Well, we hope Mr. Hewett will clean out his pond, re-stock from the commission and have better luck. TODE.

## Bass at Crystal Lake.

IONIA, Mich., Sept. 16.—*Editor Forest and Stream*: I had been out several times this season for bass, but this, considering the short space of time devoted to fishing, was the best trip I made. Some friends of ours, Mr. and Mrs. C. W. Parsons, were camping on the banks of Crystal Lake, twenty-six miles north of here, and my wife and I determined to join them.

The lake by the way is rightly named, for the water is so clear you can easily see a white pebble in 15ft. of water, and the banks go so far out and the water so shallow a team can be driven around the entire lake without the water going over the hub. But you can find deep water by going out far enough.

On Tuesday, Sept. 5, my wife and I started from home at 7 A. M. and drove the twenty-six miles, arriving at the lake at 12:30. I drove up to camp and left my folks, took dinner, and after half an hour spent at table took my horse one mile to a stable, walked back to camp and took out my bathara 10oz. and Mylan reel. I rowed out alone for the resort of the gamest of all the finny tribe, the black bass. I had not gone over twenty rods, when my reel began to whizz and I soon landed a beautiful 2lbs. lake bass, and when the gong sounded for mess at 5:45 I pulled into shore with ten lovely black bass and two small pickerel, having been out two hours and forty-five minutes. This is a sample of our excellent fishing in old Michigan. E. R. B.

## Big Maskinonge.

BELLEVILLE, Ont., Sept. 18.—Maskinonge, which were very numerous in Mosquito Bay three years ago, but have not since been found in their former haunts, were rediscovered by Messrs. L. A. Appleby and A. N. Reid on Friday last, when they caught three which weighed 40lbs., 29lbs. and 23lbs. respectively. The largest one measured 4ft. 6in. in length and girthed 2ft. These lucky fishermen reported plenty more where those came from. R. S. B.

## FISHERS AND SPORTSMEN AT THE FAIR.

## The World's Fair Fisheries Congress.

CHICAGO, Ill., Sept. 20.—One of the features of work on which Capt. Jos. W. Collins, chief of Fisheries at the Fair, had set an especial interest was the Congress of Fisheries, earlier announced for Sept. 19-20. In these days of many congresses it is source of much pride for any event of this nature to show a large attendance, but in view of results of this convention the effort may be called a worthy one in a way. It was of course a convention not of sporting fishermen and anglers, but of commercial and scientific fishermen. Representative men from both coasts and from the Great Lakes were in attendance. Capt. Collins called the meeting to order Tuesday morning, President T. W. Palmer following with an address. Hon. William Smith, of Canada, Minister of Marine Fisheries, spoke on the "Fisheries of Canada," and Lieut. E. W. Bassett made an interesting talk on the "Folk Lore of Fishing." In the afternoon a cosmopolitan procession of fishing boats passed through the lagoons, among which the following craft appeared:

A life-saving boat, with all the crew wearing cork life-preservers, a Rhode Island striker boat, the Blake's sounding boat, whaleboat from cruiser Illinois, Turkish caique, Norwegian boat, Lofoten Islands fishing boat, Norway; pleasure fishing boat, Norway; dory, with lobster pots, Massachusetts; canoe from West Alaska, klukit canoe from Alaska, modern skiffs, outrigger canoes from Ceylon, balsas from South America, Esquimaux cayoks, Dahomey canoes, Samoan canoes, Egyptian boat, ordinary canoe, bragozza, fishing boat from Venice; Jangada fishing raft from Brazil, Canadian boat, St. Lawrence skiff, angler's boat, water bicycle, land and water motor, aluminum shell, canvas folding boat, angler's boat yawl, Japanese Phoenix boat, with net casting, Japanese boat with fish balloons, birch canoes with Western Indians, birch canoes manned by Penobscot Indians, native boats from British Columbia, dugout manned by Iroquois Indians, kaiaik from whaler Progress, float with fishing camp and sturgeon boat.

On Wednesday the congress reassembled at 10 A. M. Capt. Collins read his paper on "The Relation of Fisheries to National Prosperity," showing how important the fisherman has been in history from the time of the Phoenicians down. Mr. John Hudson, of Washington State, read a paper on the "Fisheries of Washington." Mr. John Tobin, of Chicago, made some interesting remarks on the subject "How to Scale Fish." Mr. Hart, of Chicago, presented valuable results of his study on the "Manufacture and Uses of Fish Glue." On Wednesday there were some boat races, the most interesting being those between the canvas boats, Osgood boat

broke her oars, Acme lost an oar and the King boat's rowing gear gave out. Eureka boat won.

The third and last day of the three so-called fisheries days was better known as Sportsmen's Day. There was no congress on that day, but two meetings, that of the national convention of sportsmen and the tournament of the Chicago Fly-Casting Club, were held, both of which are reported elsewhere in these columns. The fly-casting tournament was very successful, indeed one of the very few successful sporting events which have been brought off at or about the Fair.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Pennsylvania Pisciculture.

The Pennsylvania State Fish Commission have been liberally stocking the public streams of the commonwealth with black bass obtained from pound-net fishermen of Lake Erie. The fish introduced are from 3 to 6 in. in length, they being caught in September and carried to the various streams in the State Fish Commission car.

This Commission will distribute about three or three and a half millions of trout and trout fry this year. The success with trout in several streams in the northern portion of Lancaster county is very gratifying.

Captain Peoples, of New Providence, has been highly successful with black bass. The Captain had several old quarries on his place into which he turned the waters of a small stream and so formed good ponds. These he has stocked with bass, which now afford his angling friends most excellent sport. The Captain experienced some difficulty in feeding his bass. Chopped meat is used. The pieces must be small. Captain Peoples has lost a number of bass, which were choked to death by pieces of meat of too large a size.

FIXTURES.

DOG SHOWS.

Sept. 26 to 29.—Ottawa, Canada. Alfred Geddes, Sec'y.  
Oct. 3 to 6.—Minneapolis K. C., at Minneapolis. H. T. Van Duster, Sec.  
Nov. 21 to 24.—New Jersey K. C., at Newark. Dr. W. F. Seidler, Sec.  
Dec. 12 to 15.—R. I. Fowlter and Pet Stock Ass'n, at Providence.

FIELD TRIALS.

Oct. 23.—Brunswick Fur Club field trials, at North Acton, Mass. Bradford S. Turpin, Dorchester, Mass., Sec'y.  
Oct. 30.—National Beagle Club trials, at Nantuet, N. Y. Geo. Laick, Tarrytown, N. Y., Secretary.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—New England Beagle Club trials. W. S. Clark, Linden, Mass., Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lellinger, Sec'y.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

RHODE ISLAND DOG SHOW.

THE above heading may seem rather too general, but not more so than the show deserves. It was the united opinion of those present that "Little Rhody," as in society, politics and commerce, must henceforth be reckoned among the leading shows. Conflicting with another A. K. C. show, the result of this initial effort must be peculiarly gratifying, and FOREST AND STREAM sees nothing to regret in upholding the show at the expense of one whose management was deplorable. The Cranston fixture was alluded to by some writers as a "little one-horse affair," but all must admit that the horse must have been a "hackney" by the resolute manner in which it stepped out. The prize list is sufficient to show that a majority of the best dogs we have in the East put in an appearance. This was to be expected, for the judges are popular, the money prizes fairly liberal and, with John Read at the helm, every one knew that the management could be depended upon. It was one of the pleasantest shows to attend; everything ran satisfactorily, and the judges did their work unostentatiously, methodically and promptly. There were eight rings put up outside, but only four were needed for judging, but the space proved a safeguard to the dogs. With a number of rings partitioned off, there is no fear in exercising even the smallest dogs, and affording them the relief they sometimes cannot get when dogs of all sorts and sizes crowd into one large ring. The building where the show was held is one made by covering the space between two cattle sheds, and had it a better floor would be admirable for the purpose. Mr. D. Seabury, brother of poor "Nat" Seabury, an architect, planned the benching and building, and it was well arranged. The benching was new and in the old style, and a large space was reserved in the center for rings in case of stormy weather. We can make one suggestion to the management. The floor was earth and covered with sawdust, and naturally when the crowds passed through, there being no admission fee, a heavy pall of dust covered dogs and visitors alike, and many of us thought we were afflicted with hay fever or some such nostril-tickling complaint. The solid earth floor will be sufficient another time and a little sprinkling will keep down the dust.

The judging was delayed somewhat the first day by heavy showers, but as it cleared toward noon, Messrs. Mortimer, Davidson, Boutelle and Wakefield soon got to work. Open air judging is a feature we do not often enjoy in this country, and would we had more of it. The show looked like a second edition of a Boston reunion, so many familiar faces from the city of "cultchah" were to be seen. The quality in some of the breeds was quite conspicuous, and the gathering of fox-terriers was a rare compliment both to the judge and the efforts of the new secretary of the American Fox-Terrier Club. Mr. H. W. Smith, who was there both to show his wires and see after the club stakes.

Among others we noticed were H. H. Hunnewell, Jr., T. S. Bellin, F. F. Dole, Winslow Clark, A. Heald, T. W. Turner, G. Muss-Arnolt, Geo. Jarvis, Tom Aldrich, Joe Lewis, J. B. Martin, all the way from San Francisco, Cal. Estelle Deffey, E. H. Moore, B. S. Turpin, F. W. Chapman, H. V. Jamieson, J. H. Scanlan, F. Senn, Dr. Thurber, H. N. Waldron, Dr. Lougest, Dr. Glazier, Geo. Thomas, James E. Green, George Fletcher, A. W. Pearsall, N. Wallace, J. B. Elton, E. H. Parsons, F. W. Connolly, J. Sharpe, C. Fred Crawford, B. Alton Smith, E. B. Elliott, Major Taylor, A. W. Atherton, H. S. Roberts, C. Steadman Hanks, German Hopkins, Jas. Bowen, Mrs. Smith and Mrs. Meacham, and Henry Brooks and Mr. Taylor. All the "boys" seemed satisfied, and there was a complete absence of that hard feeling and rancor that seems to have crept into some shows lately. Mr. Walter J. Comstock and his able deputy, Billy Birch, saw that the exhibitors did not want for anything and every one was made to feel at home. The judging was completed before noon on Tuesday. The catalogue was singularly free from duplicates, there being no novice classes, and consequently out of the entry of 467 dogs, 425 were benched. The number of entries in the classes are given below in parenthesis.

MASTIFFS (James Mortimer, Judge).—It is not often that we are treated to such a capital lot of mastiffs as those shown

here. In another year or so if the two doctors, Glazier and Lougest, continue to "nick" their stock as they have done, there should be no cry of decadence in this breed. Challenge classes failed to draw, but the quality of several dogs in the open abundantly made up the loss. The winner, Ingleside Minting, a son of Beaufort's Black Prince, has come on nicely since New York, and now stands forth in the same row as Beaufort and Black Prince. He is a little faulty in pasterns and feet, but his head is a study, capital skull and deep square muzzle, altogether very massive, well placed ears, good expression and wrinkle, eyes might be a little darker but well set, great bone, body good depth with plenty of substance considering his eighteen months, if it was a little longer it would be better, though this fault is not nearly so pronounced as in his sire, and above all he is a good mover, his hind parts being more than ordinarily well formed. He is a dog with a future. Emperor Maximilian is another good one, by Ingleside Maximilian; his expression is not so good as the winner, his ears being set on too high, the fawn and black markings are not pronounced enough, being very dark all over the head, and eye color is not in keeping; ear small, excellent forepart, should be deeper in loin, but chest is deep; he is a younger dog than the winner, but has considerably more loose skin round shoulders and neck, he is also a good mover. Emperor William loses behind to the others, being too straight in stifle, he has, however, an excellent head, massive skull, and deep, square, short muzzle, and nice wrinkle; he is a litter brother of Emperor's. Leo G. and Trump were outclassed here, heads too long and not the same type. A very promising bitch, Lady Diana, beat her dam, Gerda II.; she is a sister of the two Emperors; very pleasing, well formed head, deep body and strong loin, but she could be much improved with straight forelegs and feet, she won handsily in the parts spoken of. Gerda II., however, can well rest content without bench show honors when she can point to such a litter as this. Boston Boy is just over distemper, but really I thought the judge a little hard in withholding first; he is of a later litter, by Maximilian out of Gerda II., and though a little too pronounced in stop and condition rather low, still his type and quality justify entitling him to score, especially when followed by two poor ones. Dr. Lougest took the kennel prize.

ST. BERNARDS (James Mortimer, Judge).—There was quality here, too, and classes were well judged. Lady Livingstone, looking in high feather, furnished the only challenge entry in roughs. In open dogs came Altoner once more, but

FOXHOUND FEMUR.  
First, Challenge, Rhode Island Show, 1893.  
Owned by Dr. Thurber, Providence, R. I.

his summer's rest has not furnished that body as it should have done, and his shortness of coat made it more apparent; in head, expression and type, however, he scores, and especially in carriage of tail. Columbus is a handsome dog, rather light in bone and should have more rib, nicely marked, good, deep head, should be broader in chest and not carry his tail so high and curled. Imperator is an improved dog, tall and with good action, muzzle should be broader, but it is deep, pasterns faulty, tail curls, and if he had more rib would be better; still, he is a handsome dog, with the best coat in class. Czar G. is another good-looking one, by Alton, muzzle not deep enough, flat-ribbed, but nice type and color. The others were brindle, and Donnar is cow-hocked. Two bitches by champion Pout came together next, and they showed a great family resemblance in their peculiar style of head, though Lady Saerwell has an advantage in size and substance throughout. Walkure loses in type, substance, legs and head to the others. The only pup was a son of Jim Blaine.

In Smooths Mr. Moore furnished both the challenge winners with Melrose and Miss Alton; both are now as good as they ever will be, and a lightness in body is apparent in all the dogs of this celebrated litter, but for all-round type, heads, bone and action they are hard to beat. Melrose King took the dog prize, and in doing so beat Belisarius in head, color, bone and coat, the latter looking a bit ragged. Cato has a poor front and an all-white body, while his hocks are too straight as well; so he got quite as much as he deserved. Admiral has too much coat. Melrose Belle, well known in the circuit last spring, had no competition; she has not filled out in body either, tail faulty, but she shows lots of type and quality. Puppy prizes were rightly withheld. Melrose Kennels won the kennel special.

NEWFOUNDLANDS (James Mortimer, Judge).—First prize was withheld from a poor sort.

GREAT DANCES (James Mortimer, Judge).—In Lord Wolverton's absence Bismarck was the only competitor; his forelegs want straightening and loin more arch; he is a black dog. There were no bitches.

BLOODHOUNDS (John Davidson, Judge).—Some well known winners turned up here, but Belus, in open dogs (3), for type, expression and quality beats Bruno, who is a bit coarse but can throw a well-wrinkled head and nice leather. Delphian, a sweet little bitch, was the only one to uphold her sex; excellent wrinkle and head and peak but not enough of it all; her appearance is marred somewhat by only having three-quarters of a tail.

DEERHOUNDS (John Davidson, Judge).—But for Frank Dole's interference Mr. Thayer would have just farmed these classes. Hillside Warrior was the challenge dog; he wears well. The New York winner Argyle beat out Douglas in open dogs (3), better head and loin and coat, Lancelot beating in turn in front and rib. In bitches (2) the prizes fell to two well known matrons, Hillside Heather and Peodora, the latter, while stronger in muzzle, loses in loin and coat. The kennel prize fell to Mr. Thayer, of course.

RUSSIAN WOLFHOUNDS (John Davidson, Judge).—These were all from Mr. Hanks's kennel and have been described many times before. Groubian took challenge honors. Leek-hoi, who seems to have taken a second lease on life, I never saw looking stouter. Turner has evidently solved the difficult question of keeping these dogs in shape, for he had them all in good flesh, but of course some of them lacked the silky hair that makes these dogs so handsome. Peter the Great, second, loses to Leekhoi in quality, head, coat, loin

and shoulders. Obrounga repeated her Wissahickon victory over Flodyka in bitches (2), the latter losing in head and front and loin; both are out of coat. Mr. Hanks scooped the kennel prize.

GREYHOUNDS (John Davidson, Judge).—Quality was mixed here and the winners, most of them well known had no difficulty in asserting their superiority. Champion Gem of the Season was alone in his class. In open dogs (7), Imperator a previous winner showing much quality, a little too short in back, beats Sir Lancelot, who has improved wonder fully on his previous form, and is now quite a passable dog, beating the winner in body and loin, but losing in an essential point, his forelegs. After these came a mixed lot, reserve going to a son of Oruiatus, who is long cast and should be better sprung in ribs. Vigilant is too full in skull and weak in muzzle and his feet are not set true. Bronx should have more substance and a stronger loin. Lord Northcroft got all he deserved with a c. In bitches (5), Mr. Davidson placed Southern Beauty in her right place, first, over Wild Rose, thus correcting the Toronto decision, and confirming our report of last week. Wild Idle, reserve, is coarse in shoulders and her stifle being too straight she does not cover enough ground. Ruth, vhc., should close her toes up and her head is faulty. Paramello, bc., turns his feet out and fault can be found with his ribs. Mr. Purbeck takes the kennel prize.

FOXHOUNDS (A. H. Wakefield, Judge).—This marked the debut of this well known beagle man in the ring after many years absence, but that he still has an eye for a hound he amply proved by the way he handled his classes. Competition in challenge class was confined to Femur and Elite, and a picture of this well known bitch will be found in this issue; Femur has a better type of head. In open dogs (6), a capital built truly American hound won well. If we want a dog to illustrate a good type of American hound, showing careful improvement, this dog will furnish the subject; he beats Deacon in head and body. Parson, also well known came reserve. Felix, bc., should be truer in elbow. Connecticut Valley Kennels, with Norah and Fancy, furnished the open bitch (5) winners, the former has more substance and is better built all round than the other who is rather weedy, both have the harrier mottle. Dr. Thurber took the kennel prize.

BEAGLES (A. H. Wakefield, Judge).—There was a good entry, and though there was considerable quality in some specimens, the general run was not at all "sorty." There was a good diversity of type, long heads and short, bodies the same and not enough of the "cob" that a Lou, a Royal Krueger, Butterfly or a Lonely show. Of course little fault can be found with Forest Hunter, who beat out Fitzhugh Lee, as youth must be served, but the old dog keeps up wonderfully, and in front, bone, body, depth of rib and head is still an object lesson to breeders, and his loin yields not to the heaviest hand. I do not agree, however, with the placing of Twintwo over Butterfly; the latter is correct type, the former not, though a well built bitch is coarse and too long in body. This decision is probably explained by the judge's predilection for size and substance. In large class dogs (2) Sir Thomas beats Wheeler's Little Duke in front, though leggy, and head, but loses from there back. Duke's head is coarse, and he has heavy shoulders. The well-known Gypsey A., shown well, beat another of same type in bitches, Vick R., both familiar to us all; they are both lacking in type, heads too long. Spider C. stands on good legs, but should have deeper chest and muzzle, and not be so broad in skull. In small dogs (2) both entries were light in body, and though the second winner, Little Lee, is straight in forebone, his elbows seem a trifle out. The winner, Spot S., is also long in body, but rather nice head and ear. The bitch class had a larger entry (9), and Gypsey Forest, a familiar name to those interested in these dogs, was placed ahead of Lady of Denmark, a daughter of Fitzhugh Lee and Desdemona; poor front and feet and light in loin, snipy muzzle. Beauty, reserve, though weak in face, shows more type than either, and is cobby, and has a deep-chested body. Lady Novice, vhc., loses in head and front, and is longer in body. Lady Lee has fair front and body, tail awry, and head not above reproach, in the puppies (7) type was mixed, Mr. Fiske, of Worcester, supplying all but one. The winner, Piper, is not the type, too long in body. Arline, second, I think a better all-round dog, good body, though also little long; nice forelegs, but skull too coarse; looks like making a workman. The others had many faults, and need not be mentioned now. Forest Beagle Kennels took the kennel prize.

POINTERS (John Davidson, Judge).—The cookies of this veteran judge's heart must have warmed within him when he saw such a good challenge heavy-weight dog class pass before him as ch. Lad of Kent, Pontiac, Lancelot, ch. Duke of Hessen and ch. Robert-le-Diable, all good pointers and true; absentees, Tempest and Duke of Kent II. The verdict fell to Lad of Kent and "George," who showed his dog, as usual, strong and fit; Lancelot must owe his reserve to the condition of Duke and Robert who were not in full bloom, as far as coat goes, though in nice flesh. Ch. Woolton Game was the only challenge bitch. A capital lot of serviceable looking dogs then came in for the open class (eight) and a dog we always had a good word for during the spring circuit, Sandford Druid, predicting that he would get there when in shape, won nicely. He could be improved in front somewhat, and if stifle was more bent, and he was a little cleaner in neck and shoulder little fault could be found with him. Twinkle, second, is a stylish sort, rather short in neck, good head, feet not as they should be, and is rather narrow in chest; King of Lynn, reserve, is a strong well-made dog in body and hind parts, but faulty in face and feet, and not exactly true in front. Lord Bracken is spoilt by a short thick neck and much loose skin, otherwise he is a well-made dog with a pleasing head, somewhat on the Beaufort order, good legs and body. Hempstead Beau's toes should be closer, loin be more arched and throat cleaner; in other parts he will do. Hempstead Drake, high com., is rather plain in body, might be better in feet and throat, good legs, one foot turns out a bit, and stop too pronounced. In bitches (five) May Go proved to be the winner, her coat is not in good condition, and she stands back on pasterns, and feet should not be so open; Kathleen Kent, a youngster, came next, should be stronger in pasterns and is rather heavy and coarse in quarters and set on of stern, otherwise a promising bitch. The others were absent.

In light-weight dogs (8) Hempstead Duke, a son of Lass of Bow and Duke of Hessen, scored; he has a good front and fair head, skull a trifle broad and his loin should not be so flat and hocks more bent, one hind toe is down; a nice stylish dog taken all round. Second went to Dash A., third at Boston; he rather gets the other in head and legs, has faulty set on of stern; Perry should be stronger in pasterns and his broad skull and prominent cheek detract from his appearance, and he gets his tail up beyond the proper angle. Hempstead Luck, vhc., was the best of the lettered ones, is all right but for his throaty, short neck, and his skull could be improved. Light-weight bitches (10) proved a hard class, the Hempstead Kennels showing up strong with first, second and reserve; their Jill, if she had a deeper muzzle and darker eye, would have a good head, shoulders and bone good, body a bit plain. Hempstead Blossom, I missed somehow, but Hempstead Game, reserve, has rather a plain face, nice body and forelegs, stifles might be more bent, but taken all round she must have pushed the others hard. Wild Lily was about the best of the mentioned lot; she is a stylish bitch, little light in body and faulty in muzzle, but well shown. Lord Bracken won nicely in puppies, heating Prince of Pontiac in muzzle and body. Hempstead Farm Kennels won the kennel prize, showing a strong hand.

ENGLISH SETTERS (John Davidson, Judge).—These were strong classes and nearly every setter man one met told you that the open dog class was a "scorching," and it must have

been warm. There were two names colored in challenge class for dogs, but Kent II. failed to appear, and old champion Paul Gladstone just came to look on and lead his consorts for the kennel prize. He holds his age well and seems to have lots of spirit; though he scarcely holds himself now so well as he does in his picture, considering his burden of eleven years he is a wonderful old dog. In bitches victory rested with Blue Nell, that charming piece of dogflesh, whose expression, general build and quality have always made her a favorite. Victress Llewellyn cannot compete with her in these attributes and was not in the best of condition. Mr. Davidson scarcely ever forgets a dog's face, and once win always win or somewhere near it seems to be his creed, and this it is that makes him one of our most consistent judges. Cactus won in dogs (17), and this he did at Wissahickon, followed by some of the same stock; he is well made all round, though expression is marred by an almost black face. Dad Monarch, shown far too fat, was second; bit long cast, good head, but throaty, and heavy-looking round shoulders and neck. Robin Goch, third, might have come in there; though hardly so good in forelegs, he excels in body, neck, and is quite as good in head. Prince L. is getting throaty, but is still a handsome dog. Gasseau is another good-looking one; should be deeper in muzzle and not so round in skull and longer in neck, excellent coat, legs, body and feet. Viscount was not in bloom; he is a bit coarse. Reverdy, he, was in fair coat; he is too big and coarse for this company. In bitches (10), Daisy, a new one, is quite a charming one, shows lots of quality, fair head, might be a trifle more pronounced in stop and scarcely as good in muzzle as second, Maid Marion, but legs, and especially shoulders, loin and quarters, are capital. Maid Marion is well known as a bitch of good type; she was a little out of coat and is getting a bit throaty. Nellie L., reserve, was second at Boston; she was shown fat. A nicely-built one is Gath's Flake, a little out of coat and plain of face. Spectra was absent. The puppies (5) were fair and promising. Joe Lewis took the kennel prize.

**IRISH SETTERS (John Davidson, Judge).**—There were some good dogs shown here too, though the quality scarcely corresponded with the English setters. Challenge dogs brought out four, and victory lay with Dick Swiveller, but many thought that Kildare came a little nearer, especially considering shoulders and hindparts, while Inchiquin felt like getting the reserve card, but he and Duke Echo were companions in trouble. The bitch class was also strong, with Queen Vic, Norma and Edna H., but of course there was no questioning the former's position. A fairly good dog in Pemberton headed the open dog class (7); he has been described before, I think; his feet turn out but he is a stylish-actioned dog that would be improved by more swell of rib. Erin's Lad came next; he is not so good in head (bit plain), color or rib as the winner. Tim's Dandy and Seminole Blarney, both known, came next, with Burke, he, not so good enough, should be better ribbed, and his color is not dark enough. In bitches (7) Mr. Scanlan had a "picnic," "lead pipe cinch," or whatever the correct term may be, getting first and second with Jessequin and Shandon Belle, that were both in the money at Boston. Jessequin was out of coat and Shandon Belle, while losing in front to winner, is better behind. Kildare Doris, reserve, is faulty in muzzle and drops a bit too much in quarters; good color and condition. Daisy Redstone, vhc., has an excellent front but ribs and chest should be deeper. The others deserved their letters, Belle Ida showing age. Lizzie, the only pup, has faulty feet, is small, but of good quality.

**GORDON SETTERS (John Davidson, Judge).**—These were scarcely up to form. No challenge entries and Ranger B. was well ahead in open dogs (4). Brillmont, second, is a fair sort, good legs and body, but head could be improved with a better muzzle. Dan, reserve, is another well shaped dog whose leg tan is devoid of markings, nice head. Dick, vhc., was too fat, and is light in tan. The winner at Boston, Fan, scored again here, followed by Lady Maud, a pretty bitch, who was also second at Boston. Raymond, reserve, loses in muzzle and expression, but in legs and ribs she retrieves herself. Reedmont, the winning pup, is very faulty in head and ears, good legs and markings. Scott, second, beats him in front and head and bone. Kennel prize did not fall.

**SPANIELS (James Mortimer, Judge).**—These, though not very extensive in numbers were choice, and with one exception, Dainty, all cockers. Dainty was in poor coat and light in flesh. Middy, in challenge cocker dogs was practically unopposed, as Bamboo was shown fat and in anything but show form. Middy looked well as did nearly all of the dogs from the Swiss Mountain Kennel. Miss Waggles was alone in her class and was the only one in this kennel that showed a bit ragged in coat. Then came the open dogs (7), and here we saw two dogs shown in the pink of condition that together seemed to bring out more strongly the type of dog we should have as a sporting dog and of such is a cocker, high enough on the leg to get over their shadows, straight of limb, active and with well balanced bodies, smart jaunty appearance, alert in expression, they struck one at once, especially Bim, as well bred specimens of the old type of cocker before "fancy" fiddled with them and made "mollie coddles" of the breed. If more of this sort could be shown we feel sure a change would take place and the cocker as a sporting dog would command more attention from practical sportsmen. Though Bim loses in head slightly, being longer than Othello's, his exquisite condition improved body and general style could not be denied, though he does point his abbreviated stern too high. In King Raven, Jr., reserve, we found a more modern type, best bone, fair height, but head too heavy and large or "feldy." Cherry Punch is a cobby little chap that would do more if his head was better formed. Jay Kay, also vhc., is well known and was well shown. In bitches (7), Miss Chips scored over another one, Woodstock Dora, better front and head. Miss Chloe another known to fame, getting reserve. Corktown Cleo, he, too round in skull and body nearly touches the ground, how such can do more than just push themselves along I cannot understand. A nice little pup in Cloudy, by Middy, had his division to himself. Swiss Mountain Kennels won the kennel prize, Irish water spaniel entries, Shellia and Musha, were absent.

**COLLIES (James Mortimer, Judge).**—These dogs did not come up to expectations. There were some fairly good individual specimens, but the average were off. Ch. Roslyn Dandy was the only challenge dog and we have seen him often lately. Open dogs (11) was an outing for Chesterford Park Kennels, for aided by the "sponge" Mr. Elliott landed his C. Marvel and C. Hero into the money. I thought they looked in better fettle this time, though still low in flesh; they do not show themselves as they should nor have they the strong jaunty action that the collie should have. Rover, reserve, was lucky, I thought, to beat Al-De-Ber-Eclipse, who has a better head, but was dead out of coat and far from his Wissahickon form; I liked Roger best of the others. In bitches it was Highland Floss, so sweet in expression and full of quality, though out of coat, far ahead of Flurry IV. in head and legs. Patient also loses in head to winner. The puppies were a poor lot and second only was given, though I thought Highland Bobby should have had this, considering Eggleston Flurry's bowed front. Mr. Lambert Stansfield took the kennel prize.

**BULLDOGS (James Mortimer, Judge).**—These were a mixed lot, with little quality. Adiscombe Gypsey, in nice shape, furnished the challenge winner. In open dogs (4) it was Romance first, the rest nowhere. Seen out in the open this dog showed up much better, and he will always get well up in the list, whatever the competition. Damon is only a moderate one; beaten in shortness of face and body and shoulder by winner. Dr. Rush is light in body and is coarse in head and expression throughout. The well-known Lady Nan won

in bitches (5) with Lady Grace, straight in front and not broken up enough in face, second. Miss Pert is a pug mastiff in markings and color. Charmion was absent.

**BULL-TERRIERS (James Mortimer, Judge).**—There were some good ones here and others not so good—as usual—the Boston terrier classes getting most of the worst. Crisp was alone in challenge dogs, and is keeping up in good shape, although when he gets home he will just about have squared the eastern part of this country. Champion Starlight pulled off another ribbon and was looking almost as young as ever. This is one of those bitches that is the salvation of a kennel and helps to feed the balance, Mr. Dole having already made nearly \$2,000 from this bitch. In open dogs, considering Prince Guiley's condition, there was only one dog in it, the new one, Cordonua, head getting a bit cheeky, but well formed, capital legs, good bone, though at times he shows the inside of elbow slightly, excellent body and quarters and is a winner that must be reckoned with again. Prince was all out of shape and should not have been shown. Principio, who is wrongly called a champion, was absent; the others were poor. In bitches the only one that the judge could consider was Edgewood Fancy II., who promises well. My Queen and Castle's Pride were absent.

**FOX-TERRIERS (James Mortimer, Judge).**—Here was a capital entry, certainly the best seen outside of New York this year, the principal kennels showing up strong, and the Blenton not out of it yet by any means. Blenton Victor II. and Starden's King had another tussle in challenge class, B. Punster not entering into the discussion. King is beaten in neck and cleanness of shoulder, but gets well in loin and body, Victor being light, but loses again in skull, carriage of ears and set-on of stern. In bitches Dona, New Forest Ethel and Grouse II. appeared, and the first had a comparatively easy victory in head, Ethel, reserve, being out of coat and showing age. Open dogs (17) was a hard class to judge, not because there were any real cracks, but from the large number of good average ones. Blenton Stickler proved the winner, beating Blenton Rasper, second, in muzzle, skull and ribs, reserve to the well-known dog Warren Tip Top, shown well. Among the four vhc. dogs I liked Holster, first at Toronto. Warren Ripper is light in loin and ribs, but otherwise good. Warren Layman is another that deserved his card, though he is getting coarse in head and front. Starden's Prince is wavy-coated, round in skull, but fair front and character. In bitches first went to a smart terrier in Warren Duty, that we commented on favorably when she came out at Elmira last spring. She has filled out, but is still a little round in skull. Blenton Vindex, second, is another known to fame. Reserve went to Spinster, faulty in head, muzzle especially, but looking in good shape. Grove Nettle and Lady Roseberry are also known, the latter winning at Toronto a couple of weeks since, and Warren Dorothy, also with three letters, was shown light in body and not up to her spring form. Wire-hairs were chiefly interesting because of the meeting of Oakleigh Bruiser and Brittle, the latter shown very much better and different than he has yet been seen in this country, though he looked a little light and short of coat of which Bruiser had quite plenty, the latter loses in head, stop especially, ribs and carriage of ear. Cribbage failed to appear in time, though entered. In bitches (four) Suffolk Tassel proved too much for Sister Grit who beats in head and rib, is not in such good coat or so good in body, too long, and a rather leggy bitch. Hillside Dona wore in smooth puppies, fair head and ear. Blenton's Vigil, second, is not likely to make much stir. Warren Spruce shows good front, but is off in muzzle and skull, too much of one and too little of the other. In vire pups Sister Grit won nicely from some rather weak-faced ones.

**IRISH TERRIERS (James Mortimer, Judge).**—Had Mr. Comstock shown his dogs for competition the rivalry would have been greater. As it was they were exhibited N. F. C. and made an interesting exhibit, "Billy" Birch putting them on the bench in excellent trim. Jack Briggs and Salem Witch furnished the challenge entries. In open dogs first went to Crib; he is good type, but his crooked front should throw him out, though in the absence of Brickbat, Jr., there was little to push him, though I thought Shaun Rue might have done it; his head is his best part. Valley Boxer, second, is leggy and shelly in body. Jack Desmond is faulty in front, fair head. Southborough Paddy was at Toronto. In bitches Coleen Rue, described before, won from Nora II., who was out of coat, is a bit long cast and drooping in quarters. Judy, faulty in front and ragged in coat, vhc. Blue Ribbon, a smart youngster by Jack Briggs, was the puppy winner.

**BOSTON TERRIERS (J. A. Boutelle, Judge).**—As may be supposed, there was lots of diversity here, you just take your choice and if you pay your money it's your own fault. This breed is badly in want of a standard that can be interpreted, or rather an interpreter of the standard. The winners were bulky dogs, but little of the terrier about them. There was a good deal of "buttonholing" over the awards and in the bitch heavy-weight class there seemed some cause, as the winner, Queen, is undershot nearly half an inch and round in skull, though at the same time a smart, interesting little thing. Diana came nearest to a flat skull and deep, square muzzle. Tony, a winner in light-weights, is quite out at shoulder and has other bull characteristics. They will do no good with this breed until they put an outside terrier judge in the ring to define the standard. The withholding of prizes in the puppy classes marks an era.

**BLACK AND TAN TERRIERS (James Morton, Judge).**—Bloomfield Sultan was in the challenge division. First in the open dogs (8) went to Lord George II., very plain in muzzle, snipy and Roman-nosed, good legs, fair body and markings, ears well carried. Oolah came second. Prince Regent was absent. In bitches (3) Rosette won nicely from Ophelia though not in very good shape, Betsy and Mab getting their deserts, Madge and Gypsey Girl absent. Endcliffe Maggie was the only Skye shown and she was not in good coat.

**SCOTTISH TERRIERS (James Mortimer, Judge).**—Tiree and Kilroy were transferred to challenge and placed as second. Runagan again won, Kilree not showing himself, second; something should be done in this as it is too bad to see a good dog placed back for indifferent showing. The Colored Preacher, out of coat, vhc. Hazlecroft Angus loses in skull, front and ear. A fairish one in Hazlecroft Norma was alone in bitches (3), Mr. Brooks's entries here being absent. In Dandies the winners were Amphion, Raglan Sandy in dogs and Ainsty Daisy, away above Meg Merries, from whom prize was withheld, in bitches. The dachshund was poor and prize withheld.

**YORKSHIRE TERRIERS (James Mortimer, Judge).**—A much better lot than one generally sees nowadays. There was no denying Mrs. Senn's Young Ted, well known and in fair coat. Sir Charles, second, is beaten in tan color, coat and body color. Phebe, reserve, excellent in body color but tan too smutty. Jenny showed the quality of the other by getting only hc.

**PUGS (James Mortimer, Judge).**—There was little here to commend outside the winners. Royal Dusty was put over Penrice Boy in open dogs (5), both described before; he gets him in body and ear. In bitches, Lady Bonson won; rather narrow in front, good ear, but skull should be full and deeper stop.

**TOY SPANIELS (James Mortimer, Judge).**—Nanki Poo came out again and crowed once more, and in his own town, too. He was followed by Prince Yodo, first at the Pet Dog show, who beats in size, but loses in head properties, especially skull and tail. King of the Charleys had a walkover in King Charles spaniels, Minnie and Royal Roy being far behind in quality, build and condition. Neither of them should have been mentioned, as they were out of shape; but Royal Roy has a far better head than Minnie, too long in

muzzle. A pretty little Blenheim, Bell, a previous winner, was alone in bitches.

**CHESAPEAKE BAY DOGS (John Davidson, Judge).**—The winners here have been shown before and we do not feel up to going into a criticism of their diversified types. With the exception of the open dog (3) winner Deacon, owned by Oak Grove Kennels, Mr. B. Alton Smith supplied the other entries.

**POODLES (James Mortimer, Judge).**—Dexter coming into his own again is improving in looks. In open dogs (3) Mr. Hunnevell had it all to himself and showed three very taking browns, Diamant, the new one, getting first, and Pooh-Bah second. The winner's coat is excellent, but is not so good in muzzle as Pooh-Bah. Vivette is also faulty in muzzle. These brown poodles should take immensely, as they are so handsome and not at all so common as the blacks.

**SCHIPPERKES (James Mortimer, Judge).**—Mr. Connolly put in seven of these and deserves great credit for his efforts to popularize the breed. The class was divided; many of them suffered from colds or effects of distemper though they were shown well nevertheless. Perhaps it was the dust that affected them. H. W. LACY.

#### LIST OF AWARDS.

**MASTIFFS.**—OPEN—Dogs: 1st, G. W. Glazier's Ingleside Mating; 2d, J. A. Lough's Emperor William. Very high com., Mrs. P. Grant's Ham's Trump. Com., R. L. Guild's Leo G. Bitches: 1st, 2d, Dr. C. A. Lough's Lady Diana and Lady Beatrice. Puppies: 1st, withheld; 2d, C. A. Lough's Boston Boy.

**ST. BERNARDS.**—ROUGH-COATED—CHALLENGE—1st, Melrose Kennels' Lady Livingston. OPEN—Dogs: 1st, Melrose Kennels' Altoner; 2d, Mrs. N. Miller's Columbus. Reserve, C. A. Lough's Imperator. Very high com., E. F. Greene's Czar G. High com. and com., O. Langenberger's Don't, Federal and J. L. G. Bitches: 1st, Melrose Kennels' Lady C. Sheerwell; 2d, Miller & Folsom's Dorothy IV. High com. and com., O. Langenberger's Walkure and Maud III. Puppies: 1st, E. Reed's Lady Blaine. SMOOTH-COATED—CHALLENGE—Dogs: 1st, Melrose Kennels' Melrose. Bitches: 1st, Melrose Kennels' Miss Alton. OPEN—Dogs: 1st, Melrose Kennels' Melrose King; 2d, Dr. Lough's Belisarius. Very high com., J. A. Walch's Cato. Com., J. Bream's Admiral. Bitches: 1st, Melrose Kennels' Melrose Belle. Puppies: Withheld.

**NEWFOUNDLANDS.**—1st, withheld; 2d, R. Sidebottom's Lyon. GREAT DANES.—1st, Bronx River Kennels' Bismarck.

**ENGLISH BLOODHOUNDS.**—1st, Dr. Lough's Belus; 2d, C. H. Innes's Bruno. Bitches: 1st, C. H. Innes's Delfin.

**DEERHOUNDS.**—CHALLENGE—1st, J. E. Thayer's Hillside Warrior. OPEN—Dogs: 1st and very high com., J. E. Thayer's Argyle and Lancelot; 2d, E. F. Dole's Douglass. Bitches: 1st and 2d, Thayer's Heather and Feodora.

**RUSSIAN WOLFHOUNDS.**—CHALLENGE—Dogs: 1st, C. S. Hanks's Groubian. Bitches: 1st, C. S. Hanks's Svodka. OPEN—Dogs: 1st and 2d, C. S. Hanks's Leekhoi and Peter the Great. Bitches: 1st and 2d, C. S. Hanks's Oubroua and Flodyka.

**GREYHOUNDS.**—CHALLENGE—1st, A. W. Purbeck's Gem of the Season. OPEN—Dogs: 1st, reserve and very high com., D. B. Lemley's Imperator, Alert and Vigilant; 2d, E. H. Morris's Sir Launcelot, High com., Bronx River Kennels' Bronx. Com., A. W. Purbeck's Lord of Northcroft. Bitches: 1st, A. W. Purbeck's Southern Beauty; 2d, J. Lewis's Lady Grace. Reserve, D. B. Lemley's Wild Idyl. Very high com., M. G. Connolly's Ruth. High com., D. A. Hagan's Faramello.

**FOXHOUNDS.**—CHALLENGE—1st, Dr. Thurbur's Femur. OPEN—Dogs: 1st and high com., Connecticut Valley Kennels' Brave's Boy and Felix; 2d and reserve, Dr. Thurbur's Deacon and Parson. Bitches: 1st and 2d, Connecticut Valley Kennels' Norah and Fancy. Reserve, S. Bennett's Beauty B. High com., S. Bennett's Belle B.

**BEAGLES.**—CHALLENGE—Dogs: 1st, Forest Beagle Kennels' Forest Hunter. Bitches: 1st, Forest Beagle Kennels' Twin-Two. OPEN—OVER 13 IN.—Dogs: 1st, Glenrose Kennels' Sir Thomas; 2d, W. H. Wheeler's Little Duke. Bitches: 1st, Glenrose Kennels' Gipsy A.; 2d, Forest Kennels' Lady. UNDER 12 IN.—Dogs: 1st, O. J. Smith's Spot; 2d, Glenrose Kennels' Lady. Bitches: 1st, and very high com., Forest Kennels' Gipsy Forest and Lady Lee; 2d, H. W. H. Lady of Denmark. Very high com., A. D. Fiske's Lady Novice. Reserve, J. Mulane's Beauty. Puppies: 1st, 2d and reserve, A. D. Fiske's Piper, Arline and Claude. Very high com., A. D. Fiske's Blossom and W. H. Wheeler's Fan Tan.

**POINTERS.**—CHALLENGE—Dogs: 1st, G. Jarvis's Lad of Kent. Reserve, Connecticut Kennels' Lancelot. Bitches: 1st, Hempstead Farm's Woolton dame. OPEN—OVER 20 IN.—Dogs: 1st, Hempstead Farm's Sanford Druid; 2d, Glen Rock Kennels' Franklin. Reserve, R. Leslie's King of Lynn. Very high com., Hempstead Farm's Beagle, and Muss-Arnott's Lord Bracken. High com., Hempstead Farm's Drake and Connecticut Valley Kennels' Auctioneer. Com., J. E. Lawrence's Don. Bitches: 1st, Connecticut Valley Kennels' May Go; 2d, R. Leslie's Kathleen Kent. Dogs (under 20 in.): 1st, Hempstead Farm's Drake; 2d, G. Feggy and G. W. Stockwell's Diana II. Puppies: 1st, G. W. Perry. Very high com., Hempstead Farm's Luck. High com., G. W. Lovell's Pontiac's Bang. Com., A. George's I Dare. Bitches: 1st and 2d, Hempstead Farm's Jill and Blossom. Reserve, G. Jarvis's Lass of Kent. Very high com., G. W. Lovell's Wild Lily and Hempstead Farm's Game. High com., Connecticut Valley Kennels' Niobe and W. Root's Bloom of Kent. Com., H. A. Waldron's Daisy, H. B. Tallant's Maudie, and G. W. Stockwell's Diana I. Puppies: 1st, G. W. Muss-Arnott's Lord Bracken; 2d, reserve and very high com., G. W. Lovell's Prince of Pontiac, Pontiac's Bang and Dolly May. High com., Connecticut Valley Kennels' Drum Major. Com., G. W. Stockwell's Sport.

**ENGLISH SETTERS.**—CHALLENGE—1st, J. W. Lawson's Blue Nell, Reserve, J. Lewis's Victress Llewellyn. OPEN—Dogs: 1st, J. J. Scanlon's Cactus; 2d, S. B. Allen's Dad Monarch. Reserve, D. J. Peters's Robin and J. M. Whipple's G. A. J. Lewis's Prince L. J. Lewis's Viscount and J. M. Whipple's G. A. J. Lewis's Prince L. J. Lewis's Viscount and H. Pape's Critic. Com., S. Barnes's The Editor and J. Scanlon's Ben Gladstone. Bitches: 1st, J. Lewis's Daisy; 2d, J. Brett's Maid Marion. Reserve, C. H. See's Nellie L. Very high com., J. Scanlon's Gath's Flake. High com., T. J. Dunn's Flora D. Com., H. Jackson's Gloriana. Puppies: 1st, W. R. Price's Leonard; 2d, C. A. Starvo's Rose S. Reserve, H. J. Fiske's Singbird. Very high com., A. D. Fiske's Gladys Kent.

**IRISH SETTERS.**—CHALLENGE—Dogs: 1st, reserve, Oak Grove Kennels' Dick Swiveller and Kildare. Bitches: 1st, reserve, Oak Grove Kennels' Queen Vic and Norma. OPEN—Dogs: 1st, J. J. Scanlon's Pemberton; 2d, Redstone Kennels' Erin's Lad. Reserve Seminole Kennels' Tim's Dandy. Very high com., Seminole Kennels' Blarney and Redstone Kennels' Burke. Com., T. Guillen's Elcho W. Bitches: 1st and 2d, J. J. Scanlon's Jessequin and Shandon Belle. Reserve, Oak Grove Kennels' Kildare. High com., Redstone Kennels' Dora and Redstone Kennels' Daisy Redstone. High com., N. McIntosh's Maid of Borsal and Redstone Kennels' Bell Ida. Puppies: 1st, Scanlon's Lizzie.

**GORDON SETTERS.**—Dogs: 1st, N. Billings's Ranger B.; 2d, E. H. Morris's Brillmont. Reserve, Scanlon's Dan. Very high com., C. H. Stanley's Dick. Bitches: 1st, H. O'Reilly's Fan; 2d, N. Billings's Lady Maud. Reserve, E. H. Morris's Raymond. Very high com., J. B. Walker's Bell II. Puppies: 1st, E. H. Morris's Reedmont; 2d, H. B. Tallant's Scot.

**FIELD SPANIELS.**—1st, Toon & Symonds's Dainty.

**COCKER SPANIELS.**—CHALLENGE—Dogs: 1st, Swiss Mountain Kennels' Middy. Bitches: 1st, Swiss Mountain Kennels' Miss Waggles. OPEN—Dogs: 1st, G. L. Tarr's Bim; 2d, F. L. Dole's Othello. Reserve, Swiss Mountain Kennels' King. High com., J. E. W. Fiske's Jay Kay, Swiss Mountain Kennels' Cherry Punch. High com., L. A. Brayton's Dart, O. F. Fenner's Trixie. Bitches: 1st and reserve, Swiss Mountain Kennels' Miss Chip and Miss Chloe; 2d, Dole & Thomas's Dora. High com., E. W. Fiske's Corktown Cleo. Com., L. Patstone's Stella. Puppies: 1st, Swiss Mountain Kennels' Cloudy.

**COLLIES.**—CHALLENGE—Dogs: 1st, Seminole Kennels' Roslyn Dandy. OPEN—Dogs: 1st and 2d, Chesterford Park Kennels' Marvel and Hero. Reserve, F. H. J. Gregory's Rover. Very high com., Al De Ber Kennels' Eclipse. High com., T. Porter's Glen Jackson & Stansfield's Roger. Bitches: 1st, L. Stansfield's Highland Floss; 2d, Al De Ber Kennels' Flurry IV. Very high com., L. Stansfield's Patient. Puppies: 1st, A. W. Jones's Eggleston Flurry.

**FOX TERRIERS.**—CHALLENGE—Dogs: 1st, Blenton Kennels' Victor II.; reserve, J. E. Thayer's Starden's King. Bitches: 1st, J. E. Thayer's Dona; reserve, Blenton Kennels' New Forest Ethel. OPEN—Dogs: 1st and 2d, Blenton Kennels' Stickler and Rasper; reserve and very high com., L. and W. Rutherford's Warren Tip Top and Warren Ripper. Very high com., L. and W. Rutherford's Warren Duke, Blenton Kennels' Spendthrift; Com., Rutherford's Warren Roadster; Thayer's Royal; J. M. Dale's Baby Domino. Bitches: 1st, Rutherford's Warren Duty; 2d and reserve, Blenton Kennels' Vindex and Spinster. Very high com., Grove Kennel's Nettle; Toon & Symonds's Lady Roseberry. Rutherford's Warren Dorothy. High com., Thayer's Pepper. G. Hanks's Seador. Myra. Wier's Seador. Bitches: 1st, H. V. Smith's Brittle; 2d, H. H. Hummer, Jr.'s Bruiser. Puppies: 1st, G. M. Carnochan's Suffolk Tassel; 2d, Smith's Sister Tritt. SMOOTH—

**Puppies:** 1st, Thayer's Dona; 2d, Blemton Kennels' Vigil; reserve, Rutherford's Warren Spruce. High com., C. Rathbone's Beverly Leader; C. S. Hanks's Rachel and Jessie. **WIRE-HAIRED**—1st, Sister Grit.

**IRISH TERRIERS**—CHALLENGE—Dogs: 1st, Toon & Symonds's Jack Briggs. *Bitches:* 1st, Toon & Symonds's Salem Witch. **OPEN**—Dogs: 1st, Dr. Kenn's Cerb; 2d, E. Brooks's Valley Boxer; reserve, S. A. Fletcher's Jack Desmond. Very high com., T. Wise, Jr.'s Shaun Rue. High com., E. Brooks's Southborough Paddy. *Bitches:* 1st, T. Wise, Jr.'s Colleen Rue; 2d, E. Brooks's Nora II.; reserve, Toon & Symonds's Judy. *Puppies:* 1st, Toon & Symonds's Blue Ribbon; 2d, T. Wise's Dandy Rue. Very high com., J. McGrisken's Nancy.

**BOSTON TERRIERS**—OVER 20 LBS.—Dogs: 1st, H. J. O'Brien's Ross; 2d, very high com. and high com. Surrey Kennels' Towser, Sport and Brown Jug. *Bitches:* 1st and com., E. Deffley's Queen and Dolly; 2d, Surrey Kennels' Pat. Very high com. and high com., Grove Hill Kennels' Dina and Nellie. *Under 20 lbs.*—Dogs: 1st, H. J. O'Brien's Tony. *Bitches:* 1st, withheld; 2d, Surrey Kennels' Dina.

**BULLDOGS**—CHALLENGE—1st, Renshaw Mason Jones's Adiscombe Gypsy. **OPEN**—Dogs: 1st, Toon & Symonds's Romance; 2d, J. H. Congdon's Damon. Very high com., R. H. Waugh's Dr. Rush. *Bitches:* 1st, Congdon's Lady Nan; 2d, Renshaw Mason Jones's Lady Grace. High com., J. W. Baird's Judy B. and Renshaw Mason Jones's Miss Pert.

**BULL-TERRIERS**—CHALLENGE—Dogs: 1st, Luyburo Kennels' Crisp. *Bitches:* 1st, F. F. Dole's Starlight. **OPEN**—Dogs: 1st, F. F. Dole's Cardona; 2d, Toon & Symonds's Prince Gully. Reserve, D. J. Maher's Lord Nelson. High com., W. H. Reed's Sir Ute. *Bitches:* 1st, F. F. Dole's Edgewood Fanny II.

**BLACK AND TAN TERRIERS**—Dogs: 1st, Henry Barton's Lord George II.; 2d, Chesterford Park Kennel's Rochelle Oolah. Com., Ester Deffler's Prince. *Bitches:* 1st, Toon & Symonds's Rosette; 2d, H. Barstow's Ophelia. Very high com. and high com., Chesterford Park Kennels' Betsy and Rochelle Mab.

**TOY TERRIERS**—1st and 2d, Mrs. Tenney's Prince and Dandy. Very high com., C. A. Parson's Dolly. High com., Mrs. Tenney's Fanny.

**SCOTCH TERRIERS**—CHALLENGE—Toon & Symonds's Three. **OPEN**—Dogs: 1st, Toon & Symonds's Rhudeman; 2d, H. Brooks's Kilree. Very high com. and high com., W. Clark's Gypsy John and Hazlecroft Angus. Very high com., Chesterford's Colored Preacher. *Bitches:* 1st, W. Clark's Hazlecroft Norma.

**DANDIE DINMONT TERRIERS**—CHALLENGE—1st, E. Brooks's King of the Heather. **OPEN**—Dogs: 1st, E. Brooks's Heather Amphion; 2d, A. T. Bradbury's Ruglen Sandy. *Bitches:* 1st, E. Brooks's Anstny Daisy.

**YORKSHIRE TERRIERS**—1st, Mrs. F. Senn's Young Ted; 2d and reserve, H. Bastow's Sir Charles and Phebe. Very high com., L. J. Townes's Young Royal. High com., Toon & Symonds's Jenny.

**PUGS**—Dogs: 1st, Bertha Brittain's Royal Dusty; 2d, J. J. Bowden's Ivy Boy. High com., E. B. Ritter's Dixie E. Com. Chesterford Kennels' Chesterford Punch. *Bitches:* 1st, J. Bowden's Lady Bonso; 2d and very high com., W. J. Wheeler's Belle D. and Little Silver. *Puppies:* 1st, J. Bowden's Lady Bonso.

**JAPANESE SPANIELS**—1st, F. P. Comstock's Nanki Poo; 2d, Mrs. F. Senn's Prince Yodo.

**KING CHARLES SPANIELS**—1st, Mrs. Senn's King of the Charles; 2d, J. Harrison's Minnie.

**TOY SPANIELS**—1st, Mrs. Senn's Bell. Very high com., E. H. Morris's Royal Roy.

**CHESAPEAKE BAYS**—Dogs: 1st, Oak Grove Kennels' Deacon; 2d, B. A. Smith's Marengo II. *Bitches:* 1st, R. A. Smith's Minnie.

**POODLES**—Black-Coated—1st, E. H. Morris's Dexter. **ANY VARIETY**—1st, 2d and very high com., E. H. Hunnewell's Diamant, Pooh-bah and Vivette.

**SCHIPPERKES**—Dogs: 1st and 2d, F. W. Connolly's Prince, Jr., and Schipper. *Bitches:* 1st, 2d and very high com., F. W. Connolly's Sophia Dreiske, Flossie and Queenie.

## MOUNT HOLLY DOG SHOW.

(Sept. 19 to 22).

This little show, held in connection with the Burlington County Agricultural Society, can scarcely be called a success as far as numbers go, but the quality of some of the exhibits was quite good, though many of the best breeds had but one entry. It was a Philadelphia show transplanted, as most of the entries were from the Quaker City, New York contributing St. Bernards, wolfhounds and some bull-terriers and fox-terriers. It would probably have been a good show had the Rhode Island event not interfered. Mr. J. H. Longstreet was superintendent, ably aided by Mr. Frank P. Smith, and to whom we are indebted for courtesies extended. There was some grumbling on account of scarcity of straw, and a little more disinfectant might have been used. The benches were the old style but very deep and roomy. A large crowd visited the show, especially on Thursday, when the aisles were very crowded, no admittance being charged.

Judging, by Mr. C. H. Mason, began about 3 P. M. in a space outside the building, and was completed by Wednesday afternoon with the judging of the Ashmont trophy, which, as expected, was won by Seminole Kennels' champion Tim; so that Dr. L. C. Sauvage will now have the pleasure of wearing it without interruption. It is to be hoped we have seen the last of such specials. They do no good, and more often, as in this case, lead to hard feeling, if not very carefully managed. It was expected that Sir Bedivere would compete for this special, but he was withdrawn from competition presumably on account of condition. This withdrawal gave rise to some feeling between the management and Mr. Reick, they threatening disqualification and dire penalties. How the matter will turn out we cannot as yet say. There were not many dogmen present. We saw and heard of being present J. H. Winslow, Dr. Darby, Henry Jarrett, Frank Carslake, Fred Kirby, Ben Lewis, Will Connors, John Stokes, H. F. Buckbee, Harry Jennings, G. P. Runtion, J. Brombach, Fred Schmitt, Dr. Sauvage and Carl Heimerle. Ben Lewis and Will Connors brought their teams straight down from Toronto and about scooped all they tried for.

In Mastiffs Ethel was the only challenge entry, and Czar, the winning and only dog, is a poor sort. Corene, the bitch, was favorably spoken of at Wissahickon.

ST. BERNARDS made one of the most pleasing exhibits in the show. In challenge dogs (2) Sir Bedivere in Kingston Regent's absence was unopposed. He looked far from well and should not have been shown, but this is Mr. Reick's county, and he naturally likes to be represented. Princess Florence, looking better than the dog, was alone in her class. Open dogs (3); in the absence of Marvel, Otis won over Royal B., who is a promising youngster with good face and head if a little more stop. Otis was well shown and in full bloom. A much improved bitch in Lady Bountiful won in bitches, Gay Belle being absent. There was one smooth, Guess Noble, and she looked well too. The special fell to Sir Bedivere.

In Great Danes Leo won well from Bismarck, beating him in clear coloring, front and head and general style, Bismarck being too gross and coarse; Hepburn Hero, vhc., is much better type but faulty in front too. In bitches Hepburn Vera beats Flora in head, body and front; Rosey, vhc., has a mean head. The now well known Carlo, getting thin, was alone and won in Newfoundland.

Deerhounds saw the Wissahickon winners the only entries. In greyhound dogs (3), Randy can beat the coarse Cheeky, but he did not do it here, shows far more quality and better front, shoulder and head. Nellie Girl was alone in bitches, she is that ribbed.

Wolfhounds were of course a capital lot with the Marlborough Kennels furnishing the dogs. Argoss looking fairly well, beat Zerry in challenge class and took the special. In open dogs Naqrajda is a most promising youngster, capital body, head and coat. In bitches, Lobedya was alone, she is known and has improved.

There were two foxhounds, three entries, but Denmark did not show and victory fell rightly to Ranger II., who bests Commodore in condition, head, bone and ribs.

Pointers had one entry in each class. In heavy-weights Mackintosh has a coarse round skull and is faulty in pasterns and leggy. Sweet Lavender in bitches was said to be out of condition and prize was withheld. In challenge light-

weights Glamorgan showed more quality and better build than any present. In open dogs Admirable had a walkover, and in bitches, Moderation, also Mr. Winslow's, won; is nicely formed behind the head, but faulty in skull and muzzle, and feet should be better.

Edmark led the English setters and was the only challenge dog. Worsley Dude had no difficulty in beating Benzine in open dogs (2); both are well known. In bitches Nora Gladstone excels her other competitor, Pride of Belmont, in legs, feet and ribs, but was not in shape. Fanchon won in puppies.

Irish setter prizes, as might be expected, fell to the Seminole Kennels, Ch. Tim and Pride of Patsy occupying their accustomed places in challenge dogs (3). In bitches (2) the winner was Elfreda, Laura B. being absent. Open dogs (7) were better in numbers, Seminole Kennels still taking out the winners with Young Tim and Montauk, Jr., both described before. Reserve went to Planet Chief, who was shown too fat and big; short neck, and want of type is very conspicuous. The others were absent. In bitches (7) the well-known Delphine had little difficulty in beating Lady Cleveland and Biddy, who, for reasons previously stated, runs the latter close. Molly, vhc., has been out before, too. A snipy-muzzled pup in Bengalee won.

Dr. Dixon of course furnished the challenge winners in Gordon setters, but when Duke of Wellington wins in the open class (3) the quality behind is not very good; he is too coarse and dark in tan. Homer S. is a better shaped dog in head. In bitches (4) the order was Princess Louise and Katherine, a daughter of Little Boy, that gets it in head a bit, but loses in front and body.

In spaniels Brantford Mohawk had no difficulty in beating Trouble in the latter's present shape. He should not be allowed in the show. There were no cocker dogs, and Miss Phyllis beat Lady Bug in head and body and bone. Cleopatra, vhc., is but a moderate one. Brantford Mohawk and Miss Phyllis took the specials.

Collies were fairly good, but none excepting The Squire being in good coat. Challenge classes were well filled. The Squire, in dogs, not having much difficulty in overcoming Ormskirck Shep, whose expression and front are always against him. With Flurry III. absent in bitches Metchley Surprise just about beats Cora II., both are on the cloddy order, but Nora more so. In open dogs (5) four were absent, leaving the coatless Curzon a bloodless victory. Competition was hot in the bitch class (6), Bertha winning rightly, but between Stonehurst Lassie and Nancy Hanks there was a little more trouble; Nancy was shedding badly, and I think loses a trifle in length of head, but there is little between them, Nancy having some advantage in forelegs and feet and undercoat. Mattie came in for third; she loses in head and body.

The poodles entered heavily, Dr. Dixon having the winners in the corded lot (5); they have been on the circuit; two were absent. Mr. Trevor showed his full strength in the "Frenchies" (6) but they were all described in our Pet Dog show report. The class was divided. Rajah is an improving dog.

The bull-terrier classes were strongly represented in challenge bitches, Enterprise coming out again and winning from Duchess of York and Royal Rose, two old timers that have had their day. In open dogs (4) the Toronto winner Duke of Rochester won over a fairly good dog in Lord Blandford, whose better front and nicer finished body and head should have given him the recognition. The well known Diamond King came in for reserve and Billy Bulger, who, had he better head, runs either of them close, was vhc. In bitches (6) a very well-formed dog in Kit, first at Pet Dog Show, won over the Boston winner British Queen, whom she gets a little in front and head. Lady of Rochester and Pearl of Rochester followed these, and they were described in Toronto report. These had their turn with Duke of Rochester in the puppy class (4), a son of Little Nell getting vhc.

The dachshund was poor and first withheld. There was nothing here in beagles excepting Doctor and Hia to command much attention. Mr. Winkle and Tony Weller II. furnishing the only dogs shown, and they were at Toronto. In bitches Hia, the New York winner, was head and heels over Snowflake, and she won the special. Wolf's Lady, vhc., is rather a fair sort, faulty head, but nice type of body. Hia took the special.

Fox-terriers had good entries, but the quality was not there. No challenge dogs. In open dogs I thought Poverina a little unfortunate in meeting Arrandale Mixture, who gains in head somewhat, but loses in coat and front and carriage of ear. Regent Brisk, reserve, is too high in brow and full in skull, faulty in ears. Myrtle Lad was at Wissahickon. Pommery Sec has a coarse head, and Prodigal should be better in front and head better shaped. In bitches (5) Trim, domy in skull, won over same owner's Dinty, who is better in loin and front. Tenny has a poor front and is runty, not a show bitch. Myrtle Lady was second at Wissahickon. Positive I am sure is not a good one. Puppies were poor. In wires Ebor Larchmont, alone, in Brittle Broom's absence, is getting coarse in skull, but has capital body, coat, feet and bone; muzzle should be longer.

The well-known Glenelg won in "Scotties." Irish terriers showed up some, Rhoderick Rhue, the Yorkers winner, beating Galtees, never a good one, in head and front. Play Boy II. is light, full in skull, and was out of coat. Peg Rue could not win first in bitches when Mary Jane was around; Mary was at Toronto, I think. The black and tans were poor and badly shown, Rochelle Lord and Topaz being the only ones in each class. In Skyes it was Sir Stafford and Sir Thomas again, with the former getting the special. Yorkshires—This time Ben was not put back for coloring, and he looked just about the same as at Philadelphia. Jacko won't do at all; wrong color. Lady Nell had nothing to beat in bitches but Topsy, a smutty silver.

Pugs, of course, came up well, but Bob Ivy was still able to take the special and first in challenge dogs, Midget occupying her accustomed place in her division. These dogs will be glad of a rest. In dogs (3), Attraction, that used to be Ivy Boy, beat Little Jewel easily in head and front and body. Bess, the winning bitch (5), I did not see, but Daisy Diamond should lose to a good one in muzzle and depth of body. Columbia, reserve, is long in muzzle. The others did not amount to much. Banker II. gets any other puppy prize.

In King Charles spaniels Duke of Wellington scored again, beating his opponent in muzzle, but not in size and skull. Sir Roger's dog seems to have chorea slightly, but is of fairly good stamp, good skull, but little too much muzzle, a wavy-coated one. Golden Rod, an old acquaintance, too big, was the only Italian greyhound, and Mr. Brombach supplied the "varieties." Most of the dogs were taken away by express on Friday.

### LIST OF AWARDS.

**MASTIFFS**—CHALLENGE—Bitches: 1st, B. F. Lewis's Ethel. **OPEN**—Dogs: 1st, F. Kattenstroth's Czar. *Bitches:* 1st, Woodbury Kennels' Corene.

**ST. BERNARDS**—ROUGH-COATED—CHALLENGE—Dogs: 1st, W. C. Reick's Sir Bedivere. *Bitches:* 1st, W. C. Reick's Princess Florence. **OPEN**—Dogs: 1st, F. Schmitt's Otis; 2d, J. Bromley's Royal B.—SMOOTH COATED—Bitches: 1st, F. Schmitt's Guess Noble.

**GREAT DANES**—Dogs: 1st and 2d, Weisbrod & Hess's Leo and Bismarck. Very high com. reserve, Hepburn Kennels' Hepburn Hero. *Bitches:* 1st, Hepburn Kennels' Flora Belle; 1d and very high com. reserve, Weisbrod & Hess's Flora and Rosey.

**NEWFOUNDLANDS**—1st, P. J. Walsh's Carlo.

**DEERHOUNDS**—Dogs: 1st, withheld; 2d, S. F. Houston's McGregor. *Bitches:* 1st, S. F. Houston's Ellen Douglas.

**GREYHOUNDS**—Dogs: 1st, P. J. Walsh, Jr.'s Cheeky; 2d, E. W. Richardson's Randy. *Bitches:* 1st, R. B. Wolf's Nellie Girl.

**RUSSIAN WOLFHOUSES**—CHALLENGE—1st and 2d, H. W. Hunt-

ington's champion Argoss and Zerry. **OPEN**—Dogs: 1st, H. W. Huntington's Naqrajda. *Bitches:* 1st, H. W. Huntington's Lobedya.

**FOXHOUSES**—1st, Seminole Kennels' Ranger II.; 2d, R. D. Williams's Commodore.

**POINTERS**—**OPEN**—Dogs (55 lbs. and over): 1st, J. S. Summer's Macintosh. *Bitches:* (50 lbs. and over): Prize withheld. **CHALLENGE**—Dogs (under 55 lbs.): R. A. Bidd's E. Glamorgan. **OPEN**—Dogs (under 55 lbs.): 1st, J. H. Winslow's Admirable. *Bitches:* (under 50 lbs.): J. H. Winslow's Moderation.

**ENGLISH SETTERS**—CHALLENGE—Dogs: 1st, F. S. Brown's Edmark. **OPEN**—Dogs: 1st, H. Northwood's Worsley Dude; 2d, W. G. Downing's Benzine. *Bitches:* 1st, Dr. Littleton's Nora Gladstone; 2d, C. H. Folwell's Pride of Delmont. *Puppies:* 1st, Woodbury Kennels' Fanchon.

**IRISH SETTERS**—CHALLENGE—Dogs: 1st and 2d, Seminole Kennels' Ch. Tim and Pride of Patsy. *Bitches:* 1st, Seminole Kennels' Elfreda. **OPEN**—Dogs: 1st and 2d, Seminole Kennels' Young Tim and Montauk, Jr. Reserve very high com., E. H. Maher's Planet Chief. *Bitches:* 1st and very high com., Seminole Kennels' Delphine and Biddy; 2d, Dr. S. G. Dixon's Lady Cleveland. Reserve, C. H. Powell's Polly's Shamrock. Very high com., B. F. Lewis's Molly. *Puppies:* 1st, Wm. B. Wright's Bengalee.

**GORDON SETTERS**—CHALLENGE—1st and 2d, Dr. S. G. Dixon's Duchess of Waverly and Lady Waverly. **OPEN**—Dogs: 1st, Dr. S. G. Dixon's Duke of Wellington; 2d, Wm. O. Lindley's Homer S. Reserve, David B. Holeton's Ridgewood. *Bitches:* 1st and 2d, Dr. S. G. Dixon's Princess Louise and Katherine.

**SPANIELS**—CHALLENGE (over 23 lbs., all breeds)—1st, Edward A. Wilson's Brantford Mohawk.

**COCKERS**—**BLACK**—Dogs: No entries. *Bitches:* 1st, Edward A. Wilson's Miss Phyllis; 2d and very high com. reserve, Francis W. Kitchel's Ladybug and Cleopatra. *Puppies:* 1st, F. W. Kitchel's Ladybug.

**COLLIES**—CHALLENGE—Dogs: 1st, Seminole Kennels' The Squire; Reserve, Joseph Livingston's Ormskirck Shep. *Bitches:* 1st and reserve, Ch. Metchley Surprise and Ch. Cora II. **OPEN**—Dogs: 1st, Seminole Kennels' Curzon. *Bitches:* 1st, 2d and very high com., Seminole Kennels' Bertha II., Stonehurst Lassie and Mattie. Reserve, Frank E. Catswell's Nancy Hanks.

**CORDED POODLES**—1st, L. A. Biddle's Berri; 2d, Dr. S. G. Dixon's Czar. **CURLY**—Dogs: 1st and 2d, H. G. Trevor's Rajah and Zulu. *Bitches:* 1st and reserve, H. G. Trevor's Chloe, Cybele and Cigarette. Very high com., Dr. S. G. Dixon's Mercy.

**BULL-TERRIERS**—CHALLENGE—Dogs: 1st, Retnor Kennels' Dusty Miller. *Bitches:* 1st, Retnor Kennels' Enterprise. **OPEN**—Dogs: 1st and very high com., W. J. Higginson's Duke of Rochester and Billy Bulger; 2d, Castle Point Kennels' Lord Blandford. Reserve, Retnor Kennels' Diamond King. *Bitches:* 1st, Castle Point Kennels' Kit; 2d, Retnor Kennels' British Queen. Reserve, W. J. Higginson's Lady Rochester. Very high com., Lansdowne Kennels' Lady Veima and W. J. Higginson's Pearl of Rochester. *Puppies:* 1st, 2d and reserve, W. J. Higginson's Duke of Rochester. Lady Rochester and Pearl of Rochester. Very high com., Castle Point Kennels' Tarquin.

**DACHSHUNDS**—Dogs: 1st withheld; 2d, Franz H. Wolf's Dachs I.

**BEAGLES**—CHALLENGE—Dogs: 1st, B. F. Lewis's Doctor. **OPEN**—Dogs: 1st and 2d, Oakview Kennels' Mr. Winkle and Tony Weller. *Bitches:* 1st, Hepburn Kennels' Hia; 2d and very high com., Oakview Kennels' Snow Flake and Oakview Jennie. Reserve, W. Wolf's Lady. *Puppies:* 1st, Oakview Kennels' Tony Weller.

**TOX-TERRIERS**—Dogs: 1st, C. D. Purroy's Arrandale Mixture; 2d, Lansdowne Kennels' Lansdowne Poverina; reserve, J. B. Nelson, Jr.'s Regent Brisk. Very high com., Donald McVickar's Myrtle Lad, J. T. Peacey's Prodigal, R. Packer's Pommery Sec. Com., Clayton Erick's Dock III. *Bitches:* 1st and 2d, Lansdowne Kennels' Trim and Dinty; reserve, Donald McVickar's Myrtle Lady. Very high com., J. G. Tomson's Positive. High com., Lansdowne Kennels' Tenny. *Puppies:* 1st, withheld; 2d, J. T. Peacey's Pearl. **WIRE-HAIRES**—1st, S. J. Roger's Ebor Larchmont.

**IRISH TERRIERS**—Dogs: 1st, Thomas Wise, Jr.'s Roderick Rue; 2d, H. O'Connor's Galtees; reserve, Edward Lever's Play Boy II. *Bitches:* 1st, Frank P. Smith's Mary Jane; 2d, Thomas Wise, Jr.'s Peg Rue. *Puppies:* 1st, withheld; 2d, B. F. Lewis's Mick.

**BLACK AND TAN TERRIERS**—Dogs: 1st, Rochelle Kennels' Rochelle Lord. *Bitches:* Rochelle Kennels' Rochelle Topaz.

**SKYE TERRIERS**—Dogs: 1st, Clifford A. Shinn's Ch. Sir Stafford; 2d, Samuel Barr's Sir Thomas.

**YORKSHIRE TERRIERS**—Dogs: 1st, James Foster's Ben; 2d, Pomona Kennels' Jacko. *Bitches:* 1st, James Foster's Lady Nell; 2d, Thomas C. Gibson's Topsy.

**PUGS**—CHALLENGE—Dogs: 1st, M. H. Cryer's Bob Ivy; reserve, J. Brombach's Ch. Bradford Rowdy. *Bitches:* 1st, Seminole Kennels' Ch. Midget; reserve, J. Brombach's Ch. Frisk. **OPEN**—Dogs: 1st, Seminole Kennels' Attraction. *Bitches:* 1st, Dr. M. H. Cryer's Bess; 2d, J. Brombach's Daisy Diamond.

**KING CHARLES SPANIELS**—1st, J. Brombach's Duke of Wellington; 2d, Pomona Kennels' Minnie.

**BLENHEIMS**—1st, J. Brombach's Sir Roger.

**ITALIAN GREYHOUNDS**—1st, J. Brombach's Golden Rod.

**MISCELLANEOUS**—1st and 2d, J. Brombach's Salvator and Mexico.

### Another Ashmont Trophy.

BOSTON, Mass., Sept. 23.—*Editor Forest and Stream:* It is scarcely necessary to urge that the trophy offered by me some months since was for the advancement of canine interests, by exciting friendly rivalry, and if aught unpleasant has intruded in the contests it is sincerely regretted. Possibly I may be at fault for much of the unpleasantness, if any exists; and if so I have no excuse to offer, as it could only have been due to misunderstanding and neglect, which latter has been easy in consequence of many exacting duties.

But whatever the fault or its origin, the desire now is to amend; and no remedy seems better than to present another trophy of equal value and of the same nature—a diamond locket—for competition under the following conditions:

It shall be for the best American born dog or bitch, of any breed, over ten months of age.

It may be competed for at any show in which there are 400 dogs or over on the benches, without consultation with the donor.

In case the judges duly credited to any show fail to agree upon the winner, the committee of said show may choose another, and if necessary a second or third disinterested party of experience, who shall have equal voice in the decision.

It shall be the property of the owner whose dogs have won it three times.

ASHMONT.

[Such an offer and letter as the above are what might be expected from a man of "Ashmont's" standing, and we are sure exhibitors will applaud his action.]

### American Fox-Terrier Stakes.

*Editor Forest and Stream:*

Inclosed I give you a full description of the winners in the different stakes of the American Fox-Terrier Club decided at the Rhode Island State fair show:

Second Division of the Seventh Grand Produce Stake.—First prize, Blemton Kennels' Blemton Stickler, whelped July 23, 1892, by Blemton Stipend—Blemton Trinket. Second prize: Hillsdale Kennels' Hillsdale Domo, whelped Oct. 5, 1892, by Starden's King—Dominica. Third prize, L. & W. Rutherford's Warren Captious, whelped Aug. 12, 1892, by Charlton Verdict—Refuge.

Yankee Stakes of 1892.—First prize, L. & W. Rutherford's Warren Duty, whelped August, 1891, by Warren Laird—Dusky II. Second prize, L. & W. Rutherford's Warren Tip-top, whelped Oct. 23, 1891, by Dusky Trap—Resume. Third prize, L. & W. Rutherford's Warren Dorothy, whelped August, 1891, by Warren Laird—Dusky II.

Yankee Stakes of 1893.—First prize, Blemton Kennels' Blemton Stickler, whelped July 23, 1892, by Blemton Stipend—Blemton Trinket. Second prize, Hillsdale Kennels' Starden's Prince, whelped May 15, 1892, by Starden's King—Lady Mixture. Third prize, Hillsdale Kennels' Hillsdale Royal, whelped June 30, 1892, by Starden's King—Hillsdale Freda.

H. W. SMITH, Sec. and Treas.

Canadian Fox-Terrier Club Meeting.

The first annual meeting of the Canadian Fox-terrier Club was held in the Walker House on Wednesday evening, the 13th inst. Among those present were noticed Messrs. F. T. Wetherall, Compton, Quebec; Jas. Lindsay, Montreal, A. D. Stewart, J. W. Morden, Hamilton; G. W. Prescott, G. Bell, P. J. Smyth, J. O. Bennett, A. A. Macdonald, H. P. Thompson, Dr. Mole, Toronto.

The president Mr. A. D. Stewart occupied the chair. After the minutes of the inaugural meeting of the club had been read and confirmed, the sec'y-treas. submitted his report for the past year which showed the club to be in a most flourishing condition both financially and numerically.

In his address the president reviewed the work of the past year and pointed out how already a great improvement had been noticed in the fox-terrier breed in Canada, and urged the members to do their utmost in promoting the welfare of the club, and the objects for which it was formed. At the conclusion of his address the president presented the cups to the successful competitors as follows:

La Cadena cup, donated by Messrs. S. Davis & Sons, Montreal, for the best four smooth-haired fox-terriers, won by Mr. H. P. Thompson, Toronto.

For the best four wire-haired terriers, donated by Mr. William Brodie, Scotland, won by Mr. F. S. Wetherall, Compton, Quebec.

For the best brace of smooth terriers, donated by Messrs. Hiram Walker & Sons, won by Mr. A. A. Macdonald, Toronto.

For the best brace of wire-haired terriers, donated by the Montreal fanciers, won by Mr. A. A. Macdonald, Toronto.

For the best smooth-haired dog, donated by the American Field Publishing Co., won by Mr. G. Bell, Toronto.

For the best wire-haired dog, donated by the Lieutenant-Governor of Ontario, won by Mr. A. D. Stewart, Hamilton.

For the best wire-haired bitch, donated by the Forest City fanciers, won by Mr. A. A. Macdonald, Toronto.

For the best Canadian bred dog puppy (smooth), donated by the Walker House, Toronto, won by Mr. J. O. Bennett, Toronto.

For the best Canadian bred bitch puppy (smooth), donated by Messrs. Smyth & Bell, won by Mr. A. A. Macdonald, Toronto.

For the best Canadian bred wire-haired dog puppy, donated by Mr. J. M. Lottredge, Hamilton, won by Mr. F. S. Wetherall, Compton, Quebec.

For the best Canadian bred wire-haired bitch puppy, donated by friends of the breed, was not competed for.

The election of officers for the ensuing year resulted as follows: Pres., Mr. A. D. Stewart, Hamilton, Ont.; Vice-Pres., Mr. R. D. Gibson, Delaware, Ont.; Sec'y-Treas., Mr. H. P. Thompson, 31 St. Mary street, Toronto. Committee, Messrs. S. Munro, London; F. S. Wetherall, Compton, Que.; J. W. Morden, Hamilton; W. H. Drummond, M.D., and James Lindsay, Montreal; A. A. Macdonald, G. Bell, Bruff Garratt and J. O. Bennett, Toronto.

An unanimous vote of thanks was tendered to Mr. A. D. Stewart for his untiring efforts in behalf of the club. Also to Mr. German Hopkins, of Hempstead, N. Y., for his kindness in lending the club the model of the fox-terrier for the purpose of obtaining a copy to place on the trophies.

Canadian Kennel Club Meetings.

At the executive meeting, Sept. 11, in Richmond Hall, there were present, Dr. Wesley Mills in the chair, Dr. J. S. Niven, and Messrs. A. D. Stewart, Jas. Lindsay, H. Gorman, and H. B. Donovan, secretary.

Minutes of last meeting read. New members.—The secretary was instructed to cast one ballot for the reception of the following names: H. A. Ekers, A. F. Dunlop, Geo. R. Hooper, Jno. Atkin, O. R. Christie, Jno. Auld, Chas. Wallace, Frank Burton, Jas. H. Smith, A. J. Ferguson, Dr. W. J. Prendergast, A. E. Mussen, Thos. H. Moore, Bartholmew Wall, W. S. Cumming, Walter Wardle, Jr., W. H. Apted, R. W. Tuck, Shirley Stewart, Jno. Smith, R. Northcote, Jarvis Thompson, Jr., R. S. McDonald and H. S. Stephenson.

World's Fair Accounts.—Re superintendent's account. Letter read from Mr. Bedlington. Voted "That Mr. Stewart having agreed to accept what the other members of the executive committee had received, a proportionate share of his claim for services and expenses in connection with the selection of dogs for the World's Fair dog show, it is resolved that his account be paid on that basis, Mr. Stewart placing the \$200 received from Mr. Awrey, Ontario Commissioner, at the disposal of the Canadian Kennel Club for that purpose."

The Annual Meeting was held Sept. 12, in Richmond Hall, the president, Dr. Wesley Mills, in the chair, and a large number of members present.

Secretary's report showed that registrations have come in freely and show an increase over last year of 106. The total number of dogs now on the register is over 3,000.

The following figures will show exactly how the roll of membership stands up to Aug. 1, 1893: Total number of names on roll, 212; members who have paid fees for 1893, 129; members who have paid fees for 1894, 55. Besides these there are about 25 now applying for membership.

Mr. Donovan was unable to announce the publication of Volume II. of the Stud Book. So little support has been accorded for this work that it would be impossible to put it out except at a considerable financial loss. The deficit on the first volume was so large that he could not, as a private enterprise, undertake the publication of a second volume. The registrations, however, have been published in the *Gazette* (C. K. C.) each month or so.

The constitution and by-laws have been thoroughly revised and put in shape at a large expense of time and trouble on the part of the executive.

The finances of the club are in a healthy state as the treasurer's report will show. Though the balance is not as large as shown last year, it is to be remembered that \$110 was expended for diplomas, most of which are yet available. In addition to cash balance he estimates the club has property valued at about \$125, consisting of diplomas, stud books, etc. The time has now, it seemed to him, arrived when a larger income will be necessary to carry on the greatly increased work in connection with the club. It is for the club to say how this shall be accomplished. The report was adopted.

The treasurer's report was read and showed a balance of \$17.50. After this the president's address came up for adoption and was voted to be filed.

Voted that Mr. Bedlington's motion re registration take the place of No. 8 in revised constitution.

Wording re stud book committee to be out of rule 3 of constitution, and in by-laws Art. II, Sec. 2, to insert "stud book committee to report at annual meeting."

Article 9 to read, "these by-laws may be suspended by a two-thirds vote at any meeting." Add to No. 5 of constitution "twelve to be a quorum at a general meeting."

Moved in amendment by Mr. Stewart, seconded by Mr. Prescott, that Sec. 1 of Clause 3 shall be amended to read as follows: "No show held under the rules of the C. K. C. shall extend beyond four days, reckoning from the hour of 10 o'clock in the forenoon of the opening day of the show, and until 10 P. M. of the fourth or closing day."

Amendment lost, motion carried.

The election of officers then took place, Messrs. Wetherall and Pitt acting as scrutineers, and resulted as follows: Patron, Hon. Senator Sanford; President, Dr. J. S. Niven, London; First Vice-President, Mr. J. S. Williams, Toronto; Vice-Presidents, Messrs. H. Gorman, Sarnia; P. G. Keyes, Ottawa; C. H. Smith, St. Stephen, N. B., and Dr. G. L. Milne,

Victoria, B. C.; Executive Committee, Dr. H. S. Griffin, Hamilton; T. G. Davey, S. F. Glass, London; R. McEwen, Byron; H. Bedlington, Hamilton; Jas. Lindsay, J. A. Pitt, Dr. W. H. Drummond, Montreal; F. S. Wetherall, Compton; C. H. Corbett, Kingston; C. A. Stone and R. W. Boyle, Toronto; Secretary-Treasurer, H. B. Donovan; Auditors, Messrs. G. B. Sweetnam and J. Lorne Campbell, Toronto.

THE MANITOBA FIELD TRIALS.

The All-Age Stake.

THE RUNNING.—CONCLUDED.

THURSDAY.

THE start was rather late, and there was much indecision as to which grounds to start on. The weather was unfavorable for good work, there being a strong wind all day. The cloudy morning cleared up for a short time in the middle of the forenoon. Afterward the weather gradually thickened up. Soon after the afternoon's work was started light rain set in, but was not sufficient to stop the work. Birds were scarce. The heats, therefore, had to be decided on few opportunities on birds. There were not sufficient birds about Souris to run a field trial in a satisfactory manner. Eight or ten bevs could be found at Morris for one found at Souris, under the same conditions. There are other places in Manitoba which are known to have abundance of birds. It would add greatly to the success of the trials if the club would select a place where an abundance of birds were certain to be found.

The judge selected Chevalier, Ranger, Lochinvar, Atalanta, Kent Elgin, Dick Bondhu, Bettie S., Count Gladstone and Ightfield Blossom to run again.

CHEVALIER AND RANGER began at 8:05. Ranger potted for several minutes before going industriously at work. Chevalier pointed and roared, but found nothing. Hedrew to a good point on a bevy and was backed. The birds flushed wild. Down 22m. Ranger did not show the good form of the previous day. Chevalier was far the better ranger.

LOCHINVAR AND ATALANTA were started at 8:32. Lochinvar took a cast ahead and dropped to a point. He moved on to a turn to the edge of stubble and pointed a large bevy, and was steady to shot. He next pointed three or four birds and flushed twice. Atalanta ranged well, but apparently had no finding abilities. Lochinvar had a wide range and fast pace. Up at 8:46.

KENT ELGIN AND DICK BONDHU started at 8:51. Both did some ragged work on birds. Soon after starting, Dick wheeled to a good point on two birds on stubble, then willfully sprung in and flushed. Kent, on plowed ground, flushed some birds excusably down wind. He ran fast and seemed a bit reckless as to whether his work on birds was good or bad. A bevy was seen to flush on opposite side of a ridge where the dogs were. Next, Kent flushed a bevy and acted badly. Some remaining birds were flushed by Dick. He next pointed one. Up at 9:14, after a poor heat.

BETTIE S. AND IGTFIELD BLOSSOM were cast off at 9:18. Bettie roared and pointing a bird well, and Blossom flushed a bevy across wind by the edge of stubble. Both were frivolous in their work at the start, but became more attentive and diligent as the heat progressed. Up at 9:42.

COUNT GLADSTONE was run twenty-two minutes without finding though he ranged wide and beat out his ground well. Six dogs were selected to remain in the running, as follows: Chevalier, Atalanta, Lochinvar, Dick Bondhu, Bettie S. and Count Gladstone.

CHEVALIER AND ATALANTA ran from 10:35 to 11:15 without finding. The former showed much the better range and judgment in selecting his ground.

LOCHINVAR AND DICK BONDHU began at 11:19 and were taken up at 11:26, put in the wagon and taken to a new section where chickens were said to be more abundant. They were cast off at 11:50 and ran 15m. The new grounds were in a valley and seemed to promise well from appearances, but birds were far too scarce for field trial work. Lochinvar pointed and was backed by Dick; nothing found. Dick pointed a bird and Lochinvar backed. Dick broke in to shot. He saw the bevy on mowed ground, burst in and flushed it. Both ranged well.

BETTIE S. AND COUNT GLADSTONE started at 12:13. Count pointed twice and the bird flushed wild each time. Bettie made two good points and Count a flush. Up at 12:18. Count had better range and speed and was more skillful in point work and finding.

COUNT GLADSTONE AND CHEVALIER ran a few minutes, beginning at 12:24, when the running was suspended for lunch. At 1:37 the dogs were again ordered on. Count did some creditable work twice in coating and pointing wild birds. His range was wider and his work on birds was better, though on point he was inferior to his competitor in style.

The judge announced Count Gladstone first, Chevalier second, Bettie S. third. The purse was \$450, of which \$225 went to first, \$125 to second, and \$100 to third.

The Amateur Stake.

The running in this stake was begun immediately after the All-Age was decided. It was open only to members living in Manitoba and Northwest Territory. Dogs which had won in any previous event and professional handlers were barred from this stake. There were seven starters. The quality of the work was from poor to ordinary. There were eight starters, namely: F. W. Scott's Spotted Belle, J. B. Roberts's Joe, H. Rose's Ranger, J. B. Roberts's Zero, D. M. Telford's Nellie, W. F. Ellis's Zeuleika, R. Adamson's Virden Prince and E. McKenney's Jingo. The prizes were, to first a silver cup valued at \$50, donated by the Hudson Bay Co.; to second, a double-barreled shotgun, donated by J. Ashdown; to third, a pair of slips, donated by E. F. Hutchins. All the donors live in Winnipeg.

The winners were all ordinary performers.

The Running.

SPOTTED BELLE AND JOE started at 2:17. The former was handled by Mr. R. J. Gallagher. Neither ranged wide nor fast. Starting at 2:17, the heat lasted 35m. Joe made two points. Belle made two flushes. The work was inferior.

RANGER AND ZERO started at 2:58 and ran 29m. The former was handled by Mr. R. S. Gallagher, and being strange to him, refused to work for him. Zero had many opportunities to point birds in stubble, but flushed more than he pointed. The work was inferior in character.

NELLIE AND ZEULEIKA started at 3:30. They showed the best pace and range of any. They worked about 45 minutes before finding. Nellie did some blundering work on birds. Up at 4:18 to be put down again.

Virden Prince had an injured foot and could not run.

Jingo with Dick Bondhu for a running mate started at 4:15. Jingo flushed some birds. Followed the birds, and Jingo flushed twice, after which he secured a point on one. Then he worked out of control.

NELLIE AND ZEULEIKA were run about five minutes. Zeuleika pointed a bird, Nellie refused to back, worked ahead and flushed, broke shot and chased.

ZEULEIKA, JOE AND ZERO ran together at 5:20. Joe flushed a covey, Zeuleika flushed a single. Zero was the best ranger. Zero pointed a bird. Zeuleika flushed a bird. Joe dropped to wing. They ought to have pointed. Zeuleika flushed a single. They were ordered up after a while.

Zero first, Joe second, Zeuleika third. B. WATERS.

Benison Dead.

Dr. Glazier has lost his bloodhound Benison, but we trust that this will not entail his relinquishing the breed.

United States Field Trials Club's Derby.

Editor Forest and Stream:

Please find list of dogs on which the second forfeit has been made in the U. S. F. T. Club's Bicknell Derby. Pointers 22, Irish setter 1, English setters 39, total 62.

P. T. MADISON, Sec.-Treas.

POINTERS.

ALICE LESLIE—E. M. Benta's liver and white bitch (King of Kent—Belle Randolph).

RHET—W. J. Wilson's liver and white bitch (Dan of Kent—Martha).

FAYETTE ALEXANDER—Joe H. Alexander's liver and white bitch (King of Kent—Lionie Bijou).

PRIDE OF ARUNDEL—T. W. Clelland's liver and white bitch (Rush of Lad—Graphic's Pride).

STRIDEAWAY—Geo. E. Gray's liver and white dog (King of Kent—Pearl's Dot).

ROSE—Horace F. Wood's liver and white bitch (Ossian—Forest Queen II.).

VENTURE—F. R. Hitchcock's lemon and white bitch (Rip Rap—Lapford Pearl).

GYPSY QUEEN—H. P. Hersberger's brown and white bitch (Bertraldo—Rosaldin Wilson).

WRICKER—Charlotteville F. T. K.'s brown and white dog (Rip Rap—Croxie Wise).

SELAH—Charlotteville F. T. K.'s liver and white bitch (Rip Rap—Dolly).

TWINKLE—Glen Rock K.'s liver and white dog (Duke of Kent II.—Bessie Kapos).

QUEEN OF ASIA—A. B. Reeves's liver and white bitch (Ossian—Heps II.).

FIAL OF IDSTONE—Idstone Kennels' liver and white dog (Shotmaster—Pearl of Idstone).

THE FRIAR OF IDSTONE—Idstone Kennels' liver and white dog (Shotmaster—Pearl of Idstone).

LITTLE NED—W. N. Kerr's liver and white dog (Ridgeview Dazzle—Kate Claxton).

LULA K.—G. R. Howse's liver and white bitch (Ossian—Pearl's Pride).

QUEEN—Geo. Catlett's black and white bitch.

BEPPY'S GENIO—Dr. J. E. Daniels's liver and white dog (Beppo III.—Lord Graphic's Gem).

LOUDON—T. G. Davey's liver and white dog (Lord Graphic—Lassie Faust).

PLUTE—Castleman Kennels' lemon and white dog (Fritz—Tilley).

NELLIE S.—Castleman Kennels' lemon and white bitch (Fritz—Tilley).

KENT'S PET—J. F. Shipley's liver and white bitch (King of Kent—Keeswick II.).

IRISH SETTER.

DICK FINGLAS—Gus Leisy's red dog (Finglas—Ruby Glenmore).

ENGLISH SETTERS.

MAY WIN—Sunset Kennels' blue belton bitch (Prince Lucifer—Lady Glady).

COLUMBINE—C. P. Hartnuls's chestnut and white bitch (Gath's Mark—Queen Blade).

LADY GANTY—C. P. Mings's black and white bitch (Gath's Mark—Queen Blade).

HOOSIER BOY—Hunter Bros.' black, white and tan dog (Antonio—Daisy Hunter).

DAISY HUNTER II.—Hunter Bros.' orange and white bitch (Antonio—Daisy Hunter).

QUEEN OF THE FIELD—Hunter Bros.' orange and white bitch (Antonio—Daisy Hunter).

ROD'S MOLLY—J. A. Peabody's black, white and tan bitch (Rodrigero—Lilly Boxer).

GOLDEN ROD—Arthur Duane's chestnut, white and tan dog (Sun Ray—Flash).

MISSIE—Arthur Duane's black, white and tan bitch (Sun Ray—Flash).

OPEL—Geo. E. Gray's black, white and tan bitch (Count Gladstone—Diamond).

SOLITAIRE—F. Hitchcock's black, white and tan dog (Roi d'Or—Tory Diamond).

KENWOOD—Chas. Proctor's black, white and tan dog (Cinch—Stevens's Ruby).

HOPE'S GLIDE—G. T. Kerr's black and white dog (Gath's Hope—Lady Lib).

INDIANA BELLE—G. T. Kerr's black, white and tan bitch (Gath's Hope—Lulu Hill).

JIFF BROWN—Porter & McGee's black and white dog (Darby T.—Lucetia).

HOPE'S PRIDE—W. A. Hinsley's black, white and tan dog (Gath's Hope—Lulu Hill).

LOTTIE H.—W. A. Hinsley's chestnut, white and tan bitch (Gath's Hope—Lulu Hill).

MARK—Fred Snyder's lemon and white dog (Race Noble—Fanny S.).

CALLIE WHITE—Manchester Kennel's black and white bitch (Gath's Mark—La Belle).

FLYING JIB—B. W. Butterfield's black and white dog (May Noble—Jay's Belton).

RODRIGO—J. T. Mayfield's black, white and tan dog (Antonio—Nellie Hope).

NELLIE H. LADY—J. T. Mayfield's liver and white bitch (Antonio—Nellie Hope).

REVENUE—J. M. Freeman's black, white and tan dog (Antonio—Nellie Hope).

SAN ANTONIO—J. A. Gude's (agent) black, white and tan dog (Antonio—Nellie Hope).

FANNIE RICE—Jackson & D. Kennels' black, white and tan bitch (Gladstone Boy—Manitoba Peggy).

EARL PALMER—Jackson & D. Kennels' black, white and tan dog (Frank Whitley—Dulania).

MCLEOD—Dr. J. A. McLeod's black, white and tan dog (Ell's Lad—Nannie B.).

ROCK RODRIGO—Ed. J. Brown's black and white dog (Rodrigero—Queen London).

CANADIAN BELLE—T. G. Davey's orange and white bitch (Lark—Leda).

MONK OF FURNESS LILL—T. G. Davey's black belton bitch (Monk of Furness—Sue of Hatchie).

BOWDRIE—Avent & Thayer Kennels' black, white and tan dog (Rodrigero—Novelist).

CIGARETTE—Avent & Thayer Kennels' black, white and tan bitch (Rodrigero—Norah II.).

HESTER PAYNE—Avent & Thayer Kennels' black, white and tan bitch (Rodrigero—Norah II.).

TOPST'S ROD—Avent & Thayer Kennels' black, white and tan dog (Rodrigero—Topsy Rod).

PRAIRIE LAD—H. J. Gleason's (agent) black, white and tan dog (Jean Val Jean—Miss Dido II.).

LADY K.—St. Louis Kennel Co.'s black and white bitch (Rock—Madge).

PRINCE—A. L. Waddell's black, white and tan dog (Royal Prince II.—Jane H.).

FAUST—Scott's Wood Kennels' black, white and tan dog (Pembroke's Grouse—Kate).

HOPE'S HILL—Charles Ham's black, white and tan dog (Gath's Hope—Lulu Hill).

Though Mr. Ludlow, *facile princeps* as a Scottish terrier breeder in England, is selling out his stock, he thinks so much of the winning bitch at New York, that he has offered big money to Mr. H. Brooks for her return. Mr. Brooks thinks if she is good enough to cross she is quite good enough to stay, and America is the gainer. Mr. Brooks tells us of a pup by Kilree that can smother any of his young stock shown this fall. It is reserved for Madison Square Garden next February.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

FOREST AND STREAM's corner in the Anglers' Pavilion, as may readily be imagined, is a center to which sportsmen naturally gravitate. Nor are the visits prompted by curiosity alone. There are friendship and good will as motives. The sportsmen walk in as if on a visit to a friend. It is needless to say that they are heartily welcome.

FOREST AND STREAM is the only journal devoted to field sports which had the enterprise to make an exhibit at the greatest exposition ever held, and, too, one of the very few of any class which made an exhibit. That the enterprise of FOREST AND STREAM is appreciated can be readily observed by seeing the crowds which visit the exhibit each day. It is astonishing, too, what a large percentage of the thousands who pass know FOREST AND STREAM already.

While at the exhibit a few days since I had the pleasure of meeting Mr. W. S. Bell, of Pittsburgh, well known to his friends as a quiet, unassuming gentleman, and a crack shot afield, and to the public as a most competent field trial judge. While we were chatting away Mr. A. C. Wilmerding, of New York, eminent in spaniel and bench show history, walked in and favored us with a handshake. It was quite a coincidence that Messrs. Bell and Wilmerding are both dog fanciers and expert photographers. Mr. W. L. Washington made the office a call a few days since and I missed a pleasure by being absent in Manitoba at the time. I met Mr. A. E. Pitts on the grounds some days ago. Indeed, if one desires to see the world in procession one has but to come to Chicago, take a seat anywhere and just look on.

B. WATERS.

The A. K. C. Meeting.

THE quarterly meeting of the American Kennel Club, which was to have been held in the Chicago Athletic Club building, Michigan avenue near Madison street, Chicago, at 8 o'clock P. M., Sept. 23, was quite lacking in one essential circumstance, namely, there wasn't a quorum, therefore there was no meeting. The president, Mr. Belmont, was in the chair. The secretary, Mr. A. P. Vredenburg, was there with a formidable bundle of papers with which to entertain the meeting. On calling the roll there were but four regular delegates present and three others with credentials. As the four regular delegates were not a quorum the credentials of the others could not be acted upon.

Following is a list of the members present: Westminster Kennel Club, W. J. Bryson; Associated Members, A. C. Wilmerding; Blue Grass Kennel Club, Roger Williams; City of the Straits Kennel Club, W. Howie Muir; Illindio Kennel Club, Dr. Harry Van Hummel; Mascotah Kennel Club, J. L. Lincoln; New England Kennel Club, Edward Brooks. Mr. Belmont discussed earnestly with those present the possibilities of securing the attendance of available delegates from other cities and expressed a desire to hold a meeting in Chicago if it was possible for the club to do so. To further this intention by communicating with delegates, the meeting adjourned to 9 o'clock A. M. on Monday, Sept. 25.

The apathy or inattention in respect to this meeting has demonstrated beyond question that an A. K. C. meeting can be held only in New York. It is true that many Western clubs have Eastern delegates and would have had to pay the expenses for such delegates from the East. But there are no excuses to make, since there is nothing in evidence to show that any effort was made to hold the meeting, outside of the facts above stated. It has made a precedent, however, one most far-reaching and potent.

B. WATERS.

No A. K. C. Meeting in Chicago.

A SPECIAL despatch, dated Sept. 25, to FOREST AND STREAM from Mr. Waters, reads: "The adjourned meeting of the A. K. C. to-day had no quorum, only three present, Belmont, Bristen and Muir." This about conclusively sounds the death knell of the cry for adequate representation in the West. President Belmont, on behalf of the A. K. C., has afforded the Western contingent, and presumably those whom we were told had so much to say about the A. K. C. being run in New York, every opportunity to present their case and have the say they wished in A. K. C. affairs. The meetings were held at a most propitious time for outside Western men to attend, the World's Fair affording an ample excuse. If they would not attend then how can we expect them to attend "between whiles," as in New York. A. K. C. business would never get on without quorums, therefore meetings must be held in New York for the present, at least. So ends the first lesson.

"The American Field Cup."

Editor Forest and Stream:

The following item is taken from the issue of the *American Field* of 16th inst.:

A New York contemporary that has for the last seven years referred to the principal stake at the American Coursing Club's meetings as the "All-Age Stake" has suddenly become aware of the fact that its name is the *American Field Cup*. Curious, very.

It certainly does not seem strange to one conversant with the facts why the said New York contemporary has changed the so-called "All Age Stake" to the "*American Field Cup*." If I mistake not, the proprietor of the Chicago periodical offered a "cup" or its equivalent, \$100 in cash, to be hung up as a prize in this stake. As the "cup" or its equivalent has not been paid by the proprietor of the Chicago periodical for the past two years (1891 and 1892), and the cup is presumably in the possession of the *Field* during this time, it was but natural to suppose that it belonged to the *Field*, and therefore the New York contemporary was justified in calling it the *American Field Cup*. "Possession is nine points in law," and evidently the proprietor of the Chicago periodical intends to stand by the saying.

HAY MAN.

Flaps from the Beaver's Tail.

TORONTO, Can.—Mr. A. A. MacDonald has sold that good little wirehaired bitch Bonnet, imported by Mr. Brodie and winner of first at the late Toronto show, to Mr. F. S. Wetherall, of Compton, Que. Mr. MacDonald has a nice litter from her, her first, to his Dark Eye.

I am pleased to note the arrival of another good collie in Ightenfield Chief, a sable and white of Mr. Walter Curll's, Burnby, England, breeding. His breeding is really good, being by Burnley Enterprise, who is by Edgbaston Excelsior out of Walton Lassie, out of Prairie Flavor by Denver, out of Lady Flora; Denver by champion Squire out of champion Princess Shela. His wins include: first, puppy class, Rochelle; first, puppy, first, novice, second, open and special, Halifax; first, novice and third open, Middleton; second puppy, third novice, at Preston and others, so for a year and a half old dog he has not done so badly. His new owners, Messrs. A. J. and H. L. Jeffrey, of Stratford, Ont., proposed showing him at Toronto, but he arrived too late.

At the annual meeting of the C. K. C., radical changes were made in the rules governing the fees for registration, and in the manner of voting for the election of officers. Up to the present, members paid an annual fee of \$3, and were privileged to register all the dogs they wished free. The new rule is that the fee remains the same and but five free registrations are allowed, subsequent entries may be made at 50 cents each. The fee to non-members has been raised to \$1

for each dog, and listing 50 cents. Listing to members 25 cents, so you can have the advantage of joining the club.

Election of officers is to be done by a mail ballot, so that each member no matter how distant, may be given an opportunity of casting his vote. Nominations to the various offices are to take place one month previous to the date of annual meeting.

H. B. DONOVAN.

DOG CHAT.

Eastern Field Trials Subscription Stake.

Field trial men should remember that the "New Subscription" stake of the Eastern Field Trial Club, which has been substituted for the champion, closes Oct. 1, 1893, and the \$50 subscription must be paid on or before this date. This entitles the subscriber to nominate, run or sell his privilege up to the night of drawing and running in said stake. It may be of interest to many field trial to give the conditions under which this new subscription stake will be run. The heats will be two hours and repeat; \$50 subscription, transferable; dogs to be named at 9 P. M., night before running. Winner of first to receive 50 per cent. of subscription and \$250 added money by the club. Winner of second to receive 30 per cent. and winner of third 20 per cent. of subscription. The first brace of dogs down in the morning shall run two hours, then be ordered up, and the second brace of dogs put down and run two hours and then ordered up, when the first brace of dogs shall be recalled and put down to run their final two hours. Upon being taken up, the second brace of dogs shall be recalled to run their final two hours. And this order of runnings shall continue throughout the first series of the stake. After the first series have been run through the balance of the running shall be at the direction of the judges, until the winning of first, second and third is determined.

All entries must be filled at 9 P. M., on night previous to running of stake. Mr. Washington A. Coster, Saratoga Springs, N. Y., will give further information that may be required.

Officials Exhibiting.

Had Mr. Comstock's entries competed in the Irish terrier classes at Cranston, there would have been a stronger lot than at New York in quality, but this good and true exhibitor followed a procedure that should obtain in all shows. While really there is nothing in it as our judges are square and beyond influence, still if the superintendent shows dogs and wins, there are always some people so constructed that they think they can see clean through a solid brick wall. Those are the people that talk, too, and this talk, while it does not affect those who are in the business one way or the other, will and does undoubtedly influence those who are not versed in kennel affairs to an opinion that some judges are venal. Once for all it may again be said that most judges are straight and the press light nowadays burns too fiercely to admit of much "hanky-panky" work escaping detection. Still, it is always better that those who are directly interested in a show should allow their own fixture to pass and simply exhibit their dogs N. F. C. There are plenty of other opportunities to exhibit during the year.

We recently spoke of "Prof." Fred Weissman, the dog circus performer at Brooklyn show, getting into trouble for burglary, etc. We notice that last Saturday he was sentenced to eighteen years imprisonment with hard labor. He was mainly convicted on the evidence of his common law wife, who, it is said, was coerced into this. He afterward married her in prison as soon as sentence was passed.

Mr. Bousfield, owner of the Bay City Kennels, in renewing his advertisement, remarks: "Kennel business is picking up somewhat, and expect to do very well in the near future." We are glad to hear it.

Gordon Field Trials.

We were told at Cranston of a scheme on foot to arrange for some Gordon setter field trials the latter part of November. A number of New England sportsmen and lovers of the handsome setter have the matter in hand. Some relations of Mr. C. T. Brownell, of New Bedford, Mass., have a farm adjoining the N. E. F. T. Club's grounds at Assonet, Mass., and report birds plentiful around them, enough for a trial. This farm is cultivated and this fact has probably enticed the N. E. F. T. Club's birds over the fence. *Verb sap*—N. E. F. T. C., and take the advice that was given last year about more cultivation. The trials will be restricted to Gordons, and a pleasant reunion is looked forward to, and it is not to be a bit slow, either.

The Irish Setter Club Trials.

Mr. Hildebrand Fitzgerald, of the *Philadelphia Item*, intends giving a special prize for the winner of first in the All-Aged Stake of the coming Irish setter trials. The Irish setter men are under great obligations to Mr. Fitzgerald for the aid he has extended toward making their trials successful. It will be remembered that it was he who gave the beautiful large silver punch bowl won by Harry Anderson with his good little bitch Nugget in the Derby of 1891. Mr. Fitzgerald writes to Mr. Davis as follows: "My sympathies go out to the much-abused Irish setter, and as I have shot over a good one (Clifford, a son of Bruce, owned by my brother-in-law, Mr. A. Hallam Hubbard) I feel like extending some encouragement. I will donate a prize of not less than \$25 value for the All-Aged Stake."

Changes in Bulldogs

Frank Dole is not one to let his right hand know what his left digits doeth, but he does "plenty business," as Mr. Hough would say, just the same. Some people think our New Haven friend is a bull-terrier man *per se*, but he makes a "bully" deal now and then on the quiet. Casting that other eye around he picked up the bulldogs Charmion, Lady Nan, Crinoline and Pessara out of the Illwiss Kennel, of Chicago, and then while at Providence spends half a day with Mr. Congdon, who fancies bulls too. Mr. Congdon had a colt that seemed good to "Frank," that colt now belongs to the New Haven man; then he spied a set of harness that fits the colt; the harness goes with the colt, and Mr. Congdon has the four before mentioned bulls.

Mr. H. A. Harris is thinking of going out West, ranching or horse-breeding or something. This was Mr. Dole's opportunity, and the celebrated deaf dog, White Wonder, one of the best bull-terriers in the country, Count's Nell, My Beauty and Chatham Kit were recently transferred to the Royal Bull-Terrier Kennels. Since then he has sold White Wonder to Mr. W. J. Pegg, and this good dog now returns to his native country—England. Count's Nell had three pups by Gully the Great, and My Beauty five by White Wonder. After recounting this transaction Mr. Dole winked that other eye; in fact, a series of winks came in telling us of a four-months' pup by Gully that has a head as long as—at any rate it's very long, and Frank illustrated it by drawing three fingers and a thumb right out from his nose like pulling chewing gum, and then there was an extra wink for luck—we hope it stays.

On Tuesday of the Cranston show the visiting dogmen,

judges, press, etc., were invited to lunch by the bench show committee, and in the evening under the careful supervision of "Cousin" Comstock a most enjoyable reunion occurred in the London club house. Our host was elected chairman and several members of the company rendered songs and recitations, among them James Mortimer, who gave us one of those good old ballads. E. B. Elliott, whose classical rendering of a song which alluded to somebody's colored optics, was indeed a "surprise;" German Hopkins, as usual felicitous and to the point; John Brett, who "slipped" his tongue to a good song or two, and a gentleman whose name starts with a Mac, proved that he had a tenor of high quality and good training. It was late when the party broke up to see Mr. Comstock off by the night train after "Auld Lang Syne" had been rendered in the good old way.

Newark Show.

The Newark show is gradually materializing into an assured and tangible fact. The premium list has not been issued yet but we learn that the prizes will be quite liberal. In challenge classes for the principal breeds \$10 and diploma will be given, and in corresponding open classes \$15 and \$7 and diploma is the rate. Other classes have \$10 and \$5 and pet dogs \$7 and \$3. The classification is quite liberal, in fact the same as at New York. Most of the breeds have two challenge classes. A good lot of specials are already promised. The premium list will be issued about Oct. 15. There will be a number of judges, as our informant told us, a new lot, and the most practical men in their specialties. Variety is pleasing, but we can tell better about the practical part after the show. We thought we knew most of the "practical" men, but our informant tells us we don't and he should know.

Secretary Collins, of the Rhode Island State Fair Association, paid Mr. John Read a high compliment as a manager. He said that he was the first superintendent of a department they had ever had that knew his business and required no assistance. As a rule they have to teach the different superintendents their duty before the fair opens, but the boot was on the other leg in the dog department.

The prize cards were put up in good time at Cranston and this is a part of dog show management too often neglected. But one thing we must grumble at, Mr. Read is a little too lenient in allowing kennels to bench their dogs together. This relic of bygone management should not obtain in these days of Spratts benching and systematic arrangement. In the sporting classes especially there was much confusion on this account. The feeding was all that could be desired at this show and there was little need for disinfectant, as straw was plentiful and the building well ventilated by the large open doorways and windows; still there must have been a chance for El-a-to! somewhere and it did its work efficiently and unobtrusively. We were pleased and surprised to meet Mr. W. E. Codman on the bench show committee at Cranston. He is an Englishman and an old "black and tan" man familiar with shows in the old days of General Belcher, Saff, Queen II., etc. He has been out about two years.

Dr. T. G. Sherwood had little to do in a veterinary way at Cranston, so he wore his badge more conspicuously this time. He is fast becoming Americanized and his prescriptions in the FOREST AND STREAM seem to have a telling effect from all accounts.

Explain This.

We are accused by our Quaker contemporary of making two willful misstatements in our arraignment of the manner in which the "Ashmont" trophy was awarded at Toronto. Let us see, Mr. Stone distinctly stated in the presence of several witnesses, to whom we now refer for proof, that he knew nothing in regard to the conditions under which the trophy was given, etc. In regard to the second accusation, we will ask Mr. Mason if he did or did not refuse to judge the special for best collie at the Wissahickon show on Wednesday, June 7, and that, too, after the winners in the different collie classes had been brought into the ring by order of the management? We have ample proof that our statements are true.

Mr. F. S. Wetherall has bought the wire-haired terrier Bonnet from Mr. A. A. Macdonald, of Toronto, Can.

We draw attention this week to several changes in stud advertisements, and that of the Excelsior meat dog cakes. Among the dogs for sale we find the Connemara Kennels offer Irish setters; J. S. Logan, English setters; Box 886, Japanese spaniel; A. L. Page, greyhounds; A. C. Anderson, Irish setter pups; C. P. Clough, cocker spaniel; W. H. Spear, rabbit hound; Standard Kennels, beagles. Special attention is called to the good things set forth by Oak Grove Kennels; the stock is of the very best and the prices are extremely low.

Owing to the crowded state of our columns this week a number of kennel notes and other matter must lie over.

Mr. T. G. Davey has now decided to add 20 broken dogs to his sale list, and a catalogue will be ready to mail in a few days. The lot includes well-known show and field stock.

During the fair at Cranston there was some whippet racing, always an interesting adjunct to the fun of any fair. A. E. Hoey, of Natick, Mass., supplied the dogs, and they seemed to be quite fast when racing on the track, but we could not ascertain their time.

Some good bulldogs are likely to change hands soon, and Mr. John H. Congdon, of Providence, will probably have a strong kennel shortly.

Mr. H. A. Waldron, of Providence, who has dabbled in pointers and setters for some time, is now going to give them up and turn his attention to cockers, and he means to have the best. This is easier said than done just now; the best are not going a-begging these days.

Bedgebury Lion Dead.

Bedgebury Lion, the celebrated bulldog, is dead. He died in a fit at the Retnor Kennels, Morristown, N. J., about three weeks since. This is a great loss to owners and the fancy.

Tom Aldrich showing bulldogs is rather like a hackney man going in for mules. Tom is out of dogs now—so he says—quite out of them. He says they're getting too fast for him in the field and he's paying attention to business from now on. Still we noticed that as long as there was a dog show at Cranston he wasn't far off.

ANSWERS TO CORRESPONDENTS.

T. J. A., Corning, N. Y.—I have a setter 4 yrs. old whom I treated successfully through distemper, but afterward allowed him to go into the water, so that now his nerves are badly affected, especially so in the left foreleg, which twitches and drags. When he walks he frequently falls over on his head. Can you give me a remedy or will he recover? He is a well-broken dog, and I should hate to kill him if he can't be cured. Ans. The twitching will never go away, but he will probably regain use of the limb. Give the following mixture and continue for some weeks:

℞ Syr. hypophosph. co.....	℥ iiii
Liq. arsenicalis.....	℥ i
Aq. ad.....	℥ vi
Mix. Give one tablespoonful twice a day.	

smoked along. As before, it was a broad reach from Paignton to Torquay, where the third round ended:

Britannia.....	1 14 19	Navahoe.....	1 22 03
Calluna.....	1 18 15	Satanita.....	1 23 10

Running their heads well up on the surges, they flew off to the sea mark for the fourth and last time, Satanita closing in very fast, and the last quarter of Navahoe, and just as the former was drawing level Navahoe rounded to and gave up, her mainsail having burst at the reef cringle. Satanita thus remained last boat, and chased the others off to the sea mark, where the time was:

Britannia.....	1 31 40	Satanita.....	1 39 30
Calluna.....	1 35 20		

Beating across to Brixham, Britannia just held her own, wind and sea remaining as before, and the time presenting a very business-like picture, as they were masterfully laid on the wind. The time of weathering the Brixham mark was:

Britannia.....	1 52 40	Satanita.....	2 00 21
Calluna.....	1 56 25		

A close reach along shore to Paignton and a broad reach home Satanita making an all-round gain) brought the match to an end at: Britannia (winner).....2 09 00 Satanita.....2 16 15 Calluna (second prize).....2 33 36

Valkyrie.

A thirty day passage across the Atlantic is in no way remarkable, and Valkyrie's failure to equal the record of Thistle and other yachts would of itself have created little anxiety. There was, however, a strong probability that she had encountered one of the August cyclones when but one or two weeks out, and this, with the fact that she was not reported by any steamer, caused a certain amount of apprehension over her delay in reaching New York. Although she was reported on Sept. 18 by the steamer Spain, having been spoken by the tug Vigilant, it was not until the early morning of Sept. 23 that she sighted the two lightships off Sandy Hook. The tug Charm passed her a towline, and after a short delay at Quarantine she dropped anchor off the Atlantic Yacht Club station, Bay Ridge. On her way up the bay she was saluted by vessels of all kinds, the ferryboats going out of their courses to get a look at her. She carried her racing mast, a fine stick of Oregon pine, with short bowsprit, topmast, gaff and boom. On board were Capt. Wm. Cranfield, who has sailed her all the season; Capt. Wm. Harvey, her navigator, brother of the Capt. Harvey, who sailed Jessica in 1891, and the following crew: Oscar Ponder, first mate; William Taylor, second mate; Ennis Turf, boatswain; William Bowen, chief cook; Arthur Wade and William Waddley, assistants, and William Cranfield, Walter Sebborn, John Pierce, Alfred Scarf, Wallace Allen, Alfred Allen, William Brown, Herbert Springak, B. J. Pugh, William Pervall, Ed. Herreshoff, Adam and Robert Potter. Twelve more of the crew, some of them from Lord Dunraven's smaller cutter L'Esperance, arrived on Saturday on the Paris and at once joined the yacht.

The voyage was a hard and tedious one, as told in the following story by Capt. Cranfield, and by the log:

"We had a very hard passage, but there never was a moment when I felt that the Valkyrie was in danger. In danger, as far as her weatherly qualities go, she has been thoroughly tested, and a boat not so well built would have certainly gone to pieces during some of the heavy blows. I made no attempt to make a record, but kept the yacht going as fast as was consistent with perfect safety. Before starting it was generally understood that we were to take a southern course, but after getting out on the high seas I determined to take the far northern course, which accounts for our not being sighted by the incoming steamers.

"For ten days after we left, on Aug. 23, we had light easterly winds and made fairly good headway. Then we ran into about as nasty weather as I have seen for a long time. From Sept. 2 to 6 we were knocked about by squalls from the west and an ugly cross sea, which forced us to put the main boom into a crutch. On the 7th we were struck, while running close reefed, by a north-west gale, which kept up with a few short respites until the 11th, when it increased to a hurricane that made things very lively for us. It was impossible to move anywhere on the vessel and on deck it was very dangerous to the crew, even with the aid of lifelines, which were stretched along the deck. All we had out was a close-reefed trysail, and that was enough. We shipped some very heavy seas, but they rolled off the deck like water from the back of a duck.

"I thought that our boats would be carried away, but we lost nothing. The tiller was bent by a heavy sea that swept us fore and aft about midnight, and two of the crew had a close escape from being washed overboard. The little storm jib was blown out of the bolt ropes with a report like a cannon, and for a time we were in a very uncomfortable position. But the Valkyrie did not seem to mind the terrible tossing, and the way she dove into the waves and came right side up every time was a delight to the sailor, although the experience was very unpleasant.

"We had to let her scud before the wind while the damage to the tiller was repaired, which was a very ticklish job indeed, in such a terrible sea. The wind went down in about two days, but the sea ran very high all the time, and kept us all awake the most of the time. She rolled so hard occasionally that it seemed as if she would land on her beam's end and never right, but after hanging for a moment in the balance as if undecided, whether to go clean over, she would come up with an easy motion that was very reassuring to those on board.

"We were running close reefed in half a gale when the Spain sighted us. On Sept. 16 I signaled to her, but got no response, owing, probably, to the thick weather. We kept together for about seven hours, and logged in that time about seventy miles, which, I see, agrees with the report of Capt. Griffith of the Spain. The Spain was the only west-bound vessel that we sighted, but I signaled to several east-bound steamers, which ought to have reported us.

"On the same day we passed a ship bottom up, but it was blowing too hard for us to stop and get her name. She had a bright copper bottom, and looked as if she had been upset only a short time. We ran into a frightful gale from the southwest after the Spain left us, which forced us to heave to for safety. This storm was accompanied by terrific lightning, which played the Valkyrie altogether too close for comfort. While running before the wind the yacht thumped the sea very hard, and huge waves came aboard and swept the deck.

"During this week we had a succession of gales which gave us a terrible knocking about, and it was a great relief when we ran into a fog bank and calm. When the fog lifted we spoke the pilot boat Leahy, and you know the rest."

"The crew wasted little time after the anchor was down, but at once set to work to fit out for the races. Capt. Cranfield at first being unaware of the postponement to Oct. 5. The yacht showed the effects of the voyage, no damage was done to the hull beyond the starting of the caulking about the end of the long counter, but paint and varnish were washed off, sails were torn and ropes stranded, while she looked anything but the trim and stylish racer which she really is. On deck amidships were lashed six large water casks, and the two masts were bent two places, and the short, dirty spars and cruising sails gave her a rather disreputable look.

The sails were unbent, spars unshipped, and by 10 o'clock a big floating derrick was alongside with a lot of racing spars safely wrapped in burlaps. The main boom was shipped, the topmast set up, the bowsprit run out and the decks cleared of the old sails, casks and spars.

During the morning Messrs. Watson and Ratsey, in company with Mr. Matland Kersey, came down in a tug and spent most of the day on board or about the Atlantic Y. C. The spare spars were landed on Winttingham's bulkhead, and Mr. Sawyer very kindly offered the use of his Bay Ridge loft for the storage of sails and gear.

Valkyrie, though very different from Thistle, is just as distinctively a Watson boat, showing the same artistic sheer and counter. She has the "Dova bow," similar to the new American boats, but not so long in overhang, and in appearance is much like Queen Mab. While her waterline is full, as in all recent yachts, the fore end is quite sharp, the waterline being straight rather than convex for the first few feet. The bow is undoubtedly a good and serviceable one, making a fair ending to all the fore and aft line, but with less weight and windage than in the longer American overhangs. The after end is hardly as strong as the fore end, but the Herreshoff boats, and possibly no better as to speed, but it is certainly far handsomer to look at.

The lines of the hull, so far as they are visible, disclose a well-shaped and powerful craft, but until she is docked next week it will be impossible to form any fair opinion of her speed. The rig is practically the same as Thistle, the masthead shrouds and extra stay and spreaders of the new Herreshoff boats being lacking. The old-fashioned oak cheek pieces and trestle trees are still in use, the five shrouds all going over the masthead. The ironwork is of good design but considerably heavier than in the American boats, and while there is far less liability to break down, it is an open question whether the rig might not be lighter and yet strong enough. The yacht will be under way next Thursday, and she will dock early next week at the Erie Basin.

Lord Dunraven reached New York on Saturday on the Campania, with him the party took a run up to Duxbury, her two daughters, the Ladies Rachel Wyndham-Quinn and Allen Wyndham-Quinn; his brother-in-law, the Hon. Charles Kerr; the Marquis of Ormonde, Lord Wolverton, Col. Arthur Paget, the Hon. Hercules A. Languish and Charles Barrington.

No sooner had he landed than Lord Dunraven took a tug and visited the yacht in company with Messrs. Kersey, Watson and Ratsey. On Sunday the party took a run up to Duxbury, her two daughters, the Ladies Rachel Wyndham-Quinn and Allen Wyndham-Quinn; his brother-in-law, the Hon. Charles Kerr; the Marquis of Ormonde, Lord Wolverton, Col. Arthur Paget, the Hon. Hercules A. Languish and Charles Barrington.

The sight off Bay Ridge must have astonished considerably Capt. Cranfield and his crew. Early in the morning the hillsides and piers

were black with people, while the water was covered with boats of all kinds, from the rough little bateau built of driftwood and old boards, up to eight-oared shells and barges and all sorts of sailing and steam yachts. Rowboats drove a thriving trade in carrying visitors around the yacht, and the little steam water boat was crowded on every one of her trips, of which she made for an hour. For the small sum of twenty-five cents she offered a complete view of the yacht on all sides and also of Lord Dunraven and his two daughters. The day was warm and fair, but with a flat calm for three or four hours, which hung up the sailing craft, but in spite of this there were catboats by the score, and white sails were visible in all directions, trying to reach one common point. The steam yacht Ituna brought down from New Rochelle Messrs. Belmont, Iselin and Herreshoff, who scanned Valkyrie closely for some time. Vigilant will haul out on Sept. 23 or 24 at Harkin's ways, City Island, and will lie there until the eve of the races. The final details of the races will be arranged at a meeting on Sept. 26 between Lord Dunraven and the cup committee.

LOG OF VALKYRIE—COWES TO NEW YORK.

Aug. 23—Left Cowes 5:40 A. M.: light westerly winds; noon, calm, heavy swell; barometer, 30.08; 26 miles.  
Aug. 24—Noon, Falmouth abeam; 4 P. M., signalled the Lizards.  
Aug. 25—Noon, abreast Seven Storm Lightship, distance 4 miles; calm; barometer 30.40; P. M., light air, swell, west by northwest.  
Aug. 26—Open; wind, light easterly; haze; slow progress, at noon all canvas set; afternoon calm, no headway; barometer 30.40; longitude .06, latitude 50.07; 27 miles.

"VALKYRIE."  
CUTTER, 86FT. L.W.L. DESIGNED BY G. L. WATSON FOR LORD DUNRAVEN. BUILT BY HENDERSON & CO., GLASGOW, 1893.

Aug. 27—Open; light westerly wind; noon, set squaresails; barometer, 30.30; latitude 49.57; longitude 8.15; breeze, east by southeast; sea, irregular.

Aug. 28—Open; fresh winds, east, clear, blowing sharp; barometer 30.53; Noon, latitude 49.18, longitude 12.46; P. M., squally, showers, southeast winds.

From noon of Aug. 27 to noon of Aug. 28, 225 miles were made by log, 218 by observation.

Aug. 29—Open; fresh easterly winds; barometer, 30.38; noon, latitude 48.40, longitude, 18.06; P. M., fresh winds, southeast; nasty sea; single reef and trysail. Noon to Aug. 30, 234 miles by observation.

Aug. 30—Open; fresh winds, southeast; noon, high southerly breeze and swell. P. M., less wind; latitude 42.48, longitude 23.24; 224 miles.

Aug. 31—Two hundred miles. Open; southeast winds; ship rolling heavily. Noon, wind freshening; latitude 47.54, longitude 28.31. P. M., high wind and cloudy. Wind still southeast.

Sept. 1—Two hundred and twenty miles; open; moderate breeze, southeast. Noon, wind south; took squaresail in; reaching along steadily. P. M., wind west, smart breeze; rain and showers.

Sept. 2—One hundred and ten miles; open; wind west by northwest; squally; rain; bad sea; rolling heavily. Noon, latitude 47.30, longitude 36.12. P. M., hard squall, high sea; ship laboring heavily and flooding decks.

Sept. 3—Strong squalls, northwest by west; rain. Noon, heavy squalls; no observation; 173 miles by log. P. M., wind freshening; double reef fore and aft.

Sept. 4—Wind southwest, shifting to west by west; unsteady; poor progress. Noon, no observations; 90 miles by log; overcast; rain; nasty cross swell.

Sept. 5—Open; close reef trysail; wind west. Noon, wind more moderate; no observations; 77 miles by log. P. M., wind moderating; set trysail; heavy swell.

Sept. 6—Open; moderate breeze, west by northwest; heavy swell. Noon, observation 45.50 and 42.40; weather fair; 80 miles by log. P. M., breeze moderating; cross sea; west by northwest.

Sept. 7—Open; freshening winds, south by southwest. Noon, same; rain; observation 45.18 and 45.32; hard winds; heavy sea; close reef; 130 miles by observation. P. M., high wind; lay to under close reef trysail.

Sept. 8—Open; rolling heavily; high seas. Noon, wind moderating; overcast. Let reef out; very high sea, west by southwest. P. M., weather finer; heavy swells; barometer unsteady.

Sept. 9—Open; moderate winds south. Noon, dense fog; latitude 44.07, longitude 49.55. P. M., heavy seas; wind west by north; flooding decks; 151 miles.

Sept. 10—Moderate wind, west; clear; passed several fishermen. Noon; 56 miles; latitude 43.42, longitude 51.06. P. M.; poor progress; wind unsteady;

Sept. 11—Open; light wind, southwest; heavy roll; barometer falling. Noon, no observation; 61 miles. 8 P. M., wind freshening; with hurricane force; close reefed trysail and reached off. 10 P. M., shipped seas; smashed starboard storm rail and stanchion, bending tiller.

Sept. 12—Open; heavy storm; jib blew clear out of ropes. 6 A. M., gale abating; fished tiller with spare spar; sea high and shifting north; 61 miles. 10:40, signalled steamship bound east, one funnel, white band, three masts, fore and aft rigged; no answer. Noon, head winds; kept ship on course. 9:30 P. M., squally, light winds; trysail sheet swinging in, carried away binnacle hood.

Sept. 13—Fresh winds, north by northwest, heavy swells; shipped tube tiller. Noon, observation 43.17, 56.55. P. M., moderate winds, west by northwest; slow progress; 120 miles.

Sept. 14—Wind west by northwest; poor progress; passed east-bound steamship; signalled, no answer. Noon, 80 miles; observation 43.15, latitude 53.35. P. M. same weather; signalled another steamship all well, no answer; heavy swell north by northwest.

Sept. 15—Wind northwest by west; 6:30 A. M. passed steamship Berlin, signalled and was answered; set topsail and balloon staysail. Noon, calm. 3 P. M. signalled three steamships bound east; eighty miles; poor progress; observation, latitude 42.17, longitude 59.47.

Sept. 16—Wind south by southwest; signalled ship bound east; no answer; southwest swell. Noon, 160 miles; observations, latitude 41.39,

longitude 63.32. P. M., freshening gale; plunging heavily. Midnight, gale increasing; ship hove to; shipping water.

Sept. 17—Heavy gale, southwest; split after leech of trysail; ship before wind; set storm trysail. Noon, wind falling; calm; fearful swell; washed binnacle overboard; vessel dipping stern under and seas thumping heavily; rolling. P. M., light wind, northwest; wind and weather trying; 110 miles.

Sept. 18—Freshening winds, north by northwest; signalled mail steamship east bound, no answer; repaired trysail. Noon, observations, latitude 40.39, longitude 65.25; 97 miles; light airs. 8 P. M., moderate swell; threatening weather.

Sept. 19—Light wind and calm. Noon, wind freshening and sea, southwest by west; under gaff topsail and jib. Noon, no observations; 78 miles. P. M., single reef trysail; dense fog; light westerly winds.

Sept. 20—Dense fog, heavy swells. Noon, fog lifting; 42 miles; no observations. 2 P. M., fog cleared up, set topsail. Midnight, wind freshening, northwest by west.

Sept. 21—Head sea, freshening wind, northwest by north; shipping sea; took in jib and topsail. Noon, 230 miles; observations, latitude 40.19, longitude 72.33. P. M., tacked to north; calm, clear and smooth, 1:30 P. M., took pilot aboard.

Sept. 22—Light westerly winds. 5 A. M., abreast Highlands of Navesink, making trip 29 days 18 hours.

The Brenton's Reef Cup.

Thursday, Sept. 14.

A most remarkable race was sailed by Britannia and Navahoe for this trophy, the former eventually winning by 2½s. over a course of 130 miles. The distance was covered in 10h. 37m. 35s. by the winner, and considering the heavy sea which had to be contended with it was an unparalleled performance. Nothing in yacht racing annals can compare with the extraordinary close sailing of the two vessels, for as a matter of fact, neither was at any time more than a minute ahead of the other, and for fully half the distance, it may be said, that there was not more than a couple of lengths between them. Altogether it was a race beating far and away in every particular anything yet recorded in yachting history. There have perhaps been matches sailed over short courses quite as exciting, but nothing to compare with the wonderful speed maintained through such a trying sea. There was not a "carry away" worthy of note to be recorded, although the masts of both when the wind laid on caused some anxiety. The match proved most conclusively that the racing yacht of the present season is far ahead of the old type in regard to seagoing qualities as in speed.

At the westward of the island, the tides were as follows:  
 Britannia..... 2 12 30 Navaboe..... 2 21 20  
 A difference of 9m. 13s. At this point the Navaboe made an error in sailing; she jibed too late; she took in her jib so clumsily that she nearly hove to, and she lost way a little. At the end of the first round the tides taken at Kyds..... 1 58 45 Navaboe..... 2 14 15  
 In a word the Britannia was now more than a quarter of an hour ahead. The Navaboe had the only one little bit of luck in the first part of the race, as she passed the Warner Lightship. When the Britannia was laboring under the influence of the gusty wind, the Navaboe was laboring under the influence of the gusty wind from the land, which was worth ten minutes of time to her. She made some credit to it and seemed likely to do better, but the breeze blew away; she got again into the same water as the Britannia and showed no speed. She had improved, but not much. At the Nab the times were:

Britannia ..... 2 58 25 Navahoe ..... 3 12 31  
There was no longer the quarter of an hour's difference, the difference was only 14m. 6s., but as the Britannia turned home and made a broad reach it became evident she was the winner. She never faltered. It was difficult to take the times off the Spit markboat and they have to be trusted, though they are recorded as official markings by the Royal Victoria Y. C.  
A difference of hardly 14m. The lead of the Britannia had increased at the markboat at the West Middle to 14m. 25s. and the day's work was over. There was still Cowes to be visited, but the end came before five. The times of the finish are:  
Britannia ..... 4 29 17 Navahoe ..... 4 45 25  
Thus in the third day's race the English yacht won by 15m. 8s. and the cup stars with us. It will likely remain for the present at Ryde, unless the Prince should call for it. One strange thing happened. The race being over, the line being passed, almost as the gun fired the Britannia split her foresail from top to bottom. Her ill-luck came when it could do her no harm. The Navahoe's came when she lost her way by it. But it is evident that in the Solent, luck or no luck, the Britannia is the better craft. She is not so much better as some of her champions are saying, for the second turn over the course the Navahoe was yesterday almost the equal of her rival; but she cannot stand against the Britannia, and it is agreed on all hands that yesterday saw the victory of the better boat. To-day the two race across the Channel from the Needles to Cherbourg.

A British yachtsman who has seen all the races writes us as follows:  
*Editor Forest and Stream:*  
The result of the three matches for the Royal Victoria Y. C. gold challenge cup, value £600, between Britannia and Navahoe shows clearly that the former is by far and away the best all round vessel, as she has beaten Navahoe in moderate as well as strong breezes, winning the first race on Sept. 6 by 16m., second race on the 7th by 20m., and third race on Sept. 11 by 15m. The wind was moderate on Sept. 6, but strong, with a considerable lump of sea outside the Wight on the other two days; and Britannia was about three miles ahead at the finish in all the matches.  
Some excuse is made for Navahoe from her having several mishaps to her gear and canvas, but even if everything had stood all right there was no chance whatever of her winning any of the matches, as when the breeze was true and steady Britannia beat her fairly on every point of sailing, except on a dead run, when Navahoe was rather the fastest, but the moment sheets were pinned in, Britannia left her fast every mile they sailed, more especially when there was a bit of a

there was a protest. In one or two classes there were protests entered by some of the beaten yachts; in other classes they frankly admitted that they were fairly beaten and entered no protest. What would you consider a fair and just decision for the regatta committee to make. Kindly give your opinion and greatly oblige.  
Geo. S. McALEIN.

Beverly Y. C. Championship.

MONUMENT BEACH—BUZZARD'S BAY.

Saturday, Sept. 16.

THE 206th regatta, third Buzzard's Bay championship, was sailed at Monument Beach on Sept. 16 in a very heavy blow from S.S.W. and an exceedingly heavy sea, the weather being very thick and the squalls, which were very severe and differed several points in direction, being accompanied by a blinding rain. Altogether it was one of the most severe races ever sailed on the bay and the number of starters was largely diminished in consequence.

In the first class Flight, which had just been purchased by Mr. Bulard, put in an appearance, but as she had never been properly enrolled with the secretary her entry could not be taken. Violet started, but owing to a mistake about the course did not finish. The second class had a long beat to Scraggy Neck, a run almost before the wind to Dry Ledge, where they gibed over and had the wind about abeam to Pine's Buoy, and then home dead before it; 9 1/2 miles.

The rules require all boats to be sailed by members of the club only. Gymnote and Agawam are fitted with a wheel, the others with tillers, and in two cases at least, Ulula and Mist, it was impossible for one man alone to steer them off the wind.

The start was a very good one, the six boats all getting off within 10s. of the gun. Mist was first, with Anonyma on her weather quarter and Gymnote to leeward.

Mist started with three reefs, others with four or five. Mist lugged hers over the course, but would have done better with another reef. Agawam amaged her centerboard and was delayed by it.

Mist immediately worked to windward of the fleet and outfooted all but Gymnote, who, however, fell off badly to leeward, and after a while started her mast on the step and had to be eased along.

Mist led Anonyma about a minute round the windward mark. Gymnote a very close third; then Ulula, Agawam far in the rear, while Lestrin had broken her boom and gone home.

Mist lost badly running to Dry Ledge by going too far to windward, letting the others take a shorter course and cut a corner. When the buoy was finally found, it was too thick to see anything; she was still

Canoing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc. of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

Canoing at the present time is in a very curious condition, apparently flourishing as far as the number of canoeists and canoes are concerned, with many large canoe clubs well housed and in good financial condition; but at the same time there is a marked lack of vitality in both cruising and racing that must, sooner or later, have a bad effect on canoeing at large.

The cruising side of canoeing, once so prominent, has largely disappeared from public view; cruising canoes are built and used, and long cruises are made, but neither the canoes nor the cruises attract even a small part of the attention once given to them.

In a similar way racing has fallen off, until it is a serious question just what the next year or two may bring about. The annual meet has by degrees become mainly a racing function, in fact it has been proved that cruising and attending a meet are mutually incompatible, if the phrase may be permitted. From the nature of the case the racing must figure as the chief feature of a meet, it is by no means the sole, or even the greatest pleasure to be found in attending an A. C. A. camp, but it appeals to canoeing at large and the general public, while the quieter pleasures of social intercourse and the meeting with old friends are known only to the campers themselves.

We are glad to see that there is still one canoeist who appreciates both the necessity for some action, and the power and responsibility of the American Canoe Association as the body from whom such action must come. We can heartily second all that Mr. Vaux says, both last week and this, and we hope the racing men will take it upon themselves to at least express their opinions as a guide for the executive and regatta committees.

The A. C. A. and Canoeing.

*Editor Forest and Stream:*

Article 1 of the American Canoe Association's constitution states: "Object.—Its object shall be to unite all amateur canoeists for the purposes of pleasure, health or explorations, by means of meetings for business, camping, paddling, sailing and racing, and by keeping logs of voyages, records of waterways and routes, details, drawings and dimensions of boats, and collections of maps, charts and books."

The A. C. A. was organized thirteen years ago for the purposes stated above. The present function of the Association is little more or less than an annual meet—a two weeks' camp and races. This is a fact and not a theory. It is also a fact that for two years the number of men and canoes competing in the races is far less than it once was. Whether the A. C. A. should cover a wider field or not I do not propose to discuss at this time. But first, the meets having come to be about the only excuse for its continued existence; second, the races being the main feature of the meets; and third, the interest in racing having certainly greatly declined in the last three years, it seems timely to look for the cause and, if possible, to awaken a new interest in racing, or sit quietly by and see the A. C. A. go to pieces.

The editorial in last week's FOREST AND STREAM practically sums up the causes of a decreasing interest in racing, and refers to the fact that a like state of affairs exists in England—the great skill of one or two sailors, and the perfection of their rigs and models discourages competition. Expense and time are also factors. What are we going to do about it?

What can be done? The rules should be revised, corrected and brought down to date, for one thing. The laying out of courses is all in the hands of the regatta committee, and a vast improvement is possible by which a fair chance of winning can be given to a greater number. This detail of a meet has run in a deep rut long enough. Handicap races could be arranged for on the programme. Sails or seats might be limited for special races. Division rivalry might be stimulated in paddling and sailing by having division races for the selection of division champions and a final series of races between the four division champions for the A. C. A. championship. These are mere suggestions for discussion. Club rivalry in the divisions and division rivalry in the A. C. A. might be stimulated with good results. But nothing will be done unless those interested will stand up and speak out.  
C. BOWEN VAUX.

The Newton B. C. War Canoe.

The new war canoe which has recently been built for a few members of the Newton Boat Club, is attracting a great deal of attention on the Charles River these fine autumn days. On Labor Day she was launched from the boat house of John R. Robertson, at Riverside, and a trial trip to Waltham and return proved that the Wabewawa is an extremely fast canoe. The name is taken from an Indian word meaning wild goose, the dimensions being as follows: Length, 25ft.; beam, 30in.; depth, 16in.

This is the only canoe of the kind ever built in this part of the State and is certainly a novelty to local canoeists. It is the intention of the owners to visit Springfield next season, during the Eastern Division Meet of the American Canoe Association, and try the Wabewawa's speed against a similar war canoe owned by the Tatassit Canoe Club, of Worcester. In all probability she will also be taken down the Connecticut River to Long Island Sound so as to be able to participate in the races at the regular camp of the American Canoe Association in August, 1894. Here she will meet the war canoe of the Red Dragon C. C. of New York, and the Ko-ko-ko-ho, of the Yonkers C. C. Some very interesting races ought to be the result.  
The seating capacity of the Wabewawa is 13, but the greatest speed can be attained with a paddling crew of eight men, besides the helmsman. An impromptu race with the Cleo, one of Waltham's fastest steam launches, took place a few days ago and proved to be most exciting as well as interesting. While the launch was running under 65lbs. of steam the war canoe could easily show her stern to the Waltham boat, but when the pressure was raised to 110lbs. it was nip and tuck for half a mile. The speed attained by the Wabewawa was fully 8 miles an hour, which is extremely fast for a canoe of this kind. With a properly trained crew she will undoubtedly be able to make at least 9 miles an hour.

The canoe is manned by a regular crew as follows: Louis S. Drake, captain and helmsman; Francis J. Burrage, lieutenant and stroke; Russell A. Ballou, Jr., Wm. V. Forsaith, Chester A. Howe, John F. Linder, James H. Lowe, Quincy Pond, George H. Smith.

War canoes are fast becoming popular, and a canoe club is not considered complete without one. In a race which took place recently on the St. Lawrence River there were six canoes, each with a crew of fifteen men, making a total of ninety in the one event. Races of this sort are naturally exciting.

The Newton men who are lucky enough to be owners in the Wabewawa are planning many local trips for this fall, and the new canoe is sure to be a success.—Weston (Mass.) Graphic.

Red Dragon C. C. Fall Regatta.

The fall regatta of the R. D. C. C. was held on Sept. 16 in the presence of many friends and guests. The evening was successful in every particular and were highly appreciated by all present.

The sailing races were the first upon the programme and the entries and order of finishing were: Oseola, D. H. McCormick, first; Kee Lee, F. W. Noyes, second; Smuggler, A. S. Fenimore, disabled; Fineen, J. M. Hamilton, disabled; Her Name, M. D. Welt, disabled.

Thirty minutes after the start of the canoes the yaws entered upon their journey of twice around the triangle. The entries and order of finish were: Radha and R. G. Fleischman, first; Oni, W. J. Scott and P. O. Gross; Coquette, W. Wise and H. Blumer. This race was hotly contested for second place as the Ardee was a sure win and Enid second, Coquette third.

The tournament was declared a draw. Wimley, with his servants, attended to the waits of all; after which the orchestra poured forth sweet melodies to which the ladies and members tripped the light fantastic until the wee hours of the morning. The series of year's events the most successful in the history of the R. D. C. C. The members are very enthusiastic, and we are anticipating a year of pleasure that will surpass the present year.  
F. O. G.

ISLE OF WIGHT COURSES.

jump of sea outside, when Navahoe made a very discreditable performance for such a big vessel, so much so that she could not possibly be given the full weight of her canvas.

This was no doubt the reason she had so many mishaps to her gear, because it is a well known fact that when a vessel is hampered and pinched up to every fresh puff of wind, the canvas is liable to be blown when she is once more set a-going, and no matter how clever those on board Navahoe may be, I think they have yet to learn the first principle of sailing in a jump of a sea "to keep your vessel going," because unless this is done accidents are sure to happen. The only excuse for not doing so is when one has not confidence in his ship being able to keep going.

Probably this is the case with Navahoe, as on every occasion when there was a strong breeze they seemed to be afraid to keep her full, her head sails and topsail showing evident signs that they were ripping her up. So the only conclusion one can come to is that she is very deficient in stability for the amount of canvas she carries. This was evident to every one who saw her in the matches of Aug. 3 and 4, at Cowes, except possibly to those on board, who afterward asserted that she was all right, but from the fact of their reducing both her spars and canvas, preparatory to the matches for the Victoria cup, it proves beyond a doubt that she was not all right then and neither is she now, even with her canvas reduced from 161 to 155 rating.

This, I think, shows clearly that there is something radically wrong in her calculations which do not reflect much credit on those who designed her. Mr. Herreshoff puts the blame on Mr. Carroll and vice versa, but whoever is to blame there can be no doubt that they have made a fine mess of her between them, and to think that after all the chops and changes in her she is still far from being a really reliable seaworthy vessel, makes one feel as if she had been designed by some "apprentice" hand, instead of by a "master architect."

Contrast her with Britannia and Valkyrie, the former of which has sailed 42 matches since May 25, in precisely the same trim and sail plan as the day she was launched, not an alteration of any kind being required, and no trial match with any other vessel before she started in her first race—Valkyrie, owing to her being withdrawn preparatory to crossing the Atlantic, has only been in 24 matches from May 25 to Aug. 4, but has been equally as fortunate, no alteration of any kind being required, except a trifling reduction in her topmast early in the season. Such results in two vessels of rather different type show what may really be looked on as the perfection of an architect's skill, and what may be the result of the contest between Valkyrie and your Cup defender, we on this side have the satisfaction of knowing that Valkyrie is fit to go anywhere, not as some of yours which have been built with only one object in view, and not of very much value later on, while all our new big ones may be trusted to be good all round vessels for many years.  
SCOTSMAN.

LONDON, Sept. 12.

A Question in Racing.

THE following letter explains a question which has been submitted to us for a decision. From the circumstances, as stated, we should say that the race should stand, all the conditions being complied with, and that there was no warrant for the action of the committee in ordering a re-sail.

*Editor Forest and Stream:*

On July 4, a regatta was sailed under the following circumstances: The verbal orders were to sail from the club house to and around buoy 11, then around a stakeboat off Norton's Point, returning to the club house, twice around. The typewritten orders read "to and around stakeboats off buoy 11, and Norton's Point, etc." The leading (and winning) yacht in each one of the first three classes, not finding a stakeboat off buoy 11, sailed some distance below the buoy and rounded a fishing schooner. All the rest of the yachts in these classes started to follow their leaders; but, finding it was a mistake, came about before reaching the schooner and headed for the Norton's Point mark. The leader in the fourth class started on down for the schooner after passing correctly buoy 11, but finding that the rest of her class rounded the buoy and was not heading for the schooner, immediately gybed and took after her opponents, caught and passed them, and won the race with minutes to spare.

All winning yachts complied strictly with the rules as to rounding marks, etc., and only made the mistake of looking for a stake boat off buoy 11 on the first turn, all rounding the buoy properly on the second turn. The winner in each class sailed over a greater distance and lost the most time by the conflicting orders and yet won under those circumstances. Would the sailing committee be justifiable in ordering the classes to resail the races, or only those classes in which

leading boat, however, and had the race well in hand; but when they tried to jibe, the one member aboard was not strong enough to keep her off, and she had to come about. She failed the first time, and when she got round on second trial was several minutes behind all but Agawam. After this she gained very rapidly on all, catching Gymnote and Ulula, finishing with them and gaining on Anonyma; though Anonyma and Ulula shook out a reef each, coming home from the Pines.

Gymnote protests Ulula for not being sailed entirely by members of the club, claiming that one or two professionals helped her owner at the stick; Anonyma had two or three club members aboard. Gymnote's protest was granted.

Five boats started in third class, course a beat to Pines buoy and back, twice over five miles. Gilt Edge was soon overpowered and withdrew. Kaloola showed up in great form, beating Nobska 14m. Scintilla broke her boom.

In the fourth class Kitten had a walkover on same course as third class. It is greatly to be regretted that Dawelle and Cygnet did not appear.

In fifth class P. D. Q. and Weona started, course Pines and back. The latter soon withdrew, but the fellow kept on, and though constantly full of water, managed to make the course, though the sea was tremendous for a boat of her size.

FIRST CLASS.		Length.		Elapsed.		Corrected.	
Violet, Toby Club.....		24.05					
Anonyma, F. L. Dabney.....		23.08	1 48 10	1 35 25			
Ulula, W. H. Winslip.....		22.08	1 40 53	1 36 04			
Gymnote, W. E. C. Eustis.....		23.09	1 50 00	1 37 21			
Mist, Geo. H. Dyman.....		23.09	1 50 03	1 37 23			
Agawam, J. G. Young, Jr.....		23.08	1 55 50	1 46 05			
Lestrin, J. Crane, Jr.....		22.08		Broke boom.			
THIRD CLASS.							
Kaloola, H. N. Richards.....		19.09	1 07 15	0 57 53			
Nobska, A. Beebe.....		19.08	1 08 32	0 59 10			
Doris, John Parkinson.....		19.08	1 12 58	1 03 30			
Scintilla, Geo. S. Fiske.....		19.00		Broke boom.			
Gilt Edge, D. L. Whittemore.....		19.07		Withdrew.			
FOURTH CLASS.							
Kitten, Toby Club.....		17.00	1 23 10	1 11 35			
FIFTH CLASS.							
P. D. Q., R. W. Emmons.....		12.00	0 45 07	0 36 10			
Weona, Henry Ware.....		14.00					

Winners, Class 2, Anonyma first. Class 3, Kaloola first, Nobska second. Class 5, P. D. Q. first. Violet holds championship. P. D. Q. and Anonyma win championships. Second prize, Class 2, won by Gymnote. Judges—F. Elliot Cabot, N. H. Emmons.

YACHT NEWS NOTES.

The Roberts Boiler Co. has had a very busy season in spite of dull times, and has booked an order for their 550th boiler. Messrs Marvel & Co., of Newburg, have ordered two boilers, of 43sq. ft. grate surface, for a twin screw steamer building by them. Some time since a battery of four Roberts boilers was placed in the steam yacht Radha, but were removed after a short time and placed on Tebo's wharf. Two of these same boilers were purchased this spring by Mr. H. B. Moore and placed in his new yacht Monetta, where they are now performing most satisfactorily. The steam launch Portland, built this spring by Riley & Cowley and fitted with a Roberts boiler carrying 250lbs. of steam, was the winner in the steam yacht race of the Lake Champlain Y. C. on Aug. 16, making just over 19 miles per hour. She is 32ft. long.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$2).

## Toronto C. C. Paddling Trophy.

The Toronto Canoe Club was very unfortunate in having Saturday for the international paddling trophy race. The wind was strong north-west wind blowing, and as a result "all the little wavelets had their white caps on." The race was to start at 3 o'clock, but at that time the regatta committee decided to wait for the sea to calm down, but it was a vain hope, and at 6 o'clock the contestants were ordered to get to the starting point. Every one would have preferred having it postponed until Monday, but R. D'Arcy Scott, of Ottawa, who was of the A. C. A. paddling trophy, had to return Sunday, so there was no help for it. After quite a delay all got to the starting point. When they lined up it was seen that Muntz and O'Brien had covered racers, and Scott had an open racer. Their positions were on one knee, with the other foot extended in front. Tilley and Johnston had ordinary double Peterboro open canoes, and took the standing position. An excellent start was made and the paddlers kept well together until the half-mile mark, when R. G. Muntz, of the Argonauts, drew ahead, and finished six lengths to the good. Time, 8:55. He thus maintained his title of champion double blade paddler of America. R. D'Arcy Scott was second, three lengths ahead of A. H. O'Brien, of the Argonauts, and Tilley and Johnston, of the Toronto C. C. At the finish it was almost too dark to recognize the paddlers as they passed the finishing point. —Toronto Mail, Sept. 18.

## A Passaic River Camp.

The canoeists of the Passaic River will hold a three-day camp on Oct. 6, 7 and 8 at Bendview, near Avondale station, on the Erie Railroad. The camp is on the Passaic River, above Belleville. All canoeists are invited, and tents will be provided for visitors from a distance, though each will do well to carry a pair of warm blankets.

## CANOE NEWS NOTES.

Under date of Sept. 10 the "Whiffler," writing to a friend, thus describes his meeting with the "Jabberwock" at Oakland, Cal.: "I went over to Oakland, and at the Oakland C. C. found the 'Jabberwock' on the float, preparing his canoe for a race; when I spoke to him and he realized who it was he nearly fell over backward with amazement; then he sprang up, grabbed me by the shoulder and executed the wildest kind of a war dance, crying, 'The 'Whiffler!' the 'Whiffler!' Why, bless your old eyes, how did you get here? Where did you come from? What's been to Alaska and never wrote for me to go with you?' etc., etc. The 'Jabberwock' goes East in about a week so he is most likely near New York now." We regret to say that the "Whiffler" did not tell of the "Jabberwock" racing, but we all know that in a race for friendship with any of the hundreds of his canoeing friends "Jabber" always gets there—jang-a-lang, jang-a-lang.

## Rifle Range and Gallery.

## Zettler Club Shoot.

CYPRESS HILLS PARK, Long Island, Sept. 24.—This being the regular practice day of the club, the larks were hardly on the lookout for the early worm before straggling groups of the experts were to be seen entering the park. There was some interest centered in this shoot from the fact that two of the lay members, Messrs. Schmidt and Plaisted, had challenged two of the experts, Messrs. Ross and Holges, for a fifty-shot race. To be shot here this morning, the losers to pay for the winners. The challengers had for some days been boasting to their ability to do up the experts, but whether this boasting was in earnest or simply a whistle to keep up their courage, it is hard to say. Probably the latter. At any rate the lay members were not in it after the second string was shot. The scores were as follows:

F C Ross	231	207	238	227	217	1068
H Holges	199	213	208	224	215	1061
Philip F Schmidt	300	210	203	201	212	1026
G W Plaisted	207	185	217	203	1029	1005
The weather conditions were favorable for good shooting and some of the shooters present made creditable scores. Geo. W. Downs struck an expert gait at one time, making a score of 215 points. L. P. Hansen has joined the Zettlers and shot along with them for the first time today. His scores of 219 and 215 show that he is reaching for the expert class.						
F C Ross	23	25	20	24	20	24
H Holges	21	25	21	20	23	24
L P Hansen	23	24	20	25	20	21
G W Plaisted	23	20	20	15	24	20
C G Zettler	20	22	25	19	23	21
R Harman	19	20	21	15	23	25
P F Schmidt	19	24	20	19	23	21
B Zettler	24	20	19	20	23	21
G W Downs	22	20	24	20	24	21
Jos Gunther	19	17	15	20	20	17
F Fabarius	25	17	19	17	19	10

## Hudson Rifle Club.

ALL arrangements have been completed for the match between the Hudson Rifle Club and Paterson Rifle Association for a purse of \$40, which takes place at Paterson, N. J., Oct. 1, at 1 P. M., distance 100 yds., German 20-ring target. Trains leave New York via Erie R. R., at 12, Jersey City at 12:12 P. M.

In regard to the item under the heading of "Rifle Notes" which appeared in the last issue of FOREST AND STREAM, regarding the Hudson and Greenville teams, it is unnecessary to state that the Hudson do not look for newspaper honor, but do actual work when called upon to present themselves at the butts. It can be further stated that they are perfectly prepared to meet the Greenvilles at any time and for any purpose which may be agreed upon, as there is never an excuse made for being disabled by not having their best men with them. The club is now composed of such strong elements, that there are always enough "best" men to compete in a match even if it should call for 30 men. Any challenge from the Hudson's friends in Greenville will not doubt be cheerfully accepted and no excuses offered.

The Puritan Rifle Club have challenged the Hudson Rifle Club to a 10 men team match, to take place at an early date.

The following members of the Hudson Rifle Club, shot the appended scores on Saturday, Sept. 22, on the classic range, distance 100 yds. The rifles used were the regular gallery rifles, using 22cal. cartridges.	
C. E. Bird	14 17 18 20 16 14 13 16 15-148
T. A. Reynolds	17 18 15 19 15 13 15 16 15-166
W. Cornell	19 12 18 9 13 20 17 13 16 15-142

S. Middleton	19 14 11 16 11 13 14 6 16-139
	19 14 11 16 11 13 14 6 16-139
	18 15 17 16 11 1 6 13 14-130
	17 7 0 13 10 16 19 16 15-128
	20 13 15 9 14 9 14 10 12 17-133
	12 18 15 14 13 14 5 18 15-139

## German-American Prize Shoot.

The sixteenth annual festival and prize shoot of the German-American Shooting Society of New York was held in Washington Park on Monday and Tuesday of last week. The society is composed of some twenty odd separate companies and the membership is something like 1,400. Many of our prominent shooters are identified with the society and there is more or less rivalry among the several companies for individual and team honors.

The Lutzow Co. No. 12 has for some years held the lead in the team competitions. Its captain, Gus Zimmerman, a shooter with an international reputation, is known as a hustler, and he has probably had much to do with the success of his company. To ex-captain Gus Ringler is also due much of the credit for keeping up the reputation of the Lutzow as the banner company of the society.

To have the pleasure of claiming a company member as the king at the annual festival is also a matter of no little moment to the several company organizations. This year the honor fell to the Lutzow Co. in the person of its captain, Gus Zimmerman, who made the fine score of 69 points out of a possible 75 on the ring target. The crowning ceremonies on the evening of the second day were carried out in a most elaborate manner and the Lutzow Co. had made great preparations for a grand time, which was broken up by the receipt of a telegram, by Zimmerman, fortunately untrue, that his wife lay at the point of death at home. This caused him to hurry away in great distress of mind.

The programme formulated by the shooting committee, if it had received its just deserts, would have been boycotted by the members of the society and all outside shooters. But it seems as though the average shooter, in his desire to shoot, will submit to almost any shooting programme, no matter how unreasonable its demands may be. This committee, who had made an effort to get up a programme which would handicap the good shooter, are no doubt much surprised at the results of their labors. The experts got in their work as usual; shooting but little, just enough to land in their usual positions. The average shooter nibbled a little at the programme and then drew out, and instead of the society's making \$300 or \$300 on the shoot, it barely covered its expenses.

Open to all comers, tickets unlimited. Tickets 3 shots. Ring target, open to all comers, tickets unlimited. Tickets 3 shots. Non-members must pay \$2 for the first ticket, all re-entries \$1. Three best tickets to count for first 10 prizes. The two best tickets to count for the second 10 prizes, and the single best ticket for all other prizes; 42 prizes ranging from \$40 to \$1. Scores:

## Revolver Shooting in England.

ON Sept. 5 the members of the South London Rifle Club, in their weekly revolver competition, made money and good scores. Mr. Walter Winans made a score of 41 at the 20 yds., which puts him on two more points for the revolver championship of the club. He now holds the revolver championship of both the South and North London rifle clubs, as his scores have got such a lead on those of the other members that it is impossible for them to pass them in the few weeks left before the competition closes. Mr. Winans therefore does not intend to shoot at the clubs any more this season unless his scores are threatened. Below are details of results:

Walter Winans	77777-41	C P Lowe	766776-39
G F Frost	77777-40	G Mortimer	454777-34
50 yds. Target.			
Walter Winans	77777-40	G Mortimer	774757-30
The scores for the revolver championship of the club.			
Walter Winans	41	41	40 40-202
Lieut T Heath	40	39	38 37-192
C P Lowe	39	39	37 36-189
B V Keen	37	35	34 33-170
Gollman	33	33	30 29-125

The scores for the revolver championship of the North London Rifle Club now stand as below. (It will be noticed that Capt. Cowan has drawn into third place ahead of Lieut. Varley):

Walter Winans	41	41	41 40-204
C P Lowe	40	38	38 37-192

## Greenville Rifle Club.

At the weekly gallery shoot of the Greenville Rifle Club, of Greenville, N. J., on Friday, Sept. 24, the following scores were made: 10 shots, possible 250, distance 25 yds.: Plaisted 242, Dorrier 241, Chavart 240, Purkess 239, C. Boag 239, Collins 238, Robidoux 238, J. Boag 237, Dodds 237, Hill 233.

The attendance at the Saturday outings of the Greenville (N. J.) Rifle Club, in Ambassador's Park, is growing smaller as the season advances, owing probably to the fact that many of the members are deprived of their half holiday from Sept. 1. Only six members were present, and of these, four filled out their scores. Collins is improving very fast in his shooting both in the gallery and at long range. Conditions, 10 shots, German ring target, 200 yds. The scores are appended: Plaisted 220, W. C. Collins 211, C. H. Chavart 208, C. Boag 194.

## New York City Corps.

The monthly shoot of the New York City Schuetzen Corps in Washington Park on Friday, Sept. 22, brought out the usual quota of regulars. R. Busse carried off more than half the members are present, and Otto Uehlein on the man target. The scores are appended:

Ring target: R. Busse 207, C. G. Zettler 196, Christ, D. Rehm 190, Otto Uehlein 188, H. Kuhlmann 180, John Facklamm 161, C. Gohmann 154.

Man target: O. Uehlein 54, John Facklamm 53, R. Busse 53, C. G. Zettler 52, C. Rein 51, H. Kuhlmann 50, J. Mathias 49, J. Gerdes 1, H. Kuhlmann 1.

## Italians Shoot.

The United Italian Societies of New York celebrated the Italian national festival on Sept. 20 at Lion Park. The Italian colony was out in force. A small shooting programme was put up in the short range gallery and an invitation extended to all comers to participate. The Italians have a shooting club devoted to both the shotgun and arm. The scores are appended, possibly 50 shots each.

Honor target: L. Reali 54, P. Selvaggi 52, G. Gandolfi 51, C. Schwab 61, M. Guerrieri 49, G. Muzio 49.

Common target: P. Selvaggi 52, A. Madaia 52, F. Rossi 51, A. Paladino 51, Schmidt 51.

## RIFLE NOTES.

CHAS. C. WISSEL, the genial proprietor of the Cypress Hills Park, Long Island, contemplates a two-weeks' visit to the wilds of Maine. He expects to start about Oct. 25, making the Rangeley district his objective point.

For once in its history the Zettler Rifle Club is compelled to draw upon its treasury to make up a deficit from its fall festival. The shoot was a success, notwithstanding the hard times. A little extravagance on the part of the management brought about the deficit.

At the festival of the United Italian Societies in Lion Park last week seven of the eleven prizes went to members of the Italian Shooting Society. Practice makes perfect in rifle shooting as well as in everything else.

The Greenville Rifle Club and the Puritans, of Newark, are rubbing noses over a team match.

L. Busse struck something easy when he polished off that old veteran Louis Regel. This old chancier has been handled so much that he has hardly a feather left to him.

The Greenville Rifle Club has decided to hold a gallery prize shoot in its club house ranges on Saturday and Sunday, Nov. 11 and 12. The prize list will contain 20 prizes ranging from \$40 to \$2, with 5 premiums from \$10 to \$2. The programme of the shoot will be issued in a few days.

## Trap-Shooting.

All ties decided unless otherwise reported.

## FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Sept. 25-26.—Interstate Manufacturers' and Dealers' Association seventh tournament, at Lynn, Mass., under the auspices of the Lynn Fish and Game Protective Association.

Sept. 26-29.—Pennsylvania State Sportsmen's Association tournament at Harrisburg, Pa. H. M. F. Worden, Cor. Sec'y.

Sept. 27-28.—West End Gun Club, Ottumwa, Iowa, second annual tournament. J. R. Young, Sec'y.

Oct. 2-7.—World's tournament, Watson's Park, Chicago, Ill. Live birds and targets. John Watson, Manager.

Oct. 3.—Paterson Gun Club, 25-bird sweep, \$35 entry, at Willard's Park, Paterson, N. J.

Oct. 19-20.—West Newburg Gun and Rifle Association fall tournament, at Newburg.

April 4-6.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap at Dexter Park, Long Island.

May 22-24.—Knoxville (Tenn.) Gun Club tournament, \$1,000 added money.

June (third week).—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscom, Sec'y, Atlantic City, N. J.

## DRIVERS AND TWISTERS.

The Crescent Gun Club of Denver, Col., will shoot on Oct. 8 at Perrin's Lake, beginning at 10 A. M. The Sept. issue of Sports Field has the following to say of the club. "The Crescent Gun Club, organized early in the year, is in an extremely healthy condition, both as regards finances and membership—the latter being in the neighborhood of forty. The club's regular shoot comes off the first Sunday in each month (except when said Sunday falls on the 1st or 2d of the month) at its well-arranged club-house near Berkeley Lake, North Denver. Harry Luckenbach of the Denver Packing Company is the efficient Secretary; with William Beggs, Quincy Lampough and William J. Wulff as President, Vice-President and Treasurer respectively. The personnel of the club's membership is good. The writer has not a complete list by him but picks the following out of his mental hat rack: Harry Bostwick, A. H. Lefler, Charlie Roth, Ed. Warren, Pete Schlereth, George Lyons, Henry Morehouse, Charles F. Hedges, Fred Stapp, Frank Anderson, Henry Gebhard, C. E. Weatherhead, G. Fetta, E. C. Evans, Max W. Walke, Hon. J. D. McGilvray, Paul Stenck, J. W. Tomlinson, N. C. Evans, George Bailey, Paul Haberl, George Miles, R. C. Greiner, F. C. Smilde, H. H. Metcalf, Henry Smith, Nick Dowling, A. M. Grant, A. H. Smith and the Burlington Route's clever Western passenger agent, George Valley. The club's gold medal has been won three times already; first by William Wulff, second by Eddy Warren; and third (Sept. 3) by Frank Anderson. It has to be won three times (not necessary in succession) by one person to entitle him to its permanent possession. Here is how it is shot for: Fifty bluebirds, divided as follows: Fifteen walk around, unknown traps; 15 unknown trap, shooter at centre trap; 5 pairs, doubles; and 10 walk around, known trap. The Oct. 8 shoot is going to be a 'whizzer.'—All de 'ristocratic shooters will be dar.

A year ago we recorded the fact that several members of the North End Club, the crack social organization of Newark, N. J., had become enthusiastic over the subject of trap-shooting, and that a number of matches were on the tapis. For some unknown reason the enthusiasm suddenly cooled and the matches went by default. Last week, however, interest in the sport was revived by the efforts of some of the members and before long the club is expected to put a team in the field against the Newark Gun Club. The prime movers in the new departure are Fred, Castle, as son of Samuel Castle the veteran of the Newark Gun Club, John Brockie, who passes his winters shooting at game in Florida, Henry M. Doremus, John Young and Jacob Clark. A week ago these five men secured a lot of rattling good birds and held a practice shoot to test their nerve and skill. Castle killed 23, Doremus 22, Young 22, Clark 19 and Brockie 18, out of 25 shot at by each. They are anxious to notify the press of their dates. For instance, our last issue went to press on Sept. 10. On the 21st we received a programme for a shoot to be held at Morristown on the 27th. As a matter of course we were unable to assist in spreading news of the shoot. This is only one of many instances which we could cite. Send us your dates, if nothing more, at least two weeks before a shoot, and you will always find us ready to assist you in attracting contestants. Don't be afraid to ask the same time to send along "pointers" as to the management, location of grounds, etc.

A great time is expected at Willard's Park, Paterson, N. J., next Tuesday, when the Paterson Gun Club will hold an all day's tournament at live pigeons. The main attraction of the day, and one which should attract a big field of entries, will be an open to the world sweepstake at 25 live pigeons, \$35 entry, in which, besides the regular money division the club will give \$50 in cash to the high gun. This is a match on ten Park Hotel grounds in that city, the conditions being 15 live birds per man, find trap and handle 25 yds. rise, one barrel only to be used. The birds were a splendid lot of flyers and good "lead carriers" as well. J. Smith was referee, while Messrs. Wright and Burns acted as judges. Morley lost his second, fourth, eighth and ninth birds, while Kallert lost his first, fifth, ninth and twelfth, this making the match a tie on 11 kills each. Morley lost two and Kallert one dead out of bounds. The tie will be shot off at some future date.

The trap-shooters of Lynn, Mass., will have an opportunity on Oct. 25 and 26, to test the Novelty rule, as on those dates the Interstate Manufacturers' and Dealers' Association will hold a tournament under the auspices of the Lynn Fish and Game Protective Association. Lynn is within nine miles of Boston, and the shoot is sure to draw a big contingent from the "Hub." The Novelty rule took well at Worcester, and is likely to be favorably received at Lynn.

The new "nitro club" shell of the Union Metallic Cartridge Company, mention of which was made in our columns a few weeks ago, is now on the market, and those who have given them a trial pronounce strongly in their favor. This is another success for Wm. M. Thomas, the expert

The "only" Jack Parker, of Detroit, called on us last week, jolly and hearty as ever. He was fresh from the Allentown-Bethlehem Tournament, of the Manufacturers' Trap-Shooting Association, which he says was a fitting finale to a successful season. He will try his hand on John Watson's birds next week.

Justus Von Lengerke, of the firm of Von Lengerke & Detmold, is "doing" the great West in the interest of his firm. He spent a week with the World's Fair and then started further west, going as far as Denver. He will possibly return to Chicago in time to take part in John Watson's tournament.

Positive dates will soon be announced for the three days' tournament of the Atlantic City (N. J.) Rod and Gun Club which will be held the third week in June, 1894. Any information in regard thereto may be procured from R. Griscom, secretary, Atlantic City, N. J.

"Tea Kay" Keller, fat, fair and rapidly nearing forty, dropped in to see us a few days ago, bringing along the same old engaging manner and winning smile as of old, and with the same "22-short" and "climax" enthusiasm.

T. W. Morley expects to have at least thirty entries for the 25-bird sweep to take place at Willard's Park, Paterson, N. J., next Tuesday. The special prize of \$50 for the high gun should prove a drawing card.

What a battle-royal there will be when New Jersey and Kings county pits each twenty men against the other in a contest at 15 live birds per man! No "odds" are likely to be offered on either team.

There will be plenty of live birds on John Erb's "Old Stone House" grounds in Newark to-day, and all sportsmen will be welcomed. The birds furnished at this place are always of good quality.

All trapdom is speculating as to the probable number of nery shooters who will put up their cash in the 100-bird sweep at John Watson's next week.

The Youngstown (Ohio) Gun Club will hold a target tournament on Oct. 5. American Association rules and the Parker handicap will be used.

Arthur DuBray, the genial southern salesman for the Parker gun people, has bade adieu to Chicago and started on a southern trip.

Milton F. Lindsey, he of American wood powder fame, will take part in John Watson's world's tournament next week.

Don't fail to attend the tournament of the Paterson Gun Club at Willard's Park, Paterson, N. J., next Tuesday.

Harvey McMurchy will kill John Watson's pigeons and talk L. C. Smith guns at Chicago next week.

A. G. Courtney has assumed charge of the Lefever Arm Co.'s exhibit in the World's Fair.

The Riverside Gun Club, of Red Bank, N. J., has postponed its tournament until spring.

Go to Paterson on an early train next Tuesday with plenty of shells. The Newark Gun Club will shoot on Erb's grounds on Oct. 12.

C. H. TOWNSEND.

### Boiling Springs vs. Passaic City.

THE second of the series of team matches between the Boiling Springs Fish and Gun Club, of Rutherford, and the Passaic City Rod and Gun Club, of Passaic, was shot on the grounds of the former club on Sept. 14. The teams comprised 10 men each, and each man shot at 25 bluecock targets under American Association rules. Eddie Collins, of West Hoboken, was referee. The scores follow:

### Monthly Shoot of the Climax.

THE monthly shoot of the Climax Gun Club, held at Fanwood, N. J., on Sept. 19, was attended by 14 members, who passed an enjoyable half day smashing bluecock targets. The weather was delightful and the traps worked well. This club was only recently organized, but is fast coming to the front owing to the enthusiasm and skill of its members, many of whom have national reputations as expert shots either at targets or live birds.

As regular club work is at unknown angles, the members being handicapped according to their relative skill, the scratch men shooting at 25 targets each. After the club shoot sweepstakes is indulged in the club rules limiting the sweepstakes entrance to 50 cents no matter how many targets were thrown, and any member is allowed to enter for targets only if they so desire. This renders it possible for those with limited means to have an occasional half-day's shooting for a nominal sum.

Club shoot:

C Smith.....	11111111111111111111—24
T H Keller.....	10110010110111111111—20

J Darby.....	01110101010101011011010101—21

Sweepstakes event No. 1, at 10 targets: Smith 30, Keller 9, D. Terry 9, Brantingham 8, Trust 8, Scott 8, D. Darby 6, J. Darby 5, Soper 5.

No. 2, at 15 targets: Smith 15, Keller 14, Brantingham 12, D. Darby 11, McGinty 11, Soper 10, D. Terry 9, J. Darby 9, Camp 8, D. Darby 7, Trust 8, Carpenter 7.

No. 3, at 10 targets: D. Terry 9, Keller 9, Smith 8, McLean 8, J. Darby 4, McGinty 4.

### A Day's Sport at Springfield.

The grounds of the Union Gun Club at Springfield, N. J., were visited by a good number of shooters on Thursday, Sept. 21. This was the date for the regular club shoot, in addition to which E. D. Miller had arranged for the shoot off of the tie for second prize in the recent series of contents of the New Jersey Trap League, between the Union and Maplewood Gun Clubs.

The shoot did not begin until close to noon, the shooters being rather tardy in putting in an appearance. Among those present were Neaf Appar, F. Soper, "Dutchy" Smith and Thos Brantingham of Plainfield, J. L. Smith of Hackettstown, Ford Van Dyke of Newark, "Uncle Billy" Sigler of Montclair, A. Sicker, Dr. Jackson and J. Brant of Millburn, R. S. Williams of Elizabeth, J. W. Smith, R. Yeomans, J. Sayre and W. Drake of Maplewood.

The day was all that could be desired, the sun shining clear and warm and there being no wind to flip the Keystone targets about. The shooting was from five Keystone traps and both traps and targets performed very well.

The tie shoot was for teams of 5 men each at 25 targets per man, known angles, American rules governing. This was a hot contest and the Maplewoods captured the honors by plucky work on the part of their men. The scores:

No. 7, shoot-off of tie for second place in N. J. L. series: Maplewood G. C.

Sicker.....	11111111011011111111—23
Dr. Jackson.....	011101111111011111—19

Sweepstakes—Event No. 1, 10 singles, \$1 entry: Miller 10, Sigler 9, C. Smith 9, J. Smith 8, Van Dyke 7, Appar 7.

No. 2, 5 pairs: Appar 7, J. Smith 7, C. Smith 5, Addison 5, Miller 5, Sigler 3, Van Dyke 3.

No. 3, 10 singles: Van Dyke 9, Sicker 9, Miller 9, Drake 9, C. Smith 8, Sigler 8, W. Smith 8, Bryant 8, South 8, Appar 7, J. Smith 3, Jackson 2.

No. 4, 15 singles: Miller 15, Drake 14, C. Smith 13, Appar 12, Addison 12, J. Smith 12, Van Dyke 11, W. Smith 10, Williams 10, Soper 9, Bryant 9.

No. 5, 20 singles: Miller 19, Van Dyke 18, W. Smith 16, C. Smith 16, Sicker 15, Appar 14.

No. 6, 10 singles: C. Smith 8, Miller 8, Van Dyke 7, Appar 5, Brantingham 5, J. Smith 3.

C. H. TOWNSEND.

### Eureka and Garfield.

CHICAGO, Ill., Sept. 18.—An interesting match took place on the 18th inst. between the Eureka and Garfield Gun Clubs, of Chicago. The conditions were 15 men from each club, 25 birds (targets) per man, known traps, unknown angles. The shoot took place in the grounds of the Eureka Club. The scores, which you will find herewith, show the result.

### Indianola Gun Club Tournament.

INDIANOLA, Ia., Sept. 21.—The first annual tournament of the Indianola Gun Club, held in this city, commenced yesterday morning with a fair attendance. The club members laid themselves out to give the visiting sportsmen a good time, and every one went home well pleased. A high wind made the shooting quite difficult and the scores are not as high as they would be had the weather been favorable.

C. W. BUDD.

#### First Day, Sept. 20.

No. 1, 10 targets, entrance \$1.50: Budd 8, E. Adams 6, Lewis 9, McFarland 9, Barnes 9, Dare 5.

No. 2, 15 targets, entrance \$2: Budd 15, McFarland 9, Dare 5, Barnes 12, Adams 10, Lewis 11.

No. 3, 15 targets, entrance \$2: Budd 12, Hastings 9, McFarland 12, McGinty 11, Barnes 14, Dare 12, Lewis 13, Adams 12.

No. 4, 10 targets, entrance \$2: Budd 10, Adams 12, McFarland 9, Lewis 8, Barnes 7, Hastings 9, McGinty 8.

No. 5, 10 targets, entrance \$2: McFarland 12, Barnes 12, Budd 14, Hastings 13, Lewis 15, Dare 5.

No. 6, 10 targets, entrance \$2: Budd 9, McFarland 8, Lewis 8, Goodman 8, McNaughton 7, Aneneburg 9, Dare 5, Hastings 9, Burgess 5.

No. 7, 20 targets, entrance \$2.50: Budd..... 111111111111111111—19

Hastings..... 1010111101110111—13

McFarland..... 11111111111100011111—16

Barnes..... 111001101111110111—15

McGinty..... 0101110111011101010—14

Marsh..... 110101101101010101—14

No. 8, 5 targets, entrance \$1.50: McFarland 5, Goodman 4, Lewis 5, Dare 4, Budd 4, Hastings 7, Adams 3, McGinty 0.

#### Second Day, Sept. 21.

No. 1, 10 targets, entrance \$1.50: McFarland 6, Lewis 8, Budd 8, Spencer 5, Farley 8, Dare 8, Hastings 9, Barnes 6, Aneneburg 7, Goodman 10, McNaughton 9, Silcott 7.

No. 2, 15 targets, entrance \$2: Budd 14, McFarland 10, Barnes 12, Hastings 12, Lewis 11, Farley 9, McGinty 10, McNaughton 10, Goodman 12, Spencer 9.

No. 3, 15 targets, entrance \$2: Budd 15, McFarland 10, Barnes 10, Hastings 9, Dare 6, McGinty 11.

No. 4, 10 targets, entrance \$2: McFarland 5, Dare 5, Barnes 8, Lewis 6, Goodman 9, Farley 9, McGinty 8, Hastings 7, Budd 10.

No. 5, 15 targets, entrance \$2: McGinty 13, McFarland 12, Goodman 11, Barnes 11, McNaughton 10, Hastings 15, Budd 14.

No. 6, 10 targets, entrance \$1.50: Aneneburg 7, Dashiell 8, McGinty 6, Lewis 8, Jones 7, Goodman 5, Silcott 4, Farley 6, Budd 9.

Special club shoot, at 10 targets, entrance \$1, open only to members of the Indianola Gun Club, for championship cup, cup and money to go to highest score:

Lewis.....	1110111001—7
Dashiell.....	111010110—7
Aneneburg.....	111101010—8
McNaughton.....	10101101—7
Jones.....	00000111—4

Barnes won the cup and money on shoot-off. A few extra sweeps followed each day's programme events.

### Rochester and North Parma.

ROCHESTER, N. Y., Sept. 22.—The North Parma Gun Club have arranged for a series of three matches, the first one being a target shoot on the Rochester Rod and Gun Club's grounds Sept. 20. Both teams were out for blood, and the Rochesterers thought they would have a hard fight to win, but before the contest was over they considered it like sitting down to a spring chicken dinner. The next shoot will take place on the North Parma Club's grounds. The scores follow.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 390 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TOWNHULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksman; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales.

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 308 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/4. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

# FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, OCTOBER 7, 1893.

VOL. XLI.—No. 14  
No. 318 BROADWAY, NEW YORK.

## CONTENTS.

<b>Editorial.</b> Fish and Fertilizers. Yacht Designing and International Racing. Snap Shots. <b>The Sportsman Tourist.</b> Days at Hemlock. The White Goat and his Country. <b>Natural History.</b> The Opah. <b>Game Bag and Gun.</b> More Prose About Barneget. In Louisiana Swamps. The 22 Short Rifle. Venison for the Meat Safe. Maine Big Game. The Vermont Woodcock Season. Chicago and the West. Camp-Fire Flickerings. <b>Sea and River Fishing.</b> Angling Notes. In Camp at Drag Lake. The Ways of the Salmon. Connecticut Bass Waters. Chicago and the West. New Jersey Coast Pounds. <b>FOREST AND STREAM in the World's Fair.</b> <b>The Kennel.</b> Points and Flushes. Mr. Barrymore's Esquimaux. Dog Chat.	<b>The Kennel.</b> Cocker Spaniel Type. Kennel Notes. Answers to Correspondents. <b>Hunting and Coursing.</b> A Wolf Hunt with the Faulkner Pack. New England Hounds. English Greyhound Stud Book. Hunting and Coursing Notes. <b>Yachting.</b> America's Cup Races. Vigilant and Valkyrie. The Cape May Cup. Navahoe and Her Races. News Notes. <b>Canoeing.</b> Amendments to A. C. A. Constitution. The Next A. C. A. Meet. News Notes. <b>Rifle Range and Gallery.</b> Greenville Rifle Club. Cincinnati Rifle Association. Rifle Notes. <b>Trap Shooting.</b> Indianapolis Veteran Tournament. Pennsylvania Third Annual Drivers and Twisters. Answers to Queries.
--	---

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

For Prospectus and Advertising Rates see Page 311.

**You are invited**

to visit the "Forest and Stream's" exhibit in the Angling Pavilion at the entrance from the main hall of the Fisheries Building, in the World's Fair.

## FISH AND FERTILIZERS.

At the recent annual dinner the Old Colony Club, as in duty bound, unanimously re-elected its genial president, Mr. Joseph Jefferson, and took another start in its good work of fighting for fish preservation. The impression is gaining ground that the paper on "Fish and Fertilizers" then read, is a valuable contribution to the literature of the subject.

The question considered was the truth of the claim that the farmers of the country are interested to have fish captured by wholesale methods for their fertilizing properties. This claim is frequently made and the farmer vote in legislative bodies has been relied on largely for this reason, to oppose an united front to any fish protection. The immediate occasion was a violent assault upon "sports" and "sportsmen" in Buzzard's Bay by a leading fertilizer manufacturer of Boston, and printed in the State Agricultural Reports, to the effect that, as fish contain nitrogen and phosphoric acid, the farmer should insist on having them killed to put on his land, however distasteful it might be to the "sportsmen" who desired to "fish off their piazzas."

The careful paper in reply is signed by Charles F. Chamberlayne, secretary and counsel for the club, Col. J. Lewis Stackpole, Frank Morrison, Esq., and the eminent statistician Mr. Edward Atkinson. It takes the preliminary position that were the interests of the inland farmers opposed in this matter to those of the hardy fishermen of the coast, on-principles of fairness the right of a section to its own natural advantages is superior to that of any other section to destroy them, and that an important advantage of Buzzard's Bay (as of other places similarly situated) lies in the excellence of fishing both for food and attracting visits from abroad.

But the committee claim there is no conflict of interest between the farmers and Buzzard's Bay. In the first place, the farmer has no better friend to-day than the sportsman. Any attempt to separate them is usually by some interested and designing person who pats the farmer on

the back while insinuating his hands in his pocket. The farmer is naturally anxious to be relieved of the burden of taxation. He is the worst taxed man of our social system. He can only get relief by increased town, county or State valuations, and nothing compares in this respect with the summer population which Maine and Massachusetts attract by the excellence of their fishing. This takes no account of the market afforded to the farmer's produce either directly or through hotels, boarding houses, etc.

In the second place farmers do not need fish for fertilizers. Of course, the farmer must have fertilizers to replace the potash, nitrogen and phosphoric acid which the plants take from the soil. But nature has not been so arranged that the fertility of the soil must be replaced by the impoverishment of the water. The potash is found in unlimited quantities in all our granite soils and merely needs an inexpensive treatment. The phosphoric acid is furnished in endless profusion by the phosphate of lime in the South Carolina or Florida beds which cannot be exhausted for generations. The remaining element, nitrogen, is on every hand. The atmosphere is two-thirds composed of it. In chemical forms like nitrate of soda or nitrate of potash, millions of tons are annually imported into the country, and the supply will suffice for centuries. In ammoniates the range is unlimited.

More than this, the endless variety and inexhaustible abundance of fertilizing materials can be utilized by the farmer at much cheaper prices than fish manure could be sold him by the manufacturer. He can procure for himself in standard forms: Nitrates and ground phosphate of lime for \$14.50 or \$19 per ton, precisely what the manufacturer of fertilizer from fish charge him \$35 per ton for. As the farmer cannot use fish to advantage in its original form, he is, in using it, in the hands of the manufacturer. In using other forms he is his own master.

The fertilizer manufacturer tries to convince the farmer that the use of sulphuric acid is essential to fertility, and so the farmer must buy of him, but chemistry and common sense show the contrary. Any cheapness from the use of fish would never, in any event, go to the farmer, for the price of the fertilizer, which no one can tell the ingredients of, is fixed by the State in the assumption that expensive ingredients are used. Any saving of expense goes directly to the manufacturer and stays there. If there is one less appeal to prejudice the farmer against fish and game preservation, it will put the fraternity under obligations to the Old Colony Club.

## DESIGNING AND INTERNATIONAL RACING.

In the international contest for the supremacy in yachting which has lasted for over forty years, the most striking feature has been the difference of type between challenger and defender, a difference which was as great in 1885 or '86 as in 1851. For a time the influence of the America and the attempts to imitate her peculiar features resulted in a certain similarity in American and British models; but as international racing flagged, the influence of different measurement rules and local conditions resumed their sway, and in the twenty years between 1880 and 1890 the progress of yacht designing in America and England was on diametrically opposite lines.

When the two nations came together in another contest, represented respectively by Wave, Shadow and Schemer on the one side and Madge on the other, the difference was most radical on every point of design, model, construction, sails and rigging. Almost from the first the influence of one nation on the other was visible, and year by year it has become plainer, until at the present time all political considerations have practically disappeared, and a surprising unanimity of opinion in technical matters has taken their place.

In rules of measurement and sailing regulations the two great yachting nations are closely in agreement, and the accepted theories of design and construction are shared in common by American and British designers.

The advantages to both parties of this state of affairs can hardly be over-estimated; the designer of to-day enjoys a freedom that was unknown even a dozen years since, when obsolete rules and absurd traditions retarded the advancement on each side.

Whatever may be urged to-day against the modern racing yacht as compared with some of the older craft, it must be admitted that, as the result solely of inter-

national competition, the yacht designer has before him a wider field for experiment and improvement than was ever dreamed of by his predecessors of twenty years back. This benefit, shared by both nations alike, is entirely to the overthrow of groundless theories and erroneous ideas by fair and open racing in all classes. The yacht designer of to-day knows no nationality in his work, but is guided only by the broad principles of science.

## SNAP SHOTS.

MR. CHARLES HALLOCK is one of the men of the day whose autobiography would make an interesting volume, and if Mr. Hallock shall carry out his expressed intention of preparing the work as leisure may afford opportunity, he will be assured of a host of appreciative readers.

We will pay \$3 for the first received copy of the FOREST AND STREAM of Aug. 13, 1874. The paper is desired to complete a file in a city library.

Mr. John W. Titcomb, well-known as the founder of the Vermont Fish and Game League, and now one of the Fish Commissioners of his State, is superintending the construction of the new Government fish hatchery at St. Johnsbury.

Four more of Mr. E. E. Thompson's portraits of American wild game will be printed as full-page supplements, the first one of the Moose next week, Oct. 14; the Woodland Caribou, Nov. 4; Coon, Dec. 2, and White-Tailed Deer, Jan. 6.

The Jenkinsons of the press have exhibited disgusting snobbery in the daily chronicle of the movements of the Dunraven party. After reading the New York reporters' stories one might conclude that the winning of the America's Cup depended more on the set of the Earl's trousers than on the set of Valkyrie's sails.

The Audubon Society for the Protection of Birds, established by FOREST AND STREAM in this city, some years ago, has a namesake in the Chicago Audubon Society, which has recently been incorporated. The purpose is declared to be to prevent the destruction of birds; and the incorporators are Rev. J. L. Jones, of *Unity*, E. S. Rood and Edward J. Galvin.

The volume entitled "American Big Game Hunting" was published on Thursday, Oct. 5, and we anticipate for it a wide popularity not only among big game hunters, but among all who feel an interest in matters pertaining to outdoor life and to game and forest preservation. Its tone is dignified and wholesome, and at the same time it contains a great fund of interesting adventure and of information about regions that are little known and animals that are yearly growing scarcer and harder to find.

Michigan has been added to the small band of States in which the trap-shooting of pigeons is forbidden by statute. The last Legislature adopted a law prohibiting the keeping of any birds for target purposes except English sparrows. Trap-shooting interests appear to be healthful in Michigan at the present time. They are not likely to feel any effect of the new law in the slightest degree. For the past few years artificial targets have everywhere practically monopolized trap-shooting, and the substitution of inanimate for animate birds has been one of the chief factors in creating the popularity of the sport. In spite of the facts of the case, however, we may reasonably expect to hear alarmist cries that the new statute is an entering wedge against field shooting.

Every year brings an increase in the number of sportsmen who care less and less to kill great scores of big game, and more and more to study the game in its native haunts. Amateur photography has unquestionably had a large and direct influence in promoting the change. It is an achievement—and a worthy achievement—to secure one's game by skill and endurance; and then to photograph it. But there is a richer satisfaction in the successful exposure of plates on living game; for to accomplish this requires even more genuine hunting skill than does the killing. This reminds us to say that Mr. E. Hofer, who was a pioneer in the field of live game photography, and who has already written of this in the FOREST AND STREAM, is now preparing another paper on the subject for our columns, to be illustrated with reproductions of interesting game photographs secured by him in the National Park.

## The Sportsman Tourist.

### DAYS AT HEMLOCK.

#### I.—A RAINY DAY.

COMFORT COVE, Hemlock Lake, N. Y.—It commenced to rain during the night. Half awake I heard the drip, drip on the roof of our lodge. Turning over in my bed to seek a warmer position, I heard D. L. yawn and turn also. Here at the lake—in a sylvan retreat, as it were—rain would not be a welcome sight, our time being so limited to enjoy the scents, sights and sounds of early autumn. Wouldn't it debar us from just so much outdoor pleasure—one less excursion to the grouse-haunted hemlock thicket in the mountain side, one less row along the wooded shore, one less saunter along the tree-embowered highway on the opposite shore? Ah! and this meant so much.

Only late last night not a cloud obscured the deep expanse of the heavens, and the brilliant stars reflected themselves in the mirror-like expanse of the still waters. Not even the weird nocturne of an owl, nor lisp of a leaf. Perhaps the silence was ominous of a coming change!

Meanwhile the rain set in for an all day's drizzle—one of those persistent drippings that leaves a decided shiver behind. Never before did I realize that nine-tenths of man himself is water, as John Burroughs puts it.

The forest swooping down to our very door was a mass of wetness. It reminded me of that beautiful line of Walt Whitman:

"The slumbrous and liquid trees,"

only there wasn't so much slumbering going on in their midst, for the wind was not idle, and every gust shook down the drops by the million. But all was liquidity at any rate. Once an over-ripe maple leaf fluttered down on the porch—an exquisite mixture of deep maroon and ochre—so permeated with sunshine it left a gentle message behind that led me to tenderly cherish it for the hint it conveyed.

What of the wild life out there in the woods? Will they also miss the precious sunbeams? Perhaps it doesn't make any particular difference to that saucy little wood darling, the chickadee, lisp of the dripping beeches? But then nothing will ever harm that "atom of full breath" since zero weather even improves his winsome notes. Yes, and there was the bark of a black or gray squirrel, but only for a moment—no repetition. The red squirrel did not make his usual racket on the roof, but the bluejay with his buzz-saw voice was abroad as usual. We were considerably amused at the antics of a pair of chipmunks, who halting just in front of the kitchen door, mistook us for two terrible monsters and precipitately fled under the stone wall, where they peered forth now and then with cunning and suspicious eyes. No inducements of ours could make them venture forth. Well do I know their snug home under an old decayed log only a short distance away.

Despondency not seeming to reign among the wood folk what is to prevent us from being cheerful also? Wasn't it Charles Lamb who wrote to Wadsworth, "For the time that a man may call his own, that is his life?" Let it drizzle, we say. In our living room, around a beech fire, we can well bid defiance to the raw elements without. Of cut wood we have plenty, only it requires a little pilfering from an absent neighbor's woodpile, for which we will humbly apologize afterward. In our last expedition to this pile we disturbed a tiny wood mouse, snugly ensconced, but he can shift to other quarters just as good. We have a monopoly of this wood now. Beech predominates here, but now and then a stick of silver birch is revealed, gleaming beautifully among its tamer brethren, which is eagerly grasped. Not that it makes a better fire than the beech, but it is good to look upon, to smooth back the shiny scalings of its bark, or cut it open to enjoy the sweet scent—too beautiful to burn, fit only for rustic ornamentation. Did this particular stick perchance come from the tall, upright sapling that I missed from the gully near the dead hemlock? How showy still these mottled beechen sticks! Here a bit of moss is still clinging or a brilliantly-tinted lichen. On top of the pile I find a gnarled stub that has evidently passed through a siege, in which the catapult of a woodpecker was used for bombarding—row upon row of little cells where the enemy's shot penetrated with telling effect to many a luckless grub.

So in all thankfulness to the bountiful wood harvest—the great and benign mortal (may he ride with St. Peter in a golden chariot) who prepared this pile for our use—we will now enjoy the crackling blaze, the grateful warmth. What virtue in a wood fire! How it roars and crackles with seeming delight to invite the devouring flame! We love the tree, so let us cherish the fire also. What matter if the moaning forest sounds like a mighty dirge? With a good fire in our little stove and a fire in D. L.'s brier, what else can there be but good cheer? 'Tis a goodly sight to see his happy face when the clouds of fragrance are greatest. Its rarity is a strange reminder of Barrie's "Arcadia Mixture." Will it inspire Arcadian thoughts in his teeming brain? Will the gentle muse descend upon his fez-capped head? Now he is absorbed in day dreams, hands clasped tightly over his head, feet planted with unholy grace on top of the stove. Soon his pipe ceases to emit its clouds of fragrance. He does not notice it. His statuesque poise almost alarms me. When suddenly he gets up with considerable trepidation, applies a fresh match to his pipe, and exclaims: "Now for a sonnet, to be set to sweetest music!" and rushes to a desk. I knew it; I knew that he would turn poet. With his slippered feet reclining on such a convenient place as the top of the stove, baggy corduroy trousers, fez-capped head, unshaven face, pipe in mouth, and such an indescribable dreamy look in his countenance, he looked for all the world like some Oriental bard—or something of that sort, at least—ready to obey the Prophet's call. I know the way his hand speeds over the paper that he has caught the divine afflatus. Then with a weary sigh he relinquishes his work and exclaims, "Sonnets be darned (looking at his watch), I must now boil that pork!" Emitting a wail, I fall to the floor like one in a swoon. Oh, the sublime and ridiculous! So, so, this is the outcome of his day dream? Perhaps he was thinking after all how to best prepare that pork? Ah! cruel fates, my dream has vanished, nevermore to return. Outside the rain is falling

faster and the moaning forest seems to echo a sad refrain.

Let us pass over this now painful subject—the sonnet and pork episode. With the gathering twilight we will resort once more to the woodpile and grovel around to see whether we can't find a few dry pieces. Then for an evening's enjoyment. With many thanks to the kind Fates, D. L.'s muse has left him and he is once more a sane man. As we settle in comfortable positions I perceive that the fragrance of his brier is even more pronounced. I am sure now that it outrivals the famous "Arcadia Mixture." What ever induced him to take up plain-spoken old Smollett, I don't know. I think he was even fond of it. In "Roderick Random" he became very much interested in Captain Weazel, described as a woe-begone looking nondescript, so like a spider or grasshopper erect. No wonder Madame Weazel called him a "poor, withered, sapless twig." I must confess that I myself found considerable amusement in this old "twig" and some of his remarkable adventures. But Smollett is shut up with a bang and laid aside. While D. L. refills his pipe, replenishes the fire and takes a look at the weather, I will glance again through "Sam Lovel's Camps," the cherished pocket companion of many a tramp by wood and field. My finger turns instinctively to the "Voyage Down Little Otter." In the whole category of Mr. Robinson's two unique volumes is there anything more mirth-provoking—extremely laughable—than this chapter? I heartily admire the fine descriptive powers of the author, but I like best the funny experiences, the rare exploits of two just such characters as Joseph Hill and Solon Briggs, while trying to row a "bwut." To use a rude expression, this is enough to make a horse laugh. Uncle Tyler tells them they "can't row a bwut no more'n a goose c'n gobble," and that ends the dispute and their prowess as oarsmen. When D. L. read this sketch aloud shortly afterward, and coming to the point where Uncle Tyler received a thud on his pate from Joseph's missed stroke, we were so thoroughly convulsed with hilarious laughter that I came very near swallowing the cigar I was smoking, and in my effort to recover fell over backward from my chair and thumped my head on the end of the table. All during this time D. L. was making such a commotion that it started a bird outside to twitter in its sleep. But he resumed reading and ended without further mishap.

And so ended a rainy day and evening.

Outside the rain was still falling, and D. L., stretching himself with a yawn, stepped to the door, where I followed and quoted the last line from his favorite sonnet of the morning:

"'Tis time to say good night."

Simultaneously from out the deep shadows came the answering call of the wicked owl. T. M. S.

#### II.—A PERFECT SEPTEMBER DAY.

COMFORT COVE, Hemlock Lake, N. Y.—This twenty-first day of September, 1893, has been, I may safely say, the most perfect, from a meteorological point of view, I have ever experienced in all my many visits to Hemlock Lake.

I date the beginning of its glories from the hour of 8 A. M., when I roused my sluggish senses from the embrace of sleep. The lately risen sun was pouring through my lattice with an inviting mellowness that shamed me for my long communion with the drowsy god, and at once I was a strong man again, drinking in with hearty inhalations the sweetness of the morning. Throwing open the shutters, my eyes took in at a glance the half-mile stretch of wimpling waters intervening 'twixt my cottage and the eastern shore, then traveled slowly up the wooded hill, noting the warm autumnal tints just showing among the deciduous frondage, doubly beautiful by contrast with dark banks of interspersing evergreens. Still upward my morning gaze soared, across the pasture lots and stubble fields lying on the rounded crest above the timber, on past the red farmhouse to another belt of woods that crowned the summit, then up through the blue ether where it met the sun, the glorifier of all.

I fear my comrade and I forgot our early religious training, and became veritable sun worshippers, when after breakfast we entered our boat and crossed the lake wholly under the influence of the god of day. The brightness not only bathed our bodies and put new life into them, but reached far down into our hearts and souls, eliminating therefrom all base material, making us better, purer, more like the day that now in full effulgence throbbed about us.

Thinking perhaps a lingering, frostless season had left clinging to the brambles a few blackberries, we took our pail and clambered up a steep path through the woods to a clearing where the vines grew thick and rank; and we were not disappointed. They were rare and hard to find, but, Oh how luscious, large and plump they were; and although we only got enough to supplement our humble dinner, we were quite content. Meantime the joyous sun was beaming down as sweet as ever. Not like the torrid orb of August, but with a full, round, yellow richness like a rare ripe pippin, the air seemed all aglow, neither hot nor cold, but just as one might fancy the atmosphere of Heaven ought to be.

As we embarked again for a quiet pull up the lake with our berries snug beneath the thwart and troling gear dangling over the stern, we felt that we could answer Lowell's query:

"What is so rare as a day in June?"

by simply noting the scene about us. There was just enough breeze creeping up from the south to wrinkle the face of the water into jocund smiles. It was not strong enough to sway the treetops, but only drew coyly from them drowsy whisperings that did not prevent us, as we skirted along shore, hearing all those mysterious voices of the forest. We heard the clucking of a grouse, the tremulous *qua qua* of a gray squirrel far up the mountain side; the discordant ranting of a pair of jays, and the gentle wheedle of the chickadees. Bright-eyed chipmunks with distended chops would peer at us from logs along the bank, and flocks of crows ordered their way across the blue ether overhead to join a clamorous concourse of their dusky fellows on the opposite mountain. A solitary sea-gull, evidently a wanderer from its native brine, dropped into the midst of the waters, its white breast shining in the sun, and far overhead a fish-hawk soared wheeling in effortless circles. What cared we that no luckless pickerel or bass was attracted by glittering spoon. It might have marred our peace to have brought up from those pure depths—whose deepest caves the sun was

gilding—a living creature as much entitled to enjoy the day as we, so our line was wound up and lazily we turned our prow toward home.

Afternoon came, the short September afternoon with no cessation or diminishment of the glories promised by the morning. The waning sun, with healing in his beams, rode down the west as brightly, calmly and serenely to his setting as some grand old patriarch, who, after a life of peace and doing good to others, rounds out his cycle with a smile and sinks down to honored death.

But even with the going of the sun the beauty of the day still lingered. The soft autumnal twilight hovered o'er the bosom of the lake like a gentle benediction, and getting out the boat again we rowed far up the western shore, peering into nooks and dells, lying on our oars and listening to the tinkling of tiny rivulets down the cliffs like voice of fairy bells. Anon up rolled the glorious moon, burnishing the crinkling waves with liquid silver and lighting us home in peace and safety, pure ending to a perfect day. H. W. D. L.

### THE WHITE GOAT AND HIS COUNTRY.

From advance sheets of "American Big Game Hunting," the Book of the Boone and Crockett Club.

[Concluded from page 270.]

THE next morning the rain kept us from making an early start, and we did not leave camp until eight. Now and then a drizzle fell from the mist, and still the banks of clouds were driving across the higher peaks, but during the day the sun slowly got the better of them. Again we saw a solitary goat, this time far below down the ridge we had chosen. Like the sheep, these animals watch the valley. There is no use in attempting to hunt them from there. Their eyes are watchful and keen, and the chances are that if you are working up from below and see a goat on the hill, he will have been looking at you for some time. Once he is alarmed, ten minutes will be enough for him to put a good many hours of climbing between himself and you. His favorite trick is to remain stock still, watching you till you pass out of his sight behind something, and then he makes off so energetically that when you see him next he will be on some totally new mountain. But his intelligence does not seem to grasp more than the danger from below. While he is steadfastly on the alert against this, it does not apparently occur to him that anything can come down upon him. Consequently from above you may get very near before you are noticed. The chief difficulty is the noise of falling stones your descent is almost sure to make. The character of these mountainsides was such that even with the greatest care in stepping we sent a shower rattling down from time to time. We had a viciously bad climb. We went down through tilted funnels of crag, avoiding jumping off places by crossing slides of brittle slate and shale, hailing a dead tree as an oasis. And then we lost count, and T. came unexpectedly on the goat, who was up and away and shot by T. before I could get a sight of him. I had been behind some twenty yards, both of us supposing we had to go considerably further. T. was highly disgusted. "To think of me managing such a botch as that," he said, "when you've come so far," and he wanted me to tell the people that I had shot the goat myself. He really cared more than I did.

This goat was also a billy, and larger than the first. We sat skinning him where he had fallen at the edge of a grove of tamarack, and T. conversed about the royal family of England. He had always rather liked "that chap Lorne."

I explained to him that the "chap Lorne" had made himself ridiculous forever at the Queen's Jubilee. Then as T. did not know, I told him how the marquis had insisted on riding in the procession upon a horse against which the Prince of Wales, aware of the tame extent of his horsemanship, had warned him. In the middle of the pageant, the Queen in her carriage, the crowned heads of Europe escorting her on horseback, and the whole world looking on—at that picturesque moment Lorne fell off. I was not sure that T. felt fully how inappropriate a time this was for a marquis to tumble from his steed.

"I believe the Queen sent somebody," I continued.

"Where?" said T.

"To him. She probably called the nearest king, and said, 'Frederick, Lorne's off. Go and see if he's hurt.'"

"And if he ain't hurt, hurt him," said T., completing her majesty's thought.

This second billy seemed to me twice the size of a domestic goat. He was certainly twice the weight. His hide alone weighed 30 lbs., as far as one could determine by balancing it against weights that we knew, such as a sack of flour or sugar. But I distrust the measurements of wild animals made by guesswork on a mountain top during the enthusiastic state of the hunter's mind which follows at once upon a lucky shot. Therefore, what I can positively vouch for is this, only that all the goats which I have seen struck me as being larger and heavier animals than the goat of civilization. After all, the comparison is one into which we are misled by the name. This is an antelope; and though, through certain details of his costume, he is able to masquerade as a goat, it must be remembered that he is of a species wholly distinct. We took the web tallow, and the tallow of one kidney. The web was three-quarters of an inch thick. Neither elk, nor any animal I have seen, except bear, has such quantities of fat, and I do not think even a bear has a thicker hide. On the rump it was as thick as the sole of my boot, and the masses of hair were impenetrable to anything but modern firearms. An arrow might easily stick harmless; and I am told that carnivorous animals who prey upon the deer in these mountains respectfully let the goat alone. Besides his defensive armor, he is an ugly customer in attack. He understands the use of his thin smooth horns, and, driving them securely into the belly of his enemy, jumps back and leaves him a useless, ripped-open sack. Male and female have horns of much the same size; and in taking a bite out of one of either sex, as T. said, a mountain lion would get only a mouthful of hair.

But modern firearms have come to be appreciated by the wild animals, and those which were once unquestionably dangerous to pioneers now retreat before the Winchester rifle. Only a bear with cubs to defend remains formidable.

I said this to T. who told me a personal experience that tends to destroy even this last chance for the sportsman to

be doughty. T. came on a bear and cubs in the spring, and they of course made off, but his dog caught and held one little cub who cried out like a child—and its contemptible mama hurried straight on and away.

Not so a goat mama of whom T. also told me. Some prospectors came on a bunch of goats when the kids were young enough to be caught. One of the men captured a kid, and was walking off with it, when the mother took notice and charged furiously down on him. He flew back in ignominious sight of the whole camp with the goat after him till he was obliged to drop the kid, which was then escorted back to its relatives by its most competent parent.

Yet no room for generalizing is here. We cannot conclude that the *Ursus* family fails to think blood as thick as other people do. These two incidents merely show that the race of bear is capable of producing unmaterual females, while, on the other hand, we may expect occasionally to find in a nanny-goat a Mother of the Gracchi.

I wished to help carry the heavy hide of the second billy; but T. inflicted this upon himself "every step to camp," he insisted, "for punishment at disappointing you." The descent this day had been bad enough, taking forty minutes for some 400yds. But now we were two hours getting up, a large part of the way on hands and knees. I carried the two rifles and the glasses, going in front to stamp some sort of a trail in the sliding rocks, while T. panted behind me, bearing the goat hide on his back.

Our next hunt was from seven till four, up and down, in the presence of noble and lonely mountains. The straight peaks which marshall round the lake of Chelan were in our view near by, beyond the valley of the Twisp, and the whole Cascade range rose endlessly, and seemed to fill the world. Except in Switzerland I have never seen such an unbroken area of mountains. And all this beauty going begging, while each year our American citizens of the East, more ignorant of their own country and less identified with its soil than any race upon earth, herd across the sea to the tables d'hôte they know by heart! But this is wandering a long way from goats, of which this day we saw none.

A gale set in after sunset. This particular afternoon had been so mellow, the sun had shone so clear from a stable sky, that I had begun to believe the recent threats of winter were only threats, and that we had some open time before us still. Next morning we waked in mid-winter, the flakes flying thick and furious over a park that was no longer a pasture, but a blind drift of snow. We lived in camp, perfectly comfortable. Down at the Forks I had had made a rough imitation of a Sibley stove. All that its forger had to go on was my unprofessional and inept description and a lame sketch in pencil; but he succeeded so well that the hollow iron cone and joints of pipe he fitted together turned out most efficient. The sight of the apparatus packed on a horse with the paniers was whimsical, and until he saw it work I know that T. despised it. After that, it commanded his respect. All this stormy day it roared and blazed, and sent a lusty heat throughout the tent. T. cleaned the two goat heads, and talked Shakspeare and Thackeray to me. He quoted Henry the Fourth, and regretted that Thackeray had not more developed the character of George Warrington. Warrington was the man in the book. When night came the storm was gone.

By 8 the next morning we had sighted another large solitary billy. But he had seen us down in the park from his ridge. He had come to the edge, and was evidently watching the horses. If not quick-witted, the goat is certainly wary; and the next time we saw him he had taken himself away down the other side of the mountain, along a spine of rocks where approach was almost impossible. We watched his slow movements through the glass, and both were reminded of the bear. He felt safe, and was stepping deliberately along, often stopping, often walking up some small point and surveying the scenery. He moved in an easy rolling fashion, and turned his head importantly. Then he lay down in the sun, but saw us on our way to him, and bounced off. We came to the place where he had jumped down twenty sheer feet at least. His hoof-tracks were on the edge, and in the gravel below the heavy scatter he made in landing; and then—hasty tracks round a corner of rock, and no more goat that day.

I had become uneasy about the weather. It was all sunshine again, and though our first goat was irretrievably gone, we had the afternoon before us. Nevertheless, when I suggested we should spend it in taking the shoes off the horses, so they might be able to walk homeward without falling in the snow, T. thought it our best plan. We wanted to find a bunch of goat now, nannies and kids, as well as billies. It had been plain that these ridges here contained very few, and those all hermits; males who from age, or temperament, or disappointment in love, had retired from society, and were spending the remainder of their days in a quiet isolation and whatever is the goat equivalent for reading Horace. It was well enough to have begun with these philosophers, but I wanted new specimens.

We were not too soon. A new storm had set in by next morning, and the unshod horses made their journey down the mountain, a most odious descent for man and beast in the sliding snow. But down on the Twisp it was yet only autumn, with no snow at all. This was a Monday, the 7th of November, and we made haste to the Forks, where I stopped at night to read a large accumulated mail, and going on at once overtook my outfit, which had preceded me on the day before.

Our new camp—and our last one—was up the Methow, twenty-three miles above the Forks, in a straight line. Here the valley split at right angles against a tall face of mountain, and each way the stream was reduced to a brook one could cross afoot. The new valley became steep and narrow almost at once, and so continued to the divide between Columbia water and tributaries of the Skagit. We lived comfortably in an old cabin built by prospectors. The rail filtered through the growing weeds and sand on the roof and dropped on my head in bed; but not much, and I was able to steer it off by a rubber blanket. And of course there was no glass in the windows; but to keep out wind and wet we hung gunny sacks across those small holes, and the big stone fireplace was magnificent. By ten next morning T. and I saw "three hundred" goats on the mountain opposite where we had climbed. Just here I will risk a generalization. When a trapper tells you he has seen so many hundred head of game he has not counted them, but he

believes what he says. The goats T. and I now looked at were a mile away in an air line, and they seemed numberless. The picture which the white, slightly moving dots made, like mites on a cheese, inclined one to a large estimate of them, since they covered the whole side of a hill. The more we looked the more we found; besides the main army there were groups, caucuses, families sitting apart over some discourse too intimate for the general public; and beyond these single animals could be discerned, moving, gazing, browsing, lying down.

"Megod and Begod," said T.—he occasionally imitated a brogue for no hereditary reason—"there's a hundred thousand goat!"

"Let's count 'em," I suggested, and we took the glasses. There were thirty-five.

We found we had climbed the wrong hill, and the day was too short to repair this error. Our next excursion, however, was successful. The hill where the goat were was not two miles above camp—you could have seen the animals from camp but for a curve in the cañon—yet we were four hours and a half climbing the ridge in order to put ourselves above them. It was a hard climb, entirely through snow after the first. On top the snow came at times considerably above the knees. But the judicious T. (I have never hunted with a more careful and thorough man) was right in the route he had chosen, and after we had descended again to the edge of the snow, we looked over a rock, and saw, 30yds. below us, the nanny and kid for which we had been aiming. I should have said earlier that the gathering of yesterday had dispersed during the night, and now little bunches of three and four goats could be seen up and down the cañon. We were on the exact ground they had occupied, and their many tracks were plain. My first shot missed—thirty yards!—and as nanny and kid went bounding by on the hill below, I knocked her over with a more careful bullet, and T. shot the kid. The little thing was not dead when we came up, and at the sight of us it gave a poor little thin bleat that turns me remorseful whenever I think of it. We had all the justification that any code exacts. We had no fresh meat, and among goats the kid alone is eatable; and I justly desired specimens of the entire family.

We carried the whole kid to camp, and later its flesh was excelled. The horns of the nanny, as has been

THE OPAH.  
*Lampris guttatus.*

said before, are but slightly different from those of the male. They are perhaps more slender, as is also the total make up of the animal. In camp I said to T. that I desired only one more of those thirty-five goat, a billy; and that if I secured him the next day that should be the last. Fortune was for us. We surprised a bunch of several. They had seen me also, and I was obliged to be quick. This resulted in some shots missing, and in two, perhaps three, animals going over edges with bullets in them, leaving safe behind the billy I wanted. His conduct is an interesting example of the goat's capacity to escape you and die uselessly out of your reach. I had seen him reel at my first shot, but he hurried around a corner, and my attention was given to others. As I went down, I heard a shot, and came round the corner on T., who stood some hundred yards further along the ledge beside a goat. T. had come on him lying down. He had jumped up and run apparently unhurt, and T. had shot him just as he reached the end of the ledge. Beyond was a fall into inaccessible depths. Besides T.'s shot we found two of mine, one clean through from the shoulder—the goat had faced me when I fired first—to the ham, where the lead was flat against the bone. This goat was the handsomest we had, smaller than the other males, but with horns of a better shape, and with hair and beard very rich and white. Curiously enough, his lower jaw between the two front teeth had been broken a long time, probably from some fall. Yet this accident did not seem to have interfered with his feeding, for he was in excellent plump condition.

This completely satisfied me, and I willingly decided to molest no more goat. I set neither value nor respect on numerical slaughter. One cannot expect Englishmen to care whether American big game is exterminated or not; that Americans should not care is a disgrace. The pervading spirit of the far West as to game, as to timber, as to everything that a true American should feel it his right to use and his duty to preserve for those coming after, is, "What do I care, so long as it lasts my time?"

There remain a few observations to make, and then I have said the little that I know about goat. Their horns are not deciduous, so far at least as I could learn, and the books say this also. But I read a somewhat inaccurate account of the goat's habits in winter time. It was stated that at that season, like mountain sheep, he descends and comes into the valleys. This does not seem to be the case. He does not depend upon grass, if indeed he eats grass at all. His food seems to be chiefly the short almost lichen-like moss, that grows on the faces and at the base of the rocks and between them in the crevices. The community of goats I watched was feeding; afterward, when on the spot where they had been, I found there was no grass growing anywhere near, and signs pointed to its

having been the moss and rock plants that they had been eating. None of the people in the Methow country spoke of seeing goats come out of the mountains during winter. I have not sufficient data to make the assertion, but I am inclined to believe that the goat keeps consistently to the hills, whatever the season may be, and in this differs from the mountain sheep as he differs in appearance, temperament, and in all characteristics excepting the predilection for the inclined plane; and in this habit he is more vertical than the sheep.

Lest the region I hunted in may have remained vague to Eastern readers, it is as well to add that in an air line I was probably some thirty miles below the British border, and some hundred and twenty east of Puget Sound.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

### THE OPAH.

BY DR. R. W. SHUFELDT.

PERHAPS one of the rarest fishes, if not the rarest fish on the Atlantic coast is the opah—the species known to science as *Lampris guttatus*. It is the only one of its kind found in the Atlantic Ocean, and being a pelagic form, it is quite probable that it may be more or less abundant in deep waters. Especially is this the case in northern seas, and it has been most frequently seen upon the coast of Norway and off Iceland than elsewhere. There have, however, been numerous opahs captured off the coasts of Great Britain and Ireland, while it is said to be very rare in the Mediterranean. It has been observed as far south as Guinea, and has been reported many times off the Madeiras and Azores.

Years and years ago a specimen was taken near Sable Island, Nova Scotia, and ichthyologists predicted then it would probably some time be captured upon the immediate coast of the United States. This has recently been done by Captain William T. Lee on the La Have Bank in 280ft. of water (42° 49' N. lat., 63° W. long.). Coming into the hands of the U. S. Fish Commission at Washington, D.C., the specimen was considered such a unique prize that a magnificent flexible cast was made of it and then colored true to nature by Mr. A. F. Denton. This cast looked almost exactly like the living fish, and it is now in Chicago, where it forms a part of the exhibit of the Fish Commission at the World's Columbian Exposition. Before it left Washington, however, a photograph was taken of the cast, a copy of which illustrates the present article. My thanks are due Dr. Tarleton H. Bean, of the U. S. National Museum, for the photograph in my possession, it being the first one made from his negative.

As the opah often attains a length of as much as 4ft. and over, and may weigh nearly 150lbs., it is needless to say that my figure presents him greatly reduced below his natural size. But his exact form has been rendered, and that is a great deal more than can be said of a number of drawings of this fish, which illustrate various works examined by the present writer.

By some naturalists the opah has been grouped with the dolphins or the *Coryphenidae*, but by others, and more properly, it has been placed among the *Stromateidae*, as the family *Lamprididae*. The dory, the henfish family, and their allies, are interesting representatives of the same group.

So far as I am aware, the young of this fish have never been seen, and are at this writing unknown to science. By those who have eaten the opah, it is said that its flesh has a flavor hardly to be excelled by any fish sold in the European markets. It is, consequently, most highly esteemed for the table. According to an authority at my hand "the name opah, which is now generally used, is derived from the statement of a native of the coast of Guinea, who happened to be in England when the first specimen was exhibited (1750), and who thought he recognized in it a fish well known by that name in his native country. From its habit of coming to the surface in calm weather, showing its high dorsal fin above the water, it has also received the name of 'sunfish,' which it shares with *Orthogoriscus* and the basking shark."

There are but few fishes known to the ichthyologist more brilliantly colored than is the opah, and on this account specimens of it are greatly in demand by collectors, a demand by no means decreased by its great variety in so many parts of its normal range. Its large fins are of a lively scarlet, and these, as well as its green, purple and gold-tinted body, are further ornamented by being dotted all over with beautiful silvery round spots. The iris of the eye is also a brilliant scarlet, and in fact even the true dolphins can hardly be compared with it in the gorgeousness of its tints.

In the form of the opah we are principally struck by its great vertical depth, from back to belly. This is still further increased by the great length of the ventral fins, which, departing from their usual function in most bony fishes of maintaining their balance in the upright position in the water, are here used as powerful locomotory paddles to assist their owner to capture his prey. This is the more necessary inasmuch as otherwise the opah would be a very feeble swimmer, owing to his bulky proportions and a weak, short and cleft tail. He is without distinct scales, while the forms of his pectoral, dorsal and other fins are easily to be seen in my figure.

*The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

### MORE PROSE ABOUT BARNEGAT.

TO ME, and doubtless to thousands of other sportsmen in the East, the name "Barnegat" has always appeared synonymous with the very cream of shooting and fishing, and often did I promise myself a trip to that sporting Utopia, where weakfish, striped bass, immense drum and bluefish could be caught until the fishermen became tired from pulling them in, and would have to stop from very exhaustion and surf; where curlew, willet and other bay birds filled every bar and sandpit, and where we would meet with none of the disappointments which unfortunately fall too often to the lot of the devotee of rod and gun.

The long desired opportunity came this summer. I was to get a couple of weeks in the latter part of August, when snipe shooting should be good, and my brother decided to accompany me. I corresponded with hotels both on the main shore and on the narrow neck of land facing the sea, and to do the hotel people justice, must say that they wrote that snipe shooting was merely fair and that bay fishing was not anything extra, but that the bluefishing was very good. We reasoned that even if the fishing was only fair, we could fill in the time very nicely by fishing for the fighting blues; and accordingly the afternoon of Saturday, Aug. 19, saw us seated in a train of the Pennsylvania R. R. en route to Barnegat City, at which place we arrived at 6:30 that evening. From what we could see as we rolled along in the train, after leaving Barnegat City Junction, I somehow felt that we had come to the wrong place, as the different settlements all along that part of the beach bore a deserted air, and when we reached our destination it really seemed as though we had struck the "Deserted Village." The many pretty cottages that were located here and there were all closed up tight; most of them were badly in need of paint. The balconies of the hotel were empty and there was none of the crowd such as can be seen at the arrival of the evening trains at all of the resorts along the New Jersey and Long Island shores. This did not trouble us, however, as we had come for the fishing and shooting, and did not care whether or not we had any other company.

After eating our supper we consulted some of the "captains," who all made the hotel a sort of rendezvous, about engaging a small sailboat by the week, as we intended to do our own shooting without the assistance of a professional gunner. We learned of a boat that would probably answer our purpose, and arranged to go down to the bay next morning to look at it. We made many inquiries as to the prospects of shooting and fishing, and were told there were but few weakfish on our side, but that along the main shore they were very plentiful; and that there were not many bay birds flying, though peeps were plentiful.

Sunday morning we engaged the boat we had been told about, which proved to be a small, flat-bottomed one, with a sprit sail, and took a short spin across the bay to see how the land lay. A dip in the surf followed, and we settled down to take things easy for the afternoon, keeping our weather open for snipe, but we saw none.

Toward evening ominous black clouds began to pile up in the northwest, then in the southeast and all around the horizon. Fiftful flashes of lightning, followed by the rumble of thunder, showed that heavy rain must be falling all around us, but we escaped the rain until late at night, when the wind shifted to the northeast and blew a half gale, accompanied by heavy rain, which lasted until about daylight.

Believing that the storm might have started a flight of snipe, we got up early Monday morning and sailed to Sea Dog Shoal, located about a mile out in the bay, which we had been told was the best place to make our blind. Here we kept watch until one o'clock, but nothing came along but a few peeps and ringnecks, none of which we shot. Having nothing to do in the afternoon we decided to try the shoal again, and sailed across about three o'clock. Upon sailing up to the landing place at the shoal, which was now nearly covered with water, it being high tide, we saw several turnstones, a couple of black-breast plover and several hundred peeps, surf-snipe and ringnecks. Hastily putting my gun together I succeeded in bringing down a black-breast plover and a turnstone, the other birds scattering all over the bay. We put out our decoys and settled down to wait for the birds, but other than the peeps, etc., nothing came until we were about to go home, when a solitary willet flew in and was promptly brought down. A dowitch then came in, but alighted pretty well out of gunshot. After watching him for ten or fifteen minutes John tried a pot shot, but without success, and the dowitch took his departure, followed in a few minutes by ourselves.

Tuesday morning we started early so as to get possession of the blind on Sea Dog Shoal, which is, by the way, a sandbar all but covered at high tide, but at low water showing a surface of half a mile or more in area. The wind was southwest and we thought there should be some birds flying, but a couple of "jacks," flying very high, were all we saw in the way of game.

In the afternoon we decided to try the fishing and anchored in deep water, where we were informed we could catch some sea bass and flounders. A couple of hours' fishing were rewarded with one light nibble and we gave it up. A boy fishing near us, caught a couple of sea bass about 3 in. long and seemed to think he had done fairly well.

Wednesday morning the wind was in the northeast; the sky was overcast and there were occasional light showers, a perfect day, we thought, for snipe. Risking a wetting, we sailed out to Sea Dog Shoal and set out our decoys in tempting array, with their heads pointed up wind, where we expected the birds to come from. After quite a while a solitary big yellowleg came along and we succeeded in calling him toward us, but he evidently knew the blind and could not be coaxed within gunshot. We returned to the hotel with an empty bag and spent the afternoon reading. Wednesday night the big storm that did so much damage along the coast set in, and all night the wind blew as though it were a fiend incarnate

and bent upon blowing the hotel into the bay. At 4 A.M. Thursday morning the wind shifted to the northwest and blew almost as hard from that quarter as it had from the northeast. We went down to the bay, but found too heavy a sea running to admit of our going out, and besides Sea Dog Shoal was a couple of feet under water. We tried it along the shore for a while, but there were no birds flying, except peeps and surf snipe. In the afternoon we tried to get to Sea Dog, but after going about a half mile off shore and getting thoroughly drenched from the water that broke over our little boat in solid sheets, getting down our necks and into our boots, we decided to put back, thus making the fourth day practically wasted.

While we had been fooling away our time trying to shoot snipe, a party of ten gentlemen from Germantown, Pa., had been after bluefish every day, but there was a heavy sea at the inlet and their captains were afraid to venture outside, so they did not get a fish. Thursday's heavy northwesterly wind beat down the sea considerably, and Friday morning we induced Captain Morse to take us outside, which he did, after seeing Captain Mitchell's boat, with the Germantown party aboard, get out the North Way. We found a heavy sea outside and the water very muddy. We trolled for a couple of hours without getting a bite, then Capt. Morse said that the stiff southwest wind that had sprung up would make the sea so heavy in an hour or so that we could not get across the bar, and there was, therefore, nothing left for us to do but to get in.

Captain Morse and others had been telling us that there was first-class fishing along the main shore, big strings of weakfish and striped bass being caught daily, and that yellowlegs were plentiful in the salt ponds adjoining the shore of the bay. We had him take us over there, so that we could see for ourselves whether there was anything in these reports. We saw the salt ponds, but did not see a snipe around them, which was the experience of another party from the hotel who had been there the previous day.

We were now thoroughly tired of the place and decided to go home, but here another difficulty arose. The big storm had washed away a large portion of the railroad tracks between Barnegat Junction and Barnegat City, the telegraph wires were all down, and all communication with the main shore had to be by boat. The hotel people found it difficult to get supplies and their table suffered accordingly, likewise the few guests left, fifteen in all, all the others having gone home during the early part of the week.

Everybody was disappointed and disgusted with the fishing and shooting and general dullness of the place, and the entire fifteen guests, including ourselves, decided to go home Saturday morning, going across the bay to Waretown and from there to the railroad station. The usual charge for a boat for a half day was \$2.50, but when we spoke of being conveyed across the bay, \$5 was demanded (the distance being from five to six miles). The ten gentlemen from Germantown had made their own arrangements to be taken across the bay and to the railroad station. Two of the other guests, a gentleman and wife from Trenton, were not decided as to whether to go or not; but as it was certain that the other gentleman, my brother and I would go, I spoke to the captain about taking us across, for which he asked \$5. I told him this was rather steep for a party of three, but finally agreed that if only three went we would pay him \$1 each, and if five went the rate would also be \$1 each, giving the captain the benefit of the extra passengers.

Saturday morning there was a very light southeast wind and indications of a fog, so we decided that if we would be sure of catching the 3:45 train at Waretown we should start at one o'clock. Therefore at 12:30 we left the hotel and were off shortly after one. The wind was still very light and it took about an hour and a half to reach Waretown. The railroad station was about two miles from the dock and we had to look up a conveyance to take the party and their baggage. The proprietor of the hotel near the dock agreed to take us at a reasonable rate, but said he had not room enough for the three trunks and other baggage. As we could not leave the baggage behind it was incumbent upon us to hustle around and get some one else to take it. The hotel man referred us to another hotel a short distance up the road. The proprietor there said his man was down the road somewhere and he could not leave his business. I offered to drive the team to the station if he would send a boy to take them back. He said no man or boy in that town except himself and his hired man could drive his team, and referred us to the store across the street. I thought the hotel man's team must be something extra, but found upon inquiry that they were the regulation country hotel and livery stable breed that must be whipped to make them go faster than a walk. The storekeeper across the street thought his horse would be busy that afternoon, but referred us to another store up the street. There we found a boy in charge, who told us that in an hour or so he would have to call for a lady to take her to the station. I asked if he could not hitch up, take our trunks to the station and then call for the lady, but he thought he couldn't. We then went back to the hotel, but with no better success than before.

We were by this time getting desperate and ready to pay almost any price in reason to get our trunks to the station, but as the natives seemed indisposed to either accommodate strangers or to earn a couple of dollars, we saw nothing in prospect but to wait over until Monday, as no trains run on Sunday. Going back to the hotel at the dock, we met a teamster who had taken a boat down to the bay on a wagon frame. We told him our plight, and asked if he could not in some way manage to take our trunks to the depot. He proved to be a "white man" and said he would hurry home, get a suitable rig and come back. Considerable time had elapsed since we reached this inhospitable town and we had but forty-five minutes left. The teamster, however, proved to be as white as he talked, and in a few minutes was back with a box wagon, into which we hurriedly pitched our baggage, jumped in ourselves, hot, tired and mentally swearing at the "Jersey pirates," as we dubbed the people who seemed bent on making all they could out of us and putting themselves out of their way as little as possible. The drive to the station proved to be through pine woods and was very heavy, so that when we reached the 6x10 board shed used for a station of the great Pennsylvania Railroad we had but five minutes to spare. The train was a few minutes late, but eventually came along, we jumped aboard and bid good-bye to a place that we will hardly care to visit again, at least not until the fishing and shoot-

ing improve and the natives learn to have a little consideration for visitors who are willing to pay liberally for everything they get, but not to be imposed upon.

At the station we met four gentlemen who had been to Waretown fishing. They told us that the reports we had heard of big strings of weakfish and striped bass (30 to 100 to the boat for a few hours' fishing) were fish stories, as very few fish had been caught along the main shore. They said they had been told there were plenty of fish along the beach side of the bay and were sorry they had not gone there. They also said they had heard of no snipe being killed on the main shore. We saw it was simply another case of "You should have been here the other day, etc.," that visiting fishermen are regaled with when they meet with poor luck.

The above is a perfectly true narration of our experiences on Barnegat Bay, and is written simply to show that you cannot believe all you hear about fishing and shooting resorts, unless you know the source whence the information springs, and that it is entirely disinterested. There are too many people writing glowing accounts of shooting and fishing to be enjoyed at different places, their reports being mostly drawn from their own vivid imaginations and entirely without any foundation in fact. I was shown clippings from different newspapers, telling of big hauls of weakfish, sea bass, etc., caught at Barnegat City by people who, I was informed, had hardly wet a line this season. One article described a fishing trip of two persons, with a result of 106 fine bluefish. The party who wrote that item unblushingly informed me that they did not get a bite that day, let alone catching any fish.

Now, fish stories are all well enough in their place, when known as such, but when any person deliberately tells stories not based on fact of fine fishing or shooting at any particular locality, it is simply booming that place by means of false pretenses, and no reputable journal should publish such stories as truth.

For our part, it was not through any newspaper reports that we visited Barnegat City, but from the well-known reputation of the place.

I would also say that gentlemen I met there, who had been there in former years, told me that they had caught boatloads of fish, and that the snipe shooting was all that could be desired by the most exacting sportsman. I know also that the shooting and fishing all along the coast is remarkably poor this year and, therefore, Barnegat Bay suffers with other places and is no exception to the general rule. This being the case, hotel men and others should refrain from publishing "Munchausenian" stories of big hauls of fish and game, and the papers should ascertain positively who their correspondents are before publishing such "yarns." H.

### IN LOUISIANA SWAMPS.

POINT PLEASANT, La., Sept. 7.—It has been a long time since I have had the pleasure of writing to you, so I thought I would write you and give you an account of our first deer hunt of the season.

It has always been customary for us to go on opening day; but this year the cotton worms were so bad that it was impossible for us to leave home. We had a hard fight with the worms; the battle ended Sunday night, the 3d inst. Although we won the victory, our cotton reminded me very much of what a boy once said to another who had licked him, "Yes, you licked me, but I gave you all you wanted while you were doing it."

Tuesday, the 5th, was set for our hunt. We were to meet at Somerset at 4 o'clock. I was the first on the grounds, and by 5 o'clock they had all come up—C. B. Muir, Arch, and George Douglass, Max Bland and Crab (a colored man). We had 23 dogs. Of course every one had the best dog, and there was a lively discussion among the boys as to whose dog would lead the chase.

We started a buck and doe at half past six o'clock. They made a straight run of about a mile, then doubled. Then away they went back to where they had started from, with every dog in full cry. I headed them, but failed to get a shot. The dogs were well bunched, I could not tell which one led. I dropped in behind, and followed as fast as I could ride. Just as the dogs struck the field, I heard the report of a gun, then another. On coming up I found George D. had cut the deer off, and fired the two shots, one at the doe and one at the buck. He said he had hit them both. The dogs were still running. We both started after them as fast as we could ride, when all of a sudden every dog stopped opening. "There," said I to George, "They have caught one." We hurried up to the dogs and found the doe. Listening, I heard two dogs still running. We soon got the rest of the dogs on the trail of the buck, and they did not go more than a quarter of a mile before they caught and pulled him down. Both of the deer were in fine condition.

We blew our horns and the rest of the party soon came up. "Whose dog led?" was the first question asked of George. "I don't know," says he, "for I could not tell; but Sullivan and Drive caught the buck. The buck and doe were together when the doe fell, as the buck's trail led off from where she fell." "Well, boys," said I, "We will get these two out to the levee, and then eat our lunch. Then we will start another deer, and may be we will then be able to decide who has the lead-dog." It was then half past seven o'clock.

We ate our lunch, dressed the deer and were ready to start by half-past 8. George and I took part of the dogs; Max and my brother had the others. We took the swamp in different directions, so as to go on both sides of a large lake, as it could only be crossed at either end. The lake is about eight miles long. George and I did not get a start until we got near the western end, there the dogs got up an old buck. Away they went out of hearing. They were gone for over an hour. Then I heard them coming back, they were making for the lake, and I rode as fast as I could to cut them off. But again I was too late. When I got to the lake, I saw the buck about half way across, with only three dogs following him. The lake is about three-quarters or one mile wide, and the deer often take it to shake dogs off. I tried to get the other dogs to go, but the most of them being young, they would only go out a piece, and then turn back. I got separated from George. I had my little son with me (a chap of seven summers, but who can ride with the best of us). We started for the levee, for I knew the deer would go in that direction. On getting there I found Max, my brother, and Crab, with the biggest buck I have seen for many a year. They had started his trail on the northern side of the lake, and trailed him back to within

200yds. of where we had eaten our lunch. When we got up he made for the lake, but did not succeed in shaking off the dogs. Then he made a double and started for the fields. But Crab cut him off and got a shot, wounding him badly. He did not go far before he stopped to fight the dogs. It was for some time before Crab could make the second shot, for the dogs were so close around the deer that he was afraid of hitting some of them. Eventually the buck made a break to get away from the dogs, and ran by Crab, who then gave it to him broadside and killed him.

I told the boys that my deer had swam the lake, but that three of my best dogs were after it, and we had better scatter up and down the levee and try to kill it. Before very long we heard the dogs coming. Then it was a hustle who should get the first shot. George had come up in the meantime, and he put spurs to his horse and went at breakneck speed down the levee in the direction of the dogs, my brother following, and I bringing up the rear. After riding about a quarter of a mile I saw the buck spring over the levee some distance ahead of George, and right behind him came Tanner, Sullivan and Croquette, three of my best dogs. I turned to my left and cut the deer off. It was not long before I saw him coming with his tongue hanging out. I raised my Winchester, and at the crack the old fellow's troubles were over with. We had now three fine bucks and one doe. The doe was barren and very fat. We tried to weigh the big buck on a pair of cotton scales, but they would not draw him, as they only drew 300lbs.

We shall have to wait until the next hunt to decide who has the fastest dog.

D. M.

## THE .22 SHORT RIFLE.

Editor Forest and Stream:

I see in my FOREST AND STREAM of Sept. 2 notes by "Julian," on the .22cal. Winchester repeater regarding its shooting qualities. I have a few words to say if you care to give this space. I have a .22cal. short Winchester repeater, having twenty-five shots in magazine and one in the chamber, model 1873, which money cannot buy. I have used this Winchester constantly for six years. Have used it among the Sand Hills of northern Nebraska, the Black Hills of the Dakotas, and in the mountains and on the cattle ranges of Wyoming, and for all round work I would not ask for a heavier caliber.

In trying my Winchester at penetration I measured off 200yds. and set up a cloth target with an 8in. bullseye tacked on an inch pine board, backed by another of equal thickness. When I fired the first shot I could hear the spat as the ball struck the target and also noticed dust fly beyond the target. Thinking I had probably hit the edge of the board and glanced off, I fired four more shots, and at every shot dust flew beyond the target. On going to the target I found five clear cut holes through both boards. I took two more boards and nailed the four together, making a total of 4in. thick, and fired five more shots from the 200yds. mark, and dust flew again at every shot. I added another board, making 5in., and fired five more shots. There was no dust this time. I found all five bullets had gone through the first four boards and had splintered off the back of the fifth, with the exception of one which showed clear lead and was picked out with the fingers. The fifteen shots were fired without cleaning the gun. So at 200yds. the .22cal. short Winchester is quite an efficient arm. I have never tried it at a greater distance at a stationary target, although at Ardmore, South Dakota, I killed a prairie dog at a measured distance of 303yds. I have also killed geese and crane at 150yds. and 200yds. while in the Sand Hills, and coyotes and antelope while in Wyoming. In one case after wounding an antelope with a .22 short cartridge and chasing it quite a distance I slipped a .22 long in the chamber, using it as a single shot, and killed with it at about 150yds. from a saddle rest.

There is one advantage in the small bore over the larger, and that is as to noise. I have lain in the rushes at the edge of a lake and killed eight ducks from a flock before they took wing. Have also killed five quail out of a covey before they would scud for shelter.

I give it the best of care and with the exception of a few scars on the stock it is as good to-day as the day I bought it, if not better. It now hangs above my desk in its saddle holster, with my Colts six and belt on one side and my lasso and field glasses on the other, all companions on many a hunting trip in the wilderness.

EKESTER, Neb., Sept. 8.

DIAMOND WALT.

## VENISON FOR THE MEAT SAFE.

OKANOGAN, Wash.—One evening along in July I had come to my cabin, pulled off my gum boots, eaten my supper, milked my cow, and that being the extent of my chores I had picked up FOREST AND STREAM to pass off the evening; had taken a chair outside the cabin and was very comfortably situated, when my attention was called to the clatter of horse's hoofs. Indian Peter rode up, threw the bridle reins over his horse's head and jumped off. He had his rifle on his arm.

"Well," said I, "Peter, where are you going?"

"To watch the lick up on the side of the mountain," and he pointed to a spot about three-fourths of a mile from the cabin. "I want you to go along."

I objected; but he begged so hard and claimed he had never refused to go with me when I wanted to get some trout; so at last I consented. Just as the sun finished painting the Huckleberry Mountain his golden yellow, we started for the lick, which we soon reached. There was a strata of clay 10 or 12ft. long, which the deer eat. Below it some 25ft. was a hole dug just in the edge of a small patch of buck brush. We broke a few brush and stuck in between us and the lick. In clear weather the wind blows down the mountain of a night, so that there is not much chance for the deer to smell a hunter.

We fixed our rifles ready for use. I tied a small piece of flannel around the muzzle of my rifle, and drew it tight over the front sight. Then I took about ten matches and dampened them, and laid them right where I could put my hand on them. Then we seated ourselves for a four or five hours' uncomfortable sitting.

We had not been still more than half an hour before we heard a deer whistle. Down below us we could hear it jumping along; then all was quiet. I should have liked very much to have a little talk as to what kind of a deer it was and what it was doing below us, but we were not there for pleasure; so we sat silent, I had got my back

in against the bank and had a tolerably comfortable seat, so that I found it hard work to keep awake, when presently I heard, or thought I heard, a deer walking around from the side of the lick. Then all was still and the beating of my heart was all I could hear. Pretty soon I heard the sound again. Then my companion pressed my knee. It was a deer. Soon we could see the outlines; but the animal was very suspicious; he would take a step and stop. Soon he reached the lick; and after a few mouthfuls of clay he forgot about danger, if he had ever been shot at and missed. But, poor fellow, the chances were badly against him then. He would put his head down and we could hear him scrape off the clay with his lower teeth; then he would raise his head, and as it rose above the horizon we could see that he had a very large pair of horns. Our time for action had come. When he put his head down I reached and got my matches and rubbed them on the flannel just on the front sight, carefully raised my little XX and fired. Peter said he would shoot just after I had. The reports were almost simultaneous and the echo had not returned before we had jumped out of our hole.

Sometimes deer will roll right into the hole when they are killed dead. We had just got out when the buck came rolling down and stopped in the brush within less than four feet of the hole. We approached him very carefully, but he was dead.

When we got back to the cabin I turned into a good comfortable bed; Peter rolled up in a blanket and slept on the floor; and we were soon asleep. When I woke up the sun was shining and the chickens were calling for their breakfast. Peter went to get the deer while I milked the cow; and we had liver for breakfast. When we dressed the deer we found that both had hit it. I had hit the heart and Peter had broken the back. My bullet had broken one shoulder and lodged against the skin; but Peter's .45 had not stopped.

I took one ham and hung it up in my meat safe, and Peter took the rest of the meat. This is the last time I shall watch a lick; the position is uncomfortable. I would much sooner get out before sun-up and visit a lick than to sit up all night. Such is the way we have to secure our meat or go without.

LEW WILMOT.

## MAINE BIG GAME.

THE season on big game in Maine opened on Monday, Oct. 1, and it is evident that a great many deer will be killed because they are there to be had for the hunting. Reports indicate more deer in that State this year than ever. It was calculated last fall that the increase in deer had been great, but the reports are even better for the season of 1893. Deer are now regularly seen in every county in Maine, and almost the same might be said of every town. They actually come to the very outskirts of the larger towns and cities. Mr. George H. Hutting, of Andover, writes me that the deer tracks are "awfully thick" in the woods, and that he is going to have three of them this season. He killed his three deer last year with very little trouble. It only required hunting for a few hours following a fall of snow that came in the night. It is a curious fact that the deer are working down into the towns, where there is better pasturage than the dense forests afford. It is plain that they are fond of feeding on grass such as grows near to the settlements. It also demonstrates the fact that if the deer is alone with dogs, they will increase in almost any sufficiently wooded section of New England. They have come down so far in the settled portion of Maine that those who have given the matter a thought had begun to wonder why some of them did not stray over into the woods of Massachusetts. This question is solved at last, for deer are being seen in the woods of that State north and east of Boston. Mr. Claude H. Tarbox has the report of a perfectly reliable friend, who saw a deer the other morning near the pond that lies near the line between Byfield and Georgetown. This deer was seen the other morning, and in a few hours the same deer was seen not far away in Georgetown. In neither case did the deer appear to be greatly frightened. It acted as though it was a good deal at home. There is no doubt that this deer strayed down from Maine or New Hampshire, or is the progeny of deer that have strayed from the States where they are plenty. It is possible that deer are again to inhabit the woods of the northern and eastern towns in Massachusetts, as well as the towns on the Cape, where there is a perpetual close time.

With the opening of the season on moose, deer and caribou in Maine the hunters will be abroad. Mr. Chas. H. Cook, a popular dry goods salesman with Bliss, Fabyan & Co., has just started on a hunting trip to Tim Pond and the Seven Ponds country. He is very sure of getting a deer, but it is possible that he will strike that country at just the wrong time, the falling of the leaves. There is always a week or two in October when the falling of the leaves makes hunting anything but a pleasure.

Mr. Tenny, of the coffee trade, is a lover of woods and water sports, and with a friend they are after game in the woods of Aroostook county, Me. They promise an account of their trip for the FOREST AND STREAM. They are to go to Mr. Chas. Sias's camp, as headquarters for their hunting.

As for moose in Maine, it is doubtful if they have increased in the same ratio the past season that deer have. Still they are occasionally seen, even in sections where little expected. There is no doubt that summer slaughtering has told heavily upon the moose during the past three or four years, but after all it is doubtful if this summer shooting is one-half as bad as represented to be. Neither the commissioners nor their game wardens will admit that the killing of moose and deer around Moosehead Lake the past summer is half as bad as it is represented to be. Commissioner Stanley himself finds that the stories about the slaughter of moose and deer the past summer in the Moosehead part of the country have been greatly exaggerated. During a trip over a part of the ground represented to be "stinking with dead game," he found only one carcass. It is one of the mysteries about human nature that even men of truth in other matters will greatly stretch the truth concerning game in the forests and fish in the streams.

SPECIAL.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## THE VERMONT WOODCOCK SEASON.

RUTLAND, Vt.—Editor Forest and Stream: Your correspondent "Stanstead" from Highgate, Vt., has a letter in your issue of Sept. 16, which shows a degree of ignorance in regard to the migration of woodcock almost equal to that of his insult to the sportsmen of southern Vermont, when he says that it was owing to the latter's selfishness that the present opening of the woodcock season (Sept. 15) was obtained.

I admit that the Vermont Fish and Game League was influential in obtaining this law. This organization is generally composed of high-minded sportsmen who, in pressing their influence on our Legislature in the recent general revision of all of our fish and game laws, tried to act intelligently and with fairness toward all sections of the State. The change in the woodcock law, like all other changes, was made upon consultation with sportsmen all over the State, and in accordance with what seemed to be the best opinion in that regard, and it is absurd to believe that the gunners of this or any other part of Vermont procured this law for their own selfish ends.

A man who says that the woodcock reared in northern Vermont migrate before Sept. 15 does not know what he is talking about. "Stanstead" acknowledges that his locality gets flight birds later in the season. Therefore, birds are bred north of him. If woodcock in northern Vermont move early, it is fair to assume that the birds north of them do. Now, if there is a movement south of woodcock late in August or early in September, why is it that "Stanstead" does not after Sept. 15 get his share of the birds as they come down from the higher latitudes? Can he reasonably assume that all of these early flight birds have got past him by that date? I say no.

The best of the woodcock shooting here is from the middle to the last of October. A few birds are shot early in November and I know a man who killed one early in December. The northern boundary of the State is a trifle over 100 miles from here. Add to these facts the disinclination of any bird to migrate before it gets through moulting—not completed here until the first or second week in September—and it does not seem probable that any woodcock in this State commence their annual flight until the last of August or middle of September.

But where do the birds go to then? I have located birds the middle of July and six weeks later I have not been able to find even a chalk mark of them. I explain it in part as follows:

Their moulting season had in the mean time arrived, and they had moved to warmer and higher ground. Any birds after their young are reared feed on more territory, and as the season advances, with their naturally solitary habits they become more scattered. Then weather conditions alter their boring places. A moist, mucky cornfield will delight a woodcock one day and a springy, warm sidehill the next.

Early woodcock shooting is not satisfactory. The birds are very hard to find, they are lean and full of pin feathers, slow of flight, and the weather is too warm for both the gunner and his dog.

While "Stanstead" is looking up his question on constitutional law he must not become so absorbed as to let possible "constant west winds" take any of the longbills past the guns of his club of prospective law-breakers.

DALG.

## Rochester Game and Fish.

ROCHESTER, N. Y., Sept. 26.—C. L. Barton and G. N. Hopkins have returned from a two-weeks' outing at Tremont Park, Tids Island, near Gananoque, Can. They had excellent sport with the bass and pike. Three maskalonge were hooked and brought near enough the boat to verify the diagnosis, but all three escaped. These gentlemen went up the Gananoque River to Sand Bay one day, and aver that good duck shooting can be had at that location. The bay is surrounded by marshes, affording good cover for the shooters.

W. D. Oviatt and Walter Green, son of Monroe Green, stumbled on to some great sport at Cranberry Pond one morning last week. The bag showed twenty-one ducks and a number of golden plover to the guns, also a fine string of pickerel.

Several witnesses well known to me vouch for the fact that a shooter secured three ducks at the wide waters in the canal, just inside the northwestern limits of the city, on Friday morning.

Aldermen Lempert and Aikenhead and Max Mock, William Heald and Samuel Solomen left Monday, Sept. 25, for the Seneca River and Montezuma marshes on a hunting trip. They expect to remain a week or more.

The annual shoot, or rather hunt, of the Flour City Gun Club came off on Thursday. It was a side hunt, twelve on a side, losers to pay for supper for all. Among the "game" brought in were woodchucks, chipmunks, ducks, bitterns, plover, red squirrels, etc. The winning side was captained by C. W. Briggs and the losing by B. Frank Enos. Samuel P. Kay made the highest individual score, 560, but he was one of the losing side just the same.

If "W." of Oswego, N. Y., who inquired for black and gray squirrel shooting in your last issue, will write to William Truesdale, corner of First and Mason streets, Rochester, N. Y., it is possible that he may acquire the desired information. Mr. Truesdale had great luck with the nimble fellows last fall.

O. S. BEE.

## Virginia Sora.

A Roanoke correspondent sends us this note received from a shooting friend:

NORFOLK, Va., Sept. 15.—T. S. D.: Your memo of yesterday. Am keeping a weather eye on the sora. We had very good tidings and the weather was propitious for last Monday, Tuesday and Wednesday. I went up to Suffolk Tuesday morning to try the sora, but arrived too late to get a pusher. I picked up an old colored man and got a boat. The old fellow knew nothing about pushing, nor did he know a sora when he saw it. I had quite an experience. I was dumped or thrown in the marsh twice, the last time up to my armpits, and in consequence had to abandon the hunt. I managed to shoot nine shells and bagged eight birds, and then hurried home. There are birds in plenty, and if I had secured my old pusher I could have bagged 100 easily. The birds are very poor and not in condition. One party day before yesterday killed at Suffolk 158. Next week will be the time, and the birds will be in good order. I will telegraph you as soon as indications point to favorable weather, etc. You must be ready to start at once.

W. T. P.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## Louisiana Paradise.

CHICAGO, Ill., Sept. 28.—An enthusiastic and successful young sportsman of New Orleans, whom we met last winter on our trip South, writes as follows to the Western representative of FOREST AND STREAM. In his invitation to a shoot he generously joins not only the FOREST AND STREAM, but all the inhabitants of the earth, that is to say, all the FOREST AND STREAM readers. We must not, however, allow him to impose on himself by making public his name and invitation, for he little recked the consequences thereof. It is quite enough to make public the pleasant country of which he speaks. His letter reads:

"Readers of your interesting paper, the FOREST AND STREAM, and especially lovers of the dog and gun, are always anxious to learn of a good country for game. I have surely struck the paradise, and I also have met two thorough sportsmen, in the persons of Messrs. E. Smiley and Wm. Cade, who reside in the very heart of this paradise.

"Quail, snipe, ducks and geese are to be found in abundance in the shooting season in this country, which lies about five miles south of Abbeville, Louisiana. It comprises both sides of Bayou Vermilion. The soil is as rich as any in our Union, the scenery is beautiful and can better be remembered than imagined.

"A few miles south from Mr. Smiley, there is good deer and bear shooting, and by crossing Bayou Vermilion and traveling about twenty miles west we find many chickens.

"I met Messrs. Smiley and Cade about six months ago, and learning they were sportsmen, I at once proceeded to get from them all information regarding a chance for a good shoot this coming season. I found them 'true blue' and at once received an invitation for myself and any of my friends to come any time and enjoy some sport with them. I have made six or eight trips in that section since meeting these clever sportsmen. On my last I saw coveys of young quail, the largest in number I ever saw. Imagine the calculations I have been making as to how many I will bag some day this season. ANODRAC."

## Chickens.

Mr. C. W. Lee, of Chicago, drops me a note about some friends of his who are just back from a chicken hunt. He says:

"J. J. Bryant, C. C. Germain, E. C. Hibbard and Charley Kern, of Chicago, have just returned from northern Iowa and southern Dakota, where they were in search of chickens. They report the chickens plentiful, but owing to the extreme dryness they had to hunt for them in the corn. The dogs got bushed in the stubble and could not work more than an hour at a time, so they gave that sort of hunting up, and did their own flushing. They had a private car, or rather two of them, and in company with Tom McKenna and Wm. McMartin, of Sioux City, had a fine time of it. They were out ten days.

"I can tell you about some things, but when it comes to 'bushing a dog in stubble' or 'flushing a bird in corn' I must refer you to our friend Waters."

This question being duly referred to the above-mentioned kennel authority, receives the following reply: "In good stubble there are no bushes, neyther does one find stubble in bushes. There must be some mistake."

## Some Chickens.

Mr. Ed S. Nowotny, of Odell, Ill., owner of a number of fine dogs, is so kind as to invite the entire Western force of FOREST AND STREAM to come down and shoot over his dogs. He states that chickens are not abundant, but that he occasionally finds a covey, though until within the past week the weather had been too dry to do much with them. In the course of his letter he remarks:

"From what I learn I am afraid Governor Altgeld was about right when he said it was useless to attempt any further game protection, as every farmer shot game regardless of season, and it was only a question of a short time until the game was exterminated. Around here the farmers all shoot chickens at any time. They have been at it for two weeks past (from Aug. 15), but as they don't own dogs I guess there is some game left."

Our compliments to the Governor. If there were fewer men like him the unequal fight would go more in favor of these birds which cling so tenaciously through all to the prairies of Illinois.

## Plenty of Chickens.

This fall I sent Mr. Reuben Donnelley, manager of the Chicago City Directory Company, up to the northwest corner of Minnesota, in response to his inquiry for good chicken country. On his return Mr. Donnelley writes me as follows:

"I looked into several towns in the vicinity of Pelan, and finally decided upon Kennedy, where I have been for the past week or ten days. We had the best kind of sport, averaging pretty nearly fifty birds a day, and this with one good dog in poor condition and one useless cur. Most of the birds which we got were grouse instead of chicken, which gave us splendid sport. The shooting in the brush gave us much more diversified sport than ordinary chicken hunting. We also got into a country where there are considerable elk, moose, etc., which some day I hope to get better acquainted with during the later season.

"I thank you very kindly for your attention, and if there is any further information that I can give you in regard to shooting in the vicinity we visited, I would be more than glad to do so."

I am glad Mr. Donnelley had good sport. It is with reluctance that I direct any one for a sporting trip, because it is so nearly impossible to tell just what luck any one will have, even when he bases his trip on the most careful information obtainable.

## After Chickens.

Mr. H. O. Wilbur, of Philadelphia, leaves this week on a fortnight's trip after chickens, ducks and geese, and on my advice will very possibly go up into pretty much the same country as above mentioned, though for wild fowl he may go so far West as Devil's Lake, N. D., which is better for fowl. I tried to get Mr. Wilbur and his party to take advantage of what seems to me the nearest certainty for a good ducking trip of anything I now know of. My old shooting acquaintance, Billy Griggs, the greatest market-hunter and best duck shooter on earth without a

doubt, is just back from some mysterious trip or other South. This week he called at my office and said he was not going to shoot in the North at all this fall, but was going back home to Browning. He also said that he would be willing to take a party of gentlemen up into some good duck country he knows of in the Northwest. A party under Billy Griggs's care would get the best of the shooting. Mr. Wilbur had already made other plans. If any one else would like to go out with Billy I will be glad to establish communications. This I do because Billy Griggs has always seemed to me more gentlemanly than many a man in a different business who would decry his business, and because he knows his business better than any one else does.

## Plenty of Ducks.

There is plenty of ducks on the Horicon Marsh this fall. Percy Stone tells me he has been up twice since opening day. His second trip was for two days, and he bagged 90 ducks in two days' shooting, quitting at 10 o'clock each morning. His wife was in the blind with him the second day. Last week Gov. G. W. Peck, of Wisconsin, was up at the lower club, of which he is a member, and Mr. Stone had the pleasure of locating him. Gov. Peck got 32 ducks in the morning's shoot, Mr. Stone bagging 45. Shooting on the upper club grounds is reported equally good.

During the course of a pleasant little visit with the little favorite, Miss Annie Oakley, and her manager, Mr. Frank Butler, at the close of the Wild West performance the other evening, it transpired that both were anxious to have some duck shooting this fall after the closing up of the Wild West show for the season. At once I invited them to use my shares in the upper Horicon club, where they would be certain of shooting any time before the freeze-up. Yesterday I spoke to Mr. Stone of this, and he adds the invitation of the Diana or lower club. "Annie Oakley can own the whole marsh and both club houses," said he, "any time till the marsh freezes. Have her and Mr. Butler and any friend of theirs come up any time." Although Miss Oakley's visit will be late in the fall, all the club men will hope she catches a good flight and has a pleasant time.

Mr. Stone stopped at the FOREST AND STREAM corner at the Fair long enough to carry off for his two club houses two of the prettiest of the FOREST AND STREAM big photographs, "Morning on the Horicon Marsh" and "In the Tules." He said he wanted them worse than FOREST AND STREAM did, and so it seemed superfluous to argue over it. Incidentally he remarked that in the three late suits against club men at Waupun the club men were fined \$10 and costs each in the justice court. Of course they appealed. In return the club arrested a poacher under the posted lands law and had him fined \$39. He appealed also. The appeal cases come up before Judge Sloan of the Circuit Court at an early date. The club men have no fear of the result, as the law seems clearly on their side.

## Around Chicago.

Mr. M. F. Emilio, of Boston, is in the city for a short time, and wished while here to have a little duck shoot, "somewhere within 100 miles of Chicago." At any date this is a hard order to fill in these times of scarcity of birds, but in early September it is a practical impossibility as the local birds are all killed and the northern birds not yet in. I directed Mr. Emilio to Water Valley, on the Kankakee, as being the best open ground at short distance, and if he goes let us hope the northern teal may possibly appear to show him that the glory of the old marsh is not altogether gone. Probably he will get no shooting at all.

Our friend Roll Organ is a hard man to kill. He has been blown up by powder, drowned and frozen to death, and a few days ago was shot. He and his friend Mr. Hanson were on the way down to Mak-saw-ba Club, when some miscreant fired a rifle at the train. The ball grazed Mr. Hanson and scared him a plenty, striking Mr. Organ in the neck and making a wound which might easily have been fatal. It didn't rattle Roll very much. The impression is gaining ground here that Mr. Organ was born to be hung.

What with two train robberies and two horrible train accidents within the last fortnight, and this last wanton attempt at a senseless crime, the firing of a rifle to injure some unknown person on a passing train, it may be said that Indiana is doing well toward establishing a reputation. The robbers of the first and more important hold-up escaped into what is called the "black swamp" of the Kankakee, over near the quail country of which we usually have good news in the fall. That is, the detectives think the robbers took to the swamps. If I were a robber, as I am a newspaper man, I would not go to the Kankakee to hide, wild as it is. I would make straight for the crowded, horse-packed, humanity-sodden streets of Chicago. Probably these robbers did. Anyhow, they have not been discovered, whereas the Centralia robbers, and the other gang who last week held up a train away up in the wilderness trout country of the Michigan north peninsula, are all now safely in jail. The wild country around here is growing too tame. If I were to rob anybody, I should make for certain mountains I know of in New Mexico, whose secret it may for prudential reasons be well not to disclose.

## No Longer Wild.

In fact, the country is no longer wild enough anywhere. Last week the Cherokee Strip was opened to "settlers." The Indian goes from his last ground. The last of the game goes swiftly from even that barren country now. We are no longer wild. Let our robbers head for Chicago. There may even be a homesteader in the nook I have been saving for myself out in New Mexico.

## A Long Time from Civilization.

From a Winnipeg, Man., paper the following is handed me by a friend just back from that country. Capt. Bell has certainly seen the wilderness in his long absence from civilization, as the following would indicate:

"Capt. J. Bell, of the Hudson Bay service on the Mackenzie River, is registered at the Queen's. He has been several weeks on the road, coming across to Athabasca landing and driving in to Edmonton, a distance of 3,000 miles. He is now on his way to Chicago and England. His district is peopled by the Chapayanes, Slavies and Dog Rib Indians, besides the Esquimaux. He states that every one living in that portion of the Dominion is apparently in a healthy state, although the Indians are not increasing. Their only employment is hunting furs for

the company. The fur trade is as good as twenty years ago. The captain was in Winnipeg during 1876, coming up on the old Ontario, then in charge of Capt. Robinson, now commanding the Beatty steamboat Monarch. After a few days' visit Capt. Bell continues his journey to the south."

## About the Deer.

Mr. Paul Blatchford, of E. W. Blatchford & Co., shot works, Chicago, is laying plans for a deer trip this fall and will probably go to the North Peninsula. Deer were reported fairly abundant in upper Wisconsin until within the past ten days. There is no telling what effect the wide-reaching and disastrous forest fires may have had.

? ? ? ?

And, by the way, has Dr. Thomas, the Chicago divine, ever paid that fine for the two illegal deer he killed in Wisconsin?

## A Growing Family.

Sept. 29.—Montgomery Ward & Co. have added another shooter to the lot class family of shooters who live on the fourth floor gun department. This time it is F. P. Stannard, late of the Stannard Arms Co., Milwaukee, and long known as a shooter. Mr. Stannard goes into the mechanical department, where his skill as a practical workmen will find ready appreciation.

## The Jerome Marble Party.

The special palace hunting car "Yellowstone," bearing the 1898 Jerome Marble Shooting party, left this city last night, Sept. 28, over the Chicago and Northwestern R. R., bound for Canby, Gary, Clark, Henry and other points in South Dakota, after grouse and fowl, of which certainly they will make good account in that country this year. This is the twenty-third annual shooting party under Mr. Marble's management, and in all the whole United States has been covered by the trips of this palatial outfit. They are out for thirty-five days this time. To show where and how they travel I append the following from their itinerary:

"The stops beyond Chicago being uncertain and depending on the reports we receive in regard to the game, we do not confine ourselves to any particular date in our movements. The route will be through Illinois, Iowa, North and South Dakota. Along this route and short deviations from the main lines we expect to find prairie chicken, quail, plover and nearly all varieties of ducks and geese. A stop of five days will be made at Chicago on the return, giving the members of the party an opportunity to visit the World's Fair. Leave Chicago via Erie Railroad at 7:45 P. M., Oct. 20, arriving in Worcester, Mass., Oct. 31.

"The entire trip will be made in the private hotel cars of the Worcester Car Co. They are models of luxury and convenience, each car accommodating eighteen persons. The Paige removable lower berths are used in these cars, which allows the main saloon to be converted into a drawing room, furnished with upholstered chairs, affording a freedom and convenience not obtainable in the ordinary sleeping-cars. It is also used for dining purposes. At night it is converted into a luxurious sleeping-car with sixteen double berths. There is also a private stateroom, with double parlor folding bed for those desiring exclusiveness. At one end of the car is a large observation and smoking room, convertible into a private stateroom at night, with double upper and lower berths. There are also two large private toilet rooms, one for the exclusive use of ladies and one for gentlemen. Each car is therefore complete in itself, with drawing room, dining room and sleeping accommodations, each car having three competent servants—porter, cook and waiter. Three meals per day will be served at regular hours, prepared by first-class cooks, and the table supplied with the best the market affords, equaling any of our first-class hotels. Our train will be special throughout the trip. The baggage car will be attached to our car for our especial use the entire trip."

The members of the party are as follows: A. W. Gifford, Worcester; D. F. Eddy, Dorchester; L. Eddy, Dorchester; W. H. Hutchinson, Lynn; Mrs. W. H. Hutchinson, Lynn; K. M. Gilmore, Lexington; Willard Nye, Jr., New Bedford; Mrs. Jerome Marble, Worcester; Jerome Marble, Worcester; Mr. Howland, Springfield; R. M. Smith, Boston; Mrs. Hannah Streeter, Worcester; E. Storey Smith, Brookline; Miss Annie B. Clark, Brookline; Miss Marion Cutter, Brookline; Miss Emma Cummings, Brookline; Charles Bell, Springfield.

## A Small Egg.

A Chicago contemporary this week uses a page of brevity to report the doings of the six persons who made the so-called "national convention" of sportsmen. It is a good thing to foster infant industries, but in this case it does look as though a great deal of incubative bosom had been wasted on a rather small egg, and not very many of it.

## North Woods.

Mr. J. W. De Long and wife, of Brooklyn, N. Y., passed through here some days ago on their way to Trout Lake, Wis., where they expected to put in some pleasant time with the muscullonge and other birds. The promised report of their doings not being forthcoming, it seems likely that they are still lost in the North Woods.

## Just Mention It.

I just want to mention something. Owing to the press of business and the many personal and social engagements of this busy World's Fair time, when one wants to see every friend he has in the city, the time for writing has been very short. Still, the material for writing has been so abundant that it is fairly as much a question of chance as of judgment, what to write about for FOREST AND STREAM. This sets me thinking. When the FOREST AND STREAM first started its Western office on its young and uncertain legs, five years ago, its sole representative had to get out and hustle to get the news. To-day this same office has more than one chair in it, and is in a state of vulgar and disgusting prosperity. Occasionally its denizens go out and in a leisurely and dignified way knock off a piece of news, but most of the news comes straight to the office, and they have to hustle to keep away from it, because the authorities at New York refuse to double the size of the paper and so give Chicago a chance. Each week the news comes into certain portly envelopes, and toward the end of the week these fairly split their sides with bits of white paper which show mighty well which way the wind is blowing. It's blow-

ing toward FOREST AND STREAM, and things are coming on wheels. Toward the close of the week the denizens of the Western office plunge their arms to the elbows in these big envelopes and grab out good things easy. The wind is blowing toward FOREST AND STREAM in every department. She sails, as Hon. Virgil says of Col. Aeneas, his boat, with a following wind. The scraps of paper show it.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

### Game Notes from North Dakota.

CANDO, Towner County, N. D., Sept. 25.—The shooting has been of the best here this season. Commencing early it lasts a long time; and we who live here enjoy a season of hunting surpassed in length by but few localities in the United States. It is becoming one of the best of prairie chicken counties. This year they had a fine season all through, from nesting on, though the nesting season was later than usual. Pinnated and sharp-tailed grouse were about equal in numbers this year. Of ducks we are having and have had shooting to satisfy any one. Many varieties and nearly all the species of the duck family are represented, excepting of course the strictly sea ducks. All the sloughs had more or less water all summer, and wherever there has been water one could count on finding the ducks. Mallards, pintails, shovellers, bluewing teal, gray duck and widgeon are the most commonly shot. There have been a good many canvasbacks and redheads this year, more than I have seen here before. Some lesser scaup and ruddy and greenwing teal are got, but not many.

In some of our best shooting here there would be but one answer to the controversy relating to the most sportsmanlike way of shooting ducks started in FOREST AND STREAM recently, and that would be a wing shot, for it is the only kind obtainable. In hunting our sloughs we have to wade in and put them up out of the grass and water, the water being from a few inches to waist deep, and the grass breast high, and only a shot that kills gets the birds. One can also have all the pot-shooting desired, though, by following the course of the coulees and edges of the open sloughs.

Geese are coming down from the north and will be at their best from now on. The prospects are for a long goose season, as they are coming down two weeks earlier than usual, and there is plenty of feed and water here, which are the two requisites to goose comfort and happiness. The only drawback to their full enjoyment of these will be the fooling decoys, a pit, man and his means of destruction—the gun and ammunition. I shall be able to give results later.

ELMER T. JUDD.

### A Western Game Country.

CHICAGO, Ill., Sept. 29.—A friend of experience hands me the following as being worthy of his indorsement in view of his late journeyings in the country mentioned:

"The best place I have found this fall for shooting deer and partridge, with a good chance for bear, is in northern Wisconsin and Michigan, on the Ashland division of the Chicago & Northwestern Railway. Away up the line, as far north as Watersmeet, deer are plenty—more so than usual. All along the line there are runways where the deer cross sometimes during the day, but more often just at night and early in the morning. There is excellent deer hunting in the vicinity of Lake Vieux Desert. At Twin Lakes, Long Lake and Sand Lake deer are plenty. Pioneer Lake, which is in the immediate vicinity of Twin Lakes, is a favorite home of the deer; in fact, within every direction within four or five miles of the club house, good deer shooting can be had by those who know how to do it. Watching in the runway is my favorite method. It is tiresome in the extreme, but if one really wants to shoot a deer at close range let him go to a good runway (there are lots of them), sit down a short distance from the trail, where he can see in both directions, stay there all day, and he is sure of a good shot. This is especially true if there are other hunters in the woods, as it keeps the deer moving.

"From Eagle River a trip should be made up the river to the lakes, and there will be little doubt of getting a good shot. Excellent hunting is to be had in the vicinity of Three Lakes, and the same may be said of the line all the way to Aniwa. Deer and partridge are plenty at Pelican Lake. At all of the points mentioned good guides and boats can be obtained at reasonable rates. Excellent hunting is to be had in the vicinity of Three Lakes, and the same may be said, in general, of the entire territory penetrated by the Northwestern line in northern Wisconsin and the north peninsula of Michigan.

"The lake region is a veritable paradise for fishermen, trout, bass, pike and muskallonge being taken in large numbers."

C. W. N.

### Caribou.

Editor Forest and Stream:

A correspondent in a late paper gives his opinion that caribou are not as plentiful in northern Maine as formerly. This opinion apparently is based mainly on the fact that in a locality mentioned fewer are seen. To one who has passed the hunting season in that region annually for many years the statement seems misleading. Doubtless in the instance mentioned, the scarcity of caribou may be accounted for by change of route of travel because of persistent hunting. It is well known that caribou are great roamers, coming around at regular intervals on the same beat, having favorite resting places where quite a halt is made. When such places become well known and are easy of access the game is mercilessly slaughtered, so that the game shuns the place for other stamping ground. The backwoods hunters easily locate them anew, and the most experienced hunters vindicate my opinion that caribou are increasing and extending into sections where they were not formerly found. In the best region, that of Aroostock county, as I think, under favorable conditions, the hunter will surely find the game plentiful, especially if he puts himself under the guidance of some backwoods hunter. There are guides and guides.

In the article alluded to above, it is stated that caribou are shy and hard to get. This does not square with my experience; on the contrary I consider them the easiest to bag of all big game. Given an equal number of caribou and deer in a township, the average hunter in a season will get three caribou to one deer. PINE TREE.

### Reed Birds in Pennsylvania.

Editor Forest and Stream:

I read in your paper of last week with some pleasure a letter from Fred Mather on the impropriety of killing bobolinks or reed birds at any time during the year. It may rejoice him to read, and perhaps astonish you at the same time, that it is unlawful to kill this little bird at any period of the year in Pennsylvania. Yet it is true, notwithstanding all publications to the contrary, and the fact that people shoot reed birds between Sept. 1 and Dec. 1 without fear of arrest. I must say, however, that the protection (?) given was not intentional, but was the result of a member of the Legislature two years ago trying to make a law for something he knew nothing about. He wanted to protect insectivorous birds, and offered an act which was passed unanimously to that effect. Among the birds which it is unlawful to kill "at any time of the year" appears the name of the bobolink, and the protection of this bird was made the more undeniable by the usual formula at the end of the act that all laws and acts inconsistent or conflicting with the foregoing are hereby repealed.

I wrote to the framer of this act, and he answered me that any one but a fool would know that a bobolink and a reed bird were entirely different birds; and so the act stands on the books to-day un repealed.

W. E. MEEHAN.

### Adirondack Small Game.

Editor Forest and Stream:

I notice in your issues of 9th and 16th inst. report from sportsmen on the game supply, and they are rather gloomy, especially in the North and East.

Last winter was a very severe one for birds in the Adirondacks. There were about four weeks of extremely cold weather, with scarcely any snow, and what snow there was, was covered with a hard crust. This was hard on the partridge, for those are the only game birds we have in this section. However, as many as a dozen different farmers report the starting of one and two coveys of partridges while cutting hay near the woods, and I know where there are five broods myself.

I have not visited their haunts yet, for it is not my time. My time is after the frosts come and the leaves are nearly off, when the birds are scattered and are found more evenly distributed. Now they are in coveys and will be till the falling leaves make them wild.

If any sportsman wants to come and stay with me a week, come board free, but don't come till October. I will not guarantee birds as thick as quail in the South, but I never at that time of year had any trouble finding enough, but being a poor shot, could not get them. Deer are quite plenty.

ADIRONDACK.

### One-Armed Wing Shooting.

CORTLAND, N. Y., Sept. 30.—Through the kindly offices of Dr. M. B. Ingalls, of this village, I have discovered a one-armed grouse shooter, Preston by name, who is evidently a wonder. Preston's right arm is off above the elbow, and he is said to practice wing shooting exclusively. He lives at Hart's Gulch, a somewhat famous locality, seven or eight miles northeast of Cortland. Dr. Ingalls, who is a close reader of FOREST AND STREAM, and therefore a very truthful man, tells me that Preston was out a short while the other afternoon and bagged five grouse. He claims that some good grouse shooting may be had thereabouts this fall.

But you should hear the Doctor, with a modesty that is refreshing, tell of an afternoon he spent in company with Preston a season or two since after the wily grouse; of the half-dozen birds they bagged; of the neat double scored by the one-armed shooter; of the wild bit of scenery their vision feasted on, and then, finally, of the baked potatoes, hot biscuits and new honey they absorbed when the tramp was at an end. It's a tale that makes a fellow wonder who wouldn't be a sportsman, anyway?

M. C. H.

### Rabbits and Ferrets in New York.

CORTLAND, N. Y.—Does the law still forbid hunting rabbits with ferrets? A party at the late county fair here, who exhibited these pink-eyed rodents, in reply to my query as to how he managed to find a sale for them, said "Oh, that's easy enough; I've sold eight already, the law has been changed so that rabbits can be hunted with ferrets, providing the rabbits are not netted." Is this true? If it is, the rabbit is doomed to speedy extinction in central New York. Give the game hog an unrestricted privilege to lug a ferret around in his pocket, and you practically license him to take bunnies by any method he may devise.

M. C. H.

[The law does not forbid the use of ferrets.]

### The Saginaw Crowd.

MR. W. B. MERSHON writes that his party—the well-known Saginaw Crowd—will leave for their Western trip the first week in October, going as usual in their own hunting car. We hope to publish next week the first chapter of the story of the Crowd's 1893 excursion, with illustrations from photographs. It will be good reading. Of the prospects for having sport Mr. Mershon writes: "I think we are going to have some quail shooting around here and get reports of a good many coveys that have been seen recently. Also good news from our old ground at Dakota. I hear of three making a bag of sharp-tailed grouse on opening day."

### The Central Route to Chicago.

Now that the travel to the World's Fair is beginning to assume large proportions, the wisdom of the New York Central management in providing for it, so far in advance, is becoming apparent. The new equipment, comprising elegant Wagner palace sleeping, drawing-room, buffet and dining cars, handsome new coaches and powerful engines, has proven ample to handle the increased business without any discomfort or delay. The great 20-hour flyer, the Empire State Express, and the other limited trains of the Central are the wonder and admiration of the world of travel.

Reduced rate excursion tickets to Chicago and return are on sale at all offices.—Adv.

### \$18.00 Excursions to Columbian Exhibition. Pennsylvania Railroad.

Monday, October 2, and Friday, October 6. Tourist Agent on train. Special coaches for ladies and families. Allegheny Mountains by daylight. Only one night on train. Leave New York 9:00 A. M. arrive in Chicago following noon.—Adv.

## Camp-Fire Flickerings.

"That Reminds Me."

### A Reminiscence of William.

HE was tall and lanky, with a longish beard and mustachios, a drooping nose and a hanging under lip, a high and narrow forehead surmounted with a stock of hay-colored hair. Altogether his *tout ensemble* reminded one forcibly of the picture of a satyr; but the kindly light of the blue eyes, and certain little puckers of humor about the capacious mouth, proclaimed the hidden existence of a genial soul.

The blue dungaree pantaloons were generally rolled part way up the cowhide long boots. Certain threadbare patches on the shoulders of the weatherbeaten brownish-gray coat gave evidence of the chafing of gun and axe-handle, and the darkish greasy stains on the wide gray felt hat showed just where the big hand, thrust into the hat, had snatched the hot frying-pan or coffee pot from off the blazing camp-fire.

I had been sleeping late one September morning in his shack. I was tired, for I had been, the day before, clambering about some tough parts of the mountain, shooting dusky grouse. I was still in bed, but awoke when he stumbled through the half open door, capsizing the water pail and nearly killing the cat with one full swipe of his well grown feet. Snatching the old muzzle-loading musket from the corner, he roared out "Bear!" and vanished.

Hours passed and the sun was low when William returned, tired and hungry, and without bear meat. He had followed bruin, so he said, from thicket to thicket, and through swamps and over hills, sometimes catching a glimpse of black fur, but never getting a show to shoot, till at last he lost him in a rocky gorge and was forced by the approach of night to give up and return empty handed.

I sympathized feelingly as he sorrowfully stood the old gun in the corner. Happening to pick it up I saw that the lock was missing. "Why how is this; you have no lock to the gun?" Glancing up at the shelf I saw that the lock was there, wrapped in an oiled rag, where William himself had placed it the night before after cleaning the gun. "Hello, William, you forgot to put your lock on before starting!" I shouted. The blue eyes opened wide in a perplexed stare and the under lip dropped a bit further down. Then the little puckers deepened as the eyes closed somewhat. "What the blank's the odds?" he drawled, "the bear didn't know that."

MAZAMA.

VANCOUVER ISLAND, Sept. 20.

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

### ANGLING NOTES.

#### N. H. Fish Commission at Sunapee.

THE Fish and Game Commissioners of New Hampshire, Judge Shurtleff, of Lancaster; Col. Wentworth, of Hudson Centre, and Mr. Griffen, of Henniker, have made extensive additions to the State plant at Soo-Nipi Park. The lease made by Dr. Quackenbos to the State having expired on Sept. 23, it became necessary for the board to renew, in order to continue fishery operations on Pike Brook. This the Commission has done, greatly to the advantage of the State, as well as of the property owners and lessees in the Park. The lease has been renewed for ten years, with privilege of renewal for a third term; but Dr. Quackenbos has relinquished his claim to the annual rental for the ensuing term, therefore virtually presenting the State of New Hampshire with \$500 for permanent improvements on the leased property. This sum doubles the amount appropriated by the last Legislature, and has enabled the Commissioners to erect and equip in Soo-Nipi Park the finest hatchery building in the State, having a capacity for nearly one and a half million trout and salmon eggs.

Mr. Alonzo J. Cheney of Wilmot, and Wm. W. Hubbell of Newport, both well known Sunapee guides, have been engaged to conduct the work of securing stock fish from the lake. Their faithful and experienced service has been unprecedentedly successful. Already some hundred large brook trout, mostly females, weighing from 2lbs. to 5lbs. each, are ripening in huge tanks in Pike Brook on which the hatchery is situated; and near them are corraled about twenty-five landlocked salmon from 6 to 14lbs. in weight. Thus 150,000 brook trout eggs are insured by one week's earnest attention to duty on the part of Cheney and Hubbell, who have been directed a portion of the time by Judge Shurtleff in person, and assisted by Mr. Daniels, who has charge of the Winnepiseogee hatchery at Laconia. Furthermore, the two Pike brooks which enter the lake through Soo-Nipi Park, and whose wealth of young salmon and trout has for two years been shamefully abandoned to vagrant fishermen, have been closed by the new commissioners, and the fish property in these streams, which cost hundreds of dollars annually to stock, is once more under the protection of the law. All this has been accomplished despite malicious predictions of failure through the incompetence of men thoroughly conversant with the work as the retired officials, and in the face of a petty opposition which sought to cripple the important operations at this queen lake of our American Switzerland. No efforts will now be spared to develop to the utmost the resources of Lake Sunapee.

#### Natural Flies for Salmon.

There is scarcely a salmon fly known that is an exact imitation of a natural insect, and by exact I mean in a qualified sense, for the best imitations are not exact, although they are exact enough to deceive the fish. The standard salmon fly is a conventional insect, and for all practical purposes it does not seem to have been necessary to fashion it after any living insect with a name of its own. Much has been written about why salmon take

a fly, and it is not necessary to touch upon the controversy here, but a well-known writer in a foreign exchange has something to say upon the subject, which, I think, will be read with interest over here. This writer, "Silver Gray," says: "Failing every combination of fur, feather and tinsel, I have often found the quiet natural fly most effective, and therefore I think we may take it that the various species at their seasons should not be neglected. \* \* \* As an instance of this, I know one stream in Ireland, and another in Scotland, in which, though often tried, Jock-Scott has never done the trick yet. By all means let us stick to the local lures, but at the same time, as a saving change, the natural flies of the water should not be altogether forgotten. The history of salmon fly-fishing from its origin, if any one could put it together, would be a most curious study. I quite agree with 'Alices' that salmon have been gradually educated, and no doubt in the Irish and Scotch rivers fish will ere long leave the quiet mallard wing for the Jock-Scott, thence go on to the Wilkinson, and finally grab at minnows, prawn, worms and other abominations, in preference to fly. There can be no doubt that where bait is habitually used, fish are forsaking fly." The writer quoted concludes his article by saying certain questions naturally arise and asks for information on these points: What are salmon flies, or rather what are they supposed to represent, and what do the fish take them for? Who first invented salmon flies, and upon what theories and observations did he base his invention?

#### Fishing Scores.

A sufficient number of fish scores get into print during the course of a fishing season, and naturally I mean exceptional scores, big scores, or scores allied to them, to cause the thinking reader to wonder what becomes of the fish that constitute the bag in the scores recorded; and it is not at all probable that more than a small fraction of the fish caught by angling during a season ever find their way into print, so the wonder would increase, doubtless, if the knowledge on this subject was greater. I made a memorandum of notable catches of black bass—notable for the number taken with hook and line, on one river one season, and put down only such catches as were recorded in the public prints, and the same total of the bass was rather appalling, considering the number of men engaged, coupled with the thought that they were an insignificant minority of the men who were fishing just as earnestly, perhaps, to beat the record of the number of bass taken in a given time. What brought the matter to mind just at this time was an extract from a Paris paper as follows: "The only Frenchmen who do not go in for shooting are the disciples of Izaak Walton, most of them shop-keepers, who throughout the summer, in rain or sunshine, line the banks of the Seine, not only above and below Paris, but even the embankments within the city limits, who are perfectly content if a day of twelve hours fishing enables them to return home with three or four minnows the size of a sardine." There is not an angler in the United States of America that would be perfectly content with that sort of fishing. We have such a wealth of game and food fishes in our waters that we scorn the commoner sorts, and kill and throw away as worthless sunfish, chubs and other of the lesser fishes that in France would be looked upon as a prize. The fishing for big scores will not ruin the fishing in this country in our day, and bring it to the condition that obtains in France, for the country is yet young, and the waters too vast, according to the quoted paragraph; but it is just such fishing, and the consequent waste of good fish that will help materially to bring such a condition of things about if persisted in merely to gratify this vanity of a moment. With one exception, and that in Maine, far beyond the Rangeley Lakes, I have not known hotel keepers or guides in this country to be solicitous about the number of fish killed by sportsmen who patronize them. On the contrary they, as a rule, encourage the big scores that must tend to decimate the water for nothing in particular.

A. N. CHENEY.

#### IN CAMP AT DRAG LAKE.

THE writer has just returned to work after ten days' experience as a "camper." (This term is probably not quite as familiar as "rodster," etc., but to my mind it is quite as euphonious as the latter.) Canadians do not seem to take as much interest as Americans in relating their experiences in FOREST AND STREAM, and I would like to see an improvement in this respect. Of course to newspaper men the work of writing articles for publication does not offer any recreation, but I feel that the opportunity of contributing to the best and purest sportsman's journal in America has too long been neglected by many on this side of the line. Of course FOREST AND STREAM has a few valued contributors in Canada, but the number should be largely increased.

A party of us, ladies as well as gentlemen, for our wives enjoy an outing quite as well as we do, left Markham, a station on the Midland division of the Grand Trunk, on Monday morning, Aug. 7, for Drag Lake in the Haliburton district. At Lindsay, a live town of about 7,000 inhabitants, we had to change cars, and the time-table allowing us about three hours we had ample time for dinner and to view the town. A small steamer plies between Lindsay, Sturgeon Point and Bobcaygeon, but this was not our route on this occasion. About 2 o'clock we took the train again for Haliburton, the terminus of this particular division of the Grand Trunk, where we arrived fifteen minutes ahead of time. At the station we were met by the parties from whom we had previously engaged boats, but, as if there could be "no joy without alloy," we found the vehicle that had been provided was not large enough to take all our luggage at one load. One of the party termed it a "baby carriage." However, by making two trips we finally succeeded in getting our traps to "the dam," the members of the party walking the distance, which, by the way, is two miles or better.

Before we got one of the tents up the dew and night had fallen; and such dew! The grass was as though a heavy shower had fallen recently. By-and-by we got the beds arranged, and to the loon's lonesome lay we slept the sleep of the "camper." (This is the last time I shall use this term.) We were early astir the following morning, for we had not reached our permanent camp ground. This was simply Lazy Creek, and up it and through two small lakes we were to find Drag Lake, where there was said to be "any amount of salmon trout" waiting for us.

After breakfast boats were loaded and we proceeded on our journey. About 10 o'clock we found the entrance to

Drag Lake, but came very near getting into Spruce Lake instead. The narrows leading to Drag Lake sometimes become blocked with cedar logs, roots, etc., making it appear as though there was no way open in that direction, and so we found it on this occasion.

We had been told by a Mr. Neely (one of the parties from whom boats had been secured) to look up old "Uncle Billy" and he would direct us to a suitable camp ground. After scanning the shores of the lake for some time we finally found Uncle Billy's camp, but the old gentleman himself was out looking after his lines. However, having found the camp, we knew we would not be long in finding the owner, and after a time we saw him some distance off in his boat. We rowed up to the old gentleman, stated our errand, and were rewarded by the information that on top of the hill, not far from his own camp, we would find as good a place for a camp as there was on the lake. True, the task of lugging everything up the hill did not at first meet with very great acceptance, but when up we were high and dry, with two good springs a short distance away on either side of us, and raspberries galore at our very tent doors. I have read with delight of the Kingfishers' "rozberries," but I doubt if their enjoyment of the berries picked by the neighbors' boys and purchased at so much a quart, equalled ours when partaking of the berries plucked by our own hands. We had raspberries two and three times a day—without milk, it is true, for there were no neighbors from whom to purchase the lacteal fluid; for a change black thimble berries, and occasionally huckleberries, which we gathered at another point further down the lake.

Mr. S. H. Greene, in a recent number of FOREST AND STREAM, briefly refers to his experience in the raspberry preserving line while in camp—or rather to Mrs. Greene's experience in that line, and his own experience when the supply of wood ran out. Our wives did not possess the sugar and the other facilities necessary for the

UNCLE BILLY AT HOME.

work—and it was too far to go for them—else we would have had a similar woeful experience. We are lost in serious contemplation of the result should the ladies undertake to turn all our camping expeditions into raspberry preserving affairs. We have heard of the "fish for count" fellows, are we to have raspberry preserving for count, too? Men, followers of the lamented Izaak, and fellow sportsmen, lend me your ears! Shall we submit to the innovation?

But to our text. The remainder of the first day was spent in putting up tents—two sleeping tents and a dining room—and in putting things in proper shape. The dining room was simply a cotton roof mounted on poles and tied at the four corners, the sides and ends of the structure being open to admit the breeze, and it was by all odds the most comfortable place to sit in. An old door picked up on the journey made an excellent table when mounted on four stakes driven into the ground. For our beds we gathered branches of hazel, raspberry bushes and ferns. The latter were to be found in abundance, but the aroma from them soon became sickening, and so we threw them out, and replaced them with long grass or hay that had been cut and allowed to dry for a day or two.

Uncle Billy did not give us much encouragement in regard to the fishing. He said that the salmon trout generally quit biting about this time of the year and that for about six weeks business would be dull at the old stand. Earlier in the season would have been better for fishing, but then the flies would have been very bad. He related the experience of a Mr. Edwards, of Toronto, who had endeavored to live there in fly time. That gentleman had at first endeavored to live with, or nearby, Uncle Billy, but the flies had proved too much for him. Then he moved to the hill upon which we were now located and again he was routed, horse, foot and artillery, leaving the field to the enemy and Uncle Billy. He must have retired in great disorder, for we found some of his despatches lying on the ground, and he had not even taken time to draw all his tent pins. Uncle Billy had stood his ground and now the flies were nearly all gone. By the way, old residents do stand the onslaughts of the little fiends better than new-comers. We got along first rate in this respect, however.

Having referred to Uncle Billy a number of times already, it will, perhaps, be in order to give some particulars concerning him. "Uncle Billy" is the only name we know him by. Every spring as soon as the fishing opens he wends his way to Drag Lake, puts up his tent and sets his lines. Between bites he cultivates a little garden patch, growing potatoes, onions, lettuce and other vegetables for his own use while in camp. He is a bachelor, possessed of some property, talks like a Cornish man, and evidently loves the life he is leading. We received some interesting certificates of character concerning Uncle Billy. "He is a decent, honest old fellow," said one. "He would not do you an injury or tell you a lie for anything," said another; and again, "If there is a man on the earth without guile it is old Uncle Billy." Is it any wonder that we wanted to get a photograph of him and his tent? I submit the result of our efforts to you for your approval. The dark shade on the tent is where Uncle Billy had put

on some oil to make it waterproof, for some reason not finishing the work. The night before our arrival a wolf chased a deer within a short distance of this tent, as the humble occupant informed us, and the second night after our arrival we distinctly heard a family of bears that had come to wallow in a beaver pond not more than two or three hundred yards in rear of our tents. The shades of night had just fallen and we were talking over the events of the day preparatory to retiring, when the stillness was broken by the half squealing, half barking noise of two cubs. The hunters of the party knew at once what it was. The bears had smelt us and could now be heard taking their departure on the double quick. Pursuit in the darkness was out of the question, but on the impulse of the moment shells were slipped into the rifles.

We told Uncle Billy of the occurrence, and the reader will try and imagine the old man striking an attitude similar to that shown in the photograph, as he remarked, "Mebbe they will pay my camp a visit some of these nights." He is an excellent shot with a rifle, having taken prizes at rifle matches held in the neighborhood for years. Some of our party were sitting in a boat with him one day, when he raised his rifle and sent a ball through the head of a loon sitting on the water. There was considerable ripple on at the time, too.

But this is quite lengthy enough for the first communication. If acceptable, you will hear from me again concerning our experiences on Drag Lake. In the meantime just insert this with Uncle Billy's photograph.

W. L. SMITH.

SHELburne, Ont., Aug. 29.

#### THE WAYS OF THE SALMON.

Editor Forest and Stream:

In your issue of Aug. 26, "Podgers" requests a statement of my reasons for believing that salmon feed while in fresh water. Heretofore, he and I have always agreed pretty well on most questions except, possibly, on the question of comparative merit, from the sportsman's standpoint, where California and Oregon were involved. And I believe that, if I can make myself plain, we are not so very far apart now on the question of whether or not salmon feed while in fresh water. This question has, for some years, been of one interest to me; and I have given it such attention and consideration as my limited opportunities offered. As I anticipated, "Podgers's" experience and observations are of great value in arriving at a correct determination of this matter. Stone, Jordan, Bean, Gilbert and other eminent students of this subject have entertained views similar to those expressed by Mr. Podgers, and some of these gentlemen have, on several occasions, paid my opinions the compliment of replying to them through the columns of FOREST AND STREAM; but I do not wish to be understood as contending with any of these gentlemen. What I have said or may say on the subject is intended as suggestive rather than assertive.

I have never claimed that salmon go into fresh water to feed.

Neither do I claim that salmon lose much time seeking food, for, as we all know, their mission in fresh waters is simply to spawn. But the fact that they are on, to them, an important mission should not necessarily be taken as conclusive evidence that they do not heed the calls of nature, and appropriate such articles of food as may be taken without the expenditure of too much energy and time and which, as I take it, they must needs have to support them and enable them to fulfill their missions and comply with nature's decree. When Columbus sailed the blue seas for weary months in the performance of his mission, he did not go to eat, but, doubtless, he did eat to go. The same may be said of every living creature that undertakes a mission that requires the expenditure of physical strength and energy. The motive power must not be neglected, and food is the fuel of physical action. But the most eminent ichthyologists of the world have declared that the salmon eat nothing while running. Even the U. S. Commission of Fish and Fisheries, supplied with all the essential facilities for the proper study of the subject, has decided that the salmon do not feed at all while in fresh waters. All the knowledge I have of the subject has been acquired incidentally about the Columbia and its tributaries, and from taking notes of the observations and experiences of others far more learned in the subject than myself; and at most it is to a great degree speculative.

Livingston Stone has, by very careful estimates determined that the salmon travel at the rate of about two miles a day in the Sacramento, and about three miles a day in the Columbia. However, he says: "Those that enter the Columbia in the spring and ascend to the mountain rivers of Idaho, must make an average of nearly four miles per day." It is a well known fact that the salmon ascend the Columbia and its tributaries more than 800 miles; as the river runs, more than 1000. Two-hundred days on full time, against the rapids and currents without a mouthful to eat, must be rather trying on even a king salmon even though well supplied with fuel when he leaves the ocean. No allowance is made for the return trip, and doubtless, many do return.

It has been demonstrated by the learned gentlemen above mentioned, that little solid food is ever found in the salmon's stomach while in fresh waters. But I believe that "Podgers" will concur in my objection to the assertion that none is ever found. "Podgers's" experience on the Sacramento, the Navarro and the McCloud, goes to show that food is sometimes found in their stomachs. The instances referred to by myself in this periodical a few weeks ago, also have a bearing on the subject. The further fact that thousands have been taken with bait and spoon at Willamette Falls, in the Clackamas River and at the Cascades of the Columbia, is worthy of some consideration; and while one swallow does not make a spring, a few swallows may indicate the inclinations of a salmon to eat. There is little doubt that the great majority of those we take with hook and line are males; and at one time I believed that this fact warranted the belief that they were prompted to attack by the combative proclivity, observable in nearly or quite every species of game, whether fish, flesh or fowl, during the rutting or running season. On this proposition however, I am not now clear. For why is it that the man that uses bait will, ordinarily, catch four or five times as many salmon as the angler that uses spoon and fly. My friend J. R. Mead is a very expert salmon fisherman and I, myself, am a little bit egotistical on the subject. One day last June at

Willamette Falls, while Mead and I took eight salmon with spoon a kid between us caught fourteen with salmon-roe. It occurred to us that the salmon was seeking substantial food, which they were able to discover by the sense of taste or smell. Trout have been found in the salmon's stomach more than 500 miles up the Columbia. Not many, it is true, but some.

More than a year ago, July 7 1892, in *FOREST AND STREAM*, I advanced the theory, which possibly has been previously entertained by others, that the salmon may feed while in fresh waters, upon food as nutritious and strengthening, although not of so substantial an appearance as that of their fattening yards in the ocean; and the fact that the calls of nature demand food for all active life, should warrant us in claiming the benefit of any doubts. I suggested that the first run of salmon undertake their pilgrimages at a season of the year when they are likely to find a good supply of larvæ and other soft or gelatinous substances that would be very nutritious without leaving any excrementitious substance; and that those that followed would have the advantage of the spawn of their predecessors. Doctor Jordan, whose opinions we are all bound to respect, kindly replying to these suggestions in *FOREST AND STREAM* of Aug. 4 1892, said: "It may, however, be true that this early run of salmon feeds upon insect larvæ and other soft, nutritious substances, which leave little or no trace in the stomach, and I quite agree that much is yet to be learned of the habits of the salmon in fresh water."

Charles Hallock, (whose opinions are respected by all sportsmen) in *FOREST AND STREAM* of July 21, 1892, said: "For myself I have always maintained, and do insist, that the food of the salmon in rivers and estuaries is mainly of a pulpy nature, and therefore is digested with such rapidity that it leaves small trace, if any, in the stomach."

Another suggestion might be worthy of some consideration: We know that the digestive apparatus of the salmon is very strong and active. The distinction between the class of fishes and that of batrachians is very slight indeed. The batrachians belong to the reptiles, and we know that some reptiles seek seclusion and become, in a sense, dormant when gorged. I believe that when the salmon is gorged he seeks seclusion in the deep holes and fissures in the bottom of the river, there to wait the action of his rapidly operating digestive apparatus. Should this be true, none of the thousands of seine-fishermen that fish for a living with their shallow, floating seines, would ever discover him in his retreat, and would never know whether the salmon took food in fresh waters or not.

As I have said, I do not insist on any of my theories or speculations regarding this interesting subject; but when Doctor Jordan says that much is yet to be learned of the habits of the salmon in fresh water; and when my friend "Podgers" says that it is about as much of a muddle as that of whether rattlers do or do not spit, I cannot help feeling that even the most humble is warranted in offering a suggestion now and then for consideration at the hands of the more learned.

S. H. GREENE.

PORTLAND, Oregon, Sept. 2.

CONNECTICUT BASS WATERS.

PROVIDENCE, R. I., Sept. 6.—Just returned from a short trip to western Massachusetts and Connecticut, and a few notes regarding the fishing in that section may not come amiss.

The waters in all the lakes and streams throughout this country were very low. In many of the places the old story of "fished out" was heard, especially in and about Great Barrington, Mass. (Lake Buel, Mansfield Pond, etc., although good pickerel and bass catches are reported from Long Pond.)

In the Housatonic River, in the rapids just below the Canaan Falls, Falls Village, Conn., there used to be good bass fishing, and one cloudy morning, well equipped with a supply of "yellow belly" hoppers, a few small green frogs and helgramites (salamanders they call them in this section), I started out to fish the rapids for bass. Nary a rise or strike could be had with the frogs or helgramites and so the hoppers were tried. Near the boulders and rocks in the stream there are many promising pools, and it was not long before a good strike was obtained. "A small bass" was the mental comment, for the fish fought well if feebly, but upon bringing it in it was found to be not bass, but an 8in. carp. The river was fished that day with grasshoppers and the result was a good catch of carp, but no bass. Reports from the local fishermen of this place say that very few bass are now caught in the river, but that large numbers of these carp are obtained. The river is pretty well fished by the small boy, who keeps everything he catches, small or big, and the result is that the bass are practically gone. How these carp got here is a mystery, although they probably came down the river from Great Barrington. Many years ago when I was a small boy I was fishing in a deep hole near the road bridge in the southern part of Barrington. Worms were the bait and bullheads the expected prizes, but a strong fish took the bait, and after some little excitement (for a youngster) a good-sized fish was pulled in. A good catch was made at that time, and the fishermen of Barrington pronounced them to be carp. How they came in the river at that time was explained by the fact that Mr. Harry Leavitt, who owned a large mansion near this part of the river, had a private pond which he had stocked with the fish. The pond was not much fished, and that spring there was quite an overflow of the waters which resulted in the breaking away of the private pond into the waters of the Housatonic River. It is thought (and probably correctly) that the carp got to the river and have bred there since. At any rate there are plenty of them in the river now.

At Twin Lakes the bass and pickerel fishing is better than has been for some time. Good catches have been made, and the excellent laws (which are very well kept) have probably helped to bring back the good old-time fishing that used to be enjoyed in these beautiful bodies of water. By the way, Mr. Henry Bishop has purchased the large island in the larger lake, and has now erected a regular "camp" thereon, and he and his sportsmen friends enjoy each summer a jolly outing here. Mr. Bishop is an enthusiastic sportsman in the true sense of the word.

Lakeville, Conn., has a beautiful sheet of water, Lake Wononscopomic, which in times past has yielded good catches of bass. It has been frequently stocked, but

from some cause the catches have been growing less each year. Some claim that it is not a good breeding pond. Possibly, but there are other reasons. Sparing for suckers in the spring "accidentally" rids the lake of many good-sized bass and pickerel, in spite of the watchfulness of the local sportsmen, and many of the fishermen keep their catches even to fingerling bass. When we reached this town we were told that there was no fishing there at all. We trolled the lake twice without a strike, but a few days after took our rods, with grasshoppers and worms for bait, and rowed out to an old familiar ledge just outside of the weeds to try our luck.

Grasshoppers were not touched, excepting by some large yellow perch, and worms were tried for "pumpkin seeds" and whatever we might get. (Yes, we had to come to that, brethren, but who wouldn't, after sitting for a long time catching nothing but perch, with our hopes blasted by the reports of the "locals," and a catch of two or three "pumpkin seeds" at one time when they are biting lively is some degree of sport when nothing else promised better.) Well, we fished with worms, and we hadn't fished more than five minutes when "whirr" went the reel and down went the little 8oz. rod in response to the strike of a good 2½-pound bass. Yes, a genuine "good 'un," and we were so surprised we almost forgot to keep him taut. But we landed him and several more after. But the idea of a nice strong healthy bass taking a worm lying on the bottom like a bullhead, that is beyond us. They didn't use to. Probably they have been fed with shiners and 'hoppers and dobsons until they wish a change.

We caught several that morning, but the greater majority were too small to keep and were carefully put back. In the afternoon we tried other spots in the lake, catching one fairly good one and a dozen small fellows, which were put back for next year.

There are plenty of bass in these lakes, and if they could only be allowed to grow would make the old-time sport. But you know if a small boy succeeds in hooking a bass, be it large or small, he is the envy of every other small boy, and the result is every small boy who fishes the lake will keep his bass for show. I have seen large strings of perch and "pumpkin seeds" taken from this lake, and pretty well sprinkled in were young bass. Give them a show, boys, and you will be better pleased.

Long Pond, some distance from the above lake, has always yielded good bass.

This pond brings to mind my first fly-rod. Many years ago some of my old friends used to camp on the shores of this lake every year. The rods used (poles, rather) were stout cane, having a strong line tied to the end. Live bait was used, both minnows and helgramites. A bass hooked was swung back and forth, and if the hook did not tear out or the tackle give way, was landed with no "play" ceremony.

When a fifteen-year-old youngster, I had purchased a light 10oz. bass fly-rod of our friend Chubb, and that summer when I arrived in Falls Village I was invited to spend a day or two in the camp at Long Pond. Now, being a boy I had never had much practical fishing with such tackle, and the only knowledge I had of the scientific "play" of the black bass was gleaned from the yarns of the Providence fishermen and the poetical rules and regulations as laid down in many of the fishing books.

Early one morning I arrived at the camp just in time to be taken aboard a flat-bottom fishing boat with two old friends with their "poles." On the way to the pond I had caught a good supply of grasshoppers. We reached the spot where good catches had been made the day before, and the two old-timers began operations with minnows first. The "boy" carefully put together the little fly-rod and was hooking a grasshopper, when the fisherman in the stern, hearing the sound of a click-reel, looked around and said, "Why, what in thunder do you expect to land with that thing?" meaning the rod. We will confess that the "boy" had some misgivings himself after seeing the others land their fish, and when at length a strike was had and the reel began its music and the little rod seemed to quiver with the excitement of the holder, the "boy" actually wished he had a cod line and a good stout "pole" to land his first bass with. A confused mass of rules came up before his mind: "Don't give him slack," "dip the tip when he breaks," etc., added to which the excited remarks of the audience tended to "rattle" the holder of the little rod. "Why don't you yank him in and not let him get away?" was one I shall never forget. But we became calm and played the bass, and landed him too. We fished all that day, and at night when we reached the tents, the "boy" had a bigger string than the others, and the excitement of that day, the playing of the bass, and the pleasure of showing to two old fishermen that even a city boy with "fancy tackle" could bag his game, only impressed the hours more deeply than all others we have seen, and even now when there are times when we cannot go fishing, we like to live over that day and silently laugh at the many expressions of surprise we saw on the faces of our old friends. It may seem like boasting, the above, but I presume you have all "been there," and if I didn't tell about it, who would, not the scoffers at the light tackle surely!

But pardon the liberty we have taken. Our "notes" have lengthened out into a yarn.

TODE.

The Chicago Fly-Casting.

OUR esteemed Western contemporary, in its report of the Chicago Fly-Casting Club's tournament, mentions that "a thirty to forty-mile gale blew during most of Thursday, in consequence of which good work was impossible." One can readily imagine that such a wind would toy most persistently with a fly, and make casting wholly impossible. The fly-casting on Thursday was done in the forenoon. My estimate of the wind was that it was quite stiff, but far from being a gale. To place the matter on an authoritative basis, I called at the U. S. Weather Bureau, World's Fair Grounds, and there learned that the wind in the forenoon of Sept. 21 did not exceed sixteen miles an hour, and a large part of the forenoon it was less. In the grounds it would be still less, as the buildings would be obstructive to it. In the afternoon about 6 o'clock a velocity of twenty-four miles was registered. The gale of that night which created so much alarm had a velocity of forty-eight miles, except for one minute, when it plunged at sixty miles. The circumstance is of no special importance, save that it is misleading to publish that the contest took place under conditions which would render the casting of a fly an utter impossibility and bring ridicule on the contestants.

B. WATERS.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Good Bass Grounds.

CHICAGO, Ill., Sept. 20.—Mr. Samuel J. Ryan, of the *Appleton Evening Crescent*, Appleton, Wis., writes me the following letter, which I know will be of interest. He says:

"I have not noticed in the *FOREST AND STREAM* of late years any reference to the fishing in the Wolf River. The bass fishing from above Shiocton to Poygan Lake on this river is worth your attention. The September fishing is particularly good, 4 to 6lbs. small-mouth bass being frequently taken, and they seem as lively as those in our swift-running Fox River."

Later I met Mr. Ryan here in Chicago at the Fair, and have his consent to publish the following more specific description of that country, which he has prepared for *FOREST AND STREAM*. In this he writes as follows:

"The Wolf River in Wisconsin rises away up in Eagle River country, running in a southerly course to Lake Winnebago. The latter body of water emptying through the rushing, roaring Fox River, by chutes and rapids, into Green Bay, finding its way to the ocean by the Great Lakes and St. Lawrence.

"The Wolf is best known as a logging river. During the past thirty-five years millions of pine logs have been floated down the stream to the great saw mills that once existed at Oshkosh. As the bulk of the pine has been cut, Wolf log driving has almost ceased of recent years, and the fish now have a chance for their lives.

"The river south of Shawano is narrow, deep and crooked, with mud bottom; the banks lined with heavy second-growth timber. Anglers have slighted this river, partially because of the logging operations and partially because only catfish, pickerel, red horse (suckers), sturgeon and other non-game fish were supposed to swim in these dark, deep waters. The time is coming, however, if nets are kept out of the river, when this despised stream will be eagerly sought by bass and trout anglers.

"Numerous creeks, tributary to the Wolf, teem with brook trout, chief of which is the Evergreen, and the upper waters will certainly afford fine trout fishing in the not distant future (just mark that down in your note book) as conditions are peculiarly favorable.

"Now, as to the small-mouth bass. Within the past ten years this monarch of the fresh water has multiplied with such astonishing rapidity that I doubt if there is any better ground in the State to-day. Food is plenty and fish grow to great size. There are many excellent points from Shawano to Oshkosh, a vast stretch of water, where one may take 4, 5 and even 6lbs. bass. Sept. 1, W. D. Boynton, of Shiocton, captured a small-mouth bass that weighed several ounces over 6lbs., from the river four miles above that village. I brought back a 4lbs. specimen last week from that place. A couple of days ago at Gill's Landing I helped W. A. Gibbons, of Oshkosh, land a bass that weighed 5lbs. after being out of the water several hours.

"The fishing above Shiocton is particularly good. The banks run straight down to the water line, and the water is 2 to 10ft. deep at the bank. We fish from the bank. The fly can be used nicely. The heavy fish have all been taken this year with bait, crayfish and minnows, as the warm weather has kept the big fellows down deep. Bait must be taken to both Gill's Landing and Shiocton by the angler. There are no accommodations at the former place except boats. Take Wisconsin Central train and carry lunch along. At Shiocton you can get everything except bait. It is on the Green Bay, Winona & St. Paul Railroad, and is the home of Eben E. Rexford, the poet (author of "Silver Threads Among the Gold"). The bass fishing will be better after a few heavy frosts.

"I will be glad to furnish any further information upon application."

Such information as the above, of good waters and specific directions as to how to get to them, is the best sort of stuff this paper can have, and our Wisconsin fishing newspaper man will have the thanks of *FOREST AND STREAM*'s large family for his letter. The Northern Fox I have long known as a good fly-fishing stream, but of the Wolf I know little and would like to learn more by a personal experience with Mr. Ryan for companion.

[The Nepigon.

The Nepigon was this year apparently as good as ever. Mr. W. H. Comstock, of Chicago, tells me that he is so informed by his brother, Mr. E. S. Comstock, who accompanied Mr. Arthur Baderford, of Baltimore, Md., on the trip to the Nepigon from which they have recently returned. They took two 7½lb. brook trout, three of 6½lb. each, two of 6lbs. each, and many just short of those heavy weights. Naturally they enjoyed themselves.

Sept. 23.—Mr. A. C. Van Horn, of Groton, N. Y., visiting the Fair here, said to me the other day: "If you want to know where to send somebody fishing, especially some Eastern body, I will tell you. It is Loborough Lake, Canada. A party of six of us, Messrs. W. H. Jennings, J. M. Bruce, F. A. Barney, J. B. Losey, E. E. Barney and myself, all of Groton, just got back from there, and we had the best kind of sport on both large and small-mouth black bass. Bass fishers won't miss it there."

Fly-Catching.

In regard to the late pleasant and highly successful tournament of the Chicago Fly-Casting Club the owlsh daily press has the following to say:

"Medals were awarded to the enthusiastic fishermen who whipped the lagoon in the fly-catching contest."

When will we be able to educate our friend, the daily reporter?

E. HUGH.

909 SECURITY BUILDING, Chicago.

The Pennsylvania Fish Protective Association

At the regular monthly meeting of the Pennsylvania Fish Protective Association for September, at the rooms, No. 1,020 Arch street, Philadelphia, after the election of a large delegation of new members, there was a discussion of the work to be accomplished by the association in creating public sentiment to a greater respect of the laws necessary for the preservation of fish. A large number of communications were read and acted upon, in which the co-operation of kindred organizations in the State was assured in the furtherance of this object.

## Louisiana Tarpon.

WHY is it that so few of the men who visit the South for tarpon do not come along the shore of Louisiana? I am satisfied that the fish can nowhere else be so plentiful as they are all along the coast from Vermillion Bay to the mouth of the Mississippi. Less than a week since an old oyster fisherman, with whom I have many times been out and upon whose truthfulness I can depend, told me that while he was on Oyster Bayou a "grand eaille" (tarpon), following a redfish, sprang into his boat and was captured, not, however, before he had so frightened the fisherman's son that he jumped overboard. Not being much of a fisherman I have never caught a tarpon, though I have often seen them caught. On our last trip to Last Island we came to anchor at the southern end of Oyster Bayou, and watched them play and capture the enormous schools of mullet that came down the bayou. They seemed to care very little for our being present, and would swim by after the bait between the sloop and the skiff in tow. The fishermen dislike them very much, as they often get caught in their seines and are sure to cut them very badly when they do. I have never known of more than one caught in a seine and this was owing to the quantities of other fish that were in the seine when he was caught. They so interfered with his movements that it was impossible for him to break out. I have some of his scales before me now. F. A. F.

## Whipping Pennsylvania Streams.

MR. M. G. SELLERS, secretary of the Pennsylvania Fish Protective Association, writes of his 1893 outing:

My trip consumed nine weeks through Wayne, Pike and Monroe counties; and the results were very satisfactory. The general opinion among anglers throughout this section is that this season has not been as good as last. This has been due to many causes, but principally, the natives say, to the ice gorges and heavy freshets in the early spring, which killed many fish. It is worthy of mention, however, that trout were in the pink of condition during June and July, indicating abundance of food. Under these conditions success required that manipulation which is generally spoken of in fly-fishing as "hard work."

It is hardly necessary for me to say that bass are strong customers when hooked for an argument. To those who enjoy a royal dispute with them, Hunter's Range or Ten-Mile Pond, Pike county, offers that opportunity. My success there in August would, I think, if known, attract many adherents of fly-fishing to those productive waters after the close of the trout season. The majority of the fish creel ranged from 2 to 8 lbs.; quite a good many ran over 8 lbs., and on one occasion the scale registered 4 lbs. As one must, according to tradition, lose the largest fish, it has no particular business to get hooked. In obedience to this principle, those weighing 5 and 6 lbs. were (generally) returned to the water, but through no fault of

M. G. SELLERS.

## Anglers for Sixty Years.

CORTLAND, N. Y., Sept. 29.—I never knew until recently that pickerel were found plenty enough in the Tioughnioga River and the east branch that cuts into it northeast of this village to make it worth while fishing for them. But a good many nice sized pickerel have been taken within the last month. I saw an old gentleman, a typical Izaak Walton, take four large pickerel from the east branch recently in less than an hour. The old man fished from the bank, used a long pole, a good bit over 18 ft. and a No. 5 pickerel spoon. Early in the afternoon he used minnows, river chub and whitefish for bait. He is a firm believer in big bait for big fish, often using a chub or whitefish 5 or 6 in. in length. And he generally catches fish right along when the other fellows are busy trying to prove that good fishing in the river is played out. He has a companion, "Uncle Bula," the boys call him, who is equally successful as an angler. Both men are fast approaching 70 years of age, and both declare they have been anglers for 60 years. They are two of the youngest old boys I have hitherto met in Cortland county, and their vigor and vitality prove anew the truth of that oft told yarn "it's not all of fishing to fish." Some very nice black bass are being taken from the Tioughnioga.

M. C. H.

## Mike Green Still Lives.

PORTLAND, Ore.—I cannot understand how or where the story originated that my old Mike is dead. He is about the liveliest dead dog for a ten-year-old in this neck of the woods. He actually caught and killed a big rat out on the common the other day. I have received several letters regarding his death. While I appreciate these evidences of affection for the old dog, I feel constrained to say that they are rather premature. S. H. GREENE.

[Mike had always had a part in previous stories of Molalla outings; but in one of 1892 there was not a word about him. What other conclusion than that he was dead could be drawn by readers of those delightful chronicles? No wonder folks wrote to the Judge about it.]

## Five Days to be Remembered.

MR. W. B. MERSHON, of East Saginaw, Mich., writes of a Quebec outing early in September: "I had five days' trout fishing that I hardly ever equalled. My three large fish weighed 5½, 4½ and 4½ lbs. I had a number running from 1½ to 3½ lbs. Took ten fish one evening that weighed 25 lbs. These were all caught between 7 and 10 o'clock of a nice, moonlight night, using a small silver-dog; I think any light fly would do. I found that I could get the big trout in clear, still water by using a long, fine leader and a small fly, the best one I found to be the imitable May-fly, tied on a No. 8 hook. With this I took most of my large fish."

## St. Lawrence Fishing.

CLAYTON, N. Y., Sept. 23.—Dr. J. Livingston-Reese, of New York city, has had a most successful week's fishing here this week, having taken three muskallonge, weighing 25 lbs., 32 lbs. and 42 lbs., the latter being an exceptionally fine specimen. Besides these, the Doctor has had some good catches of black bass and pickerel, and, taking the season through, has undoubtedly made the best average at Thousand Islands. J. G. FRASER.

## FOREST AND STREAM IN THE WORLD'S FAIR.

As Seen by Our Staff Correspondents.

## It Is a Dolly Varden.

Sept. 12.—The following from Dr. Bean, of the U. S. Commission, should settle any remaining doubts as to the true name and nature of Mr. La Rue's big trout, exhibited through his courtesy in the FOREST AND STREAM display. Dr. Bean writes me:

"I have examined the large mounted trout presented to Mr. La Rue by Mr. F. M. Smith, of Chicago, and now exhibited at the World's Fair by FOREST AND STREAM. There is no doubt in my mind that the fish is a Dolly Varden or bull trout.

"The brook trout is not a native of Montana, where Mr. La Rue's fish was taken. Furthermore, the brook trout in fresh water always has the back and the dorsal and caudal fins covered with dark mottling as on a mackerel. These marks are wanting in the Dolly Varden. The size and shape of the mounted specimen furnish additional reasons for my conclusion.

"T. H. BEAN, Representative U. S. F. C."

## A Pair of Jacks.

This week there has joined the group of pleasant sporting pictures in the FOREST AND STREAM exhibit, a little one, smaller than any of the others, but doubtless to become more popular, because it is in aristocratic oil colors, whereas the others are in colder black and white. It is the work of Miss Edith Farrell, of Leavenworth, Kansas, without doubt the most talented artist of the Sunflower State. It deals with no less Kansan a subject than a pair of jack rabbits, and I wish that a great many artists who make attempts at painting game pieces would come and look at this one. The pair of jacks look large, as if they were indeed 36 in. from heel to head, and every hair and wrinkle in the wise old faces are there in absolute faithfulness. These two particular jack rabbits got into the parlor of Mr. W. W. Carney's ranch, near Great Bend, Kansas, after the close of the meet of the American Coursing Club in 1890, before there was much idea of a World's Fair. They being then and there dead and hung by the heels, the artist limned them to pass away an idle day. Through Mr. Carney's intercession and the kindness of the artist, they have come all this way to the very place where they belong, so any one can see what the American coursing hare looks like. One is a rusty colored fellow, and the other a plump pepper and salt, and I remember both so well that I bespeak all to share my enthusiasm for their *fac simile*. You will not soon find so good a bit of dead game as these two lanky-legged and lop-eared FOREST AND STREAM hares.

Sept. 23.—There are several people in the world, and if you don't believe it, go to the FOREST AND STREAM place at the Fair and sit down a while. I looked at the register a moment the other day, and found names of visitors from New York, Hartford, Conn., Dallas, Tex., Portland, Ore., Columbus, Ga., Duluth, Minn., Seattle, Wash., and Rome, Italy; the rest scattering. If you wish to find a distant friend, it is cheaper and surer to come right in here and sit down.

## Place aux Dames.

It happened that this week Mr. Reynolds, the editor of FOREST AND STREAM (and he being absent from his post of duty perhaps cannot prevent my saying he is the best editor in this business, or FOREST AND STREAM would never be what it is), was in Chicago visiting the Fair, and of this fact that old FOREST AND STREAM standby, "Kingfisher," of Cincinnati, became in some occult way advised, and therefore wrote the following letter:

Friend Reynolds, or whoever is in charge of the "Forest and Stream" exhibit:

"This will introduce my daughter Kit, whom I trust you will allow the privilege of 'meandering round' through your 'show,' so that in case I don't get to put in an appearance before you 'break camp,' she can tell me all about it when she gets back home.

It might be well to regale her with a few well-chosen and plausible 'fish lies'—fresh ones, mind you, for she has been fed on old ones of mine for so many years that I am afraid they seem a trifle stale.

She won't bother you much; she just wants to 'look round' and 'have a few p'inters' to astonish her father with on her return.

Knowing the visit to FOREST AND STREAM headquarters will be a pleasure to her, I will heartily appreciate any courtesies shown, and will try and thank you in person before the Fair closes. Very sincerely yours,

KINGFISHER.

In due time the junior Kingfisher arrived, and then we all did have a great time. It so happened that Mr. F. H. Thurston, far better known as "Kelpie," and as one of the essential ingredients of a Kingfisher camp, was in town also, accompanied by Mrs. Thurston. So the local FOREST AND STREAM family, and the visiting ranking officer, and Mr. and Mrs. Kelpie and the junior Kingfisher (whom "Kelpie" just calls "Kit"), all meandered together for a while, and drank some coffee of the Guatemala and Brazilian sort, and enjoyed the thought that they all were ever born. No pleasant party has met on this enchanted spot. At this writing Miss Kingfisher is receiving a gradual and gentle education in angling lore, although the large stories are being saved for her respected sire, who is due here about Oct. 13.

Another lady to call at the FOREST AND STREAM space was Mrs. J. H. Rushton, wife of the famous canoe man. Naturally she looked with interest on the tiny Sairey Gamp, and so will Mr. Rushton, who will soon be here also.

## In General.

Prof. George Shepard Ellis, of Bethany College, a student not more of books than of FOREST AND STREAM, called on his way east to Old Virginia.

Mr. Eugene C. Reilly, a friend of the paper, left his card.

Mr. Sam J. Ryan, of Appleton, Wis., found time to come in for a moment or so and talk fish.

Mr. John M. Stotsenberg, Sixth U. S. Cavalry, comes and departs without saying where he can be found, which isn't a very charitable thing to do.

Mr. John Grenville Mott, of Michigan City, Ind., stopped long enough to tell me that the fly-fishing for bass in the Thornapple River, Michigan south peninsula, is the best of any which he knows, and good enough for a king.

Mr. Geo. A. West, of Milwaukee, Wis., trod the FOREST AND STREAM carpet all too briefly.

Mr. J. F. Layson, of Salem, Neb., came in and sat down and said he had known FOREST AND STREAM a long time and never had known it to go back on itself or on a friend.

Mr. R. W. Boyle, of Toronto, Canada, got away before we could learn all about the fishing in the big province.

Mr. E. T. Allen, of the E. T. Allen Co., San Francisco, Cal., a household word in the sporting trade of the coast, tarried a while and told about the coming big mid-winter fair in his city.

Mr. F. D. Kelsey, of East Aurora, N. Y., one of the steadiest of tournament shooters and a dealer in guns and ammunition, paused and left a card to show his passing.

Mr. H. S. Wells, of Moline, Ill., signs himself a "Friend of FOREST AND STREAM." He canst not, then, do wrong to any man.

## To Sharpen Up.

At this point one pauses to sharpen up his lead pencil, but they are still coming.

Dr. W. O. Blaisdell, of Macomb, Ill., the "wicked doctor," whose rapacious Mongolian pheasants met the veto of the "good governor," his nibs Johnnie Altgeld, tarried here for a few moments and departed to concoct further schemes of evil.

Mr. Wm. Dean Howells, Jr., nephew of the novelist Wm. Dean Howells, paused and looked over the FOREST AND STREAM pure literature. There is a good deal of go in some of the FOREST AND STREAM books. No man can be responsible for his uncle, and we will not lay up anything against this nephew.

Mr. A. Clinton Wilmerding, of New York city, signs "Bow-Wow" after his name. Mr. Wilmerding is just back from Toronto show, where he judged the spaniels. He attends the Y. W. C. A. meeting here, and will then devote some time to pleasure in the White City. He is accompanied by his uncle, Mr. Chas. W. Clinton, of New York city.

Mr. Robert M. Hartley, of Amsterdam, N. Y., is here for a week or two, and we have met him often pleasantly at the sign of the FOREST AND STREAM. Our latch string always hangs out. Indeed, there isn't any, neither are there strings to anything the paper says.

Mr. E. R. Vedder, of Rome, Italy, a late visitor, is a nephew of Mr. A. N. Cheney, who nearly always writes just what you were wanting to read about on angling matters. Is the fishing about Rome, then, any better than it is in New England?

Mr. W. T. Den, of Brownville, Neb., paused at the enchanted spot for a few moments. Mr. Den is just on his way back after a visit to Scotland, and he wore a sprig of heather in his coat lapel. This rugged Caledonian may be remembered by old-time shooters as the champion of Nebraska, and he carries a medal to that effect. He goes on West for a hunting trip into Montana.

Mr. M. L. Williamson, who was the FOREST AND STREAM bookkeeper in 1884 and 1885, came in and announced himself and registered. Ex-officio he might be called still one of the family. The books are bigger now.

Mr. John H. Madden, of the Plainwell, Mich., *Enterpriser*, subscribes himself "an enthusiastic FOREST AND STREAM man." He is one of many. They can't help it, y' know.

Col. W. H. Jacoby, of Minneapolis, Minn., made his escape in a sinful manner before he was surprised. In the same building with him in his city is the Pioneer news depot. Which I should like to ask, "What is wrong about FOREST AND STREAM, and if so, how much?"

## Sharpened Up Again.

And still they come. All sorts. From all over. A great Fair. Also, a great paper.

M. Henri de Verigny, Chargé de Mission du Ministère de l'Instruction Publique et des Beaux Arts, Délégué du Ministère du Commerce, etc., etc., of 7 Rue Sfax, Paris, came in for no more formidable an errand than to get a book catalogue, which latter is a plenty good thing, if he learns how to run it.

Mr. C. Costello, of Pennsylvania, spent a few moments at the tabernacle of the g. p. o. e. Yachts make his main love, but he found other things also.

Mr. F. A. De Muth, of Lancaster, Pa., told me of his son, a youngster who this summer caught his first trout and had to climb a tree for it. None the less, the trout was 19 in. long and the record fish of the trip. Doubtless it looked as big and glorious to the boy as the FOREST AND STREAM record tarpon.

Mr. Robert W. Huntington, Jr., of Hartford, Conn., made a very pleasant call. "Speaking of our Atlantic coast storms making a good flight of shore birds," said he, "you may care to hear what Mr. Gurdon Trumbull, of our city, says about that. He does not think the birds come ashore because driven by the wind, but because their feathers get wet. They come in to dry off, not because they can not withstand the wind."

Mr. Thomas B. Mills, of Wm. Mills & Son, New York city, in company with Mr. Reuben C. Leonard, was here long enough to see the winning of the Leonard rod in the long-distance work. Mr. Mills is an enthusiastic amateur photographer and carried a camera that looked like a lunch basket. He showed me some beautiful views made by himself along the Neversink, where he fishes trout sometimes.

Mr. F. S. Howd came in to examine the Sairey Gamp. "I used to know Nessmuk," said he, "and I saw the model of this boat before she was ever built."

Mr. Stratford J. Cullen, of Newark, N. J., stood before one of the FOREST AND STREAM fowling pictures. "I know the man sitting in the stern of the boat, with the string of geese," said he. "It is my friend Fred Hussey." This is a very small world.

Mr. Will C. Parsons, associate news editor of the *Cincinnati Post*, writes on his card that he wished to see the writer and "thank him for the many good things he has

written." Keep your eye on Mr. Parsons, gentlemen. A man of his good judgment is bound to rise.

The Neighbors Bring Things In.

Sept. 30.—If Miss Helen Cripps, of Rensselaer, Ind., will call at the FOREST AND STREAM space she can have either the lunch box or the label thereon which she left for safe keeping early one morning without specifying who was to do the keeping. The contents of the box have been applied by members of the staff. Unless otherwise specified, all lunches hereafter found on the space will be regarded as meals brought in by the neighbors and treated accordingly.

It Surprised Him.

Mr. Edmund Ocumpaugh, of Rochester, N. Y., manufacturer of shooters' sweaters, etc., came in the other day and we had a talk. "I tried my advertisement in FOREST AND STREAM at first as an experiment," said he, "but it is no experiment now. I have never known of so good a way of getting buyers. What surprised me most was to see the returns from other countries. I presume I had calls from every English-speaking country of the earth. FOREST AND STREAM certainly must have a world-wide vogue." She do.

Many Men.

Mr. M. E. Allison, of Kansas, whom readers of the sporting press will remember as the most experienced man in the West in hunting large game with greyhounds, and with whom I have passed many pleasant hours, leaves his card and says he can only be in town a short time. There are hundreds, and I believe really thousands of friends of FOREST AND STREAM, who have been here this summer, and it is one of the continuous disappointments that no one of the paper's staff can see them all. They are all mighty welcome. I would have liked to ask Mr. Allison about the "Spirits of Greener's Camp."

Mr. L. C. Grover, superintendent of the factory of Colts' Patent Fire Arms Mfg. Co., Hartford, Conn., dropped in the other evening in company of Mr. C. E. Willard, the Colts' Western representative. Mr. Grover is in town for a week or so, and says he doesn't see a gun in the Fair he likes any better than the Colt. "We have got some new machinery, just made," said he, "about which I could say a thing or two. The Colts Company is never done."

"Forked Deer" of California, came in some time ago, and hit the trail too quick.

Mr. K. M. B. Pierce, of Coyote Gulch, Colo., who runs the cliff-dweller industry over at the tin cliffs, left his signature, but had to go back and take care of the dwellers before we tangled up together.

Mr. G. G. Case, a well known and pleasant canoeist, of Jackson, Mich., was in and wanted to swap yarns with some one over the W. C. A. and kindred themes.

Mr. C. L. Goodspeed, special representative of the Louisville Commercial, called, but briefly, and left his card.

Mr. Alex. Y. Lee, an able artist of Pittsburg, Pa., made a short stay, which I wish had been longer.

Mr. William West, of Philadelphia, his card. Also those of Mr. A. R. Porté, of Ogdensburg, N. Y.; Dr. C. E. Fritts and G. Hill, of Hudson, N. Y.; Conn. Geo. W. Gardner, of schooner yacht Wasp, Cleveland, O.; Mrs. T. C. Banks, of Denver; Dr. Clarence H. Kay. I am naming only those missed in seeing, but FOREST AND STREAM salutes them all, every one of them.

909 SECURITY BUILDING, Chicago.

O, FAIR WHITE CITY.

O, FAIR White City by the inland sea,

Where waves and iridescent fountains play,  
Would I might utter all my thought for thee,  
Great crowning glory of time's mellowed day.

High was the purpose that presaged thy birth,  
And noble inspiration bade thy towers rise;  
Supreme amid the nations of the earth,  
The land that claims thee as her best emprise.

If from some rugged Pisgah of the past  
The mighty Genesee had caught one view  
Of thy bright splendor and achievement vast,  
How would his heart have thrilled at sight of you.

Or if those seekers for a pathway new,  
Where freedom might find room to walk at will  
And leave her benediction at each door, had dreamed of you,  
Their highest hopes had found completest fill.

A thousand arts have made thee what thou art,  
All lands have lent the richness of their years;  
From cloistered nook and trade's most busy mart  
The gathered products of two hemispheres.

Speak thou the secret of thy greatness to my soul;  
Art thou but witness of maturity?  
Or art thou promise as swift seasons roll  
Of that still greater greatness yet to be?

"I am the crest of that wide, onward wave  
Of human progress sweeping on through time;  
Man's life a span, then comes the lowly grave;  
The race speeds forward to an end sublime.

"Justice and love, one law, at last shall come  
To rule men's heart in one sweet brotherhood,  
And freedom's flag shall wave o'er every home  
And evil yield to universal good.

"The strife of faction and the pride of race;  
The cry of poverty, and anarchy's wild rage  
To peace and plenty shall in time give place.  
Throw wide the gates, I bring the golden age!"

J. H. LA ROCHE.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

The Kennel.

FIXTURES.

DOG SHOWS.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

Dogs and Customs Officials.

AFTER the field trials in Manitoba there was much dissatisfaction on the part of the Customs officials at Winnipeg in respect to the negligence of some dog owners or handlers, from this side of the line, who were not properly attentive to their Customs obligations. It was said that one or two handlers had departed without complying with the Customs requirements, thus leaving their bondsmen in an unpleasant embarrassment. Mr. Gallagher, secretary of the Manitoba Field Trial Club, so informed me, but he did not know the identity of the offenders. In consequence of the complication the Customs officials at Winnipeg felt that their courtesy had not been properly recognized. I am disposed to think that the inattention to the Customs requirements was more from oversight or insufficient information as to what was required than from willful evasion of the laws.

Mr. J. M. Avenet expected to arrange his business with the Customs officials, so that he could make his journey from Souris to the States without a bread, but he received a peremptory though kindly notice to return to Winnipeg to have his dogs identified and bond cancelled before leaving for the States.

The Customs officials had been most kind and considerate in dealing with the dogmen, and nothing should have been done on the part of the latter to cause them annoyance or trouble. The most scrupulous care to comply with the regulations should have been observed, nor should the kindness and responsibility of the bondsmen have been ignored.

Winnipeg.

The city of Winnipeg is well built, has a number of large business houses which would compare favorably with any in the States, and about 30,000 inhabitants dwell within its borders. Electric cars and lights, good streets and good homes, well-dressed people and a general appearance of bustle and thrift dispelled my preconceived ideas of a primitive city with Indians and bears hovering just without. As a matter of fact chicken shooting is good from the city limits outward, and it is not many miles to big game shooting.

But what caused us some surprise was the evidence at every hand of the enthusiastic devotion of the people to manly sports. The cricket game which was on, or the bicycle races, or the other sports in vogue, where the common themes. Photographic groups of the football team, or the winning oarsmen, or the cricketers, etc., were not infrequently seen in public places. All sports are well patronized.

But fine people, well-built business blocks and houses, good streets and general prosperity were not sufficient to impress me with its present and future greatness till I observed that it was quite a doggy city. Civilization, progress and the dog go hand in hand. Well-bred dogs of different breeds were not infrequently seen. Fox-terriers, setters and pointers appeared to be the favorite varieties, judging from quality and numbers. Curs, judging by their absence, were not in favor.

Messrs. J. Phillips, J. B. Stoddard and myself were participants in the hospitality of Mr. Thos. Johnson one day between the field trial dates. In his home we saw a number of valuable trophies, intrinsically valuable in themselves, but prized more by Mr. Johnson for their honor and associations. Mrs. Johnson, his charming wife, entered as heartily into the enthusiasm of sportsmanship as her husband himself.

In the kennels, which were intelligently arranged and well constructed, were several dogs, pointers and setters, of which one of the latter was Manitoba Toss, a compactly built, medium-sized, solid black fellow, active and alert constantly. Pure, running water was available at all times in the kennel yard. The kennels were clean, dry and comfortable. The dogs are fed on a specially made food of the best materials, meats, shorts and flour mixed and cooked in the form of a cracker, which the dogs eat with a relish, and judging from their excellent condition, with satisfactory results.

But to tell of all the features of that pleasant afternoon, the talks on authors and books, the discussion of dogs and sportsmanship, and the gracious hospitality pervading the household—would fill a volume with pleasant themes.

Souris.

At Souris, we found a number of local sportsmen, all keenly devoted to making a successful meeting. Unfortunately, the scarcity of birds was a serious drawback to the best success of the trials. Trains run to and from Souris but three times a week. But notwithstanding that circumstance, modern progress obtains. Mr. J. B. Roberts, of Souris, has a large kennel back of his hotel. The yard and building are subdivided into five or six parts, so that the dogs can be divided into small groups and separated from each other. Aside from a few setters and pointers, the dogs are greyhounds and foxhounds of the best breeding obtainable in England. His hounds are not quite so stockily built as the English foxhounds shown at our shows. Among them was one black and tan American foxhound. Mr. Roberts assured me that the English hounds were the speedier and enduring. They are used by him chiefly for wolf hunting.

The game laws in Manitoba are better respected and enforced than similar laws are in the States. Copies of them printed on posters can be seen in public places, such as hotels and post offices in the towns throughout the province. The penalties are sufficiently severe to deter the most hardened game law violator. Withal, there is a large discretionary power vested in the judges, which admits of an adjustment of the penalty commensurate with the offense. Public opinion, too, is against offenders.

Among several other letters, which I found awaiting me on my return from Manitoba, was one from Mr. Louis Steffen, secretary of the Northwestern Beagle Club, inform-

ing me that Mr. G. A. Buckstaff has donated a gold medal to the winner of the club's trials. It may be a little late to mention this as news, but it is not too late to mention it as one fact of many showing the enthusiasm in promoting the success of the trials.

909 SECURITY BUILDING, Chicago.

B. WATERS.

Mr. Barrymore's Esquimaux.

OMAHA, Neb., Sept. 21.—*Editor Forest and Stream:* I had the pleasure of looking over a very rare collection of dogs which belong to Mr. Maurice Barrymore, who left this city last night for New York, where he joins Mr. Palmer's company. His collection consists of two full grown Esquimaux—dog and bitch—which were purchased from a party in Portland, Ore., at a large figure. They recently came to that city from Sitka, Alaska, and are very powerful-looking dogs. Having held on by their chain for a block, I felt this fact more forcibly than by simply looking at them. Two Japanese spaniels, a chow dog puppy, and a Clydesdale terrier, better known as a Paisley terrier. All of them very rare dogs indeed. He also had a cage of birds from China, and two pet skunks. The latter are great favorites with Mr. B. It must be understood, however, that they have been deprived of the privilege of using their "German cologne." I have never seen so many dog fanciers in any one company as there are in "Aristocracy." Mr. S. Miller Kent had a pair of Japanese spaniels and a nice fox-terrier. Mr. Faversham had a handsome bull-terrier, and, I understand, bought another here in this city the last night of the show. Messrs. Barrymore and Kent had all their dogs photographed by the Omaha dramatic photographers, Messrs. Lear & Cotton, and if you wish I will send you a copy of the photo.

While going from the theatre to the photographers we came to a fur store, outside of which there stood, mounted, a large Alaska wolf. Mr. Barrymore's dog would not go by until he had thoroughly investigated his countryman, and as I looked at them both I was reminded of what W. K. Taunton wrote in his article upon foreign dogs. The two looked so like to me that I could not tell which was 'tother. Here is what Mr. Taunton says:

"The theory that the wolf and the dog were originally identical receives strong confirmation upon a comparison between the wolf of the Arctic region and the Esquimaux dog. The latter is so extremely wolf-like, that great difficulty is frequently experienced in distinguishing between the two animals at a distance; the principal differences being the carriage of the tail, which in the dog is curled over the back, but in the wolf is carried low, and the extra size of the last named animal. Those who have had an opportunity of inspecting the Arctic wolf will remember that it is much larger than animals of the same species found in other countries. In addition to the general resemblance between the Esquimaux and the wolf, we find the oblique eye in both—a peculiarity which I do not think is to be found in any other breed of dog. If it were possible to trace the pedigree of some of these dogs, we should probably not have to go very far back before discovering a direct cross with the wolf. It would naturally be supposed that such a cross would produce a dangerous, treacherous brute, not safe for any one to handle; but I have myself owned two Australian dingo bitches, whose dam was a cross between a wolf and dog, and they never showed the least sign of treachery or bad temper from the time they came into my possession till their death.

"In its native land the Esquimaux has to undergo an amount of hardship and fatigue which would prove fatal to any other breed. Yoked together in teams they travel long distances at a high speed, and to work hardest when food is scarcest. Very exaggerated statements are sometimes made as to the size of these dogs, but the average height does not exceed 22 in. at the shoulder. Nature has provided them with a dense, thick covering as a protection against the intense cold which they have to endure. This covering is formed of two distinct coats, the outer one consisting of hair about three or four inches long, very harsh, standing out from the body like bristles, especially along the ridge of the back, underneath which is to be found a second coat, consisting of a thick soft wool. Champion Sir John Franklin was undoubtedly the best Esquimaux we have seen in this country for many years, and he had this peculiar coat to perfection, while his typical head, small rounded ear, short, thick neck, long body, deep chest, excellent legs and feet and well-carried tail, combined with his general wolfish appearance, rendered his superior merit as a specimen of the breed unmistakable. These dogs would probably be far more sought after were it not for the idea entertained by many that they are more like wild animals than dogs. It will be found that in disposition they are most affectionate, but are very jealous, and they cannot bear to see any other dog noticed in their presence. I have owned many imported specimens of the Esquimaux, and have bred a large number myself; and although their appearance conveys the impression that they are treacherous and bad-tempered, I have never had a single instance of such being the case."—"Foreign Dogs," by W. K. Taunton, England.)

I wish to add that this is a very life-like picture of the dogs I have mentioned, as I took the trouble to brush Mr. Barrymore's dogs, arranged them for the photo, and found them mild, though very savage-looking. I think the dog must stand over 22 in., however. The bitch is with whelp, and, as Mr. B. said, he was not in the fancy for the money to be made on selling puppies, just to give them to his friends. It is a great pleasure to meet such an enthusiast, and the reader will think him such when he learns that, having but 36 hours' time before sailing for New York in 1892, Mr. Barrymore went all the way to Paisley, Scotland, from Liverpool, to get a Clydesdale terrier dog to mate with his bitch. I did not expect to take so much space, and trust you will pardon the length of this letter.

RICHARD FRANCIS.

Collie Club Stakes.

COLLIE breeders should bear in mind the following stakes and prizes to be competed for at the Westminster Kennel Club bench show in February next:

Grand collie sweepstakes, \$50 added to the stakes. Entries close Nov. 1, 1893. For blanks apply to the secretary of the club.

The President's cup for the best collie owned by a member of the Collie Club.

The Collie Club trophy for the best American-bred collie owned by a member of the Collie Club.

The silver club medal as a special prize for the best stud dog, to be judged by two of his get.

For entry blanks and further particulars address Mr. J. D. Shotwell, secretary of the Collie Club, 82 Hillside avenue, Orange, N. J.

Irish Setter Trials.

PHILADELPHIA, Pa., Sept. 29.—*Editor Forest and Stream:* Two additional special prizes are offered in the coming Irish setter trials. They are as follows: Mr. W. L. Washington, the club's president, offers a cup not less than \$20 in value, to be known as the President's cup, to the best dog in any stake in the trials.

Mr. Ed. F. Badmington, of Rockville, Conn., offers a nice kersey overcoat pattern to the winner of first in the Derby stake.

The place at which the trials are to be held is Thomasville, N. C., and not Thomaston, as was printed in the advertisement. G. G. DAVIS, Sec'y.

## DOG CHAT.

### Grading Entry Fees.

It is about time that entry fees should be graded according to amount of prize money. It is unfair that the exhibitor of a pug or a King Charles spaniel should have to pay a \$3 fee for \$5 and \$3 prizes, or \$2 for \$5 and \$2, while for the same fee setters, pointers, collies, St. Bernards, mastiffs, etc., get \$15, \$10 and \$5 for the \$3 fee. It may be advanced that the larger dogs cost more to send round, and that is probable, but the little dogs should not be made to pay for the others. Besides, in many cases railroads carry dogs free, and this they reckon by dog and not by weight. For instance, the Old Colony road from Boston to New York will charge \$1 a dog, no matter whether it be a 4lb. terrier or a 200lb. mastiff. It is a dog, and it goes at that. In justice to the pet dog breeders, the fees in these classes should be graded according to value of prize money offered. When \$10 and \$5 are given, entry fee \$3, with \$7 and \$4 fee \$2, and when \$5 and \$3 fee to be \$1. We are confident that this would lead to much larger entries at many of our best shows.

One would think that in such a showing country as England something would be done about late entries. It has become a regular thing for secretaries to advise the exhibitors through the papers of the paucity of entries on the eve of closing date. But in almost every instance an excellent entry is found when the exhibitor goes to scoop up the prizes, as he fondly imagines he will do on reading the secretary's cry. The secretary of the recent Birkenhead show explains the seeming inconsistency of his appeal for entries and the entry that the exhibitors found. He states that the entries closed Aug. 19 and on the night of the 22d, when entries were counted, there were found to be 272, 80 of which belonged to other departments than dogs. Then the whip was used, and a fine show resulted in an entry of 700. The secretary very justly complains of this, as it retards secretarial work on catalogues, etc. While one may change the date of entry closing, the date of the show remains the same. The threat of expulsion from the A. K. C. for clubs taking late entries worked wonders at a critical period in our show history, and we should think something on the same lines must soon be done in England.

The picture of Ned which Mr. Wade publishes in the *Stock-Keeper*, England, as a typical American foxhound, scarcely does justice to the country, that can show more types of foxhounds than any other in the world. There are several American hounds of better formation known to our shows, especially so in neck and body, and the loin and quarters of Ned, as depicted, are especially faulty. American foxhounds generally have very straight, flat backs and loins.

One would suppose that the lucky prices that Mr. Tom Stretch is credited with getting for his collie stock that nothing went out of his kennels for less than "a monkey." He has a pretty long head, as he has repeatedly shown, but like most of us, he gets rusty at times. He let a puppy go for \$15 two months ago, thinking he had the best left. The "sold one," however, came out at Birkenhead and took three firsts. By the way, Messrs. Smith & Baker brought out their new St. Bernard at that show. He is called La Prince and is described as a dog correct in markings, excellent head, massive bone and great depth of body and a good mover for so heavy a dog.

Mr. Reick tells us that he has a very handsome litter out of his new St. Bernard bitch Rustic Beauty, by Messrs. Smith & Baker's Country Member, she having been mated before leaving England. We are sorry that the New York St. Bernard dogs are not in better condition. The kennelman, who is entrusted with such stock as this—Sir Bedivere, Princess Florence, Marvel, Young Bute, etc., the *crème de la crème* of St. Bernard fancy—should have sufficient *esprit* to keep them at least in flesh and glossy condition. When shown, Sir Bedivere and Princess Florence looked wretched at Mount Holly. Mr. Reick is a busy man and has little time to devote to his dogs, but surely a kennelman can be found who knows his business; if not here, import one. The credit of our St. Bernarddom lies in such dogs as these, and the kennel that contains them is almost, in a sense, a public trust.

The Kennel Club show at the Crystal Palace to be held this month promises to be the most important event in English dogdom this year; 356 classes are contained in the premium list. The prizes are \$20, \$15 and \$5 in some breeds, and \$15, \$10 and \$5 in others. Fox-terriers have 22 classes and spaniels 22, collies 15, St. Bernards 17, setters 17, pointers 8, bulldogs 15, toy spaniels 17, and showing what a popular breed the retrievers are we note that they are given 11 classes. This is about three times the number of dogs of that breed we know of in this country, and then one spaniel judge calls them "very ordinary black setters." With sixteen specialty clubs to help things along the list of specials offered is said to be bewildering, 152 of them appearing in the premium list. The judges appointed are: Mr. W. Foster, bloodhounds; Mr. W. Norman Higgs, mastiffs; Mr. J. F. Smith, St. Bernards; Mr. R. Groom, great Danes; Mr. R. H. Wright, Irish wolfhounds, deerhounds, borzois, greyhounds, chow-chows, foreign dogs, beagles and whippets; Mr. E. C. Norrish, pointers; Rev. W. Sergeantson, English setters and retrievers; Col. Le Gendre Starkie, Gordon setters; Mr. C. Austin, Irish setters; Mr. M. Woodland, spaniels; Mr. G. R. Krehl, collies and poodles; Mr. M. Wootten, basset hounds and dachshunds; Mr. F. Gresham, Dalmatians, Welsh terriers, Bedlington terriers, black and tan terriers, white English terriers, Airedale terriers and Pomeranians; Mr. J. S. Pybus-Sellon, bulldogs; Mr. C. E. Frimstone, bull-terriers; Mr. F. Redmond, smooth fox-terriers; Mr. J. J. Pim, wire-haired fox-terriers, Irish terriers and old English terriers; Mr. H. Blomfield, Scottish terriers; Mr. S. Cameron, Skye terriers; Mr. G. A. B. Leatham, Dandie Dinmonts; Mr. J. H. Hill, schipperkes; Mr. H. Maule, pugs, and Mr. S. J. Thompson, toy spaniels. The club is not very liberal with challenge classes, mastiffs and bulldogs only getting sexes divided. Strange to say that in such a show no class is made for Yorkshire terriers. A strong breed in some parts of England, but at this show they go in the variety class. Black and tan terriers, although they have two or three specialty clubs to further their interests, get a second prize only sufficient in amount to cover entry fees. This state of things we have continually with us.

### Dachshunds.

In speaking of the difference of type in dachshunds, Mr. Freeman Lloyd takes up the question of utility and fancy as they relate to the German and English types of this breed. Lately at the Spa, Belgium show, Mr. H. Jones, the largest exhibitor of dachshunds in England, had indifferent luck with dogs he took over that have taken all before them at English shows. The Germans go in for the original terrier-headed and short-eared type. Looking at it from a utilitarian point of view, they are right too. The long-eared hound type of English dog would cut a sorry figure with varmint in an earth. His ear length would afford capital hold for his adversary. Mr. Lloyd says: "It stands to reason that a dog going to ground should have physical proportions which will not impede or lay him out to a disadvantage. I have seen these dachshunds go to earth in Belgium and in Holland, and merrily they have gone to their game, and as a believer in things practical—pretty and elegant as the hound-

like animals owned by Englishmen are—all that can be said of them is that they are a triumph of the breeder's art, and demonstrate how ridiculous a fancier often makes himself when he preserves and breeds dogs in no way suitable for their work. Neither in an earth nor above ground are those points sought for in English dachshund society of any use. They rather impede and place the dog at a disadvantage." From a fancier point of view, the dachshund, as we know it, exemplified by a Janet or a Jay, is infinitely more interesting and engaging than the terrier formation, and as long as these dogs are not used for their original purpose neither here nor in England, their present beauty interferes little with their present habits. In thick corn after the cottontail we should imagine they would fare badly, though Mr. Manice has, we believe, used his dogs extensively in the woods round Stockbridge, Mass., and it would be interesting, no doubt, if he could be prevailed upon to tell us how they acquit themselves, and if their fancy points affect them in any way. Mr. Lloyd says, "The dachshund is pretty as they make 'em and just about as useful as the fifth wheel of a coach." We trust some one will defend them from this imputation of superfluity. Perhaps the coming field trials will prove the falseness of this accusation.

While we are on the subject of dachshunds, we are reminded of a call recently made upon us by a dachshund exhibitor in the early 80s, Mr. Ludekins, who now resides in New York but formerly lived at Port Richmond, S. I. The uncertainty as to correct type of dachshunds that obtained at our shows at that time led to his abandoning the show ring. He now tells of a peculiar breed he has had for the past four years. He calls them Russian dachshunds. They are in color like a Gordon setter and in build are like a dachshund, with straight, flat coat, heavily feathered on legs and on tail, which is carried like a setter's, ears covered with long hair, too, and very silky. They have the dachshund front and head, and in fact are the same but for the addition of coat. His dogs stand about 4in. high and are about 40in. long. They make excellent field dogs, and can be used on

CHAMPION PAUL GLADSTONE.

One of winning kennel at Rhode Island Show, 1893. Owned by Mr. Joseph Lewis, Moodus, Conn.

fur and feather, pointing like the setter. They are a very old breed in Russia and confined to certain localities and families, and are not easily obtained by outsiders. The Russian, Mr. Ludekins tells us, on his way to and from the hunting grounds, carries these dogs in leather bags, which are slung pannier-fashion over his horse's withers, in front of the saddle; the dog's forepaws and head alone appearing and resting on the top edge of the bags. These peculiar dogs breed true and are a distinct breed. The shows have interrupted us in our intention of seeing these dogs, but as soon as possible we will publish a picture of one of them.

Mr. A. W. Smith, the whilom black and tan enthusiast, is paying New York a brief visit, and we are sorry to have missed him, but from Huron, S. D., to New York is a wide stride. Mr. Smith was distinctly disappointed that his specials for American bred B. and T.'s at Toronto were not won by something of more merit. It was "like throwing money into the street for any good it did"—as he very sagely observed.

We gather from a letter that Mr. Fred Mansell writes us, that the etching by Richard Josey, of the red dachshund Pterodactyl, is, besides being an interesting work of art, also a good likeness of the dog. Mr. Woodiwiss, his owner, says it is "a true portrait of my dog and a charming little picture." It is not so small, however, being 15x11in. Our copy, which Mr. Mansell, according to his letter, has kindly sent us, we expect to receive shortly and can tell our readers more about it. India prints are \$5.25 and can be ordered through the Forest and Stream Pub. Co. Mr. Mansell, who is making quite a feature of this sort of work, is also at work on a picture of the wirehair Cribbage, which we understand will be issued shortly.

### Novice Classes.

In the Toronto show catalogue there is a rule to the effect that where novice classes are provided they shall be judged before the open classes. This is a good rule if it were adhered to. It has been so at former shows in the Queen City, but this year it was not, and the show management distinctly violated one of the rules of the C. K. C. While on this subject it might be proper to ask of what use are novice classes, anyway? Dog shows are supposed to be a medium whereby the best dogs of a district or districts are brought together to ascertain which are the best in the several breeds. Now, what is the use of a restricted class that does not appeal to the public as an educator. Lately we have seen novice classes which are simply a repetition of the awards in the open and practically saddled the management with two classes, where one, the open, would have been sufficient. Dog shows are supposed to bring out the best dogs, but a dog not good enough to win in open, perhaps is able to do so in novices. There an inferior dog is

credited with a position and a sort of fictitious value that in comparison with the open class winner he is not entitled to. A puppy class, if we will give puppy classes, should be enough for the youngster, as novice dogs as a rule are. The class is superfluous and is only a drag on show committees, who might better add the money given to these classes to the challenge, which often is too poorly provided for. Instead of restricting the challenge classes to one class for both sexes, or the amount of prize money, as we find in so many cases, where novice classes are given, abolish the latter and give more inducement to the showing of dogs which presumably (of course there are exceptions) are superior exemplars of their breed, and as such are public educators, and in many cases worth a dozen of the novice class winner, who very seldom get above vhc. when he competes in the open class. We should like to hear the opinions of others on this subject, as we believe it has been discussed among dogmen in a desultory fashion from time to time. Every dog that is over twelve months old, we contend, unless he is eligible for the challenge classes, should when shown take his chances with those in the open class, and those under twelve months are provided for by the puppy classes, and their status is conveyed as such to the public. The fact that they, the novice class awards, don't count in reckoning wins for the challenge class shows that they are a superfluity. If we are to have novice classes, however, let them be judged first, before the open.

### The Death of Bedgebury Lion.

The demise of such a fine bulldog as Bedgebury Lion is a heavy loss both to his owner and to the bulldog fancy. Few of the bulldog men had an opportunity to see the dog that would have made His Lordship and King Lud feel that they had done a good day's work when they beat him. The particulars regarding this dog have been so recently given at the time of his importation last spring that it is not necessary to recapitulate. We sympathize with the proprietor of the Retnor Kennels in their loss, but trust they will

not be disheartened and try again. Owing to his being out of condition he has had few opportunities at stud since he came over, and this adds to the loss the breed has suffered in his death. With His Lordship practically out of the way there seems to be no obstacles in the further victories of King Lud and his mates. Mr. Parker is the donor of the handsome Parker cup to the Bulldog Club, and his active interest in the breed should be better seconded.

### Peoria Jerry is Dead.

A correspondent, owner of a kennel of pugs at Morris, Ill., writes to our Western office as follows: "In the official awards of the Toronto dog show, as published in the *American Field* of Sept. 23, I find Peoria Jerry, owned by 'Uncle Dick' Fellows, was awarded second in open class. But upon reading the FOREST AND STREAM of same date I learn that poor Jerry was killed by a truckman at Buffalo. Now I would like to know—'you know'—how a dead dog could receive second prize at a reputable show and just how it came to find its way among the 'official' awards. Our sympathies go out to 'Uncle Dick' in either event. Say, this looks like a 'scoop' to a 'fellow up a tree,' eh?" It is. That pug is dead, was dead, and FOREST AND STREAM chronicled its demise, and the mode and manner of its taking off.

### Field Dog Trainers.

There should be, and doubtless are, a number of good trainers of dogs for private shooting within easy distance of New York and New England towns. If these men would only make their identity known by using our business columns we are sure their income would be considerably increased. Every week we have an inquiry or two as to where such trainers can be found.

### More Pointers for Maine.

Mr. Chas. D. Roberts, of Dexter, Me., in a letter to us says: "It is with much pleasure that I inform you of the successful arrival Sept. 10 of a litter of pointer puppies, five dogs and three bitches, from my imported bitch Devonshire Pearl and by my Duke of Dexter. Pearl was imported from John Lee Bulled, Devon, Eng., last March, and is by his Devonshire Nero out of Devonshire Fan, and has won first Birmingham, Eng., second Amsterdam and third Boston, the latter when just from her voyage. In good condition I think she can do better. Duke of Dexter is now well known, having won first at New York, Boston and Lewiston in 1892, and first Boston in 1893. These pups are the finest marked I every had and if there are not some winners in this lot I shall not raise any more. As none of these are for sale I hope I shall not be accused of trying to blow my own horn. If 'like breeds like' I shall surely be in it."

As an evidence of the good and complete management at

Rhode Island show, we acknowledge with thanks the receipt of an officially marked catalogue of the show. The courtesy is none the less welcome because it is the first in our experience.

Flap Doodle.

Our contemporary, *Turf, Field and Farm*, took occasion last week to do a little crowing, stating that Mr. Tallman went to the Manitoba field trials to report the trials for them. We scarcely see where the "doodle" comes in when it is known that Mr. Tallman went specially to the Manitoba trials to act as judge, not as reporter, and his expenses were defrayed by the club. If it was worth while, FOREST AND STREAM might do a little crowing, too. It sent, at its own expense, Mr. Waters, a member of its staff, to BOTH the Northwestern and Manitoba trials at Morris and Souris respectively. Further than this it had another of its staff in Toronto doing the dog show there at the same time, and further, the week after the Providence and Mount Holly shows were covered by the New York office; and further, FOREST AND STREAM was the only paper outside of the State that had its staff representative at the Lexington, Ky., show.

The address of the old English Mastiff Club's secretary, Mr. Court Rice, is now The Limes, East Maling, Kent, Eng.

A Florentine volpino is the newest foreign breed to appear in England. *Stook-Keeper* does not give us much description of the animal further than it is about the size of a schipperke and said to make the best of pets. Perhaps this will turn out to be the Timbuctoo terrier that the English fancy is waiting to improve according to Mr. Lloyd.

Gordons for Canada.

According to a late number of the *Sporting Mirror*, Mr. Barclay Bruce, of Essex, England, took out with him to Canada five brace of Gordons, partly for sport and partly for possible sales. They have not as yet been heard from, however, on this side.

Mr. N. H. Harris, of North Wilmington, asks us to stop his adv. as he has sold all his dogs to Mr. Dole, Mr. Hanks and Mr. Symonds.

Mr. W. F. Ellis, of Manitou, Manitoba, offers a reward for the return of his Hoodoo, black, white and tan setter dog, weight 45lbs., large patch of tan on head and scar on forehead. Should be returned to Mr. von Lengerke, 246 Wabash avenue, Chicago.

Just as we go to press comes word from Mr. Frank Windholz telling us of the death of the famous setter champion Rockingham. More about him next week.

Secretary George Laick sends notice that a field trial committee meeting of the National Beagle Club of America will be held at A. K. C. rooms, 44 Broadway, on Monday, Oct. 9, at 3 P. M.

Cocker Spaniel Type.

Editor Forest and Stream:

In your report of the Rhode Island show you have an admirable, outspoken reference to their being in Bim the essentials of a sporting dog. In placing this dog first in his class Mr. Mortimer has practically, as an official judge of the Spaniel Club, indorsed much of what "Uncle Dick" has said in favor of a working cocker, and given my contention a very welcome boom. I have always held that the cockers of America are to a great extent unfit for any kind of sport, and particularly that of this country. I should like to learn whether Bim is useful in the field, and whether there are not many such that would come forward if the club would appoint judges like Mr. Mortimer without prejudices, and an insane hankering for blacks of the pet spaniel order. I think, too, that there are lots of blacks of similar build that would also take the place of the toys, and the sooner a new era comes the better it will be for the spaniel.

One of the chief reasons for the formation of the English Spaniel Club was the retention of the old cockerspaniel type, and we now find the American Club with judges that have not only caused Irish Clumbers and field spaniel classes to drop out at some shows, but are now doing their best to simmer down cocker classes to a collection of pet dogs.

EDWIN H. MORRIS.

HACKENSACK, N. J., Sept. 30.

United States Field Trials.

THE Derby entries have closed with a list of 32 pointers, 27 Irish setters and 40 English setters. The list having been received just as we go to press, it will be printed in our next issue.

Paisley Terrier Tam.

OMAHA, Neb.—Some time last fall there arrived from Scotland a Paisley terrier dog called Tam. The dog was imported by a lady of New York. As a reader of your paper, I would be pleased to know the whereabouts of this dog.

R. F. M.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

*Lady Taska.* By W. J. Snow, Waterbury, Conn., for rough St. Bernard bitch, whelped May 20, 1893, by Hesperance out of Sabea.  
*Hero.* By W. J. Snow, Waterbury, Conn., for rough St. Bernard dog, whelped June 15, 1892, by Victor or Lord Malcolm out of Gipsy.  
*Bobolink.* By Inwood Kennels, Providence, R. I., for black and tan Gordon setter dog, whelped July 6, 1893, by Count Noble (Ben Butler-Belle) out of Juliette (Captain Dan—Mollie Fitcher).

BRED.

Prepared Blanks sent free on application.

*Gertrude—Count Noble.* C. Patnotin's (Pawtucket, R. I.) Gordon setter bitch Gertrude (Don—Cremorne II.) to Inwood Kennels' Count Noble (Ben Butler-Belle), Aug. 4.  
*Ran—Count Noble.* H. O'Reilly's (Providence, R. I.) Gordon setter (Don—Fanchon) to Inwood Kennels' Count Noble (Ben Butler-Belle), Aug. 29.

*Minnie Belle—Happy Toby.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Minnie Belle to their Happy Toby (Spokane—Nelly T.), Sept. 8.

*Virginia—Patsy Bolivar.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Virginia (Spokane—East Lake Virgie) to their Patsy Bolivar (Eberhart's Cashier—Flossy II.), Sept. 8.  
*Dora—Chatham Prince.* A. W. Mullin's (Somerville, Mass.) bull-terrier bitch Dora to Chatham Kennels' Chatham Prince (Hinks—The Shrew), Sept. 10.  
*Loumount Kit—Chatham Prince.* P. A. Fuller's (Providence, R. I.) bull-terrier bitch Loumount Kit (Gully the Great—Kit) to Chatham Kennels' Chatham Prince (Hinks—The Shrew).

WHEELS.

Prepared Blanks sent free on application.

*Queen of the Dale.* Chatham Kennels' (Boston, Mass.) bull-terrier bitch Queen of the Dale (Plunger—Nettle), Aug. 31, nine (four dogs), by H. A. Harris's White Wonder (Gully the Great—Kit).  
*Pepper.* H. M. Tonner's pointer bitch Pepper (Bruner's Nig—Amaryllis), June 23, five (two dogs), by Sergeant Kent (King of Kent—Babe Graphic).

*Nig's Hope.* H. M. Tonner's pointer bitch Nig's Hope (Nig—Amaryllis), Aug. 13, seven (four dogs), by Sergeant Kent (King of Kent—Babe Graphic).

*Estrella.* H. M. Tonner's English setter bitch Estrella (Monk of Furness—Minnie Noble), July 4, eight (five dogs), by Shell Hudson (Gladstone—Dido II.).

*Dell Roy.* H. M. Tonner's English setter bitch Dell Roy (Roy T.—Jolly Fan), July 19, ten (seven dogs), by Shell Hudson.

*Isca.* H. M. Tonner's English setter bitch Isca (Roy T.—Los Angeles), July 23, seven (five dogs), by Shell Hudson.

*Edgemark's Nellie.* J. E. Borden's (Lansdowne, Pa.) English setter bitch Edgemark's Nellie (Edgemark—Lucy II.), June 1, ten, by F. G. Taylor's champion Breeze Gladstone.

*Bettina Bondhu.* L. M. Levering's (Baltimore, Md.) English setter bitch Bettina Bondhu (Gus Bondhu—Rural Neva), June 9, seven dogs, by F. G. Taylor's champion Breeze Gladstone.

*May F. Bondhu.* J. Feulner's (Unadilla, N. T.) English setter bitch May F. Bondhu (Gus Bondhu—Daisy Buckellew), June 9, nine (four dogs), by F. G. Taylor's champion Breeze Gladstone.

*Belle Buckellew.* C. K. Westbrook's (Philadelphia, Pa.) English setter bitch Belle Buckellew (Buckellew—Vic Vie), June 20, ten (six dogs), by F. G. Taylor's champion Breeze Gladstone.

*Belle of Delaware.* F. G. Taylor's (Philadelphia, Pa.) English setter bitch Belle of Delaware (Breeze Gladstone—Delaware), June 20, ten (six dogs), by his Ben Hur of Riverview.

*Nicolette.* J. P. George's (Concord, N. H.) English setter bitch Nicolette (Lady—Lady Bessie), July 9, six (three dogs), by F. G. Taylor's champion Breeze Gladstone.

*Fatality.* F. G. Taylor's (Philadelphia, Pa.) English setter bitch Fatality (Breeze Gladstone—Lest Noble), Aug. 2, eight (four dogs), by his Ben Hur of Riverview.

*Cad's Pet.* F. G. Taylor's (Philadelphia, Pa.) English setter bitch Cad's Pet (Moorefield—Caddie M.), Aug. 7, five (four dogs), by his champion Breeze Gladstone.

*Maisie.* J. L. Harrison's (Philadelphia, Pa.) English setter bitch Maisie (Edgemark—Flora B.), Aug. 12, — puppies, by F. G. Taylor's Ben Hur of Riverview.

*Clutes.* E. W. Jester's (Wilmington, Del.) English setter bitch Clutes (Plantagenet—Countess), Aug. 23, seven (three dogs), by F. G. Taylor's champion Breeze Gladstone.

*Til.* T. Dingler's (Harrison, N. J.) English setter bitch Til (Count Noble—Lil), Aug. 31, five dogs, by F. G. Taylor's champion Breeze Gladstone.

*Belle Murr.* A. L. Fookes's (Columbus, O.) English setter bitch Belle Murr (Gladstone's Boy—Flame M.), Sept. 1, eight (two dogs), by champion Monk of Furness.

*Flirt.* O. W. Harris's (Limerock, R. I.) Gordon setter bitch Flirt (Gyp—Fan), Aug. 6, nine (six dogs), by Inwood Kennels' Count Noble (Ben Butler—Belle).

*Clara Barton.* G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Clara Barton (Sir Bedivere—Judith), Sept. 3, ten (five dogs), by E. H. Moore's Altoneer (Alton—Hera).

*Lady Lomond.* G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Lady Lomond (Alexander—Bessie), Sept. 6, twelve (nine dogs), by E. H. Moore's Altoneer (Alton—Judith).

*East Lake Virgie.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch East Lake Virgie (Champion Bradford Ruby—Puss B.), Sept. 5, eight (six dogs), by their Sir Douglass (Douglass II.—Lady Verne).

SALES.

Prepared Blanks sent free on application.

*Dash Noble.* Black and tan Gordon setter dog, whelped June 8, 1893, by Count Noble out of Lady Noble, by Inwood Kennels, Providence, R. I., to Mrs. E. Case, same place.

*Little Lady.* Fawn pug bitch, whelped May 5, 1893, by Happy Toby out of Midget Nellie, by Eberhart Pug Kennels, Cincinnati, O., to Bishop Clay, Lexington, Ky.

*Douglass II.* Silver fawn pug dog, by Douglass out of June, by Bellevue Kennels, Newport, Ky., to Eberhart Pug Kennels, Cincinnati, O.

*Oklahoma Boy.* Fawn pug dog, whelped June 20, 1892, by champion Bonsor out of Lady Clover, by Eberhart Pug Kennels, Cincinnati, O., to F. H. Bowman, same place.

*Douglass II.* Silver fawn pug dog, by Douglass out of June, by Eberhart Pug Kennels, Cincinnati, O., to F. H. Bowman, Avondale, O.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

L. W., Columbus, Ga.—Write to Horace Smith, Monroe, N. C.; he is reliable and the most convenient trainer to who we know of.

J. A. F., Lowell, Mass.—Write to E. Knight Sperry, New Haven, Conn. He will probably know of a good man up your way.

A. B. M., Wodmont, Conn.—Your Italian greyhound Spider is 6,624 (A. K. R.). H. Abrams's Daisy II. is 6,623 (A. K. R.). Both are in March 1893 issue. Posey is not registered; the numbers you mean belong to a bull-terrier. Spider won second at New Haven, 1892.

H. J. H., Fort Leavenworth, Kan.—If by staghound you mean a Scotch deerhound, you can get the very best from the Hillside Kennels, Lancaster, Mass., whose advertisement will be found in our business columns. They should prove a useful dog out your way.

W. H. V. S., Eau Claire, Wis.—If you write to Mr. J. L. Winchell, Fairhaven, Vt., he can probably supply you with bloodhound pups. His stock is of the very best and we believe are from parents trained to hunt the boot. Geo. W. Glazier, Salem, Mass., also has some of the same stock.

H. C. B., Springfield, Mass.—Dalmatians, or coach dogs, as they are usually called, are not by any means common in this country. A notice in our business columns might put you on the track of one. There were some shown at the Pawtucket show, we believe, but they were not very good specimens.

G. S., Yonkers, N. Y.—The beagle is considered best for hare hunting, and Mr. Ashburner's book will give you information about training. Price, 50 cents. We can supply it. Little training is required, developing a disposition to hunt and heed is about all. Consult our advertising columns for good stock.

T. A., Birmingham, Ala.—I have a pointer dog two years old that has become very deaf. There is no sign of canker rising or other trouble in head or ears. I had his ears examined to-day by a professional doctor, who says there is no obstruction and the ears are healthy looking. Can you explain cause and give treatment? Aus. Pour a few drops of almond oil (warmed) into the ear every day for a week, then syringe out with warm water and dry thoroughly with a soft cloth.

H. F. de B. C., Detroit, Mich.—I have a litter of cocker puppies 7 weeks old. One has a lump as large around as end of index finger projecting at navel, which upon pressure slips back, only to reappear when same is removed. Another has a swelling in neck just above chest on underside, which feels like a gland and may be moved about. It is not hard, but yielding, and apparently gives no pain. Is almost as large as a walnut. Will you kindly oblige me by telling me in your interesting paper, which I regularly read, what I can do for them? Ans. Do nothing for the lump at the navel; it is a rupture, and will disappear as the puppy grows older. For swelling in neck apply tincture of iodine twice a week.

Geo. W. P., Manchester, N. H.—Nearly two years since I wrote you inquiring about a bunch that for some months had been growing on my mound bitch, directly in front of the point of the shoulder. From my description you pronounced it a tumorous growth and recommended application of iodine liniment, and if that failed, then removal of bunch. I employed the local veterinarian and he has tried external applications, has injected iodine, has put in a seton, and all these have failed. He says the brachial artery is involved, and not professing experience in canine surgery fears to cut it out. The bunch has attained the size of a large orange, is about as hard as loose muscle, apparently causes no pain or soreness. It seems to me that its size must fatigue her some when on the trail, but its future is what troubles me most and I am too far up country to consult a specialist. Will you kindly tell me if it is safe to use ether on dogs, and would the severing of the brachial artery impair the usefulness of a foxhound if properly taken up? Ans. It is perfectly safe to use either ether or chloroform on dogs. The severing of the brachial artery would not impair the usefulness of the dog.

H. A. V., Albany, N. Y.—I have a pointer dog, 5 yrs. old, who at times is very constipated. There seems to form in the rectum a large hard lump, which when passed and broken up is like baked sand. After passing lump the accumulation behind lump is soft and natural. He is fed since this trouble soft food. Rectum seems very feverish. Fed once a day. Trouble came one year ago. Will pass lump after giving injection of oil. Otherwise dog is perfectly healthy. What would you advise. Ans. Try the following mixture:

℞	℥i	℥i
Tr. rhel.	℥i	℥i
Tr. nucis vom.	℥i	℥i
Tr. gent. co.	℥i	℥i
Aq. ad.	℥vi	℥vi

Mix. Give one tablespoonful three times a day. Do not give dog any bones.

Hunting and Coursing.

FIXTURES.

Oct. 17.—Kenmore Club meeting at Goodland, Kan. Frank L. Webster, Sec'y. Entries close Oct. 16.

The Huron Meet.

HURON, S. D., Oct. 3.—[Special to Forest and Stream:] Everything points to a successful meeting. There is a number of well-known coursers already here. There are no English dogs. Entries are chiefly of those from Kansas, New York and Indiana, with three from California, and several from this neighborhood. The draw took place last night in the Opera House, with thirty-two dogs, as follows:

Whiton's Lord Neverstill against Nelson's Dover. Alley's Dick Alley against Allen Andrew's Delsarte. Allen Andrew's Sir Hugo against Watson's Royal Crest. Landseer Kennels' Viola against Watson's Drytime. Allen Andrew's Fanny against Slocum's Raven. Hall's Joe McAnuliffe against Landseer Kennels' Nancy. Coyne's Flying Fancy against Whiting's Touchwood. Allen Andrew's Woodford Boy against Coyne's Willis H. Coyne's Laplander against Nelson's Greenshine. Vinton's Cyclone against Busfield's Bicker. Watson's Will of the Wisp against Lowe's Princess May. Lowe's St. Lawrence against Hall's Banboy. Coyne's Romona against Hall's Daziel. Watson's Willy Nilly against Wallace's Alaka. Lowe's Prince Charlie against Landseer Kennels' Vanpeter. Nelson's Miss Dallas III. against Lowe's Voltaire.

Local interest is very great. A supper and a musical entertainment were given to visitors after the draw.

Weather bright but frosty. Judge Williams and Slipper Brett are both here. The Great Bend meeting is declared off. H. C. Loye's noted greyhound Master Peter is dead, burst a blood vessel. H. W. L.

A Wolf Hunt With the Faulkner Pack.

Editor Forest and Stream:

Long about the middle of last December I had word sent me that on the following day there would be a big wolf hunt, and as I am a lover of such kind of sport I was up and ready to start next morning, when I heard the hunter's horn which was about six miles away. The air was damp and just cold enough to brace one up for the sport to come. On coming up I found the party, consisting of some twenty persons and Mr. Faulkner with his fifteen trail hounds and two greyhounds; also Mr. Lafallett with four of his pack of fighters. As we were all ready we started for some timber about two miles away. On entering the timber we had hardly gone 400 yds., when old Lud, one of Faulkner's best trail hunters, gave tongue, in which he was joined by Little Ben, Mr. Lafallett's old reliable, and the rest of the pack. Going in a kind of circle and nearing the edge of the timber they put Mr. Coyote up to show his running qualities.

At this time of the game there was music in the air for sure. Why, I can almost hear them yet, in imagination, and the way they did run nothing could strike a hunter's fancy more. The coyote made for a deep ravine in which we lost sight of him but not of the dogs. They were well packed and straining every nerve and muscle to put him out on the open prairie. But on reaching the other side of the ravine we caught sight of him making for some small timber, three or four hundred yards away, in which there was a good deal of brush and vines. After running him several times around here, the coyote appearing not to know just which way to go, he finally made a bee-line south, keeping in cornfields or near a hedge. We were all doing our best to keep up with the pack of dogs, and by this time we were all limbered up, the dogs doing their best were determined to make the chase as short as possible. After running the coyote about eight miles he made a large circle and started for Mud Creek, some five miles away. There was considerable straggling now among both men and dogs. On seeing the move the coyote had taken those that were behind out across to head him off, followed by most of the stragglers, among which were the two greyhounds.

We had gone about two miles, when we came in sight of the coyote; urging the dogs on so as to keep him from giving us the slip at Mud Creek, the greyhounds soon sighted him. Then talk about dogs running! Why they seemed to fly, and in no time they overtook him. They were going so fast that when the coyote turned to fight them they knocked him down, going ten or twelve yards past. Before they could get back the coyote turned and started off, only to be knocked down again. By this time Speak, Queen, Bob and Lady had caught up and made short work of Mr. Coyote before the other dogs came in. It was quite laughable to see some of the horses running, especially when they would come to a small ditch, the horse and rider would go up in the air and come down like a ton of brick, this being the first chase they had ever been in. To tell the truth, we got pretty well shook up, and almost hungry enough to eat a wolf ourselves. Thus ended one of the most enjoyable and long to be remembered wolf hunts in many a day.

G. B. L. MERCER.

New England Hounds.

A BRIEF glance at recent foxhound history in New England may be of interest at this time when fox hunting is exciting so much attention, and so many additions and changes are being made in prominent Eastern packs. The field trials of the Brunswick Fur Club occurred in '89. This was the first public competition of foxhounds in this section of the country, and the friendly rivalry engendered at that meet has completely changed the personnel of many of our best packs.

Up to that time most of the hounds in use in New England were native bred, and were considered by their owners unequalled in all good qualities which a hound should possess. After the inaugural trials were finished, Mr. R. D. Perry, the present M. F. H. of the Brunswick Fur Club, attended the Interstate Fox Hunters' Meet in the South, and was so much pleased with the work done there that he purchased the Avent hound, Clinker. At the second trials in New England Clinker won first in the speed class, and at the third trials he won the club medal given for the highest general average in all classes, and also the American Field cup; at these trials, too, fine work was done by the Wild Goose hounds Slip and Leads All.

The great speed, and endurance, and fine hunting and trailing qualities displayed by Clinker were a surprise to most of the sportsmen who witnessed the field trials of '91, and many who had previously doubted the superiority of the Southern hound over the native, were convinced that they were mistaken in their estimate of the relative qualities of the two. These gentlemen were not slow to follow Mr. Perry's example, and the trials of '92 saw a remarkable change in the class of hounds entered for competition.

The desire to beat Clinker led to a search for the very best Southern hounds, and many splendid specimens were seen at the '92 trials. The Portsmouth Hunt Club entered the July Hendricks, the lead hound in the well-known pack of Mr. Thad Murphy, Macon, Ga.; Mr. E. J. Bates again entered Leads All, a Wild Goose hound; the Kinney-White pack had among their representatives the Goodmans, Logan and Aggie; Mr. J. H. Baird sent the English hound Duff, and the Walker Crook; Mr. M. Stewart was accompanied by Chum and Paddy, English hounds; Mr. N. Q. Pope's pack was represented by the Goodmans, Clay, French and Orange, and the July, Pealer; Mr. Richard Seely entered the Buckfield-Byron Jim.

As all the world knows, Clay won the highest general a r

WHILE the immediate conditions of the races are thus established on a fair and permanent basis that should prevent all disputes in the future, the same cannot be said of the conditions under which the Cup will be delivered to a successful challenger. The statement credited to the chairman of the Cup committee to the effect that all differences were arranged when the challenge was accepted is, as we happen to know, entirely incorrect. After the long discussion of terms which began in 1889, the challenge of Lord Dunraven and the Royal Yacht Squadron was finally accepted at the end of a late meeting, and the one vital point of the holding of the Cup by the winner was left undecided, and with opposing statements on each side. Unless it was settled at the meeting of Tuesday or a subse-

overthrow the conclusions based on Gloriana and Wasp, nor will it develop in general use a much deeper or wider type of centerboard than is now found in the larger classes. Exciting as the present contest is, its technical issues are of comparatively small importance.

The America's Cup Races.

THE meeting between Lord Dunraven and the Cup committee of the New York Y. C. took place on the afternoon of Tuesday, Sept. 26, at the club house, there being present Messrs. J. D. Smith, A. Cass Canfield, J. F. Tams and Latham A. Fish; the fifth member, Mr. Philip Schuyler, being on his way home from England. The meeting lasted for a couple of hours, but nothing is yet known of the subjects discussed or the conclusions arrived at. After the meeting it was announced that the results would not be made public for the present, as they had not been "formulated;" no information of the meaning of this term being given. In answer to a direct question as to whether the terms under which the Cup should be held by the Royal Yacht Squadron in the event of a victory for Valkyrie had been discussed, the chairman, Mr. Smith, stated that these terms had been finally arranged when the challenge was accepted last winter.

One important matter settled at the meeting was that of the immediate detail of the races, which was announced by circular on Saturday, as follows:

Conditions of America's Cup Races, 1893.

SAILING DIRECTIONS.

Start—The start will be made off Sandy Hook Lightship, th

Letter G—Do you assent to calling race off for the day?  
If both yachts signify their assent by setting the affirmative signal (letter O), the answering pennant will be hoisted on the May. G G—Race postponed on account of fog. Letter L—The starting point will be shifted out from the Lightship.  
All signals will be made by club code.  
By invitation of the Commodore the committee will be on board the flagship.

GENERAL RACING CONDITIONS—BY MUTUAL AGREEMENT.

The racing rules, time allowance, and system of measurement of the New York Y. C. shall govern, with the proviso that any excess of load water-line length over 85ft. shall be counted double in calculating the sailing length, and also that the load water-line length shall not exceed 86.7ft.

Best three out of five races, outside of headlands, over courses each 30 nautical miles in length, and with a time limit of six hours.

The first, third and fifth races shall be to windward or to leeward and return. The second and fourth races shall be around an equilateral triangle, one leg (and the first, if the wind permit) being to windward.

One day shall intervene between each racing day. A race postponed or not finished within the time limit shall be decided before the next term in the series is taken up.

\*The races will be started off Sandy Hook Lightship, the preparatory signal being made at 11:15 A. M., and the start (from a single gun) at 11:25. But if on the day of a race to windward or leeward, the course cannot be laid from the lightship, then the race will be started about 11:45, from some point further out to sea.

\*\*The Regatta Committee shall have discretionary power to declare

Vigilant and Valkyrie.

SINCE the trial races the members of the Vigilant syndicate here worked even harder than before in the effort to perfect the boat for the final contest, and nothing that work and money could do has been omitted. Mr. Iselin, Mr. Willard and the others who have been with the boat from the start have been constantly at work, aided by Mr. Herreshoff, and many changes have been made at City Island. Spars, rigging, gear and sails have been altered and strengthened, the wire in particular being very much heavier than that first used. Piegrass has made more new spars, including a hollow boom and topmast, and a spare mast is ready in his big shed. Sawyer has made a new jib and staysail, and all the sails have been more or less altered. So many changes of spars and sails have been made that it is not known what particular ones will be used.

Early last week a diver went down and scoured the Tobin bronze centerboard, and on Thursday the yacht was hauled out on Hawkins's railway at City Island, the faithful Hattie going out at the same time.

The yacht laid on the ways until Monday, being run off at 4 A. M. While dry she was visited by hundreds of people, Sunday being the principal day. Her bronze bottom was cleaned and then polished with Bath brick, or some similar polishing material. On Monday she was under way on the Sound for another trial of the sails. On Wednesday she will visit Erie Basin, where Mr. Hyslop will make the final measurement of both yachts.

Valkyrie was under way for the first time in racing rig on Wednesday of last week, first spending an hour or more of Owl's Head while her compasses were adjusted. She sailed down the Bay, returning in the afternoon, and on the three following days she was also out. On each occasion she was closely watched from tugboats and yachts

COLONIA—DESIGNED BY N. G. HERRESHOFF.

VIGILANT—DESIGNED BY N. G. HERRESHOFF.

PILGRIM—DESIGNED BY STEWART & BINNEY.

JUBILEE—DESIGNED BY JOHN B. PAYNE.

THE CUP DEFENDERS OF 1893.

Copyrighted, 1893, by Bolles, Brooklyn.

preparatory signal being given at 11:15 A. M., and the starting signal at 12:25, except as provided under \*General Racing Conditions.

Courses—No. 1. (Letter B) From the starting line to and around a mark 15 miles to windward or to leeward and return, leaving the mark on the starboard hand. No. 2. (Letter T) From the starting line 10 miles to and around a mark; thence 10 miles to and around a second mark, and thence 10 miles to finish line, turning the marks on the outside of the triangle, to port or starboard, according as the yachts are sent around.

Starting and Finishing Lines—Will be between a point on the flagship May, indicated by a white flag and the mainmast of the lightship, or other stakeboat if the start is made further out to sea. The starting and finishing lines will be at right angles with the outward and home courses, respectively.

Compass Courses—Will be set on the maintopmast stay before the preparatory signal is made, and will be kept flying until after the start. The signals for course No. 2 must be read beginning forward.

Marks—Will be floats displaying a red flag with white stripe. The position of each float will be indicated by a tug showing a red ball and stationed about 100yds. beyond. Should a float be wrecked its place will be taken by its marking tug, which will show the club signal in addition to the ball, and in turning the tug, the directions for turning the float will govern.

STARTING SIGNALS.

Preparatory—A gun will be fired and a red ball hoisted.

Signal for the Start—Ten minutes later, a second gun will be fired, and the ball will be dropped. In case the start is postponed or the starting point is shifted from the lightship, a preliminary signal will be made by firing a gun and displaying a blue peter at the fore ten minutes before the preparatory signal and twenty minutes before the start. Should a signal gun miss fire, a prolonged blast of the whistle will be given.

Recall Signal—A yacht crossing the line before the starting signal is made will be recalled by a blast of the whistle and the display of her private signal on the fore.

Postponement Signals, &c.—See General Racing Conditions.\*\*

Letter H—Do you assent to postponing start until later in the day?

the race off in case of fog. They may also, on account of other weather conditions, postpone the start or declare the race off for the day, provided that both yachts assent.

In case of serious accident to either yacht, prior to the starting signal, she shall have sufficient time to repair before being required to start; if during a race, she shall have sufficient time to repair before being required to start in the next race.

Manual power only shall be used in working the competing vessels.

S. NICHOLSON KANE, }  
CHESTER GRISWOLD, } Regatta Committee.  
IRVING GRINNELL, }

The first race will be on Thursday, Oct. 5, and the second on Oct. 7, continuing on alternate days until at least three have been sailed. The possibility of postponement for weather or to make repairs renders it impossible to fix in advance the exact date of each race.

The accompanying chart shows the racing ground, outside Sandy Hook, and the courses will be within the limit of the two lines diverging from the Sandy Hook Lightship, the circles representing ten miles, the sides of the triangular course, and fifteen miles, the length of the leeward course, respectively. As stated in the conditions, it is possible that the start may be moved seaward from the Lightship to secure a windward leg.

A very large fleet of steamers and tugs will follow the race, many of them engaged by clubs or private parties. Public steamers, carrying passengers at \$2 to \$5 each, will be run, full information as to the times and places of starting being given in the advertising columns of the daily papers. Some of the yacht clubs have also arranged to give notice to holders of tickets of any change of programme through the same medium.

Capt. Crocker was in New York this week, having returned by steamer. On Oct. 2 Navahoe sailed from Coves for Madeira, with Mr. and Mrs. Carroll on board. They will visit the West Indies, returning to New York in a couple of months.

which accompanied her, the comments on her sails and her apparent speed being uniformly favorable.

Nothing was done on board on Sunday, but on Monday morning she was towed to the Erie Basin Dry Docks. She reached the dock before noon, but the steamer Iroquois had to be floated, and it was just midday when Valkyrie was warped in. Thistle and Genesta were grounded near the outer end, but the keel blocks for Valkyrie were laid ahead of Iroquois while the latter was dry, so the yacht was grounded near the head of the dock.

As soon as she was in position, the crew left her in the two boats, then Messrs. Watson and Ratsey with Capt. Cranfield, and one of the crew took the dumpy and rowed round her, carefully marking the exact waterline at the bow. When they reached the long, low counter the task was far more difficult, and it was some time before a mark was made. After several attempts to reach under, the boat was heeled until her gunwale touched the water and Mr. Watson leaned out, his body beyond the boat and barely clearing the water, and by a long stretch he succeeded in making a mark at the proper point.

There was about 2ft. of water when the caisson was floated in, closing the docks and the pumps were set to work until the depth was reduced to about 18ft. before the yacht began to fall by the head, showing that her keel had grounded on the lowest keel block.

Owing to her peculiar keel contour the greatest care was necessary in properly adjusting her to the blocks specially built up to support her, the forward tier of blocking being at least 10ft. high.

The yacht was held by four tackles from the bows and quarters. A wire rope with a short line hanging in the center was stretched across the dock just clear of her taffrail, and a lead line was hung from the center of the latter.

At the head of the dock the foreman of the yard stood by the two posts which mark the exact center line of the dock, and sighted the bow, a man on the stern watching the plumb line and the center of the wire rope. Other men on the four tackles moved the yacht slightly to one side or the other until she stood over the exact center of the dock.

When finally adjusted, the spur shores were run out, four on each side, from the yacht to the steps of the dock, and one pump was started. The crew took possession of the two float stages, each man

armed with a stiff brush broom, while on each float were several tubs of a black scouring mixture, composed of sand, water and an acid. The men scoured vigorously, moving the floats from end to end, while the pump was run slowly and stopped at times when the water fell too fast. The cork was in good condition, the little float, and a shoving only a few wrinkles forward, though the white putty showed plainly along the seams of the counter from the copper line to the archboard.

All the afternoon a steady stream of visitors poured into the yard, until all the yachting talent of New York was assembled within a radius of 100 ft. of Valkyrie's mast. Among the visitors were Messrs. A. Cary Smith, J. Benson Webb, Canfield, Tams, Sanderson, Gardner, Gielow, Thomas, Conner, C. H. Haswell, M. R. Schuyler and E. B. Clarke. Lord Durraven was not present, having gone on a flying visit to Boston on Saturday, but a casual visitor with a cane and a gafftopsal hat was pointed out by some one as his Lordship. The word quickly passed through the round and many stopped to gaze, enjoying the sight just as much as though it had been really the owner of Valkyrie.

Owing to the delay of scrubbing, it was 5 o'clock before the deck was dry and the yacht was visible from her truck to the heel of her rudder. Of course her dimensions are not known, but the most reliable estimates place the beam at 22 ft. 6 in., and the extreme draft at three to six inches over 17 ft.

In Valkyrie, in spite of much that has been said, there is not the east suggestion of the Herreshoff boats. Not only are the dimensions different, but the whole treatment of the design shows Mr. Watson's individuality; in fact, he has not even copied himself in Thistle.

Like the topsides, the bottom is very much like Queen Mab, the keel contour being somewhat different. The bow is long and more of the V-section than in any Herreshoff boats, the waterlines being straighter. The middle body is quite full, with a rather deep bilge and a thick throat to the floors, but the run is very clean ahead.

The general dimensions of the yacht are unquestionably far ahead of any other Cup challenger, she has a good amount of beam, her lead is very low, and from all accounts she carries her canvas in a way that none of the older boats have done.

What is of even more importance is that her draft is apparently enough for good windward work, her lateral plane, ample, and its distribution indicates a good balance; in other words, she is strong in those points in which all previous keel boats of large size have been notably weak. Whether she is relatively as good as the modern keel boats of medium size is yet to be proved, but she is certainly not lacking, as Colonia, Thistle and the older boats have been, in draft and in distribution of lateral plane.

Her rig is far heavier than Vigilant's, but it is tried and tested, and certainly stronger. It is essentially the same as Thistle, and not as light as the modern American boats, but there is little danger of its going to pieces.

As to the probable results of the races the general opinion is all on the side of Vigilant, and while yachtsmen admire Valkyrie, the majority are looking for a decided and easy victory for the American boat as in past years.

In many respects the two are far more evenly matched than ever in the past, and while Vigilant is likely to do the best windward work under normal conditions, there are, in our estimation, two adverse factors in the great beam and the large and light rig. The possession of the Cup has in the past been decided by this same ability to windward under normal conditions, smooth or nearly smooth water and a clubtopsal, or at least a topsail breeze, and under the same conditions Vigilant is likely to win. Should it come to disturbed water, even short of a really bad sea, while Valkyrie has probably beam enough, we believe that Vigilant has too much for her best speed; and while Valkyrie has a rig that, though heavier, has been tested for three months, the lighter rig of her opponent presents a serious element of risk which must be greatly increased after two or three days of tossing even in a moderate sea.

### The Cape May Cup.

The Cape May Cup, which was won in 1885 by the Genesta in American waters, is a sister trophy to the Brenton's Reef Cup, which the Royal Yacht Squadron committee on Thursday awarded to the Navahoe. The conditions also are practically identical, and the course on this side is however somewhat different, the weather conditions for different from those of the Brenton's Reef contest on Tuesday last, the vessels taking upward of 24 hours to cover the 120 miles course. They started at 12:49 P. M. on Friday, and did not finish until 12:57 P. M. on Saturday. For about 10 hours after the start the breezes were light and baffling. Then came a following wind, which took them to the French coast. In crossing the channel back they had it smart enough to bring them in about 5 hours from land to land.

A clever start gave Britannia the lead after the first tack, and she gave the Navahoe a very hollow beating, which might really have been increased, as may be gathered from the racing details which follow. Britannia can claim the credit of having come in ahead of Navahoe every time they have met, and the Prince of Wales's cutter has won the unparalleled number for a first-class yacht of 39 prizes this season. She displayed her winning flags yesterday in Cowes Roads, and the ship was decked with them rainbow fashion. It may be said that it was arranged to start and finish the Cape May cup match from Alum Bay, and that Col. J. Sterling undertook the duties of starter and timekeeper. Racing details follow:

Match for the Cape May Cup, presented by Mr. J. G. Bennett in 1872 to the New York Yacht Club for competition by yachts of all nations (Last holder, Genesta, cutter, the late Sir Richard Sutton.) Course from a line drawn from Alum Bay Pier and Col. J. Sterling's cutter Chough, anchored off, out through the Needles, round Cherbourg Breakwater and back, distance 120 miles. New York Yacht Club rules. No time allowance. Yachts allowed five minutes to cross the line.

Britannia (defender), cutter, the Prince of Wales.....	Rating.....
Navahoe (challenger), cutter, Mr. R. P. Carroll.....	151

It had been arranged that the two competitors were to tow away from Cowes at 5 o'clock on Friday morning, but a dense fog prevented their getting away until 9:30, when a clearing came. It was flat calm at this time, as it likewise was when we got to Alum Bay, and as the flood tide was coming the start was delayed until the stream eased and a little breeze then drew up the Needles passage. Both vessels had lower sails, big jackyard topsails and large flying jibs, and after the fifteen minutes' signal they were working about in quite lively style. The Britannia's line of action in regard to start was a masterpiece of generalship. She led Navahoe to the flagboat and purposely crossed the line a minute or two before the latter, and then she sailed on. Britannia made a circle round the mark, while on the starboard tack the Navahoe was reaching down the line by the wind. Britannia actually crossed ten seconds astern, but she had a high weather berth, and when Navahoe came round she found Britannia pointing to cross her, the latter being on starboard tack. Navahoe did not seem inclined at first to go round, but had she not there would have been a collision, as the Prince of Wales's cutter claimed the right of the road. Navahoe was soon around again and Britannia, tacking almost directly, fair in her wind, made as smart a start as has been seen this season.

There was a drain of flood yet coming in the Needles passage, but both crossed it as they stood across for the Shingles. The start was made by Navahoe at 12h 48m 59s, and Britannia 12h 49m 1s, and close hauled on starboard. Britannia weathered the Needles and stood out into the Channel at 1h 4m. Navahoe at 6m 30s. There was but a light trickling breeze outside, with just a slight ripple on the water, and the wind did not freshen when the ebb came. Britannia kept stealing away, and at 2 o'clock held about a mile lead. At this time her big jib topsail fell down, owing to the shell of the upper blocks breaking; and she was for about a quarter of an hour without the sail, which, when set, was salt water wet, and not at its best for picking up its shape.

In baffling breezes with sheets mostly close in they worked on, making good a south-south-west course and Britannia making a steady gain. At 7 o'clock the Prince of Wales's cutter had a lead of about three miles, and there was about the same distance between them. When at 8 o'clock darkness set, the flickering air had then quite died away. A goodly number of the yachts were working on, but 9 o'clock Britannia was about twenty miles southwest of the Needles and Navahoe's side-lights were not discernible. It was dark, but not hazy.

At 10 o'clock, after a spell of about two hours in the doldrums, a night breeze came from the northeast, and booms were squared off and spinnakers set to port. The wind freshened fast and Navahoe astern was getting the best of it. Britannia went streaking along and at 1 o'clock made Cape Barleur lights right ahead. She had spinnaker in and hauled up a bit, but this did no harm, as the west tide was sweeping down, and on re-setting spinnaker had not to hold against the stronger stream nearer the land. The wind seemed to blow home as they got in toward the breakwater, and in the gray of the morning the Navahoe was made out about three miles astern of Britannia. They ran right into the western entrance by the land, but to the wind at the buoy. The timing as they passed inside the breakwater as taken by the British Consul was as follows, A. M., Saturday: Britannia.....5 29 00 Navahoe.....5 50 15 The tide was quite dead at Cherbourg Roads, and the wind easterly straight through. Jibtopsails were kept up and each made five or six tacks before getting weathered. The tide of the eastern end, Navahoe had broze the breeze, which was strong and by the land, but ten miles off, and had got close upon Britannia, which was, however, two miles to windward, as the Prince of Wales's cutter was going out of the east end of the breakwater, while Navahoe was coming in at the west. On getting outside, Britannia came close by the wind on the

tarboard tack, and went off wind jibtopsail set, going about 9 over her ground.

By 7 o'clock it had settled down to a real smart breeze a little to the northward of east, and came fresh enough for flying jibs to be pulled up. When Navahoe came out she was at first dropping under the lee quarter of Britannia, but as the American sidled away so much harder was Britannia sailed, the latter being content to keep her opponent fair in the line of her wake. The eastern stream came under the lee and the breeze got smarter, although there were lulls in which flying jibs were pulled up.

Sailing clean full, both came at a tearing pace across Channel, the weather being fine and the atmosphere clear enough for the land to be made 10 miles distant. With a little screwing Britannia might have made Christchurch Head, but through keeping Navahoe in her stream she fetched no higher than Anvil Point, where she tacked to port and stood up for the Needles, the Navahoe, now about 3 miles astern, following in her wake. They had a fine tide sweeping them to windward and settled up fast, only two more tacks being made outside the sea gates. Both stood in to the fairway of the Needles passage on starboard, then made a long leg on port up into Alum Bay, a short hitch on starboard put them across the line between the Chough and Alum Bay Pier. Britannia dropped Navahoe a good bit under the lee in heating up from Anvil Point to the winning line, and she eventually finished a hollow winner. The official times of arrival were as follows, P. M. Saturday: Britannia (winner).....12 57 10 Navahoe.....1 33 32 According to corrected timing, the Britannia won by 36m. 23s.—*London Times.*

### Navahoe and Her Races.

The following summary of races and comments on Navahoe are from the *Field*:

Whatever else may be said of the building of Navahoe, and her competitive visit to this country, there is no doubt that her owner has sailed her in the most resolute manner, and adhered strictly to all the engagements he made for her. This steadfast, plucky way of playing an uphill game will appeal strongly to Englishmen, and all will agree that he is the good sportsman the men who know him said he was. Whether or not Navahoe came up to his expectations we do not know, but there can be no doubt that she is very much in advance of anything built in this country or in America previous to this year of 1893. It is not her fault, but rather her misfortune, that she is not quite as good as Britannia or Valkyrie, and had these two vessels been out of the way, Navahoe's visit to our southern shores would have been a very different record. As it is, the record of her matches is as follows:

Date	Club	Wind	Finish
July 31	Royal London	Fresh	Britannia (winner).....3 46 16 Valkyrie (second).....3 47 19 Navahoe.....3 47 39 Satanita.....3 50 06 Calluna.....2 53 52
Aug. 1	Royal Southampton	Light	Navahoe (winner).....3 55 30 Satanita.....4 06 08 Calluna.....4 06 08 Iverna.....gave up
Aug. 3	R. Y. S.	Strong	Satanita (winner).....1 40 30 Valkyrie.....1 49 02 Navahoe.....gave up Calluna.....gave up
Aug. 4	R. Y. S.	Fresh	Satanita (winner).....2 31 05 Valkyrie.....2 33 14 Calluna.....2 36 27 Navahoe.....2 38 41
Aug. 5	Royal Southampton	Mod.	Navahoe (winner).....4 31 29 Calluna.....4 42 54
Aug. 8	R. V. Y. C.	Fresh	Britannia (winner).....3 54 33 Navahoe (second).....3 58 23 Satanita.....4 04 54 Calluna.....4 06 25
Aug. 10	R. V. Y. C.	Light	Britannia (winner).....2 21 26 Satanita.....2 31 23 Calluna.....2 36 05 Navahoe.....2 36 35
Aug. 14	Royal Albert	Light	Britannia (dis.).....6 41 12 Satanita (winner).....6 43 36 Navahoe.....gave up Calluna.....gave up
Aug. 16	Royal Albert	Light	Britannia (winner).....3 52 40 Calluna (second).....3 57 45 Navahoe.....4 04 05 Satanita.....4 08 32
Aug. 19	Royal Dorset	Fresh	Satanita (winner).....2 08 40 Britannia (second).....2 08 56 Navahoe.....2 11 35 Calluna.....2 13 03
Aug. 31	Torquay Regatta	Fresh	Britannia (winner).....2 09 06 Calluna (second).....2 13 36 Navahoe.....2 16 13 Satanita (winner).....gave up Navahoe (second).....6 15 48 Calluna.....gave up
Aug. 27	Start Bay	Light	Britannia (winner).....3 37 53 Satanita (dis.).....3 45 09 Navahoe (second).....4 47 16 Calluna.....3 50 37
Sept. 6	R. V. Y. C. Gold cup	Light	Britannia (winner).....4 50 02 Navahoe.....5 03 29
Sept. 7	R. V. Y. C. Gold cup	Fresh	Britannia (winner).....4 50 46 Navahoe.....5 24 57
Sept. 11	R. V. Y. C. Gold cup	Strong	Britannia (winner).....4 32 37 Navahoe.....4 44 25
Sept. 12	Brenton's Reef cup	Light	Britannia.....10 37 45 Navahoe (winner).....10 38 32
Sept. 15	Cape May Cup	Light	Britannia (winner).....24 12 14 Navahoe.....24 48 32

Britannia defeated Navahoe every time they met, but it is rather difficult to form an exact estimate of how much better she is. Leaving the Royal Victoria Gold Cup races and the Cape May and Brenton's Reef races out of the question, Navahoe finished 6 matches in which Britannia was a competitor. Of these the closest finish was the first race, when Britannia led home by 1m. 37s.; and the greatest defeat Britannia inflicted on the American was 11m. 35s.; the average beating was 3m. 28s. This leaves out of the calculation time allowance due to Britannia and also any estimate for the beating Navahoe would have received in the races she retired from.

The gold cup races, as far as the first two are considered, were not entirely satisfactory, and the third was spoiled by the tremendous fluke Navahoe got in the second round. On the first day, over the triangular course in the open sea, Britannia won by 16m. 27s. On the second day, in the dead water to the leeward and return to windward trial, in a good lump of a sea, Navahoe was practically as good as Britannia before the wind. On the heavy beat back, with single reefed mainsails and housed topmasts, Britannia proved to be the more powerful and faster boat, but she probably would not have beaten Navahoe by more than 7m., but not the latter met with a serious accident to her best gear. As it was, Navahoe was defeated by 34m. 11s. The third race was sailed in a strong breeze, mainsails being again single reefed and topmasts housed. It is fair to estimate that in this match, allowing for the mishap to Navahoe and for her subsequent fluke, Britannia would have beaten her by at least 22m.; as it was, the actual beating proved to be 15m. 8s. The final conclusion to arrive at is, we think, that, providing Navahoe had been consistently well handled, Britannia is 10m. the better boat in any kind of weather; and in light wind Valkyrie is probably 15m. better. The estimate just made would, of course, be considerably discounted should Navahoe make another race with Britannia like the very remarkable sail across Channel, for the Cape May Cup on Tuesday.

It is much to be regretted that the foolish longshore yarns about Navahoe should be reiterated. It is now repeated that Navahoe "heeled over dangerously," and "in a strong wind is absolutely deficient in stability." If heeling over dangerously is intended to convey the idea that the yacht was likely to capsize, the statement is absurd, and equally so is the sentence about the yacht's stability. In speaking of the stability of a yacht under canvas, the term is necessarily used relatively, and to say that a yacht is "absolutely deficient in stability" would mean that the yacht had no stability at all—that is, if any meaning can be ascribed to the sentence. It must be remembered that Navahoe is a vessel 87ft. on the waterline, beam 23ft., draft of water 14ft., displacement about 140 tons, with 74 tons of lead ballast—all stowed practically at the greatest draft. To state that any floating body so constructed is "absolutely deficient in stability" is to state what is absolutely an absurdity.

An absurdity of almost equal magnitude came to us from New York on Monday in reference to the Vigilant, as follows: "The Vigilant won by the ability with which she sailed almost within three points of the wind, keeping the angle of the keel from the direction of the wind under 45°. The advantage thus gained was reckoned to be equal to over a mile in distance and nearly ten minutes in time." This is one of the biggest gooseberries of the season, and is enough to scare off the owner of the Valkyrie.

The determined fight which Navahoe made for the Brenton's Reef

challenge cup has naturally been much commented on in yachting circles. This performance of Navahoe's will show up in a glare of light the absurd libels which have been published about her capabilities in a heavy wind and sea way, and it must always be remembered that to belittle the capabilities of Navahoe is to depreciate the performance of our own yachts, as they have not uniformly beaten her by such a very large margin.

### Miramichi Y. C.

A TRIANGULAR race was sailed off Newcastle on Saturday, Sept. 16. There were five entries—Maude, Com. Miller; Oriant, Vice-Com. Stewart; Kilbride, Rear-Com. McKane; Leairg, Alex. Burr; Kittich, Howard Williston. They crossed the line as follows:

Kilbride.....	3 56 15	Kittich.....	3 57 35
Leairg.....	3 56 55	Maude.....	3 58 00
Oriant.....	3 57 30		

Leairg took first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

	Finish	Elapsed
Leairg.....	4 53 35	0 56 40
Oriant.....	4 57 20	1 00 00
Maude.....	4 59 25	1 01 25
Kittich.....	5 03 30	1 07 15
Kilbride.....	5 04 40	1 07 05

Oriant claimed first place from Kilbride, went of starboard tack and forced Oriant to tack to avoid a collision. They tacked again together on the Nelson shore, and Oriant had to be luffed sharply to keep her bowsprit out of Leairg's mainsail.

Leairg drew ahead and increased her lead to the finish, followed by Oriant, while Maude took third place, dropping a little further behind Oriant on every leg, whether windward work or running.

The times at the finish and the elapsed times were as follows:

so long as no good reason offers for a change. In this way the expense of a meet will be reduced about one-half, the work imposed on the officers and committees will be greatly lessened, and far better arrangements for mess, transportation, etc., can be made. If this plan should be put into practice, the best place in the United States for such a semi-permanent site is on the St. Lawrence River, within easy distance of Clayton in New York State and Gananoque in Canada.

Amendments to A. C. A. Constitution.

Editor Forest and Stream:

In accordance with A. C. A. constitution, Article XII., notice is hereby given that at the next general meeting of the executive committee the following amendments will be submitted for adoption:

BOARD OF GOVERNORS.

**Board of Governors.**—ART. IV., SEC. 4. The executive committee of each division, as soon after the passage of this section as convenient, shall elect one member of that division to serve on the board of governors of the Association, whose duty it shall be to have general control of the Association.

The board of governors at their first meeting shall by lot determine their terms of office, one to retire on Nov. 1, 1894, one on Nov. 1, 1895, one on Nov. 1, 1896, and one on Nov. 1, 1897, and thereafter all members shall be elected in each division at its annual meeting in the same manner as its other officers, and their terms of office shall be for four years or until their successors are elected. The commodore shall be a member *ex officio*.

**Duties.**—SEC. 5. It shall be the duty of the board of governors to appropriate and apportion suitable sums to the officers and committees for necessary expenses for the running of the Association and the meets, etc., from the finances in the hands of the secretary-treasurer. They shall hear and determine all questions of dispute on appeal from the decisions of the regatta or executive committees when referred to them.

**Meetings.**—SEC. 6. At all meetings of the board of governors three shall constitute a quorum, but in the event of the absence of any member, the executive committee of the same division from which he comes may select any member to represent him during his disability only, and in the event of a vacancy occurring, the same shall be filled for the unexpired term by the active members of the division in the same manner as for a full term.

**Meetings.**—SEC. 7. The stated meetings of the board of governors shall be held during the annual meeting of the Association in August and at the annual meeting of the executive committee in November, but special meetings may be held at any other time and place at the call of the president or at request of three members of the board.

**Officers.**—SEC. 8. The officers of the board shall be president and recorder, whose duties shall be as in other organizations and they shall be chosen annually at the stated meeting in camp.

**Amend.**—SEC. 1. Amend by adding after the word "commodore" in sixth line, "but no money shall be paid out in excess of the appropriation made by the board of governors;" and substitute in sixth and seventh lines "he shall" for "and to." ROBERT J. WILKIN, BROOKLYN, N. Y., Sept. 26.

A. C. A. No. 47.

The Next A. C. A. Meet.

Editor Forest and Stream:

The American Canoe Association has held fourteen annual meets, all but three of which have been located in the territory of the Central Division, and one of these three—Stave Island—was only a few feet over the border line. Stony Lake in Canada, 1883, and Jessup's Neck, Long Island, 1890, were the only camps in other places, away from the center of canoeing interest. Five of the meets were located on the St. Lawrence.

It is said that all roads lead to Rome. Lake George, Lake Champlain, Jessup's Neck and Stony Lake are reached by practically only one road each. The Thousand Islands are the canoeists' Rome.

The A. C. A. commodore for 1893-4, Mr. Irving V. Dorland, a member of the Atlantic Division, has a rare opportunity to make himself famous with the help of his executive committee. A permanent camp site has been suggested, and the idea meets with considerable favor. There is no need for any legislation on the matter. Let the '94 meet be held on Old Grindstone, and the Eastern men will almost certainly select that site for '95, the Central Division in '96 and the Canadians in '97, will call us back to Stave Island, just across the narrow channel.

Grindstone being selected the work of the transportation, camp site and regatta committees will be vastly simplified, as there will then be no unknown quantities to bother the workers. It is unnecessary to name the advantages of Eel Bay and Delaney Point, they are too well known.

The selection of a site is in the hands of the Atlantic Division. The members of that division can pursue a narrow and selfish policy, and try to make a successful meet near home on salt water. It may be possible to do this. The experiment of a salt-water cruise was once tried, and it succeeded, largely on account of the novelty; but the cost was far beyond the means of the Association, and those from a distance would not be likely to come again in view of their trials and tribulations of 1890.

If selfishness obtains in the management of the A. C. A., its days are numbered. New life is needed now, new racing blood, and new members, who really use canoes. The next meet should be a canoeing meet, not a dudes' camp or a summer hotel picnic. Not only is new blood needed, but some of the old "bloods," too, who have drifted away these last few years. Name Grindstone and many of them will rally to the call.

A RADICAL CONSERVATIVE.

Editor Forest and Stream:

Something should be done to encourage more men to enter into the events of the "A. C. A." meets, as every year sees a decreasing number of entries while the membership of the race is steadily increasing. It seems to me that a competitor to enter the races with any hope of success, as they are at present arranged, must spend money freely on his boat and rig and devote the entire season to constant practice. No encouragement at all is given to new men, and it is utterly useless to bring anything but a fast racing boat to a meet. Now, it is well enough to have some races unlimited in every respect for the encouragement of the highest development in skill and speed, but surely the majority of the members of the A. C. A. have a right to expect that the majority of the races should be arranged so that an ordinary boat could have the chance of competing with the prospect of success. I would, therefore, suggest that the programme this year at nco two or three sealed handicap races, say 75ft. sail limit. By sealed handicap I mean: No one would know their handicap, so all would have to sail the entire race on the matter what their position would be. Entries would have to be made about a week before the meet, so that the handicap could be arranged. I believe this plan would encourage more competitors than we have ever had before.

Mr. Vaux's letter of last week, suggesting that the triangle be changed to one with mile sides seems a very practicable reform, as men would have the old triangle for scrub races during the first week of the meet. His other suggestion to have the races directly to windward and return is hardly seems practicable as it would prevent the windward course before the races, unless the outer buoy was changed to windward dial.

There has been some discussion about the presence of ladies in camp during the past two years, and I think a much needed reform would be to compel all ladies who attend the meet and sleep in camp to become members of the Association previously. I think this would increase the ladies' camp, as they would know who each other were, and from whom to get introductions, as ladies, of course, are not like men, and cannot make each others' acquaintance without a formal introduction, as the men do.

HENRY H. SMYTHE.

Editor Forest and Stream:

Your invitation to the members of the A. C. A. to express their views on the needed changes in the racing regulations has not met with a very hearty response, and I do not expect that the subject of this letter will elicit any more communications, but in the hope of arriving at some of the old and experienced men in the Association to which it will ask the use of your columns to speak of the duties of the secretary-treasurer, and how in my opinion they may be lightened.

It is the secretary's duty to publish the year book, and as far as collecting the statistical part or arranging what may be termed the ornamental portion, this is a pleasant enough task. It is when he begins to pay for its publication that the year book becomes a nightmare.

The Association makes no provision for payment, and of late years it seems to be expected that the year book will show a profit after deducting the cost of publication from receipts for advertising. As a matter of fact, had the year book not contained advertisements and had the other receipts and expenses of the Association been the same as they were, the A. C. A. would now be so deeply in the mire as to be almost beyond extrication.

I think it will be admitted that the advertisements are not an ornamental feature in the book. Experience has shown that it is an awful job to secure them, and so it becomes a question whether it is fair to ask the secretary, who occupies nominally an honorary position, to undertake the publication of the year book under present conditions.

The principal receipts of the Association are derived from membership dues, initiation fees, camp dues and advertisements. If you do

away with the last item the other three must be made to bear the extra burden, and the question that I would like to ask are: Would the members of the Association be willing to pay \$1.50 per annum instead of \$1? Can the camp dues be raised to \$2 instead of \$1? Can there be brought into the A. C. A. an increased number of new members each year representing \$400 to \$500?

Either one of these plans, combined with an economical administration, would obviate the necessity for the advertisements, and make what is at present an irksome task a pleasant duty.

KINGSTON, SEPT. 28.

R. EASTON BURNS.

The Site for the Meet of 1894.

ARLINGTON, N. J., Oct. 2.—*Editor Forest and Stream:* The incoming officers of the American Canoe Association have spent considerable time during the past two weeks looking for a desirable salt-water camp site with very unsatisfactory results.

It would be a matter of sincere regret to them if for lack of knowledge of whatever good camp sites we may have in or near the Atlantic Division waters the executive committee should decide to hold the meet of 1894 on Lake Champlain or the St. Lawrence River. Any information, particularly that giving full description and photographs if possible of suitable camp sites that may be known to your readers will be appreciated.

IRVING V. DORLAND, Commodore.

Rifle Range and Gallery.

Greenville Rifle Club.

The weekly gallery shoot of the Greenville Rifle Club, at its club ranges on Cator avenue, Greenville, N. J., on Friday night, was well supported by the members. C. Boag and C. H. Chavant divided the honors for the best score, each having 241 points out of a possible 250. The scores are appended, 10 shots, possible 250, distance 25yds.: C. Boag 241, C. H. Chavant 241, Capt. Robidoux 240, W. C. Collins 238, G. W. Plaisted 237, Geo. Purkess 235, J. Boag 230, J. Spahn 227, J. Hill 223.

The 50-shot handicap match between the members of the club, which was booked to come off in Ambrose's Park on Saturday afternoon, Sept. 29, did not receive the support that was expected. Several of the members who had entered for the match failed to show up. The weather conditions could not have been more favorable. A cloudless sky, with a moderate wind and the atmosphere as clear as a bell, gave those who were present an opportunity to make records for themselves. The scores of the members who participated are appended: Geo W Plaisted (.38-55-300 lub. Bal.), 23 21 25 23 21 23 21 23 19—222. Scratch man.

After the close of the 50-shot match the following 2-3 shot pools were shot off: C. H. Chavant 63, 71; Plaisted 63, 65; Collins 63, 55; Purkess 63, 49; Dodds —, 54; Robidoux 37, 50; Hill 45, 45.

A Trip to Paterson, N. J.

On the beautiful banks of the well-known Passaic River, which turns its course through the city of Paterson, is a delightful spot called Bunker Hill, and to this place the Hudson Rifle Club journeyed on Oct. 1. They were cordially welcomed at Paterson by a committee of ten gentlemen from the Paterson Rifle Association, and after the regular preliminaries were dispensed with a number of ten men teams took place. The shooting on both sides was quite evenly balanced during the first half of the match, but after that the visiting team began to crawl a little higher and at the finish they were 70 points ahead. The Paterson Rifle Association is composed of gentlemen of very amiable, sociable and good-hearted dispositions, and after meeting with a defeat in their first experience of outdoor shooting, they still had the grit (which a good many older organizations are not blessed with) to cordially invite all present to partake of an elaborate dinner which was in waiting in the Italian Hotel. The caterer served a good meal, but he wished to make enough profit to keep him for the balance of the winter, and it was very unfortunate that the home club was compelled to pay an exorbitant price for the entertainment of their guests. Every one expressed themselves as being most anxious to go to the jolly friends they had met, and hoped that the friendship would last for years to come. Among the visitors were noticed Messrs. Hansen and Hennessey, of the Excelsior Rifle Club, and Messrs. Chavant and Purkess, of the Greenville Rifle Club; also the old and well-known trap shooter, Mr. A. L. Heritage, of Marion fame. Although the range is in a good location the Paterson boys have a good chance still to make it one of the most attractive in the country, and it is to be expected another year passes that they will retain the place they have started with and forge ahead into rifle notoriety by actual work at the butts.

Appended are the scores:

Excelsior Rifle Club.

The Excelsior Club opened its gallery shoot for the season 1893-4 at its range in Montgomery street, Jersey City, on Tuesday, Sept. 26. Six members were in attendance and participated in the competition. The scores are appended, handicap rules, 10 shots, possible 250, distance 25yds.:

L P Hansen.....Scratch—239 J Spicher.....224+ 3—227  
J Binns.....207+226—233 J Hughes.....Scratch—224  
R H Duif.....226+ 3—229

The weekly shoot of the club in Ambrose's Park, Greenville, on Friday, Sept. 29, brought together only three of the best members. There seems to be a lack of interest among the members for outdoor shooting. Our news gatherer, Plaisted, being in attendance looking for items, was invited by Messrs. Hansen and Weber to participate in a friendly match, 50 shots per man. Being in a mood for shooting and thinking that he had a soft snap, he was easily drawn into a contest that turned out somewhat different from what he anticipated. Mr. Hansen proved to be in fine shooting form and rolled up a score that would bother some of our experts to overcome. The scores are appended:

Capt. Hansen.....25 19 25 14 23 22 23 21 19 24—212  
21 21 20 25 21 24 21 19 24—217  
21 25 21 19 25 20 20 20 19 23—216  
21 19 25 16 20 23 21 22 22—208  
21 19 23 24 21 22 22 21 24 22—207—1075

Plaisted.....24 21 23 19 17 22 15 18 24 25—207  
18 20 21 25 22 22 18 24 22—214  
22 21 31 14 20 19 22 24 22—1702  
31 23 17 23 25 18 24 17 24 25—216  
20 23 23 00 33 55 20 22 22 23—200—1030

Weber.....18 18 21 22 12 18 14 19 19 14—175

Hansen.....21 21 20 25 21 24 21 19 24—217  
C Ward.....22 23 19 22 23 20 22 19 21 19—210  
Weber.....24 18 18 21 22 12 15 14 17—185

Greenville vs. Puritan.

The Greenville and Puritan rifle clubs opened the season with a team match, on Friday night, Sept. 29, on the ranges of the Greenville Club, Greenville, N. J. The members of the Puritan team had provided a enthusiastic set of shooters, and as the scores advance they will if properly handled put up some good team scores. The members in both teams showed considerable unreliability in their shooting, but much of this will disappear before the season is over. The news of the match brought together a large gathering of interested spectators from Greenville, and also from Newark the home of the Puritans. In anticipation of such gathering the Greenville Club had provided a goodly layout for the hungry and thirsty shooters and their guests. The result of the match was as expected, an easy victory for the Greenville team by 127 points. But the Puritans are not in the least disheartened over their defeat, when the result of the match was announced. Capt. Weller (of the Puritans), immediately challenged the Greenville team for a return match on the home ranges of the Puritan Club in Newark. The match to be shot off on Tuesday night, Oct. 3. The scores are appended: 10 shots per man, 12 men a team.

Greenville Team.

Dorrier.....245—2318 Kopf.....234  
Sauer.....214—2191  
Scorers, C. W. Agnew and F. Weller.

Buss vs. Vogel.

The return match between L. Buss, of the Empire Rifle Club, and Louis Vogel, of the Miller Rifle Club, which was shot on Oct. 1, has been a matter of much interest to the friends of the two shooters. After the defeat of Vogel by Buss in the previous match some weeks since, many of Vogel's friends hoped that he would begin to profit by his experience. But he is one of those never inclined to quit until the last shot is fired and his own or his backer's exchequer exhausted. This spirit of tenacity when used with judgment tends to success, but used otherwise is apt to invite disaster and mortification. We would caution Vogel to use more judgment in the future in making his matches. Should he profit by his experience his friends will then have the pleasure once in a while of extending their congratulations over a victory. As to Buss, he is one of our young shooters in close touch with the best of our metropolitan riflemen; young in years, good eyesight and a moderate amount of nerve that will increase with his experience. The conditions of the above match called for 100 shots per man, to be shot on the range of Sulzer's Harlem River Park, distance about 75yds., the 15-ring target, with .32cal. rifles. The stakes were \$50 a side. Charles W. Zettler, Jr., was referee and stakeholder. W. Rosenbaum coach for Buss and M. Kolp for Vogel.

Scores follow:  
L. Buss.....169 166 160 167 162 166 166 163 167 160—1646  
Louis Vogel.....163 160 152 156 168 163 167 158 165 164—1616

Hudson Rifle Club Prize Shoot.

The fifth annual prize shooting festival of the Hudson Rifle Club, Captain Henry Mahlenbrock, of Marion, N. J., will be held at their ranges, 35 Giles avenue, Oct. 23, 24 and 25. Programme: Shooting from 7 to 12 each evening. German 23 ring target, open to all comers, any 22cal. rifle. Tickets unlimited. First prize for 50 to \$3. Well-known shooting rules to govern. Shooting committee: Henry L. Hansen, Pres.; Chas. E. Bird, Sec'y, Aug. Stauber, Henry Boddey, Sam Middleton.

RIFLE NOTES.

Now that we are approaching the end of the season for outdoor shooting our shooting associations should turn their attention to gallery practice. A well appointed rifle gallery with the personal attention of an experienced rifeman, will make a shooter out of a novice in quicker time than the same experience will at the outdoor or long range. There has never been in the history of rifle shooting an expert shooter who did not equal the Zettler Rifle Club, and the first experience of all of these riflemen has been in the gallery with the gallery rifle. With the gallery rifle the novice in his awkwardness escapes the possibility of having his proboscis brought into violent contact with the rear sight, thereby creating a feeling of fire-shyness which only a long experience can overcome. The modern gallery rifle as used by the Zettlers and other first class gallery men is almost a *fac simile* of the long gun or long 300yds. range rifle. After a while practice in the gallery it is surprising with what ease one becomes accustomed to the use of the larger caliber. In the gallery one becomes accustomed to the proper mode of holding, sighting, etc. It is, in fact, a new acquaintance, one that to him who has been blessed with those characteristics which, with proper culture, develops the true sportsman, an acquaintance that never leads to that familiarity that is sometimes styled contempt. But on the other hand it is an acquaintance that becomes as close in its affinities to our personality as nature itself.

So we say to our many shooting societies in and about New York, and in fact all over this glorious country wherever there is an organization of the kind, bring your members together in the gallery once a week or once a month during the winter, encourage those who are slow in the ability to become proficient, help them along in their efforts, and thereby create in them a desire to become shooters.

Rifle shooting requires practice, and with practice comes proficiency. It is not like many of our other sports, easy to acquire, and herein probably lies the reason why so many neglect it for other sports. They do not realize that there is a charm about it that is only to be appreciated when one has acquired proficiency.

Now we have in New York city scores of shooting societies, some whose membership reaches beyond a thousand, and out of all this membership there are not 5 per cent. that can be termed shooters, or in fact know the first rudiments of rifle shooting.

The consequence is that these societies are in a measure governed by this element of non-shooters. The real shooters are held in suspension, as it were, and the societies become simply social in their workings.

If the Bundes Fest, which is to be held in New York in 1895, is to be a success it will require a great deal of labor; and if our societies do not make an early start to create a proper interest in shooting among their members the festival will hardly be a success. We should like to see some of our city societies, like the New York Corps, Independent New York, the Central, the City, the German-American and others, make a start in this matter.

PLAISTED.

The Hon. Thomas A. Logan ("Glean") of Cincinnati and W. B. Leffingwell, the talented author of "Wild-Fowl Shooting," also write in high praise of these boots, and the approval of judges as competent as these gentlemen are speaks volumes for the quality of the Hanna-ford Ventilated Boot Company's product. Sportsmen will find them just the thing.—*Advt.*

ner, is his great hold, and is almost always pointed right. The bird is also a good live shot, and a good shooter and generally holds his end up at targets with his head down. He is one of the good hearted German brewers of Philadelphia, a member of the R. Baker Brewing Co., and superintendent of their works. He is a good fellow, and a good fellow, and always allows from his that Snooky City that it does one good to meet; always sniling, he puts one in a good humor just to look at his pleasant face. Isaac C. Elliott, of Wilmington, Del., known as one of the best live bird shots of that little State, came out to-day with a crack at some of the sweeps.

*The Fourth Day*

The fourth and last day of the shoot opened with a clear sky and the wind blowing almost a gale from the northwest, which made some very hard shooting, a great many birds being lost just out of bounds. The main event to-day was the three-men team race for the L. C.

### Down Town Gun Club.

FOURTEEN members of the Down Town Gun Club were present at the pening shoot of the season held at Dexter Park on Friday, Sept. 29. Each shot at eight birds, club handicap, H and T traps, modified Long land rules. L. Maissch and H. Fajen tied with seven each for the bird's gold medal and first prize, Fajen winning on the shoot off. F. Goetz won the second medal, defeating W. Joost and H. Muller.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### Flore About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 464 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$3.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENeca." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GORDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breech-loading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksman; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeealand. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is a brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story-tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor *London Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCEY. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even our hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/4. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

## THE MOOSE.

The moose is singular among existing deer for its great size and its ugliness. It has also the reputation of being the most keen and wary of any of its family, and its size and the difficulty of hunting it make it the most desirable of all deer to the sportsman.

An adult male moose considerably exceeds a horse in height, usually measuring at least six feet at the withers, and sometimes much more. Its legs are very long, and the long, loose, mane-like hair on the neck, shoulders and back being usually slightly raised gives the animal an appearance of still greater size. In the autumn, when his coat is new, the body color of the moose is black, with tan muzzle and legs, and a grayish belly, but as this coat grows older and the tips of the hairs wear off, it loses its glossy blackness and becomes a grizzled brown.

The general appearance of the moose is well shown in the accompanying picture, which is the result of Mr. Thompson's study of many living animals. The points about it which are most striking are the great size of the head and horns, and the great size and power of the fore-as compared with the hind-quarters.

In the United States east of the Mississippi River the range of the moose is at present confined to two or three localities. It still exists in northern Maine, but is believed to have been extinct for thirty years in the Adirondack region of New York, where it was once abundant. In Michigan and Wisconsin a few moose are still to be found, and when one reaches the dense forests and tamarack swamps of Minnesota they are still more abundant. The great plains are unsuitable to their mode of life, but in Montana, northern Wyoming, Idaho, Washington and possibly Oregon they are still found in small numbers.

All through the British possessions, from the Province of Quebec to central British Columbia, and from the United States boundary line north to Hudson's Bay and Peace River, moose are found wherever there is a country suited to their habits of life.

The food of the moose consists largely of the smaller shoots of trees, and it is more dependent on this browse than any other of the deer kind. It is said to prefer especially the young and tender shoots of the birch, mountain-ash, maple and poplar, but sometimes eats also those of some coniferous trees. In summer it feeds much along the streams and the shores of lakes, browsing on the willows and various aquatic plants, and also feeding to a considerable extent on the roots of the water lily, which it digs up from the bottom. In winter, besides eating the shoots of the trees, it often peels off the bark from young saplings, and also rides them down to bring their tops within reach.

The horns begin to grow in April and are usually hard in September, at which time the rutting season begins. The bulls are fierce fighters at this time of year and are apt to lose their natural shyness and to become extremely combative. A number of instances are on record where wild moose have attacked unarmed men, who have been forced to take to the trees to escape with their lives. Advantage of this disposition is taken by hunters, who call them up to their place of concealment by imitating the cry of the cow moose. The young are said to be born in June, and to vary in number from one to three.

As is well known, the moose is readily broken to harness, and becomes a very speedy beast of burden; but as they have never been regularly domesticated, those which are driven are often very uncertain in temper and action, and are likely to do unexpected things.

While the moose are yearly growing less abundant in the United States, there is no special reason for thinking that in the vast Canadian region which lies north of us any serious inroads are being made on their numbers. The moose does not go in herds, but is found only singly or at the most a family together. This prevents any general slaughter like that which has taken place in the case of the elk, the caribou, the buffalo, or even the musk-ox.

There is no doubt that in early times the range of this animal was very much more extensive in the territory which is now the United States than it has been of late years, and yet we know of but few records to show what that range used to be. It is very desirable that this material should be brought together and published, and readers who may have any facts bearing on this question are requested to send them to us.

Because of its great size and its wariness, and the magnificent trophy afforded by its antlers, the moose holds a high place among the game animals of the continent. Men make long pilgrimages to the moose-haunted bogs in calling time, and when the tracking snow comes they follow the trail of the bull for days. Moose hunting is a favorite theme of hunting story; our files contain scores of readable and re-readable accounts of adventure with the game; only the other day we published a story of the "Museum Moose," which has deservedly attracted much attention.

## HARD TIMES AND THE GAME FIELDS.

At first thought it might hardly be considered that there was any close relation between the business situation of the country and the game supply, or that the hard times would lead to an increased destruction of game and fur. Something of this, however, is likely to take place this winter.

The business depression which prevails over the whole country—not only in the shops of the East but in the mining regions of the West as well—has thrown out of work a very large number of men, many of whom will spend much of the autumn and winter in hunting and trapping. Most of these men, in ordinary times, have steady employment all through the year, and are only able to take a few days annually for their recreation afield with rifle, gun and dog. This year, as they are out of work, many of them will spend all their time afield, in many cases making a business of hunting. This season—because of their necessities—men will hunt for the market who never did so before. They will sell their birds, or if they hunt in a section where big game is plenty, the meat which they kill will reduce their winter provision bills, while the hides will give them a little ready cash—enough probably to pay for their cartridges and their grub stake while in camp.

In like manner and for the same reason the trappers will be out in force, and many streams long undisturbed, and where the beaver have made a little start again, or where mink are plenty, will be trapped from end to end, until all the fur on them is destroyed.

The destruction of game likely to result from this great addition to the already large army of gunners and hunters must be very great and will have a serious effect on the game supply, cutting it down in some places to nothing, and making serious inroads on it even in those localities where it is now abundant.

It is doubtful if there is any present remedy for this state of things, but it ought to teach to every thoughtful man its own lesson—that of recognizing the importance of moderation in the field, remembering that the season which has just opened is to be terribly severe on game of all descriptions.

## VIGILANT AND VALKYRIE.

THE success of Vigilant in two races and especially the display of her superior speed under normal racing conditions in the second race make the final result almost a foregone conclusion. In order to retain the Cup, Vigilant has now to win but one more race, while to take it Valkyrie would have to win three straight races. After the display of Vigilant's speed in Monday's race, and the probability of similar conditions in the next trial, there is hardly a possibility of Valkyrie winning in the end. Such is the outlook at the time of our going to press on Tuesday.

While the speed made by Vigilant on Monday, under the favorable conditions of a reach in a good topsail breeze, is not up to the wonderful reports of the early season, being just 12 knots, she is unquestionably faster than any of the older Cup defenders, and than all the new boats of the year. It is quite probable that Valkyrie may return home without an opportunity to show herself under any different conditions of weather, but though a thorough test of the rough weather abilities of the two would be interesting and valuable, the winning or losing of the America's Cup is still, as it always has been, a matter of absolute speed under the prevailing conditions of our summer racing, and in such a test Vigilant is by far the faster boat. It is a matter for general congratulation, however, that the conditions of the races have been as fair as it is possible to make them, and also that the weather, after two days of disappointment, has at last given such a breeze as was wished for by both sides.

## "Excellence and Progressive Character."

THESE are two qualities which in the field of journalism command commendation. For a recognition of their possession any journal in any honorable field may well strive. In the attainment of that recognition it may take honest pride. When a medal is awarded for good journalism, it goes to the paper of recognized excellence and progressive character. If FOREST AND STREAM is in the race it wins the medal.

The Committee on Awards of the World's Columbian Exposition has just given to the FOREST AND STREAM a diploma and medal in recognition of this journal's excellence and progressive character. This is an award which will be indorsed by the tens of thousands who have visited our cosy corner in the Angling Pavilion and by yet other tens of thousands, for whom no World's Fair exhibit was needed to demonstrate these distinguishing qualities of the sportsman's favorite journal of America.

From the opening of the World's Fair to these last October days of the great exposition, the FOREST AND STREAM's exhibit has been an occasion of pride and pleasure, for it has brought out as nothing else ever did before, and in wholly unexpected measure, day by day and week by week, the hearty good will and honest esteem and sympathy which are held for the paper by its circle of readers. Our gratification at the winning of such recognition as is betokened by the committee's award is more than doubled by the assurance that the giving of this medal will be acclaimed by all these hosts of friends old and new.

He who sees in the prize medal FOREST AND STREAM exhibit at the World's Fair only a material display of hunting trophies and pictures, with the forty bound volumes of the paper's twenty years, and the bric-a-brac of the craft, has not caught its true meaning. It stands for the field sportsmanship of the age. It typifies the sensible, manly, upbuilding recreation of lakes and woods and running streams and shimmering fields and briny billows. It signifies that in these last years of the century, the rod and the gun have large place in the lives and activities of the people of the New World.

When one comes to think of it, the World's Fair would have been incomplete without FOREST AND STREAM.

## ANIMAL PORTRAIT SUPPLEMENTS.

THIS issue is accompanied with a supplement portrait of the Moose drawn by Mr. Ernest E. Thompson. The illustration is the first one of the series of four. The others will be: Nov. 4, Woodland Caribou. Dec. 2, Coon. Jan. 6, White-Tailed or Virginia Deer. The dates of the former series (of which copies can be supplied) are as follows: Sept. 8, 1892, The Panther. Oct. 6, The Ocelot. Nov. 3, The Canada Lynx. Dec. 1, The Bay Lynx. Jan. 5, 1893, Gray Wolf. Feb. 2, White Goat. March 2, Coyote. April 6, Antelope. May 4, Fox.

## The Sportsman Tourist.

### THE SAGINAW CROWD.

Pilgrimage of 1892.-I.

I SUPPOSE that as a sportsman grows older the more certain he is to keep a diary. I have noticed of late years that a good many of my hunting companions have produced, at different times, a small and well-worn book from some inner pocket, and have withdrawn to the quiet seclusion of a corner of the car or by the flickering camp-fire to note down the exploits of the day just passed.

When the "Old Saginaw Crowd" began its annual pilgrimages, we thought it would be a good plan to keep a record of our doings. One of the first and earliest efforts in this direction was noted some four or five years ago in *FOREST AND STREAM*, under the title of "The Pilgrimage of the Saginaw Crowd to the Indian Territory." Since then, each year has furnished its quota of good times to the majority of the same "old crowd," who have been together somewhere each autumn.

I have this morning taken down the old record book; and, on opening it, have run across a good many odd memoranda, some recording notable shots and bags; and nearly all bringing forth pleasant recollections of the good times we have had. In fact, three-quarters of the fun derived from shooting and fishing trips is in anticipation and retrospect.

Among the scraps of paper dropping from the opened book is one written on the back of some haberdasher's billhead, as follows: "Write to Dick Carter for dog for the Judge." Short, and to the point. Probably I could write something that would be entertaining, or at least I fancy it would be entertaining to the readers of *FOREST AND STREAM*, either on Carter, the Judge or the dog, separately, or on the combination. I do not intend to do so; but the dog came, and was a daisy, with a good nose, and lots of quail to work on. She was also the means of developing a 20-horse-power voice in the Judge. You could hear him across a 50-acre lot, yelling at the dog, as soon as she began to show signs of game, or, in fact, was doing just about what she ought to do. It probably was his first setter; and as he had recently joined our "Saginaw Crowd," coming from the north, from near where, as Bing used to say of his Duluth experience, "about four miles this side of where Greely's party was found," he is excusable. The Judge was out only twice before he learned that it was not necessary to talk to the dog; that she could do the work just as well without a political oration.

Then comes a list of things on the car Oct. 26, 1892; stuff left over from other trip, tomatoes, mustard, sardines, ox-tail soup, etc. This reminds me that an inventory was taken on the return of the last trip, and said inventory shows we had run very close on the larder.

Then here is another, dated Monday, written on the back of a "Star Soap" letterhead, without other date, and, from the fact that "Dad" Cross is mentioned, it must have been during the shoot of '91. It starts with: "Monday morning. Eight of the party went for a morning shoot, Briggs and Cross remaining in the camp; returning at 10:30 in the morning, bringing in 66 geese, 14 sharp-tailed grouse, 18 ducks and 8 snipe." It shows that the boys evidently were in the right spot that morning.

I imagine that I would not as readily run across the slips of paper recording the many days on which a similar party went forth and came back "skunked." We do not tell of these days; it is only the men who strike it right that we hear of; failures are not noted. However, on the opposite side of the sheet is a record for ten men for two weeks that is pretty good; it savors a little of hog-gishness, but when you consider that twenty-one days elapsed from the time we left home till the time we returned, and that there are ten in the party, it divides it up, after all, to a pretty small average for each man per day. We always give our birds away; that is, those we cannot eat, and we eat a good many, for Bigelow always has a good appetite, and our friends at home can testify to the fact that young goose fed on wheat is a very toothsome morsel.

Then I strike a list of ammunition for last year, and in fact for the year before. The boys sent me a list of their shells, and we ordered of the Chamberlin people together. For the trip of 1892 we stuck to E. C. powder, and it was great stuff; we never had more satisfactory ammunition.

Then there is the expense account, footing up \$1,300. This is something that may interest some of the readers of this article, for many times the question is asked, "What do you have to pay for taking along a private car?" It simply means that you have to pay for fifteen or eighteen regular tickets, whether you have eighteen passengers or half that number, but then there is no charge for hauling the car in addition to this. You are also furnished with wood, water, coal and ice as needed. Buying your own provisions, and having your own cook and porter makes it a very economical trip. It amounted to \$144.43 each last year; there were nine in the party. This included transportation and supplies. We also put up \$5 per day for a sinking fund for the car. It also included our bills for liveries and men, both in the Bad Lands and for the week when we were shooting east of the Missouri River, and a day at the World's Fair grounds.

Last, but not least, I come across a letter from the editor of *FOREST AND STREAM* reminding me I promised to write up something as a result of some of these shooting trips, and as I have repeatedly promised I would do so, and business is a little dull this morning, I will make a start at it anyhow.

When the edge is worn off from our trout fishing in May and June, we begin to think of getting together the "Old Saginaw Crowd" for its annual October outing. Since 1883 not one fall has been missed that some of us have not gone somewhere in the West together, almost always to Dakota; and though the Crowd has changed some in all these years, yet a good many old and familiar faces respond to the roll call regularly each new October.

In 1888 we made a trip into the Bad Lands, the party then consisting of Bob S., Barnard, Briggs, Ferd. A., McGraw, Bob, Jr., Mores and the writer. (Four of the party of 1888 went last year.) Since that time McGraw, the man with the ginger whiskers, has married; and it was owing to the continual advent of little McGraws that he did not go with us last year, for he feels that it is his duty to take

the youngsters out behind a trotter that is well in the list, on the first outing. It is told as an actual fact, that when his first boy was two weeks old he was seen giving him a spin, holding him on his lap in the sulky, behind one of his fast trotters.

Ever since, the experience of the 1888 outing in the Bad Lands we have wanted to "do it again." We had an idea that to put in a light draft boat in the Little Missouri, at Menora, and float down stream to a point near the Kildeer Mountains and there arrange for our teams to meet us, would be a great trip—in fact, it would be. I wrote Theodore Roosevelt about it, and asked his opinion as to whether it would be possible. His reply was that we could not do it with an ordinary state of water; that it would be a dragging instead of a floating trip. The shallows and sandbars are so numerous that it would probably not be possible; so we reluctantly abandoned the idea.

Not until last year have circumstances been such that we could undertake it. Correspondence was opened with the Northern Pacific agent at Dickinson, and a guide secured in the person of Paddock. Our experience with guides has been varied and interesting; mind the word, however—I did not say satisfactory; consequently we had not taken much stock in Paddock; but we were happily disappointed. He did not say, like the ancient mariner on the Erie Canal, "Fear not, but trust in Dollinger, and he will fetch you through;" but whenever there was a sentiment of doubt as to the final outcome broached, the quiet and confident look on Paddock's face reassured us at once, and it was not long before we found out that he understood his business. Later on I hope to relate some of his experiences as he told them to us one evening as we were lying on the grass under the shade of a spreading cottonwood, on the banks of the Little Missouri River.

On Saturday, Oct. 1, 1892, the "Crowd," nine in number, met in Saginaw. The good car City of Saginaw, which has carried us on many successful and pleasant journeys, was side-tracked at Merston Station, and all were busily employed during the day in packing and getting things stored away. We take no trunks with us, but each man has a locker large enough to hold all his stuff, which he can get to at any time and which is much handier than a trunk, and besides, it does not litter up the car. In one corner of the car stood a Bond sectional boat; sitting against it is a barrel of apples, nice big Northern Spies, that we are taking with us as a present to Lee. Tents are slung up in the turret, blankets and sleeping bags keeping them company. In one corner of the car is the ammunition in nice fresh boxes, just as it came from the Chamberlin Co.; above the ammunition is a newly-concocted shelf, on which rests the car hand organ with a good supply of new music; while several cases of Milwaukee beverage and two or three boxes of decoys took up the balance of the spare room. In the drawing room end two racks, well overhead, contain all the guns.

The train was to leave from the Grand Trunk depot at 9 o'clock that night. The party consisted of Bob, of Zanesville, O.; G. D. Seib, of Brooklyn, N. Y.; A. P. Bigelow, of New York; Dr. C. R. Sumner, of Rochester, N. Y.; the Judge, Ferd. A. Briggs, and, aside from the writer, Jack, or Brooks, of "Section 37" fame; George, our porter, and old Harrison, the cook, made up as jolly a crowd as ever pulled out of any railroad station on fun intent. Van was too much mixed up in politics, and was afraid that he possibly might not represent his district in Congress if he went with us. McGraw came up to see us off, and brought along two fine boxes of celery from the McGraw farm.

Sunday, the 2d, we were in Chicago. The car was promptly transferred to the Wisconsin Central. Then we went to Jackson Park to see what had been done on the World's Fair grounds. We returned to the car, and left for St. Paul at 5:47. The evening was spent in listening to sacred music on the herophone, mainly ground out by Jack and the Judge.

Jack, for the first time on the trip, related his famous exploit of catching a 40lbs. salmon on the Cascapedia; how, after being fast to it for an hour and running rapid after rapid, the fish was at last gaffed and thrown into the boat, and, as Jack tells it: "I placed one foot each side of him and raised my club and hit him on the head, and the fish gave a flop and jumped over the side of the boat and got away. I tell you, boys, he was a whopper, and a few days afterward we could see him in the pools with a great white scar on his back where the gaff had torn out. We christened him 'Scar-faced Charlie,' and some weeks afterward he was reported as having been seen away up the river." Jack told this story so many times before we got back that it got to be something of a chestnut; not but what it was varied from time to time; the salmon never weighed less than 40lbs., and sometimes more; and at times he had struck him with the club several times before he knocked him down, and got away. As I said, he told this story so many times that at last we paid no attention to him when he began to grind out his tale of woe about losing this big fish.

During the evening we were favored with a call from Mrs. Miller, managing editor of the *Industrial Magazine*. She was fond of outdoor sports, knew how to cast a fly, and could handle a rifle. We enjoyed her visit very much, and Jack related his famous salmon story. We kept straight faces during the recital, and Mrs. Miller afterward published this miraculous fish story in her magazine.

We arrived at St. Paul on time Monday, Oct. 3, and spent the day, as we usually do, in seeing the sights of the twin cities. Nearly every one sees something that he wants to buy, and thinks he needs—goose calls, hunting knives and other tomfoolery that you never use after you come to the hunting ground, but which always look so tempting, displayed in the store windows or show cases.

After a pleasant call on Mr. Austin in the general ticket office of the Northern Pacific, and putting on board a supply of fruit, not forgetting the usual crate of California grapes, we were willing to have the train start for some unknown region. However, we were two hours late in starting, and did not leave till 7 o'clock. We passed through Flint, our old stamping ground, at 9 o'clock Tuesday morning. Owing to Bob's being uneasy about his mother's health, he did not dare go with us in the Bad Lands, where he would be out of reach of the telegraph; so concluded to wait at Flint until our return. The friends of years met us at the depot, and boarded our car to shake hands before the train started. They also left us a nice bunch of ducks and grouse, which

were very acceptable, and were at once turned over to Harrison.

Our train speeds westward. We cross the bridge that spans the Missouri River from Bismarck to Mandan, and during our brief stop at the latter point we saw the usual specimens of Sioux Indians that come up from Standing Rock Agency to sun themselves on the depot platform; a more villainous lot of savages never congregated in any one spot than you see here.

We had figured to arrive at Dickinson about 1 P. M.; and by having everything packed and ready, we had hoped that Paddock would have horses and teams at the depot on our arrival, so we could start that afternoon; and by camping that night somewhere beyond Green River, we could make the drive and get into camp on the Little Missouri on the following day. One is greatly upset at times by late trains; and in this case we did not arrive at Dickinson until 4:40, and were promptly introduced to Paddock by the Northern Pacific agent. Paddock looked well and moved slowly; and we, full of fire and enthusiasm, did not have much effect in hustling him; for when we suggested that we ought to have everything packed and start by 6 o'clock or earlier the next morning, he "allowed" that 8 o'clock would be time enough, and he would try to get around by that time. We did the town that night; that is, what there is of it to do. Jack showed us how to sharpen knives (for he is the buyer for a large cutlery house and is supposed to know all about it), and from that time on he employed most of his time in sharpening some one's knife; whether it was improved by his sharpening or not I won't say. He was rigged out in a new white sweater, broad-brimmed white hat, bran new leather cartridge belt, with hunting knife and small revolver; and when he asserted that he wanted a bucking broncho, and was prepared to ride the whole seventy-five or eighty miles, Paddock and the drivers smiled.

We took Harrison with us and left George, the porter, in charge of the car. We expected to be away about a week, and were going northwest across the divide at the head of the Knife River, down into the bottom lands of the Little Missouri; therefore it was necessary to take provisions for our party for that time, and tents, bedding and ammunition. We went to bed that night tired out with our exertions, and awoke bright and early next morning. For some reason Paddock did not come around as early as he intended; and it was half-past eight before we started. We had one double team and wagon to carry our baggage, provisions, etc. This was driven by Henry, and Harrison rode with him. Then we had one double team and three-seated wagon, driven by Ferd., and containing Bigelow, and the Doctor, and Seib, and at times, Jack. There was also a double buckboard driven by the Judge, the other two passengers being Briggs and myself. Paddock was horseback, likewise was Jack on starting, and the one extra saddle horse was led.

We made about fifteen miles and then halted near the crossing of the Green River, fed horses, and had lunch. The enthusiasm that is always present on first starting out on an expedition of this kind, found vent in numerous feats of marksmanship performed by the members of the party in trying to knock the white label off from an empty beer bottle with a Winchester. It was surprising how easy the bottle was missed.

After resting we hitched up for the afternoon drive, and before starting I snapped my kodak on the party, and called it "The Halt on the Prairie." We had by this time left civilization behind. Between Dickson and the crossing of the Green River we had passed several farms, taken up principally by Russians. In some cases not only the outbuildings, but the houses as well, were made of turf. All of the settlers seemed to be in fairly prosperous condition, with plenty of horses and cattle about, and, aside from the fields of wheat which had recently been harvested, evidences existed of a good supply of garden truck for the long, cold winter that was near at hand. A sharp turn in the road discloses a gully washed out by some stream in times past. Two farmers were digging from under the bank their winter's supply of coal, poor coal, no doubt, but yet it answered the purpose and was cheap.

An occasional sharp-tail grouse was seen, and as the Judge had never killed one, I handed him my 16-gauge, and he stepped proudly forth with a confident air. The bird arose within easy shot, but like most every one who has a sure thing, he missed it slick and clean with both barrels, and returned to the wagon crestfallen to endure the taunts and jibes of the rest of us; however, next time he did better and the bird tumbled. We picked up two or three in this way, for we needed something for the larder. Paddock rode ahead of us on his pony, and checked our ambition for fast driving. He seemed to have the idea that it was going to take about three days to reach our destination, and we had made up our minds that by nightfall of the second day we were going to have camp well established. He was evidently saving the horses and knew as much about it as we did.

The country was barren and was covered with brown, dried-up grass; even the buffalo bones had disappeared. What a great place this must have been twenty-five or thirty years ago, when these grazing lands were covered with buffalo, antelope, and possibly elk. We always comment on this whenever we are in this prairie country, and think what a shame it was ruthlessly to exterminate them the way they did. At one time we had a guide who told us that one winter, with two men to manage the skinning and packing, he alone had killed 5,000 buffalo and taken their hides only. He would travel ahead and do the shooting and the other two would follow with the outfit and skin and pack away the hides.

Our camping place that night was Indian Springs, at which place there is a horse ranch, and, strange to say, one of the owners was a Michigan man, living near Saginaw. No matter where you go, you run across some one who is from home.

The distance from Dickinson to Indian Spring is supposed to be twenty-nine miles. We made camp in good season, and our horses were being taken care of, and luggage taken out and tents put up, when two or three of the party started out after sharp-tailed grouse that we had flushed when we came to the brow of the hill. On going down to the spring we found it to be a bubbling pool ten feet in diameter, sending forth the purest, coldest water one ever saw. Near the marshy lands that took up the overflow of the spring I put up two or three Wilson snipe. They seemed as lively and contented as ever,

although they were at a place so many miles from their usual feeding grounds. Where they came from or how they happened to be out there we can only guess. The boys on the hillside were having a regular picnic with the grouse, judging from the cannonading, and soon Bigelow came up to camp for more ammunition. He said that Jack had run out and had sent him for more. It never occurs to "Old Section 37" that he can do the running for himself, but he had gotten some one else to forego the sport and come after fresh supplies of shells. The result was, however, that there was more powder burned than the game bag warranted. The boys were short-sighted, or the birds were wild, for they only had three or four all told.

The wind began to blow and we were afraid to start a camp-fire. To set fire to the grass would be a most outrageous piece of carelessness. It is something I am very nervous about; not that there is any danger to life or limb from it, nine times out of ten, but on these large ranges a fire started is very apt to burn miles and miles, and ruin the feed that the stockmen are depending on to winter their cattle. We always have with us bunches of dry wood for the small fire that is needed to cook our meals, but in this case the few dead trees in the little gully by the spring furnished ample fuel. Where the two gullies meet on the under side of the hill we found a place sufficiently protected from the wind, that after a liberal use of the spade to clear away the dry grass we could build our small fire in safety; and soon Harrison had coffee made, grouse broiled and, with the ever present pan of baked beans, boiled potatoes, and some few gimcracks that we always have along with us, we had a feast for the tired and weary. You all know how good it tastes, no matter what you have cooked at such a time. This was no exception.

Before making the beds we stretched out on the dry grass, had a good smoke and swapped lies. We had no visitors that night, as the cowboys on the ranch were evidently away on a "round-up" or some other work. The wind continued to blow and we thought at one time

HALT ON THE PRAIRIE.

that our tents would surely come down as the gale increased, but about 10 o'clock it moderated and we were soon all sound asleep. I had crawled into my sleeping-bag, disdaining the shelter of the tent, and with the starry heavens above, the silence broken only by the tired horses cropping the grass near by, I as well as the rest slept the sleep of the just. The sleeping-bag is a success. I had found in previous years that hard lumps continually accumulated beneath me, and to remedy this I had brought along a piece of felt such as is used for covering steam pipes. I imagine it was about 1 1/2 in. thick. Cutting this just the size of my bed, and slipping it in a bag of unbleached factory cotton, I had a soft comfortable mattress that could be rolled up during the daytime conveniently within the sleeping-bag.

It is strange, out on the lone prairie this way, the horses, after they have eaten about all they want will come close to the sleepers in camp. I thought several times that one old spike-tailed roan would lie down with me.

We had planned for an early start, and were up before daylight. While Harrison was preparing breakfast we hastily packed the camp equipage. Each had a duty to perform, and as is the case where work is divided in this way and each understands what is to be done, and what he has to do, in no time at all everything was loaded and in shipshape order. Two dust-proof chests with hinged covers contained, one the cooking utensils and the other the provisions. Besides this we had two lunch boxes made of dry pine and tight enough to keep out all dust, in which we managed to put away a good lunch for our noonday meal.

We expected that forenoon to run across antelope, for when we were over the same ground in '88 we had seen a good many of them.

Some of the grouse of the night before putting in an appearance delayed our starting a little, but the sun had not been up more than half an hour before we were well under way, the buckboard fetching up the rear, for we intended to scout a little that day and see if we could not get an antelope. We had not gone more than three or four miles, when, on the hillside to the south of us we saw a band of eight or nine in number.

The heavier loads forged on ahead, while Briggs, the Judge and myself in the buckboard determined to have antelope. Driving so that the hill intervened between us and the game we drove as far as we could with safety, the wind blowing directly from them to us. Briggs kindly consented to attend to the horses, and the Judge and I thought that if we could reach the brow of the hill we would have a fair shot, and, crawling and dragging ourselves in this way for what seemed an endless distance, we at last reached a point where by peering through the grass and weeds we could see them. Here comes in a sample of how hard it is to judge distances in this flat country, for, instead of being a few hundred yards, as we thought, the game was still over half a mile distant, and between us and it intervened a deep gorge that in times past, or possibly in early spring time ran considerable of

a stream. However, this made good ground for us to approach the antelope.

Beating a retreat, we entered the ravine and began cautiously to work toward the unconscious quarry. At one point it seemed as if they surely would see us, and hugging guns we both rolled over and over down the hillside and into the bottom of the dry run. As the Judge weighs in the neighborhood of 250 lbs., he could roll faster than I could, but I noticed with some satisfaction that the extensive diameter of the man was not well balanced; in other words, he could not roll straight, and began to describe a circle. Being built more on the lead pencil order, I did not have to roll so far to catch up with him. We at last reached the bottom in safety, and found it easy traveling,

THE KID AND PADDOCK.

and for a time there was no danger of our being detected. After going some distance we came to where the gorge turned directly toward them, and it would not be safe to go much further in this direction.

After comparing notes we concluded to divide forces, I to take another small draw that went in back of the hills from the other side, while the Judge was to work his way along back of a projecting rise in the ground where he thought he could get within shooting distance. Such proved to be the case, for when he reached this point the antelope were in full sight, some lying down and others feeding.

He gauged the distance, and correctly, to be about 400 yds. Adjusting his sight to that distance, he lay down and awaited developments. I found it easy going, but was obliged to go a good ways before going up on the hillside opposite where they were. Evidently a current of air was swept from me to them, for I heard Judge shoot before I reached the brow of the hill, and running rapidly forward a few paces I saw the antelope running at full speed, and though I blazed away at them two or three times, did nothing more than raise a cloud of dust among them, but a glad sight met my eyes, for there, kicking its last on the brown turf, was the victim of my companion's unerring aim. He explained to me that he saw the antelope suddenly throw their noses in the air and run round excitedly. Knowing that this was his only chance, he took careful aim at one that stood broadside to him, and we found that the bullet had broken his back. Even then we had some difficulty in getting to it, for an intervening ravine, before unnoticed, compelled us to make quite a circuit before we could reach it.

We could see Briggs in the distance, and, frantically waving our hats at him, he knew that something had happened and drove as near us as he could. In the meantime the Judge had dressed his game, and taking the carcass over his shoulders, I with both guns, we went down the ravine and up the opposite hillside to where Briggs with the buckboard was awaiting us. A more delighted and happy three you never saw; it was the first antelope we had ever killed; in fact, these were the first the Judge

THE FOREMAN OF THE H. A. RANCH.

had ever seen, and as he had made a remarkably good shot, not only was he pleased, but we were all elated.

We concluded that a tire was getting loose and something must be done to swell it, and as my flask happened to be the handiest it was produced and opened. Putting our game in the wagon we started again on the road, but it was well toward noon before we reached the remainder of the party, who were wondering what had become of us and were beginning to feel alarmed, thinking we had had a breakdown or some other accident. They were waiting for us near the head of the Little Knife River, and they, too, had seen several wolves and antelope. A little lunch, a few bottles of beer, a smoke, a few more kodaks, and we were ready to proceed. This time the buckboard took the lead, for Paddock did not believe in haste. We were destined for more adventures that day.

We had figured on reaching the "H. A." ranch about one o'clock. In the distance we descried a lone horseman riding at a rapid gait. To an Eastern man an incident of

this kind always brings up pictures of robbers and bandits. The rapidly moving horse surmounted by some one who evidently was at home in the saddle, drew near, and we found that instead of a stage robber we had a pleasant-faced, jovial boy from the "H. A." ranch. He was about 18 years old, his home was in Iowa, and he was called the "Kid," all of which we learned in a very few moments. He had been kindly sent by the manager of the ranch to assist us in any way he could, and had ridden since morning from Dickinson, the entire distance we had been twelve hours longer in driving. Like all of his kind he had no mercy for his horse.

As the buckboard took the lead, the Kid concluded we were the ones to accompany, and rode beside us for some way, until a black smoke was seen to suddenly shoot into the clear sky from a range of buttes some miles to the northwest. This might mean danger to the "H. A." ranch; and away the Kid dashed, putting spurs to his already jaded little beast. Indeed, a cowboy has no mercy for a horse or steer: I believe they consider a horse only to be ridden to its death. As we drove slowly along, the rider came in sight and vanished again and again as he fairly flew over the swells of the broken prairie. At last he reaches the summit of the distant range of hill, and horse and rider are outlined against the sky for a moment only, and then at the same killing speed he turns toward us. Following the hills and valleys to the westward, he joins us ere long with the information that the fire is evidently beyond the Little Missouri, north of the "X's." We learned later that he meant by this a ranch that branded its cattle with a long slender "X," and later on the boys from the "X's" outfit paid us a visit at our camp. As we topped a hill, far down in the valley to the north we saw the "H. A." herd dotting the prairie with brown, red and white; thousands of cattle destined ultimately for the stock yards of the World's Fair city.

"Stop the horses, Judge. What are those playing in that bunch of cattle below us there? Antelope?" "Wolves!" comes from the Kid. And, sure enough, wolves they are; two of them big gray fellows; and we quickly see they are not playing with the cattle, but mean death to a two-

SKINNING THE ANTELOPE.

year-old that they are nipping from behind at every chance. The old steers, four or five in number, are trying to protect the smaller one, and charge every now and then at the persistent wolves. It does not keep them off for more than an instant; for, dodging the thrusts of the steers again and again, they jump upon the terrified and bellowing animal. Though not over a quarter of a mile from us, so intent are they on securing a dinner that we are not noticed; and a plan of action has been adopted in less time than I am writing this in. As they disappear around a hill we drive for them, but under cover of the rise of ground. Supposing of course the wolves had continued the chase for some time, we jumped from the wagon, rifles in hand, before reaching the brow of the hill (the Kid holding the horses), and running to the top came fairly upon them not twenty rods away. They had the "critter" down and were tearing it to death. At the sight of us they started to run away, and we, blown and excited, began a fusillade that frightened them if it did little damage. One was struck twice, at least so it seemed, and the dust flew as the balls struck either just behind or just ahead of the thoroughly frightened creatures running in opposite directions. I was pumping at one, and the Judge and Briggs at the other at a lively rate until they were out of sight. Poor shooting, of course, but, in the first place, we came on to them much nearer than we expected to, and then, in the hurry the Judge lost the front sight of his gun in pulling it out of the case, and did not know it until he tried to shoot, and he was all at sea and shot by guess. We cursed a little at our bullhead exploit, and said we were each of us old enough to have known better than to rush pell-mell over the hill-top in the way we did; and furthermore I wanted some one to kick me for not shooting better anyhow. Well, probably you know how it is yourself, even now we can't help a sigh of regret that we did not plan it differently, for, as Briggs admits, they were "big wolves." The poor, partially disemboweled steer had staggered to its feet during the fracas, and was slowly going away, until killed by a bullet from Briggs's rifle and its suffering ended.

We got under way once more, the Judge much disgusted at losing the sight of his Winchester, for we had carefully hunted around the wagon where the gun was taken out of its case and failed to find it. Some way must be contrived to make a new one. Later on, when we reached the H. A. ranch, we borrowed from one of the cowboys there the front sight of his Winchester, and returned it to him on our way home. This helped us out of what might have been an unpleasant situation. Old Spiketail, the roan, catches it from the Judge, for it is near dinner time and we are none of us in the best of humor, owing to the poor shooting and the loss of the gun sight. This old roan had a peculiar way of flipping his tail, which was utterly bare of hair, in our faces every once in awhile, and Judge could not resist striking at the elevated spike whenever it was so waved in defiance to our endeavors to make reasonable progress. On our return from the Bad Lands we laid in a supply of newly-cut gads, and took our revenge by keeping up a respect-

able gait on the last end of the journey if we failed to do it in the first place.

Soon we came to the petrified stump that marks the distance as only four or five miles from the ranch house. Sugar Loaf and Red Butte loom up in the distance, and the scenery becomes grand and picturesque. Another wolf slinks across the road ahead of us and gets away unscathed. The turn is made around the head of the Big Knife River, we sweep northward, and the H. A. ranch is in sight.

Another band of antelope had been seen across the Knife River, slowly going up from the spring that the Kid said was a regular drinking place of theirs; the distance, however, was too great for a successful shot.

The Kid rides ahead, opens the barb-wire gates, and passing through the horse pasture the cavalcade, now tired, dusty and hungry, draws up at a little cluster of buildings, and we are at the H. A. ranch.

This place was our stopping point for dinner four years before, and had not changed during that time. On the hillside, facing northward, stands the cook-house, at the foot of the hill is the beaver pond, in which a family or two of thrifty beavers keep in order the dam that we can plainly see in the distance. The pond is formed from an overflow from one of those pure, cold springs occasionally found in that part of the country, and which we sampled immediately, for we were thirsty and tired, and a drink of clear sparkling water was very grateful. The horses, too, enjoyed it, and after wading through the basin formed by the upper spring, old spitkail took it into his head to visit the horses in the pasture near by, and the result was that it was some ten or fifteen minutes before he was safely tied alongside of the corral, eating his noonday meal.

They seemed glad to see us at the ranch; the boss, two or three cowboys, and line riders, and last but not least the cook. The cook had a great deal to say; he "allowed" there was too much "Texas" in the outfit, and if it was not that the pay was mighty good, he would jump the whole thing to-morrow. Notwithstanding his continual grumbling and fault-finding he found time to get up a mighty good meal. He took us out to see two black-poll Angus cows that were his pride and delight. At his request I kodaked him with his "pets," as he called them, one on each side; and later on, I sent him the photograph, and received an acknowledgment and expression of his pleasure. In passing, however, I will say that he had quit the outfit, as he termed it, "Texas was too strong for him," and he was now located at another ranch not quite so far from civilization, and hoped that in another year we would come out that way, and he would keep us posted as to the best shooting, etc., etc.

Harrison rummaged through our lunch boxes, and soon a square meal was being devoured by the members of the Saginaw Crowd. After that the antelope was skinned by the Judge, who was ably assisted by Harrison; and taking up his hide and one hindquarter the balance was left with the boys at the ranch. We came very nearly being starved in consequence of this injudicious proceeding, for it was some time after that before we killed enough to supply our larder. W. B. MERSON.

## Natural History.

### MOOSE IN HARNESS.

One span of the captured moose mentioned in my letter on "Minnesota Moose and Indians," is now owned and driven by a man in Grafton, N. D. Another is driven single by a liveryman in Emerson, Manitoba. At a recent fair or something of the sort, he was billed to trot against a certain horse. The moose, then three years old, was hooked into a sulky, and Harris, being a well-known horseman, was requested to drive him. The headgear with which the moose was provided was simply a halter, to which the reins were attached. Harris insisted on having a bit put on, but the liveryman said the moose objected; that he was perfectly gentle and tractable in the halter, but that he drew the line on a bit—he wouldn't have it. Harris mounted the sulky, but had some doubts as to the outcome of the race.

The bell sounded and the horse and moose started. The latter reached out in a style rarely seen on any racecourse, his big, clumsy hindfeet fanning his ear at every stride. At the first quarter post he was more than a length ahead of the horse, and before the half-mile post was reached had doubled this lead. About this time, however, he concluded he wouldn't play and lit out for home, striking squarely across the racecourse and the fair grounds for the main entrance. There was a great jam of people, carriages, farm wagons, half-breed carts and the like, but when the moose started for them they stampeded as if a cyclone were coming their way. The way was cleared and in spite of all the pulling and sawing Harris could do the moose went out of the grounds and down the main street of the town like a tornado. He headed for his corral, adjoining the livery stable, the gate of which happened to be open, but made a bad shot and caught one wheel of the sulky on a gatepost. He went out of the shafts as if there had been none, went to the other end of the corral and stood looking at his late driver, with his ears thrown forward just as if he scented some one. Harris pulled himself out of the wreck, badly bruised and disfigured, and says that the next time he drives a moose he will put on him the wickedest ring-and-chain bronco bit he can find.

Still moose do make great drivers when properly trained and handled. Their magnificent build, their long, well formed and strongly set legs, their great strength of quarter and loin and their wonderful lung development give them such power of endurance as no horse can approach. A moose will simply trot all day, over any kind of ground bogs, wind falls or rocks, and scarcely tire. Harris says that one morning in the winter of '90 and '91 he started from his ranch, on the Roseau River, to drive to Emerson, a distance of forty miles. Soon after leaving home a bull moose, with only one horn, showed up on the Big Muskeag, trotting west, parallel with the road on which H. was driving, and only half a mile away. Harris had no gun and started out for a race. He put his horse into a run and the moose trotted easily along, keeping well abreast for about ten miles, when he veered off to the south and was soon out of sight. H. went on into Emerson, attended to his business and started home at 4 o'clock in the afternoon. Before he got

out of town he saw the same moose coming back from the south, still on the trot, but now with his tongue hanging out and thoroughly tired. He bolted into a street of the town and started north. H. turned and drove after him, shouting to the townspeople to turn out and capture him. A hotel man saw him coming, ran in, got a rifle and killed him in front of his house; several farmers coming in from the south, during the next week or two, reported having seen a bull moose with one horn on this same day, some of them having encountered him as much as twenty miles south of Emerson, and all stating that he was on the trot. On figuring it out it was found that the moose had trotted at least ninety miles that day after H. sighted him, and it was not known how far before. Some hunter had doubtless started him away up the Roseau early in the morning, and having encountered people at frequent intervals he had been kept in a state of alarm, only to lose his life at the end of his great race.

Nate Ellerton, who lives near the Roseau, in the east end of Kittson county, has a three-year-old bull moose, a moose calf and an elk calf, all caught in the woods near his farm. The bull has not yet been driven, but has been led and handled all his life. When I was there the rutting season was on. He was kept in a corral and was disposed to be ugly. No one, not even his owner, cared to go inside the corral just at that time.

G. O. SHIELDS.

### Fred Mather's Snipe.

Editor Forest and Stream:

Fred Mather's pleasant letter in the last number of FOREST AND STREAM, apropos of "spring reed birds," recalled to me an incident that he has undoubtedly forgotten, but which for various reasons is distinctly impressed on my memory, and furnishes proof that a score of years ago Mr. Mather had arrived at that stage, which many sportsmen reach, when one can derive more satisfaction in observing the habits of birds than he ever did in shooting them.

If I mistake not it is nineteen years ago this fall that I made a visit to Mr. Mather at his residence near Honey Falls in this county. I had been informed that he was at once a sportsman and the most original and interesting resident of the region. It was promised me furthermore that I could see on his premises some fine trout and grayling, the latter having been introduced in the East from Michigan a year or two before. An old acquaintance of Mr. Mather offered to introduce me to him, and I jumped at the offer, for, to say nothing of the satisfaction a young fellow feels in meeting a fellow-sportsman, a chance to see troutlings in a brook always had a fascination for me not easy to explain.

We reached Mr. Mather's house, and when informed that the stranger had a weakness for shooting and fishing, the host lost no time in making him welcome and revealing for his entertainment every feature that could interest one of the fraternity. I well remember the trout and grayling that were basking in the pond established on the spring creek that had its origin on the farm. There was also shown to the visitors some odd examples illustrative of the taxidermic skill possessed by the master of the house. But rarest of all was the couple of half-domesticated Wilson snipe that were sojourning on a little piece of bog along the border of the brook. They had been there, Mr. Mather said, for several days and had become so accustomed to his presence that they did not resort to the usual practice of their kind on the approach of man and flit to fresh fields.

I wonder does your Cold Spring Harbor correspondent remember those birds? Whether he does or not the facts I state show that while Mr. Mather now allows himself, like the rest of us, to shoot snipe, there are circumstances under which nothing could induce him to draw a trigger on one of the brown beauties.

E. R.

ROCHESTER, N. Y., Oct. 4.

P. S. to the Editor: There is so little game left in this vicinity that in order to find a subject to scribble about one is forced to fall back on reminiscences, and Fred Mather's letter called up the above.

E. R.

### Questions About Birds.

Editor Forest and Stream:

You know the black and white red-headed woodpecker, sometimes called "flicker." Well, he is a tough one; in other words, a bird of extraordinary vitality. I think no one ought to shoot him, but whoever has done so knows that he does not yield up his life as readily as most birds of his size do. He seems to be peculiar in another respect. During my life of forty-two years at Highland, on the Hudson, I never saw one of these birds in the vicinity of the river, but six or eight miles back they were numerous. As to a theory in regard to this fact I have none.

In the winter of '74 or '75 there appeared in Highland birds whose species were unknown to the inhabitants. The birds were gregarious and in size equal to the robin. The most of them were of a russet gray color, not at all pleasing, yet well formed. Occasionally there was one of delicate pinkish hue and altogether pretty. I was reminded of the carp, of which, while the majority of them are unattractive in color, a few are gorgeously golden. It is rightly expressed to say the people were puzzled, and not altogether on account of the novelty, but also because of their tameness, comparable almost to that which "shocked" the sensibilities of Selkirk on the island of Juan Fernandez. One could almost put the hand upon them. When one was caught it would at once eat from the hand. Some thought the cold, which was intense, so benumbed them as to render them thus fearless, but I do not think so. Mr. Editor, if you have any idea what kind of birds they were and where they came from, I should be pleased to hear from you.

A few years before this I had become quite interested in taxidermy, and seeing a flock of birds about the size of sparrows on the snow, I shot into the flock and killed three. They were almost as white as the snow on which they were sporting. Before I shot among them I saw that they were unlike the ordinary snow bird. Their rise on wing from the ground even when undisturbed was so sudden and simultaneous as to excite wonder and admiration. What kind of birds they were I could never tell.

N. D. ELTING.

[The tame birds were undoubtedly pine grosbeaks (*Pyrrhula enucleator*), birds which have a northern distribution and which appear pretty regularly in winter in New England and northern New York. The white birds were snowflakes or snow buntings, also northern birds, seen hereabouts occasionally in winter.]

### A White Rattlesnake.

BEATRICE, Neb., Sept. 29.—A white rattlesnake was captured last week about twelve miles east of Beatrice. It is exactly like the common black prairie rattler except for the color. The body color was a lustreless, chalk white, and the diamond spots or markings were a pale ochre. It was exhibited alive in a store window for several days and attracted a great deal of attention. It was about 24 in. long, had six rattles and a button and seemed to be in good health so far as outward indications went. One noticeable thing about the little serpent was the color of the eyes. In most albinos the eyes are pink, but in this snake they are the same color as the body, a dead chalk white, not gray but white. It is the first instance of the kind which has ever been under my notice during a residence of twenty-five years in the country west of Missouri River, and I am inclined to think it is one of those incomprehensible freaks of nature where she reverses the condition of things in an individual.

If it were an insect the color would be more easily explained. Take the common grasshopper, for instance, in this section of black soil and luxuriant vegetable growth their color corresponds to the color of the grass and leaves. In the sandhills they are almost exactly the color of the sand. In the Wyoming clay beds they mimic the color there, and in the red earth district of the Black Hills of Dakota, near Sundance Mountain, they are the color of the soil there. Do they, like the tree frogs and lizards, possess the faculty of changing their color to suit the surroundings, or are those of a color found only in that locality, and are they a species by themselves?

All the birds except bluejays have left this section for the south. A few meadow larks still remain, and a few woodpeckers, including the golden and the "sapsucker," both of which remain here all winter in company with the robins and some of the titmouse family. Of late years I notice numerous specimens of different species which were almost entirely unknown ten years ago, among them the butcher bird, Virginia rail, woodcock and bobolink.

EL COMANCHO.

[Different individuals of the same species of insects may assume different colors, the variation being caused by the food and the surroundings, just as trout are vari-colored in different waters. Some reptiles, too, vary greatly in coloring, the tree frogs—as suggested—and the chameleons being well known for their power of voluntarily changing color. Others, like some snakes and lizards, without seeming to have the power of changing color at will, take more or less the color of their surroundings. In the red triassic beds of Wyoming we have seen horned toads (*Phrynosoma*) which were nearly as red as the soil on which they lived.]

## Game Bag and Gun.

### THE ADIRONDACK "CARIBOU."

SEVEN years ago FOREST AND STREAM printed sundry notes on the killing of a peculiar deer at Long Lake in the Adirondacks. This deer was generally called a caribou, but a valued correspondent put it on record as his view that it was an elk. The matter, though of considerable interest, was not definitely settled at the time, and it is only recently that conclusive evidence has been received with regard to this strange animal. At the time, no doubt, most readers believed it to be a common Virginia deer which, by reason of some abnormal horn development or peculiarities of color and marking had been given the name of another species. It was not such, however, and the following notes, some of them bearing directly on the so-called "caribou," and some only indirectly or not at all, may be of interest on account of their general reference to the big deer of the Adirondacks, as well as of clearing up the "caribou" matter.

The Long Lake "caribou" was killed about the first of November, 1886, by Charles C. Robinson, of Long Lake Village. Its tracks had been seen in the snow by a still-hunter in an upland pasture west of Long Lake, but he had been unsuccessful in getting a shot. He related what he had seen, together with some peculiarities which attracted his attention. The animal had rooted with its nose to get at food under the snow instead of pawing it away. He did not, however, apparently notice any peculiarity of track beyond the fact that it was a large one.

Robinson on hearing the story decided that the tracks had been made by a wounded deer, and formed a hunting party for its capture. In the party were two of his brothers and R. J. Peck, all of Long Lake. The object of the hunters was to drive the deer into Clear Pond which lies about one mile west of Long Lake. This pond is nearly as wide as it is long, and is about two miles in diameter. It is fed by mountain streams and springs and the water is very clear. There are a number of shoals in the lake and several points project a considerable distance.

The hunt began on a Tuesday. The strange deer was easily started, but it displayed none of the characteristics of the common deer. It repeatedly back tracked and did not seem to mind the dogs a great deal. Though it was seen several times trotting through the shallow water near shore, it would not enter the deep water and swim like an ordinary deer. "He would trot ahead of a swift hound" to quote Robinson, "and cleared from 8 to 10 ft. between steps." No amount of pushing would make the strange deer change his gait.

The first day's hunt terminated unsuccessfully, so far as the hunters were concerned. The following day, however, they were on the ground again. Robinson put two hounds on him Wednesday, and after a run of three hours succeeded in wounding and finally in killing the deer as he was trotting along the shore of the pond.

It was not till then, so the party assert, that they realized the fact that the animal was not a common deer. Gazing at its dead body they observed that it was a brown color growing lighter toward the hips, that its tail was short and stumpy and that its horns were very unlike what they were accustomed to see on ordinary buck deer. In speaking afterward of the occurrence, one of the Robinson brothers said that had they known that the deer was what it proved to be, they would not have killed it.

The animal was very poor and its flesh was dark and rank. None of the party could eat the flesh. The deer, butchered, weighed 320 lbs. This was not estimated, but ascertained by actual weighing. Previous to the still-hunter's experience, no one, so far as was known, had seen signs of this particular animal, though this might be

accounted for by the fact that there had been no snow before or that the deer had wandered in from the wilder and unfrequented woods.

Charles Robinson and the brother above quoted say, however, that signs of similar animals have been seen since. This is an interesting assertion, but it seems unlikely that it can ever be substantiated.

After the hunt was over an old French Canadian working for one of the Robinsons, on seeing the dead animal exclaimed, "Where did you get your reindeer?" As he claimed to have killed caribou in Canada, they thought him an authority on the subject, and often referred to it as a reindeer. Others, however, said the deer was a caribou, and in course of time it came pretty generally to be called by the latter name.

The Robinsons noted that the animal had canine or eye teeth, similar to that of the male horse. The feet were very round and large, being about the size of a yearling steer.

An identification could never have been surely made by the description of the animal alone, though from the facts already given it seemed extremely likely that it was an American elk or wapiti. However, additional evidence of the most valuable character was to be had. The head had been preserved and mounted, and was in possession of Mr. James Ten Eyck, of Albany, and in addition to this the skin was secured and sent by Mr. Charles Robinson to FOREST AND STREAM.

Mr. Ten Eyck, who is a genial and popular sportsman, did all in his power to aid the investigation. FOREST AND STREAM consulted with some eminent authorities in Washington, and finally the identity of the strange animal was settled. Contrary to previous suppositions it was decided that the animal was a European red deer.

This head was mounted by a man who had been accustomed to set up Virginia deer, and his predilection is unmistakably shown in the result as illustrated. He has molded the face and neck and arranged the ears in a very unnatural manner for the red deer, which resembles our elk much more nearly than our common deer. Though the excellent photograph seems to indicate it, there are no white markings on the face similar to the Virginia deer. The photograph is the work of Mr. A. W. Floyd and the head is in the possession of Mr. James Ten Eyck of Albany.

In the meanwhile an explanation of its appearance in the Adirondacks had been secured. This came from Mr. Wm. Pickhardt, of New York. Mr. Pickhardt made the following statement to a representative of FOREST AND STREAM:

"Some ten or twelve years ago I imported a buck and doe red deer from Hanover. I put them out in an inclosure on the east side of Schroon Lake, hoping to be able to breed from them. Unfortunately the first year after, they were in my possession, about the time for the doe to come in heat, she accidentally caught one of her legs in the crotch of a beech tree, which resulted in a broken leg and her subsequent death.

"I kept the buck with the idea of crossing with the Virginia deer of the Adirondacks, of which I kept half a dozen young does in a neighboring inclosure. After they were three years old and had grown sufficiently I let these does loose in the territory east of Schroon Lake. I also released the red deer.

"The red deer was never again seen in that neighborhood, but the young does were very tame and kept about the fence on the outside, in fact, several of them were shot by local hunters. This happened in 1884, I think, but I am not sure as to the date." Mr. Pickhardt also says that he has heard reports of large tracks that he thought were made by this deer from time to time, both in the neighborhood of Schroon Lake and further north, and that he thought a strange animal seen near Elizabethtown, of which an account will be given, was this red deer. No later than last fall a hound was found badly torn by the antlers of some strange deer, and it was argued that this must have been done by the red deer which invariably showed fight to dogs, a course which is in strong contrast to the action of the common deer.

When Mr. Pickhardt was shown a photograph of the head of the deer killed at Long Lake, however, he reluctantly acknowledged after examination that there could be no doubt of its identity with his deer. The horn development, and also the weight as given by the hunters, corresponded very closely with that of the animal he had released.

It is an interesting fact that Mr. Pickhardt believes his deer succeeded in crossing with the common deer after its release. If such a thing were possible it would perhaps serve to explain a strange deer which has been seen in the last few years in the neighborhood of Elizabethtown, and to which reference has been made.

Last fall a year ago the local correspondent of the Essex County Republican wrote to his paper: "Many tracks of a moose (?) have been seen, but so far the hunters have not been lucky enough to start him with the dogs. Two years ago he was seen out twice, but was not wounded, although many shots were sent in his direction."

With reference to the above Geo. H. James, a well-known Elizabethtown hunter, wrote FOREST AND STREAM under date of Oct. 31, 1893, as follows:

"I do not think there are any moose at the present time in the Adirondacks. Two years ago this fall we had a deer hunt from what is known as the Cedar Swamp on the side of Hurricane. Wm. Hayes and Chas. Root went in to start the dogs. They put the dogs on an ordinary deer track. But they struck on the track of what we called a 'caribou.' It first came out in a lot near a cemetery which was a 'runway' and was guarded by Dr. Blood, who says he first heard his hoofs rattle in the stones some 30 rods away, and could not think what it was, but blazed away, but did not hit it, and it trotted on up the mountain toward where I was. I saw it crawl over a stone wall and wondered what it was. It must have stopped in the brush, for it was some 15 minutes after the Doctor shot before I opened. Blood motioned up the mountain with his gun. When I next saw it it was some 80 rods from me, and trotted along, not loping like our deer, and looked as long as a rail. I shot three times at it before it reached the woods. J. D. Nicholson, who was on a runway above me, left and came toward me to see what it was I was shooting at, and while he was down there the 'caribou' came across his runway, and that was the last seen of him. His tracks have been seen in the woods since, but we have never been able to get him out again. \* \* \* Our 'caribou' makes a track very much like a 'critter' round."

Though Mr. James gives practically no description at

all of the animal itself, it being nearly a quarter of a mile from him at the time he shot, and too distant to see very plainly, he gives some interesting peculiarities which are worth noting. Chief among these were its gait and hoof impressions, which resembled those of cattle. Other hunters and men whose business takes them into the woods have reported similar tracks in this neighborhood, and among these may be mentioned Wm. Denton, who, while gathering spruce gum, came on the tracks of an animal that he would have supposed to be a cow had they not been found near the summit of a mountain, and in a location that was very inaccessible and where no cow had ever been seen. James's description bears a strong likeness to that which Charles Robinson gave of the Long Lake "caribou," and it would be interesting to know definitely what the animal he saw was. It is said to inhabit at the present time a cedar swamp on the side of Hurricane, and hunters who have followed it say that the toe half of their boots would just fit its track.

In reply to a question bearing on the subject of big deer in the Adirondacks, Charles Fenton, of Number Four, on the Beaver River, wrote:

"I used often to hear reports that some old hunter had killed a caribou. I know two old guides, now over 60 years old, who claimed to have killed caribou; one of them who had guided in the Saranac region thirty years ago. After I had a fine head, which I procured in Maine, mounted and hung up in my dining room, this guide came to my house, and some way we began talking about caribou. He positively asserted that he had seen several on the east side of the woods. I did not dispute him but only asked him to give me a general description, which he did and by which I knew they were not caribou. He did not know that I had a specimen. I asked him in the dining room to dinner. I noticed that his eyes wandered over to the caribou head but said not a word. When he arose from the table he walked up to the head and viewed it minutely and I was surprised to see him walk out of the dining

RED DEER KILLED IN ADIRONDACKS.

room without saying a word. Meeting a man on the walk he says to him, 'What head is that on the wall in the dining room?' Being fond of a joke and knowing how sure he was that he knew all about caribou, he replied that he did not know what it was, that I had put it there lately, etc. Meeting another man he made the same inquiry, who told him that he thought it must be some little cow's head fixed up with horns. The guide replied that that was just what he thought it was. Finally he asked me, and when I told him he admitted frankly and without hesitation, that if that was a caribou he had never seen one before.

"Another hunter and guide who declared that he had killed a caribou thirty years ago near Brandreth's Lake, admitted at once on seeing the head that what he killed supposing to be a caribou was no such animal as that.

"Deer have degenerated since twenty-five or thirty years ago, as would naturally happen by much hunting and the killing of does in summer, leaving the fawns to grow up stunted, and to attain at best but small size. I find that all specimens of caribou claimed to have been killed or seen in the Adirondacks were nothing but overgrown bucks of great age, as they had a chance to be at that time, and very likely had deformed or peculiar horns, as very old deer are likely to have. I see no reason why caribou should not have inhabited the Adirondack region unless it be beyond their southern limit. Caribou are made to inhabit cold and snowy regions and of course will not go beyond a southern limit. As caribou are much harder to exterminate than deer it seems to me that caribou were never found here. The northern part of New Hampshire is their southern limit. Now about moose. The last track I saw in the Adirondacks was about twenty years ago, and since that time reports have come that tracks were seen on the headwaters of the Independence River, once a famous ground for moose. But I did not rely much on these reports, as they came from young men who might not know a moose track, until, I think, about three years ago, when an old surveyor over sixty years of age and who has always had charge of the Lyon estate in the Adirondacks, and who traveled the woods when moose tracks were plenty, told me that he saw a very large moose track in the vicinity mentioned. Now, this man is reliable, and I would believe him as surely as if I had seen it myself. The track I saw was a young moose, and it is probable that it was living at that time. This is all I know about the likelihood of there being moose left in the Adirondacks.

"The last moose killed of which I have any knowledge was killed by the late Governor Seymour north of Albany Lake. I have killed over one thousand deer in the Adirondacks in the past fifty years and have seen thousands more, and I have no reason to believe that there

ever existed more than one variety of deer in the Adirondacks.

"It was the prevalent idea among guides and people living in the Adirondacks that a caribou did not differ materially from the deer, and that it would really require an expert in zoology to distinguish the difference. The guide who was the most positive that he had seen caribou used to guide it in the Saranac region, and it was there he saw them. But when he saw my specimen (I have the feet, too), he frankly admitted that he had never seen a caribou, and that his supposed caribou were not caribou at all."

Mr. Jacob K. Wood, of North Elba, another widely known hunter and a man of long experience in the woods, gives the following interesting facts under date of Nov. 7, 1893:

"I know of no other species of deer than that which exists here to-day—namely, the common 'Adirondack deer.'"

"I have always lived in this locality and have done considerable hunting in the last thirty-five years, and in that length of time I have not known of there being a single moose or caribou killed in the Adirondacks. One of a party with which I was hunting several years ago killed a very large buck which weighed, after hanging nine days in the woods, 270lbs. Some of the party called it a caribou, but there was nothing in the shape of the horns or the build of the animal that would indicate that such was the fact, and I thought then, as I do now, that it was nothing more than an old and overgrown deer.

"My uncle, Robert G. Scott, was with the party that killed the last moose in this part of the Adirondacks, and this was in 1841.

"We have none of the so-called 'swamp bucks' here. We do occasionally get a dark-haired, short-legged, heavy-bodied buck, which resemble in many respects the 'swamp bucks' of the South. The average bucks here will dress from 150 to 180lbs. and occasionally we get them that will dress considerably more, my son having shot one two years ago this fall that dressed 220lbs., which had it been as fat as others we have killed would have dressed 250lbs. But it is very seldom that one is killed in these parts that will dress over 200lbs. I think that the size of deer depends greatly on the age; that is, I have always noticed that large and overgrown deer have shown to be of considerable age.

"Deer are much thicker here now than twelve or fourteen years ago. I can remember then traveling all day through splendid deer country, with five or six dogs, and had great difficulty in starting a single deer, wherein for the past few years I could start the same number of dogs within an hour's tramp from home."

It will be noticed that in the foregoing letters mention is made of a belief among certain hunters that they have seen or killed caribou, and this despite the fact that caribou probably never existed in the Adirondacks. No good authority for or evidence of their appearance in northern New York can be found.

Audubon speaks of the "caribou of Newfoundland, Labrador, Canada, and the States bordering on the St. Lawrence."

Merriam, "Mammals of the Adirondacks," p. 114, foot note says, "I have been unable to find a trustworthy record of the reindeer or caribou from this region." He refers to DeKay's account of supposed caribou horns and says that measurements show them to have been elk horns.

The explanation of the application of the name is probably the following: Moose have existed in the Adirondacks within the lifetime of the fathers of the present generation of hunters, and even in the memory of some of the older men now living. This animal is consequently well known, and no one could be tempted to give its name to any other deer. The caribou, on the contrary, is an animal with which the hunters are in no way familiar, but of which, on account of its proximity in the neighboring wilds of Canada and Maine, they have heard a great deal. Naturally they give this familiar name to any unfamiliar member of the deer family, and likewise to abnormal specimens of the common variety.

In speaking of strange deer the name of elk is never used because this animal is not commonly found nowadays within several thousand miles of the Adirondacks, and its name has an unfamiliar sound.

J. B. BURNHAM.

#### Nebraska Game.

BEATRICE, Neb., Sept. 28.—Waterfowl are coming in in increasing numbers now and are very fat. Upland plover have come and gone, other plover are quite numerous, and a good many teal and wood duck are reported by hunters. The large ducks have not arrived as yet and the goose brigade has not been heard from.

Squirrels are numerous and in good condition. Every little draw, weed patch, hedge and plum thicket holds its own covey of Bob Whites and all kinds of grouse are favorably reported as to numbers all through the western part of the State.

Young jack rabbits are very numerous around the stubble fields and the common cottontail is here to furnish the schoolboy with all the fun he wants.

Withal, I think the prospect for the coming shooting season in Nebraska is better than for years.

EL COMANCHO.

"American Big Game Hunting," the Book of the Boone and Crockett Club, is out this week, and a descriptive circular will be sent free on application.

You are invited

to visit the "Forest and Stream's"

exhibit in the Angling Pavilion at

the entrance from the main hall

of the Fisheries Building, in the

World's Fair.

## MY MILLION-DOLLAR BUCK.

AUBURN, Cal.—Bang! Ping! Bang! Spat! and a few pine needles and bits of bark rattled down around me as I stood upon the mountain side away up in the Sierra, on a September day. The shooter was in a cañon away to my right as I faced up the mountain spur, and I had no apprehension of his bullets coming too close, except by deflection, but as a bullet flying around loose in the air should always be treated with respect, I stepped behind the trunk of the big pine, in whose top the last bullet had found a lodgment. As I stood there two more shots rung out, awaking more echoes in the quiet cañon, and the hum of the flying missiles sang in the still air. The game must be coming my way, I reflected, and my friend is over-shooting. I will keep a sharp lookout and wipe his eye.

And surely enough, in a moment afterward a noble buck broke cover, coming out of the cañon and crossing the spur on which I was standing.

Waiting until he was about 30 yds. distant, I sent a bullet into the center of his chest, and he turned a summersault and lay dead almost at my feet.

Standing as I did behind the tree, with only my head and one shoulder and arm showing, he had not seen me, but had come bounding straight to his death.

He was a magnificent fellow, in prime condition, with symmetrical antlers bearing eight points, and his coat was "in the blue." A finer specimen of the beautiful Columbia blacktail could not be seen in years of shooting. I stepped forward and bled him, and gave the agreed upon signal for a "kill" to my companions.

My two companions arrived while I was still at my task of dressing the game, and as John M. came up he exclaimed, "Well, you got him, didn't you? I thought you ought to be where you could get a shot. I started him out of the bottom of the cañon, and shot at him four times as he jumped over the tops of the thick brush, but as I could only catch instantaneous glimpses I had little hopes of stopping him, and I didn't, either," he added, by way of parenthesis.

Just then the other member of our party arrived, with a pick and shovel over his shoulder, and a large gold-pan swinging from them over his back. Laying these down at the foot of the tree, he came forward and assisted me in cleaning the game. Just as we had completed the task and were preparing to hang up the carcass on a convenient sapling, to await transportation on the back of a pack horse, our attention was arrested by the exciting tones of our companion, as he stood leaning on his rifle a few steps away and gazing on the surrounding rocks and trees.

"Why, great gods, boys," he shouted, as he made a sweeping motion of his right arm, "this is the identical spot we have been looking for! See! there is the rock, above us, with the five black spots on it. There is the ditch forming a half circle around this spur. And here is the row of three pine trees, and this," stamping his heel upon the spot where he stood, "is the very spot where we must begin our work."

In an instant our game was forgotten, and jumping to our companion's side, we eagerly scanned the surroundings. Surely it was as he had said, and our search was ended. We had been out three days hunting for this very spot, and at last had come upon it by accident. The buck had been within ten yards of it when the bullet struck him.

One day in October, about eleven months previous to this occurrence, an old man of over sixty years was sitting in the office of our hospital, of which John M. was the steward, and I the surgeon. He had arrived three or four days previously, and had been told that his case was a hopeless one. He was suffering from an epithelioma, which had appeared some two years previously, and had been neglected until its inroads were so great as to leave no possible hope. Upon the day in question I had made my round of the wards, and had sat down in the office for a few moments' chat with the steward, when the old man came stealing in. He closed the door carefully behind him, approached to where we were sitting, and in a thick voice addressed us. "Gentlemen," said he, "I want to have a few moments of your attention and want no listeners."

"Take a chair, Captain M.," said the steward, "and fire away."

The old man drew a chair nearer to us with a trembling hand, and sat down. He was beginning to waste rapidly from the effects of the disease, and his face was getting thin and pinched. His eyes burned in the back of deep cavernous sockets, overhung by heavy gray brows, and he fumbled his chin with skinny fingers all the time that he was speaking.

"You know," he began, "that old Cap, as I have always been called since I came to the State in '49, has been an honest man, and what I say you can tie to."

"I came to this place in the spring of '50, went up to Iowa City in '51 and into the mountains about that place in '52, and have lived there ever since. In fact," turning to the steward, "you knew me there thirty years ago, to your sorrow, as I got into your debt when you kept store at the Forks House and have never been able to pay you."

He paused a moment, as though arranging his thoughts, and then continued: "I was an only son, of English parents, without other relatives in America, and they both dying near the same time left me free to come West. I have no kith or kin in the world to my knowledge, and as I have a great fortune to leave behind me I have chosen you two as my heirs."

Now this sounded well, but as he was a charity inmate of the hospital we did not become deeply enthused.

"I do this," he continued, "because I owe you," nodding to the steward, "money which I have never been able to pay and because I want to enlist your interest," turning to me, "and want you to do all you can to make my last days easy and comfortable."

I turned to wink at the steward, but the latter had become interested and nodded to Cap to proceed.

"I've been a mountaineer and a prospector for over thirty years, and have just contrived to live, and no more. Sometimes I would strike a good prospect and think I had the world by the seat of the breeches, but it would soon peter out and disappoint me as before. And now, just to see how luck is against me, just as I am dying, I have uncovered a fortune."

With these words he thrust his hand into his bosom and pulled out an old red handkerchief filled with broken

quartz and laid them open on my knee. The specimens were very handsome and we viewed them admiringly.

Presently I remarked, "But these are all surface specimens (some thousands of dollars sunk in mining had taught me this much). How do you know that there is any quantity of such rock?"

"Oh, no," said he, "those are not surface specimens; those came from a great depth, and I have prospected the ledge for hundreds of feet, and it is all equally rich. I tell you there is a million apiece in it for you."

"Then," said I, "if it is so rich why did you not take out a few hundred dollars' worth of ore, and make yourself comfortable with the proceeds?"

"Oh," he answered, "it is just a part of my old luck. Just as I had fairly made sure of my find, and was prepared to benefit by it, the snow came on, over a foot deep, and I was getting so weak that I could not work, and I would not let any one else into the secret. So I just covered up my prospect, and came down for the winter, expecting to get cured and return in the spring. And now I've got to die and leave it all, without ever knowing how rich I might be," and he glared at us with burning eyes.

In a moment he went on, "I'm not going to tell you now where my mine is, but if there is surely no hope for me, I want you to tell me just when I am going to die, a few days before the end, while I am still able to talk, and I will tell you how to find it. In the meantime do all you can for me."

This ended the communication at that time, and on comparing notes, I found that John had taken stock in the account, while I was skeptical, believing that the old man had concocted the story in order to obtain favors.

However, the winter wore away and summer came again, and its heat hastened old Cap's end. One day the steward told me, on my arrival at the hospital, that Cap was very low, and we had better try him and see if he still maintained the truth of his story. Accordingly, on my rounds I stopped at his bed and examined him carefully, and then informed him that he had but a few days, or perhaps hours, to live, as the disease had reached the arteries in his neck and he was liable to die at any moment. "And now," added John, "if you stated the truth about that mine, and want us to have it, you had better give us directions how to find it."

He lay for many moments in silence, and his words could not be understood when he attempted speech. Many times he tried it, but without avail, and at last he motioned to be propped up and made signs for writing material. These were furnished him, and after many attempts he made the following memorandum, and after its completion lay back exhausted upon his pillow:

Volcano Cañon—Point—where ditch makes half circle. Up on point is big granite boulder, with five black spots on it set thus: • • • • • made with black paint. Forty steps below three pine trees in row, two yellow and one sugar pine—45 steps north of sugar pine—dig!

Three days afterward old Cap was dead, without ever giving another sign of consciousness to his surroundings. So died this man of good education and steady habits, one of thousands of other mountain miners, who have spent their lives and fortunes in vain search of the yellow metal.

This solemn dying declaration seemed like business, and in about another month a third friend was taken into the scheme, as there was wealth for us all, and the expedition which resulted in the killing of our million-dollar buck was organized.

We had surely found the place indicated. There was the ditch, forming the half-circle around the point; there was the great boulder, with the quincunx painted upon it in black paint. Here was the row of three pines—two yellow and one sugar pine, and 45 paces north of the latter lay a ledge that was good for a million apiece for each member of the party.

To be sure the ledge was not in sight, but everything else was according to programme, and we had nothing to do but to dig in order to lay that bare. The spot indicated looked very unpromising, and bore no traces of ever having been disturbed, but we had no doubts whatever, and formed as happy a trio of millionaires as ever foregathered.

We carefully measured off the distance, and John and Charlie began to dig. From 6 to 15 in. of loose rock, mold and pine needles covered the ground, and underneath this was hard, solid, virgin rock. We began to get anxious and to work further and further away from the spot, but without meeting with even a bit of loose float rock to encourage us. Night came on and found us still digging, but with flagging spirits. At last John threw down his shovel in disgust, and exclaimed: "Confound his worthless old carcass! He died as he lived—a bilk!"

No words were needed to describe whom he had in his mind. We all understood, and felt in the same way. Then Charlie spoke up and said, "Well, here we are, five miles from camp, without grub, without blankets, and without a million apiece; but by the Holy Poker, we've got a fine buck, so hurrah for our million-dollar buck," and we hurrahed till the cañons rang again.

Since that night my companions have gone over to the great majority, so that buck has become my sole property, and is no longer "our" but "my" million-dollar buck. Has any other reader of FOREST AND STREAM as equally expensive a private zoological collection as that, consisting of such scanty varieties? If so, tell us about it.

We built a good fire near by, roasted a portion of this very expensive buck, and spent the night alternately warming our backs and then our fronts, and munching steaks and liver. In the morning we resumed labor, and did not desist until thoroughly satisfied that there never had been a quartz ledge within a mile of the spot.

As the years roll by I discuss the question with myself, Was the old man deliberately lying, or had solitude and ill-luck unhinged his mind, and did he fancy he had spoken the truth?

AREFAR.

## Send in Your "Shooting Postals."

MATLOCK, Ia.—Editor Forest and Stream: Now that the shooting season is at hand, why not start a series of hunting and shooting postals, after the style of the fishing postals which have been running in the FOREST AND STREAM during the summer?

I would also be pleased to hear from some of the contributors of the FOREST AND STREAM in regard to the loads used in game shooting and the results, whether satisfactory or not. In some future number I will try and give some of my experiences, and hope that others will follow suit.

LONGFELLOW,

## IN THE ROCKIES OF COLORADO.

HOWARD FUGUET and I started from New Castle, Col., on the Denver & Rio Grande R. R., on Aug. 31, bound for the Marvne club house, on the Marvne Creek (a tributary of the North Fork of White River), a distance of fifty-five miles, over a fair mountain road across the White River plateau. The club house is kept by Messrs. Wells & Patterson (address Meeker, Colorado), guides and outfitters. We arrived there on Sept. 1 and started the next morning with pack train of twelve horses and four bear dogs. Our guides were Wm. Wells and Byron Fenner, and Wm. Strebb, cook.

Our route lay up Lost Park Creek and across the Lost Park to the headwaters of Williams Fork, a tributary of the Bear River. Here we camped and hunted a little. We found deer very plentiful and lots of elk and bear sign. We ran a silver tip on the second day, and although the dogs stopped him we could not get in quick enough and he broke away and was lost.

Our next journey was down the Williams Fork and through the cañon to the forks of the Williams Creek. This Lost Park and Williams Creek country is in the Danforth Hills. From here we crossed to Bear River and to Creigh, and thence up Fortification Creek and across to the Elk Head Creek, two days' journey on the plains. Ten miles from Creigh we began to get in among the antelope, and in California Park in the Elk Head Mountains we saw thousands of them. From California Park we went over the summit of the Elk Heads and on the other slope in Slader Basin, near the Snake River. Here we made our principal camp and did most of our hunting.

In Slader Basin the antelope are more numerous than in California Park. Here one can get shot after shot at deer, antelope and elk. It is safe to say that on this trip we saw more than 5,000 antelope and several thousand deer and more than 200 elk. We only hunted the latter three or four days and got all we wanted.

In the Lost Park and Williams Fork country one can get elk, but they are harder to get than in the Elk Head Mountains. Deer are more plentiful, but there are no antelope. At the club house on Marvne Creek one has a chance for an elk and is sure of deer not far from the house, and can get fine fishing. By going a day's journey his chances are fairly good for elk. I can honestly recommend Wells and Patterson as good guides and reliable. Byron Fenner proved himself to be an excellent hunter.

I am prompted to write this purely for the benefit of my fellow sportsmen, and I can assure them I have no ax to grind. I honestly think this is the grandest game country on the continent to-day. If one takes the trip we took he need have no fear of killing all of the three kinds of game mentioned and as many as he can possibly wish. Joe Peltrei (address New Castle, Col.) will do the transportation from New Castle to the club house in good shape. One should allow himself thirty days for this trip. We stayed in camp twenty-four.

In conclusion, I hope this may enable some sportsmen to enjoy the same sport as we enjoyed, but that they will not abuse the same.

H. W. HAMLYN.

## MINNESOTA MOOSE AND INDIANS.

THE Legislature of Minnesota has passed a law prohibiting the killing of moose, caribou and elk for a period of five years. This would be a good law if it could be enforced against all hunters, but it cannot be. The Red Lake Indian reservation, which lies in northern Minnesota, is 70 miles wide from east to west and 100 miles long from north to south. It includes within its boundaries the Red Lakes and the Lake of the Woods, and is in the very heart of the best moose, elk and caribou range in the Northwest. In fact, there is probably no other place on the continent where these three species can be found ranging on the same ground. They are all here in goodly numbers. Your red Indian cares about as much for a game law as he does for a gumdrop; and when he wants game he goes out, kills it and then sends his squaw to butcher and bring it in.

I have long had my eye on this moose pasture and three years ago was in it. Now I am in it again. Meantime I have been in close touch with at least two good hunters who live in it, and they have kept me posted. One of these is Burton Harris, of Pelan, Kittson county, Minn., with whom I am now staying, and what he does not know about moose and moose hunting wouldn't make even a primer. A New Yorker, college bred, then bookkeeper in a manufacturing house, his health failed and he came West. Being fond of the woods and of the rifle he fell in with the half-breeds in the Lake of the Woods region, lived with them three years, hunting and fishing for the market. During the winter of '89 and '90 he killed 15 moose. During the following winter he killed 18 moose, 3 elk, 1 caribou and many deer. In the following spring he caught 16 moose calves and 2 elk calves. These he sold and traded to merchants and others in the nearest towns at ridiculously low prices, because he was not prepared to hold them.

As stated above, a law, now in effect, makes it a misdemeanor to kill moose, elk and caribou for five years; yet an Indian reservation covers the bulk of the best range of these animals in Minnesota. Twice a year—in June and September—the chief of the Red Lake outfit sends out a band of runners selected from his best young hunters with orders to start a cordon of fires around the whole reservation and as much outside country as is good game range. At these seasons the prevailing winds are from west and south. The Indians form a skirmish line along the foot of the Lake of the Woods and Rainy River. Within a few days the fires have traveled north and east and the game is driven out to this death line in herds and slaughtered like so many beef cattle. So much of the meat as can be saved is, but thousands of pounds of it rot, and from many a carcass only the skin is taken.

Even now, while I write, I can look across to the east and see three of these fires burning, which were lit two days ago. At night they throw a red glare against the clouds, suggestive of the blood that will flow a week hence when all these fires have united and driven the poor beasts into the death trap.

Your loyal white hunter, who would kill one, or two, or three moose, or elk, or caribou, for sport, for heads, for skins, for meat, is forbidden.

It is all well enough to talk of the Indian being amenable to the game laws, but how will you ever enforce a law against these red wretches? Who would make a complaint and work up a case against one of them? Certainly

no settler who has to live near them. Certainly no game warden, made of ordinary flesh and blood. And so the slaughter will go on as long as the game lasts, law or no law. The white man is simply prohibited from killing the game in order that there may be more for the red man to butcher.

Fortunately we may go across the boundary line into Manitoba, which is but a few miles from here and where a white man is still given an equal show with an Indian, but it is just to compel us to go into the Queen's domain to hunt while there is plenty of game on our own soil?

I have lately talked with many settlers who live in and near the moose country, and they all say that they shall continue to kill moose and other game, the same as heretofore, law or no law. I heard of several moose having been killed during the past summer in Kittson county, and of many more that are to be killed as soon as there is a good tracking snow.

G. O. SHIELDS.

PELAN, Minn., Sept. 27.

### MINNESOTA GAME AND GUNNERS.

DULUTH, Minn., Sept. 30.—The Central Gun Club, at its last business meeting, decided to postpone indefinitely its weekly trap and monthly medal shoots, owing to the small attendance on account of the fall hunting season.

A good many complaints are heard of the violation of the State game laws, many reports having reached the club where game was killed and taken contrary to the game laws, and preliminary steps are being taken to form a protective game association in connection with the Central Club, and to offer a reward for the conviction of any one violating the State laws. This is a good plan, and it will meet with the approval of all honest sportsmen.

The past fishing season has been all that could be desired by lovers of the rod, and some remarkable catches have been reported. The latest is furnished by Mr. C. A. Pearson and his wife, who shortly returned from an outing at Deerwood, Minn.; and to Mrs. Pearson, who like her husband is an expert with the rod or gun, belongs the honor of landing the largest muskallonge of this season, having caught four, weighing respectively 20½, 19, 16½ and 16lbs.

The hunting season begins very promising. The northern part of the State and the West of course as yet is the source of supply of our market, and will continue to be so until the regular flight southward, when the weather becomes colder. Owing to the unusual growth of wild rice in the lakes in our immediate vicinity, large numbers of the scattering flocks that are moving, find a resting and feeding place here, and some good bags are being made by the professionals, although the amateurs are everywhere. They generally are satisfied with rice birds which are very numerous this year. There is good sport ahead for those who prefer geese to ducks and other game.

Several black bear have lately been seen within a few miles of the city, and deer also are more numerous than for some years, owing no doubt to the heavy forest fires which have been raging in northeastern Wisconsin and Minnesota, and when the prohibition is released on Nov. 1 until the 20th, an exodus of lovers of large game will no doubt occur, and a big round-up is looked for.

Mr. J. W. Nelson, president of the Central Gun Club, is the owner of a 5-year-old foxhound of local production, which he values very highly. In addition to being a first-class deer runner he will tree partridges, run rabbits and on command take to water and retrieve ducks as well as many dogs which have only the latter qualification. The owner of such a dog should well be proud of him.

HANQUE.

### IN THE BOWSTRING COUNTRY.

DULUTH, Minn., Oct. 3.—*Editor Forest and Stream:* You will find inclosed a clipping from the Duluth evening Herald, giving an account of a canoe trip a couple of friends of mine made to the headwaters of the Mississippi. It may interest some of your many readers and open their eyes to the greatest ducking and hunting and fishing country in America. Deer and moose were never so plenty, although the latter may not be hunted until 1898. The country abounds in hundreds of small lakes teeming with bass and landlocked salmon, which are seldom fished except by the Indians and land explorers. The country has just been opened up to the tourist by the Winnipeg Road, which does away with the hardships formerly endured.

A great many bears have been killed near Duluth this month, and every day ducks are shipped in by the hundred. Just fancy buying nice fat mallards at two bits apiece and teal at forty cents a brace.

N. B. MCN.

On the afternoon of Aug. 30 a small party of Duluth sportsmen boarded the Duluth and Winnipeg train at the Union depot and started on an outing that lasted about three weeks. Hunting and canoeing were the chief pleasures in prospect and the "Bowstring country," Lake Winnibigoshish and other waters on the borders of Itasca and Cass counties were selected for the scene of operations. The trip was a grand success. Members of the feathered flock fell before the unerring guns; the dangers and pleasures of canoeing were most abundant; camp life was experienced in all its phases; the redman's life and characteristics were studied; appetites created; muscles toughened and a vigor of mind and body attained wholly beyond the power of medicine.

"About twenty-five or thirty miles north of Deer River, the terminus of Duluth & Winnipeg Railroad," said Mr. Nash, "lies Bowstring Lake. This body of water is the 'ricing' grounds for the Leech Lake, White Oak and Winnibigoshish Indians, who, with their families, camp from two to three weeks in the vicinity of the rice fields during the latter part of August and the first of September. Reaching Deer River, we transported our outfit over the logging road twelve miles to Little Bowstring Lake. The first day of September found us paddling our Peterborough canoes up a shallow creek to Big Bowstring Lake.

"Here 'ricing' is an occupation of great importance to the Indians in those regions, as they count on gathering a supply sufficient to satisfy the family needs through the winter. Any surplus is easily sold at the trading posts.

"The process of gathering this wild grain is very simple. Two squaws paddle their birch bark canoes well into the beds and then, with short clubs, pound the heads of rice that overhang the sides of the canoe. The grain drops

into the bottom of the craft and the work is kept up until it is full. The rice is then put into an iron kettle, over a small fire, and the roasting process begins. The oldsquaws perform this part of the work also. We found them sitting on the ground before the kettles, stirring the rice with short paddles to keep it from burning. When thoroughly roasted the grain is emptied into a hole in the ground lined with wooden slabs. Then it is pounded with long poles to separate the kernels from the shells. After that has been thoroughly done the rice is put into shallow bark trays and winnowed by the Indian girls by emptying from one tray into another until all chaff is removed. It is then put into sacks and stored away for future use."

### THE EAST AND THE WEST.

CRAWFORD, Neb., Sept. 5.—*Editor Forest and Stream:* I have often wondered why there is so little in the FOREST AND STREAM from this Western country, where game and fish and the various topics of which it treats, abound. New England and all the Eastern States are written up by talented correspondents, so much so that one might naturally be led to believe that the great portion of our best hunting grounds and fishing resorts were in that part of the continent. Of course Judge Greene and "Podgers" and others have done justice to the Pacific Coast, but what I desire particularly to speak about is the middle Western States. Is it because there is so little interest manifested in the sporting fraternity of this country, or rather is it because of the fact that game is so abundant and requiring so little skill to secure it that the events of the hunt are considered of so little importance that it is not worthy the space in our great family journal?

I am inclined to think that the true sportsmen, those who hunt and fish and observe the game laws, those who are everything the word implies, those who go to the woods or lake or mountain stream for the genuine pleasure of outdoor sport or recreation, to commune with nature's creatures, giving and wishing all an equal show for which they were created—these are, I am loth to confess, to be found more abundant in the East than in the West. It may be, that being confined so closely to business in the cities, or thickly settled country, it gives one more pleasure when once he does get away, so that he feels like telling the world what a good time he has had on his outing, and writes about it. While here we live in a "free and go easy" sort of way, taking everything as it comes as a matter of not much consequence, so that a habit of indifference is formed, to such an extent that our pleasures are not half known, even to ourselves. We live in a country where everything is free, comparatively, so far as game is concerned, and we make no provisions and few anticipations when we take a little shooting or fishing excursion. We know we will get all we need without much effort, and as a consequence we think but little about it.

I am a traveling salesman, strongly addicted to the use of a gun, and during my trips I have frequent recourse to that idol. Just so it is a gun, it does not matter to me whether it is a \$200 hammerless or a \$10 smoothbore. And that is about the case with the majority of those who shoot in this part of the West. There are exceptions, of course, but it is said to their credit.

Every little village and town is full of dogs, "bird dogs," that's their pedigree, but they will hunt with anybody, and find just as many birds as one wants to shoot, and make just as many pretty points as many of the fine pedigree stock I have seen in field trials. An owner of a dog seldom boasts of the good qualities of his canine, for he knows his neighbor has one equally as good.

A few weeks ago on my trip to central Wyoming I had the pleasure of hunting by railroad, using the locomotive of a regular train to flush the birds. In that country, the common grouse and sage hen mostly inhabit, the latter largely predominating. On this trip the conductor, as usual, had his gun aboard, and when the engine would flush a covey the engineer would shut off steam, put on the brakes and stop, while the train crew, passengers and all, would take to the grass after having marked them down. In this way we got, with one gun, enough young birds to supply the families of the entire crew for several days, and to be considered a fair bag in some localities for a two days' hunt. The train went into every station on time, too, and I dare say, my Eastern friends, if you happen out this way, and want to amuse yourself by shooting this kind of game, that same conductor will accommodate you in the same manner and be pleased to have you with him.

I take a hunt every year among the big game and in the wildest country I can find, and am beginning to realize that I have been more of a hunter than I was a sportsman. I am one of those of whom so much has been said and written in recent years concerning the slaughter of buffaloes. And when I look back now to those times, when we killed the game for the paltry amount received for the skins, I am ashamed to think that I had ever been a party to such devastation and the destruction of that magnificent game animal. I have worked by the year on a stipulated salary "and found," to shoot them down merely for the hides, which brought the owner, by the piece, less than \$2 delivered at the trading post 300 miles from camp. If I had the old dried up horns now of those I have helped to slaughter they would bring more than the skins did in those times.

I was a hunter then, but far from being a sportsman. I regret it and shall aspire to be the better in every sense of the word hereafter.

REME.

### New Jersey Game Outlook.

COLT'S NECK, New Jersey, Oct. 2.—The prospects for gunning in this vicinity are about as follows: Squirrels are nearly if not quite as plenty as they were last year. Nearly every one who has hunted for them has succeeded in getting a good-sized bagful.

Owing to the remarkably cold and snowy winter of 1892-93 quail are scarce. But few coveys, and several of them quite small, are to be found in fields where last year were many flocks having goodly numbers. Partridges are represented to be about as plenty as usual off to the south of us, along the edges of the pines and among them, and also in the outlying brush lots.

The number of rabbits, according to nearly all statements, is remarkably large, even more so than last year, although many of the bunnies are yet small. Taking our gunning outlook altogether, we think it is fully up to the average.

A. L. L.

### The Usefulness of Non-Export Laws.

BINGHAMTON, N. Y.—*Editor Forest and Stream:* It is highly gratifying to me to note the growing tendency toward better protection. So many articles have appeared of late bearing on this question that we feel it a fitting time to relate a little of our experience, being in a border county. Until Pennsylvania has a law forbidding the shipping of birds we will not enjoy as much protection as interior counties, for the simple reason that market-hunters are shooting the birds and carrying them over the State line to ship. The northern tier of counties in Pennsylvania are also the sufferers to the extent that a great many market-hunters go there in order to avoid the New York non-shipment law.

Rouse, ye Keystone sportsmen, and get a non-shipment law passed as soon as possible. A little circumstance that has come under our notice goes to show the wisdom of that law. At the beginning of the season two professional pot-hunters from this section packed their sawed-off 10-bores and started for a Western State said to abound with chickens. They went with the avowed intentions of staying until the season closed. What seemed like a very short time, indeed, found them back here loudly boasting that 150 birds were easily bagged by them in a day, but they could not ship the birds. Lots of sport in leaving a field of 75 birds and taking up one where six birds is considered a good day's bag. A non-shipment law was the price of sport in the former instance.

A game protective association containing some of our leading and most influential men has recently been formed here, each member being pledged to do all in his power to uphold the game laws; they also employ a private detective. May we witness as rapid growing sentiment in favor of this branch of protection as we have in the past in respect to spring shooting.

A few days since Mr. George A. Kent, a public-spirited citizen, procured and released about twenty-five English pheasants. Already the hawks have destroyed four of them. Should this come under the notice of any one who knows a remedy or preventive we should be very glad to hear from him. Would not spring be much better time for releasing them?

PROTECTOR.

### Vermont Game.

HIGHGATE, Vt., Oct. 6.—Reports from various sections of northwestern Vermont show that some good bags of ruffed grouse have been made, and in but one locality are gray squirrels to be found. No woodcock excepting an occasional bird. Foxes are fairly plentiful and every frosty morning our hounds are out, and one hunter has already secured half a dozen pelts.

In answer to your Rutland correspondent, we would say that we have for many years studied the habits of many of our game birds, especially the woodcock. Have shot this bird not only in many of our States but also in all of the Canadian Provinces where it is to be found, and re-affirm all that we stated in your issue of Sept. 16; and in conversation with one of our commissioners we understand him to say that in framing the late bird laws they were governed largely by the opinions received from their local taxidermist in Rutland.

Some fine catches of black bass are being almost daily made here in the river, 4 and 5-pounders being taken quite often. Deer have been recently seen in this vicinity.

STANSTEAD.

### Wisconsin Deer.

THE season for hunting deer opened Oct. 1 in Wisconsin, and the grand race was made from this city and other lake towns for the deer fields. Many of the parties will remain out during the entire season. Though the period for hunting deer only opened yesterday a great many men who evidently have no regard for game laws have been on the ground for several days. Well-known men from Superior and Duluth, it is said, in open violation of the law, have slain deer by the score before the season opened. The hunting this year, however, will be very good, as a great many of the deer from the forests of central Wisconsin have been driven north to the lake region by the recent timber fires. Last year in two tiers of counties along the south shore of Lake Superior a conservative estimate of the number of deer slain was 5,000. This year it is expected that the number will be larger. The carcasses of the deer slain bring if sold in the market from \$8 to \$12 each.—*West Superior, Wis., Correspondence Milwaukee Sentinel.*

### Iowa Game Notes.

MATLOCK, Ia., Oct. 3.—The game shooting in the northwestern section of Iowa is good, though perhaps not quite up to our expectations. Both quail and chickens are fairly plentiful, but it has been very dry, making the scent poor, so that no large bags have been made yet. From six to ten chickens or quail is a good half-day's shooting. We have had a couple of fine rains the past week and shooting of all kinds will improve from this on. No ducks have come from the north yet. The few that bred here have mostly been killed. Snipe and plover are scarce owing to the drought. A party living some ten miles from here shot a bald eagle recently, wings measuring some five feet across.

LONGFELLOW.

### Game Near Washington.

WASHINGTON, Oct. 6.—Messrs. Tom Marron, Dick Mills and Bill Lanham took a ten days' cruise in the "Let-the-Bug-Hop," gunning and fishing. Sept. 20 they found rail, or sora, thick, but very small and poor. They were actually so thick that they could be knocked over with poles. Blue-winged teal and mallards were much above the average in numbers for that time of the year. These ducks were, in fact, quite plentiful. A few stiff-tails were also seen. Coot were numerous from Piscataway down. From information obtained it is safe to predict fair quail shooting in those parts. In Otterbach's woods, right back of the "White House" landing, plenty of gray squirrels were found.

BART.

### Iowa Prairie Chickens.

WATERLOO, Ia., Oct. 1.—There are plenty of prairie chickens here, with ducks, a few geese and some wolves.

B.

## Caribou Hunting.

NEW YORK, Oct. 5.—I notice what "Pine Tree" says about caribou in to-day's FOREST AND STREAM. I think that where caribou are hunted much they are the shyest animal on earth and the hardest to approach, only equaled by an old black duck; but when undisturbed they are rather tame and stupid and easily bewildered by the noise of a rifle shot. It is strange they do not seem to mind the sharp report of a rifle, but the roar of a shotgun sends them flying. One trouble with hunting caribou is that they never know when to stop. When once they get started they go for miles and miles and it is useless to attempt to follow them up. They are naturally a very restless animal. Some days you cannot get within sight of them, and on others they will trot up to the sportsman, within a very few yards sometimes, exhibiting the greatest curiosity, but once they get the scent they are off like the wind.

WAKEMAN HOLBERTON.

## Camp-Fire Flickerings.

"That Reminds Me."

Not a Grizzly!

WHEN Pete was about 14 years of age, his father brought him from California a beautiful single, breechloading 12-bore gun, and a couple of dozen burnished brass shells. Pete had dreamed of that gun for months and had become one of the "mighty hunters before the Lord" in his mind, but when he actually grasped the polished stock and rang the glittering shells his joy was unconfined. Over hill and dale he trudged, with a beautiful but unbroken Gordon setter ranging any and everywhere within a half-mile radius, and Jim, his trusty spaniel, at his heels. Chickens were plentiful, but the setter was out for fun and invariably chased them half across the county before his master could get within two gunshots of them. This sort of thing grew to be extremely monotonous, and about all our young sportsman had been able to do was to try his pattern on half the barns in the neighborhood.

As the season rolled along the father found time to take the lad out for a few lessons, and his frequent habit of "wiping the eye" of his son opened the young man's optics to their widest extent.

"Oh, dear!" cried Pete, near the close of one very unprofitable day, "if I could only shoot a grizzly bear or—a rabbit, I'd be happy."

His father soon after told him to tramp along the edge of a stubble field until he came to the field of standing corn at the far side, where he should wait and shoot at any chickens that flew out, as it was the father's intention to go around to another wheat stubble and return that way.

Well, Pete plodded along so hot and thirsty that he did not much care what came out, just so he wouldn't be compelled to run. He reached the corn and sat down, wishing from the bottom of his heart that there was a cool, gushing soda water fountain somewhere near, when he was startled by a whirr of wings and—bang! went the gun before he was fairly on his feet. "Just my luck!" he muttered as he drew the shell, and before he had reloaded the covey was half a mile distant.

Determined to be more alert he cocked his gun and awaited developments. Looking toward the ridge of the plowed field he saw the form of some animal making off to the right and just over the crest of the hill. "Wolf, of course," he thought, so off went the gun once more, and down went the quadruped.

"Whoopee, I've got him!" he shouted, and with an exultant heart up the hill he rushed. But he suddenly halts. What sight is this that fills him with dismay? Where he thought his wolf should be, there lay a mass of glistening white wool. His gun dropped from his hand, and for a moment he stared hard at the motionless object. Fear seized him, and he turned to run but sat down hard instead. He was pale and nervous, but began to think very hard. "Now I have done it; and here comes the farmer too," he exclaimed, as he saw a burly granger coming across the field. "By ginger, I'm in for it, but I didn't know it was a sheep! Wonder if I'd better make a clean breast of it or know nothing about it! Gee whiz, how fast he comes. Won't he be hot, though, when he sees what I've done?"

He tried to look unconcerned as the farmer drew near; and with trembling fingers he inserted another shell just as the man passed him and without a word marched on straight toward the fateful carcass. Pete dared not turn around, but nervously fingered his gunstock. He seemed to feel himself growing old, and a cold shiver went down his back, while a peculiar sensation as if many crawling things were under his hat made him aware of that phenomenon known as the "hair standing on end." He had never been so scared since the time he fell off the windmill and landed in the cherry tree.

What was that farmer doing behind him? What made him take so long to reach that bunch of wool? He had seemed to come across the rest of the wide field so very rapidly, but was it yesterday or last week that he had passed him? Had more than one sheep fallen at that unlucky spot? What if—but why try to think; it was all up with him the minute that sheep was found. His dear father would return and find him dead, his little life stamped out by the angry man whose prize ewe he had slain. How bright life had been to him, and now all was over. Confound it! what made that fellow so still? Why didn't he burst out in a torrent of curses at him? Anything was better than this awful quiet. Perhaps he had seen his mutilated pet, and was even now creeping up behind to strangle him while he sat there unmoved awaiting his doom. Ah, father! He thought he felt his clammy fingers about his throat. Horrible thought! He almost shrieked. But it was only Jim licking his sunburned neck. He turned his head quickly and rose to his feet, his trembling limbs almost refusing to support him. His mouth and eyes vied with each other in the extent to which they opened. What was this thing the farmer held aloft and examined so critically? So long and thin; gray above, snow-white beneath, and ears! O, such ears! Surely not a sheep. He took a step nearer, and the farmer turning to him, said: "Purty consid'able of a jack rabbit you've shot, sonny."

"Ye-yes, sir," was all Pete could reply, as his legs nearly gave way again from sheer joy.

JOHN PEAODY.

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

## A SEPTEMBER OUTING IN CANADA.

"TWO 4-POUNDERS had taken my two lower flies at the very first cast, and it required my utmost efforts to prevent the upper dropper from being seized by a 6 or 7lbs. fish that made desperate efforts to secure it." This was part of a recital by Col. A. L. Light, of Quebec, of some of his experiences in September, 1892, upon the preserves of the Triton Fish and Game Club, situated about midway between Quebec and Lake St. John, and only four hours' journey by rail from the former place. I had long contemplated a visit to this magnificent territory, so extensive in its area, yet so complete a *terra incognita* except to a few guides and to Superintendent Seaton, who within the last two years have explored a few of its woods and waters. And so when Col. Light, in pressing upon me his previous invitation to run up to his splendid preserve, described the pool where he found it necessary to employ his guide in driving away a 6 or 7lbs. fish that was insisting upon impaling himself on his hook despite all his efforts to the contrary, though his tackle and his ingenuity were already taxed to the utmost, I concluded that Triton was a good enough fishing ground for me, and so Saturday, Sept. 28, found me on board the Lake St. John railway train, bound for Skroeder, the nearest station to the preserve.

This territory includes some 160 square miles of virgin wilderness, and when the whole of the immense tract is opened up to civilization it is proposed to extend the membership of the club to 300. The present membership and the list of those who have made application for shares or have visited the tract preparatory to so doing, includes the names of some of the best known and most noted sportsmen both in the United States and Canada. Among them may be mentioned the Rev. Dr. Henry Van Dyke and Mrs. Van Dyke, of the New York Brick Presbyterian Church, who enjoyed splendid sport here a week or two ago; Mr. Eugene McCarthy, of Syracuse, and his friends; Messrs. Dean and Curtis, of New York, who made marvelous catches of trout at Lake Trois Cariboux and elsewhere during their stay of a week on the tract last July, and Mr. James B. Townsend, a well known New York journalist and Secretary of the State League of Republican Clubs, who is also a vice-president of the Triton Club. The president of the club is A. L. Light, Esq., and the secretary and superintendent is Wm. C. Seaton, Esq. The position of superintendent of such a preserve is no sinecure, but to a gentleman of the natural and educational refinement of Mr. Seaton, must afford during the summer months a vast amount of the pleasure that is derived from the contemplation of nature's charms when wooed in her innermost recesses. One would naturally suppose from glancing at a map of the territory in question, or from visiting a small portion of the preserve, that years must be consumed in becoming acquainted with its leading topographical features, and in the main this is probably correct. There are, doubtless, hundreds of lakes and connecting streams within the limits of the Triton Tract that no white man has ever yet seen. From fifty to a hundred lakes are already marked and designated on the club map, apart from rivers, rapids, ponds and purling brooks—and this map, which only covers one-third of Mr. Light's territory, and that part most adjacent to the line of railway, is in large part nothing but a blank. Yet there have already been discovered and made accessible to sportsmen by means of well made connecting portages, etc., trout waters to afford ample sport for hundreds of anglers at one and the same time. Several of the lakes are from one to four and even five miles in length, and would accommodate parties containing scores of anglers. The rivers swarm with trout as well as the lakes, and contain a succession of the most beautiful pools. The remarkable catch of Messrs. McCarthy, Curtis and Dean last July was noted in FOREST AND STREAM at the time. The writer enjoyed splendid sport in many of these waters little less than a week ago, and as proof of the size to which the speckled trout run in them, may instance a catch made by Mr. Seaton in his presence, when three fish killed by him in succession and all in the space of twenty minutes in a pool at the head of one of the rapids of the east branch of the Batiscan—the outlet of Lake Traverse—ran from 3 to 4lbs. each. It may interest anglers to know that all these fish, and indeed the majority of those taken of late on the tract, rose to the Parmachenee belle, the second best killing fly having proved to be the professor, though the queen of the water was also well taken, the color of the water, in view of so much recent rain, being very dark. But Mr. Seaton's catch was as nothing compared with one made on Sept. 19, 1892, by Mr. Light in the outlet of Lake Luna, when in the space of one hour, fourteen trout weighing 45lbs. fell to a single rod.

Indications are not wanting of the great profusion of all kinds of game. State Senator Daniel H. McMillan, of Buffalo, succeeded recently in killing three caribou here, and the writer saw the tracks of several upon some of the portages over which he passed. Moose are frequently met with, and ducks, partridges and small fur-bearing animals are plentiful.

In the handwriting of a well-known New York sportsman I found inscribed just within the entrance of the pretty log camp on Lac Trois Cariboux the following appropriate lines: "This camp is like a river of water in a dry place, like the shadow of a great rock in a weary land. God bless the men who built it, and damned be he—with accents loud and deep—whose hand is raised to mar it." Above the entrance is "the sportsman's lucky bone"—a piece of caribou vertebre, with the face of a hunter delineated upon the skull-shaped knob next the spinal cavity. Trois Cariboux is a beautiful lake, containing some richly wooded islets, looking quite ablaze in their glorious livery of crimson and gold, tipped with the burnishing rays of a September sun. But one other lake that I visited struck me as being imbedded among more beautiful surroundings than this. The solitary exception was Lake Stonewall Jackson, a crystal gem set in a framework of magnificent mountains, and producing some of the most gaudy-colored trout seen during our trip.

At Skroeder's Station is a comfortable camp house, and others are to be built at various points throughout the tracts. The portages are for the most part short and easily traveled, our Huron guides, two brothers named Maxime and Maurice Sioui, carrying the birch bark canoes and our tents, baggage and provisions over them. They were equally good in camp and in canoe and are capital cooks. Yet all we paid them was \$1.25 per day each. The waters through which we passed being less turbulent than those of the rivers flowing into Lake St. John, we took but one guide each. He sat and steered in the stern of the canoe and each of us in our own canoe took charge of the bow paddle when traveling, and fished the pools from the same position. Much inconvenience and previous preparation was avoided by taking our canoes, tents and supplies from the club store at Skroeder's Station. As an instance of the facility with which sport may be obtained close at hand, it may be mentioned that we left Skroeder for the bush at 4 P. M. of the day of our arrival there, after lunching upon partridges shot close by, and when we camped at Lake Caribou at 5:30 P. M., had secured more speckled trout than we and our guides could use for supper, although we had made no less than three portages. There is little doubt that the immense number and size of the *fontinalis* in these waters are largely due to the absence of all members of the pike family and even of the large lake trout, the hunge, touladi or *namaycush*, which in many lakes feeds largely upon its smaller, though prettier and far gamer and more toothsome cousin, *Salmo salvelinus*.

Much of mountain, lake, river and forest scenery of the tract, especially at this season of the sere and yellow leaf of the birch, and of the crimson of the sumach and the maple, with the dark green background of fir-clad mountain is beautiful beyond compare. In its condition of virgin wilderness this territory—if natural attractions count for anything—is one of the most delightful of this highly favored northern land.

E. T. D. CHAMBERS.

Quebec, Sept. 30.

## TARPON AT ST. ANDREWS.

Editor Forest and Stream:

Fishing for tarpon with rod and reel being a sport of such comparatively recent origin, there are doubtless many places in which it might be followed, still unknown to the craft, and when found they should naturally reach the piscatorial public through FOREST AND STREAM.

A dozen years ago it was little known, though specimens had occasionally before then been taken with hand-lines. The first of which I ever heard was captured near Mississippi City, on the Gulf of Mexico, by Joseph W. Allen, Esq., now of Nashville, Tenn., who then resided in New Orleans. He had a hand-line out baited for shark, and was fishing with a float in 5 or 6 ft. of water. This was on Sept. 7, 1888, and the fish when taken was 5 ft. Sin long, some of the scales of which with the date of capture he still retains, and the silver part of the scale is undimmed.

This fish is found in its season doubtless in all suitable places along the Gulf coast from Galveston to Charlotte Harbor, and many places will yet be developed to add to the pleasure of the fraternity. St. Andrews Bay, Florida, is on the northern margin of the Gulf of Mexico, between Pensacola and Apalachicola, and is a most beautiful body of water extending back into the country fifteen or twenty miles, in divisions known as East, West and North Bays. Its width varies from a mile to six or eight miles, and its depth in many parts from 30 to 40 ft. The pass or entrance to the bay is about 15 to 17 ft. deep, consequently vessels of large size do not enter. It may be reached from Pensacola by schooner, generally twice a week, a distance of 100 miles, or by back from Chipley, on the L. & N. R. R., by a delightful drive over level sandy roads through the pine woods. The distance by this route is fifty miles, with good hotel accommodations on the way.

Arrived at the town of St. Andrews, board may be obtained of good quality and at moderate rates. Sailing vessels and rowboats, with good, experienced and safe sailors, are there and at prices entirely reasonable. The town has a population of 300 or 400 and some very good supply stores, two or three churches, but no saloons.

Several visits to this place during the winter season enabled me to ascertain that from May until November the tarpon, or as they are there invariably called, the silver-fish, are present in great numbers. They are destructive to seines and a nuisance to hook fishers when angling for trout or mackerel, as they invariably break their tackle if they touch it. No one had fished for them with rod and reel, and no one of the local fishermen believed they could be so taken. There are several small towns on the bay, and the principal industry of the inhabitants is fishing. Mullet, sea trout, Spanish mackerel, bluefish, pompano, and in fact all the fishes native to Florida waters are most abundant. The snapper banks are twelve or fifteen miles outside the pass, where the water is generally ten or twelve fathoms in depth. Oysters are also plentiful and of excellent quality, and from the vast beds of shells found at several points (in some places 10 or 12 ft. in depth), the prehistoric man must have understood their food value.

About the middle of May, accompanied by A. B. Ewing and John B. Oliffe, a trip to the above place was projected for the express purpose of catching tarpon. So, supplying ourselves with what was supposed to be the regulation tackle we left on the L. & N. R. R. for Chipley, where the cars were exchanged for a hack and after a pleasant trip of 48 hours from home, found ourselves at the town of St. Andrews.

Securing a small sailing vessel and two rowboats, we visited a part of the bay called the Lagoon, a notch in the bay half a mile wide and running back three or four miles, with the water ranging from shallow up to 20 or 30 ft. deep.

Bait was easily obtained, as our sailor with a cast-net could secure enough mullet at two or three throws to last all day. We fished in water 10 or 12 ft. deep, and generally a clean or sandy bottom, with  $\frac{1}{2}$  to  $\frac{1}{4}$  lb. of mullet on the hooks. We had no difficulty in getting strikes, rarely missing a day in having two or three each from tarpon, sometimes hooking one, but oftener having them disgorge the bait, hook and all, after coming up magnificently two or three times. This experience continued during the entire trip of ten days, and we left without the scalp of a single silver fish dangling at our belts.

Many of the fish were apparently over 6 ft. in length, and oftentimes the bait was taken quite close to the boats, of which they did not seem to be in fear. Large numbers

of them were seen every day, as they came to the surface, exposing the dorsal fin and part of their silvery sides.

It seemed difficult to understand why some of the fish were not landed, as our lines, rods and hooks were of the best, but we had to record a failure, and went home limping. Being in Nashville shortly after my return I conferred with Benj. B. Allen, Esq., of that city, who is a first-class fisherman and besides had had experience in capturing tarpon at Charlotte Harbor. Our conclusion was that the snoods used, which were only about 1ft. in length, were too short, permitting the fish after swallowing the bait to sever the unprotected line with his jaws, like scissors; and I think this was correct, as the line was invariably cut or broken not far above the snood.

We arranged to try it again, and on July 24 my son and I, accompanied by Mr. Allen, left for the scene of our former failure, reaching the town of St. Andrews on the bay at 12 M. on the 26th. Early in the morning of the 27th we crossed the bay to Red Fish Point, provided with a small schooner, and a small boat and sailor for each of us. One of the sailors with a cast net easily supplied us with bait. We strung out from 100 to 150yds. apart, and anchored in water 10 or 12ft. deep, but near the margin of a much greater depth. All of us had strikes the first day, and after two or three leaps in the air, the same old result would follow, the bait and hook being thrown out with great force, and once or twice with a noise loud enough to be heard at a distance of 100yds. The experience of the first day was repeated on the 28th except that my son had one hooked so fast as to make his capture appear certain, when the line broke and he was lost. This fish kept leaping in the immediate vicinity at intervals for an hour or two afterward, the snood still hanging from his mouth. The last leap came near throwing the fish into a small boat crossing the bay and rowed by a black boy.

On the next day we continued to get strikes and to lose the fish, until late in the evening, my bait was taken and the line began slowly to pay out. Suddenly a leap from a tarpon not more than 40ft. away, coming straight toward the boat with a snood visible in his mouth, followed by another leap in the same direction, brought him within 10ft. of me, when he turned toward the open bay, and I reeled up my line rapidly until I had a steady pull on him. Meantime, Hawk, my sailor, had thrown over the float attached to the anchor line and made steady and rapid pursuit. I kept up the pull without relaxation (except once or twice when the fish changed direction and came toward me) as strong as I thought the tackle would bear, and after towing me toward the middle of the bay which is here a mile wide, the fish began to show signs of weakening, and it was only a question of time when he would give up entirely. The final act in the contest, that of bringing the fish to gaff and getting it into the boat with safety in water 20 or 30ft. deep required skill, coolness and courage, with a fair share of physical strength, all of which Hawk possessed, so when the fish was led alongside by the line the gaff was passed beneath and beyond it so that by a rapid movement upward and toward the boat the point of the gaff entered on the distant and emerged on the near side, having a firm hold near the heart. This movement was continued and brought the brilliant beauty into the boat. This being the first tarpon ever caught in the bay with rod and reel. Hawk gave vent to his joy in a few fearful yells. Time required, thirty minutes; length 5ft. 3in., and weight 93lbs.

We remained until each of us had caught two tarpon, all about the same size, satisfying ourselves and the natives of the village that it could be done.

The tarpon we caught had probably spawned, as none of them had any roe, and on examination, the contents of the stomach showed crabs as the principal food. One day while waiting for a bite, I had my rod in the holder and was eating a watermelon when my line began to run off slowly; in a flash a monster tarpon leaped within 6 or 8ft. of the boat, splashed my end of the little craft with a shower of salt water, wetting me thoroughly, and by the time I could seize the rod made a frantic leap right over the bow of the boat, so close to Hawk as to touch his clothing; another frantic leap followed, the bait was disgorged and the fish was off. This fish must have been full 7ft. in length and was by odds the widest tarpon I ever saw.

There is an element of danger in tarpon fishing that should not be entirely ignored, for if Hawk had occupied his usual seat in the boat when the fish made its leap he would have been struck squarely and undoubtedly with serious consequences. When the prick of the hook is felt, or possibly when the fish realizes something out of the ordinary course from finding the snood in his mouth, a wild craze seems to beset him and no one knows where he will land or what he will do.

Many would suppose that midsummer in Florida would prove to be insufferably hot; but it was otherwise, the sea breeze being so constant as to make the temperature not only bearable, but most of the time pleasant. At night we had no mosquitoes, nor were we troubled with flies in the day time. We made no effort to take the smaller fish, but pompano, mackerel, etc., were seen in schools around us daily, and fine sport could have been had for the trial. Mullet, which seem to be the reliance for life and growth of all the predaceous fish, are in wonderful abundance, and were it not for the destruction by sharks, tarpon, porpoise, etc., as well as by man, the water would be thick with them. As it is, with all the destructive influences at work, their numbers are simply marvelous.

In fishing for tarpon, disappointments are liable to be met with, as the shark inhabits the same waters with the tarpon, competes with him for the same food, so, when you have a bite there is the delightful uncertainty as to what it is, which in case of tarpon is relieved by the invariable habit of leaping out of the water. The mackerel shark generally gives a leap after being hooked, but always comes up in a side curve and not straight, as does the tarpon. Another and disgusting nuisance is the catfish, which damages the bait and destroys its attractiveness, for the tarpon is fastidious and only takes clean, fresh bait. We killed quite a number of sharks, one of which, caught by me, measured 7ft. 5in. in length.

Should any of your readers desire to try St. Andrews or tarpon or smaller fish, full information can be obtained from Capt. L. M. Ware, who resides there, or I will take pleasure in answering any communication on the matter.

D. B. CLIFFE.

FRANKLIN, Tenn., September.

[As an illustration of the possible danger to be appre-

hended from the leap of the tarpon as noted by Dr. Cliffe, here is an item which was printed in the New York *Sun* last week: "VELASCO, Texas, Oct. 3.—While a seine was being dragged at Cedar Lake Bay yesterday, a tarpon 5 or 6ft. long jumped over the net, striking a negro in the head and killing him instantly. Another negro was stunned by the shock."]

## ANGLING NOTES.

### Autumn Fishing.

SPRING and summer is generally considered the halcyon time of the contemplative angler, and the crisp days of autumn are usually given over to recreations with gun and rifle; but there is a golden time just before the rods are put away for winter, and before the guns are fairly warmed for their innings over stubble, that may be considered as a compromise season, that is as charming as any time during the twelve months, and of which few comparatively in the towns know anything about. The summer visitor to the country has returned to the paved streets and brisk walls, and the counter exodus to brown woods and bare fields under gray skies has not fairly begun. This is glorious, radiant October when the great painter nature inaugurates her annual art exhibition and puts on view her choicest and rarest handiwork. It is the time of Indian summer haze, balmy air, azure skies and when the winds blow from the coast of the God Cautantowit over ripened harvests. June is the angler's month in the northern latitudes, but the poetic angler, and what angler is not poetical in his soul? has a claim upon hazy, lazy, dreamy October, which the gunner must share with him. To be sure, at this season trout and salmon no longer claim the angler's attention, for they have other duties to perform at this time besides rising to the fly, but there are other fish than those of the salmon family that are not attending to family duties; and, after all, what particular difference does it make whether fish bite or not if one can only go fishing in October, when the forests are painted and decked to be admired?

I have a friend who is the most indefatigable fisherman that I know, and he fishes to get fish, and will get up before day dawn and fish all day, and repeat day after day as though he never heard that it's "not all of fishing to fish." He went to Europe and I gave him a letter that procured for him salmon fishing on the Tay in Scotland, belonging to the Count of Paris, and when his fishing was over the veteran Scotch river-keeper said that in all his experience he never before saw a man who would cast a salmon fly with an 18ft. greenheart rod from early morning to dewy eve, without ceasing, and repeat the next day. This friend lives where the beauties of our autumn foliage is unknown, and one year we were fishing for black bass in October when the hills were in a blaze of color, and he put his rod down in the boat and lighted a cigar and seated himself in the bow of the boat as though he had come to a play instead to one of the best black bass lakes in the country. I asked if he were ill but he said, "No; but how can a man fish when there is a boquet-miles long and miles wide spread out here to be admired." At last his poetic nature had risen above his desire to kill fish, and above thoughts about the market price of cotton. We fished that year until the trees were bare, and we did not get any fish to brag about, either. The next year this inveterate black bass fisherman came North in October to go fishing, at a time when black bass are turning their attention to a long winter's dream in the waters of northern New York; but we went to Canada, and as if to show that October bass fishing when the trees are in fancy dress is not to be despised, we caught more bass than ever before in the same length of time.

But autumn fishing does not consist entirely of looking at the scenery, however beautiful and attractive it may be. A few days ago a gentleman came to the town in which I live, and as he had not seen Lake George he desired to see the famous lake, and a friend went there with him, and they decided to do a little autumn fishing. They had but one day and engaged two boatmen at Katskill Bay, Frank Harris and "Warr" Harris. My friend decided to try for pike, called here pickerel, on the grass, and his friend wished for black bass, so went to rock bottom in deep water. One boat got eleven bass and the other fourteen pike. The largest bass weighed 3lbs., and the largest pike 16½lbs., and pike from the cold waters of Lake George at this time of the year are very good to eat, as I can assure any one who doubts it. One example of the actual fish taken in autumn fishing is sufficient, for, as I have intimated, the fish may be omitted entirely without destroying the pleasure of a day's fishing in golden October.

### Fall Fishing.

As a caption to the preceding note I had written "Fall Fishing," when it occurred to me that it meant something entirely different from what I intended, and therefore I changed it to "Autumn Fishing." There was a time when "fall fishing" was practiced in Lake George, and it consisted of baiting a hook with a mass of earth worms, and then waiting out into the lake at the mouth of a brook and casting this ball of worms into the water where it would be taken by young lake trout, locally called "silver trout." This style of fishing is obsolete, and I mention it only to say that the enforcement of the fish laws covering the time of spawning in the lake is alone what has made it obsolete.

A. N. CHENEY.

### Striped Bass off New York City.

NEW YORK, Oct. 4.—Striped bass are running very large off Port Morris at present. James Dineen brought in a string of eleven yesterday, the largest being a beauty of 9lbs. 10oz., measuring 32in. Some good catches have been made near Phillips & Cannon's boat house, foot of East 138th street, varying from 1 to 5lbs., the writer having hooked seven on Monday.

DRIVE.

### The Texas Black Bass Record.

VELASCO, Tex., Oct. 2.—W. M. D. Lee and M. P. Morrissey broke the Sabbath and the black bass fishing record here yesterday, landing 76 in two hours, none under 2lbs., several over 3½. They were taken from a small lake near Velasco.

R. MCC.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## POTOMAC NOTES.

TWO GENTLEMEN well known for their enthusiasm in all matters pertaining to fish and fishing called upon us the other day. Mr. Murray, of the House, to show us a pair of ova taken from the large black bass he caught in the Potomac at White's Ferry, just below where the Monocacy empties its waters into the river. The bass weighed 5½lbs. and is said to be the largest taken from the Potomac this season. The ovarian sacs are 2in. long and filled with well-rounded eggs. Mr. M. thought the fish might be thinking about laying the eggs pretty soon, but after looking up the matter in back numbers of FOREST AND STREAM we concluded that these eggs would be carried over till next spring, and that Mr. M. still remains innocent of having killed a spawning bass.

The other gentleman, Mr. William Sterritt, of Galveston, was with Mr. Murray up the river. They took 15 good bass; besides the 5½lbs. one, one of 2½lbs. was taken. Plenty of bass in the Potomac, these gentlemen say—just go and pull them out.

At McQuade's, Potomac below the Great Falls, a party caught 81 bass during one of the last days of September.

Mr. Sterritt claims that after a siege of muddy water the better is the fishing, and the longer the muddy spell lasts the better. He went up the river after a wet spell this summer and caught a fine lot of good fat fish. Mr. S. believes from what he has observed that the fish feed greedily during the muddy stages of the water.

Mr. Murray and some friends are going to Cedar Creek, lower Potomac, soon for white perch fishing. Great sport is to be had with very light tackle, using hackles and bumble bees.

Mr. Jesse Sarvis, of Washington, came up from Old Point recently with a party of gentlemen, who took the boat at Point Lookout where they had been fishing with great success for what they called salmon trout. We supposed, of course, that they were the black spotted weakfish or salt water trout of that region, but Sterritt holds that from the description Sarvis gives, they were some other fish. At Galveston the plain weakfish are known as sand trout, the spotted form as trout. The best bait for them in Galveston Bay is shrimp. *Fide* Sterritt.

From a newspaper we learn that pompano have been caught recently in the Baltimore harbor, or not far below Baltimore. In the lower Potomac perch and striped bass (rockfish) are thicker than fleas on a dog's back. There is a theory, and a plausible one, for the presence of so many fish in the fresh water and brackish estuaries. It is claimed by some that the butcher of the sea, the bluefish, drives them in.

BART.

### Does Freezing Kill Fish?

Editor Forest and Stream:

A few years ago I wrote you an article under the caption of "Winter Killed Fish," which met with cavil from some persons who affected to speak *ex cathedra*. The position I then took is fully sustained by the results of practical experiments made at New Haven, as set forth in the subjoined statement published recently in the New Haven Register:

A number of live perch were secured and placed in water at the ice manufactory, and the water was put in the process of crystallization. It requires about 40 hours to freeze a cake of ice, and during this time the fish were watched to ascertain the effect of the intense cold which surrounded them. They kept alive and continued to swim in the water until their confines were so narrowed that they had no space in which to move.

The ice in its freezing process begins at the outside and freezes toward the center, so the space in which the fish had their liberty was gradually narrowed down until the fish were incased and the water around them frozen, pinioning them tightly in its fold.

Each fish when the cake was completed was as natural as life, its fins and tail being spread as they were while in the act of swimming. The cake of ice containing the fish was placed on exhibition, and numerous bets involving several hundred dollars were made as to the outcome of the experiment.

The cake was left intact for a day or so and then cut open and the fish taken out and placed in water. They were left for some time, and of the five fishes which were originally put in the cake none of them exhibited a return to life so far as can be definitely determined except one, and whether this one was indeed alive is open to conjecture.

Of course I am pleased to be vindicated by testimony so authentic, and hope you will print.

CHARLES HALLOCK.

### Dynamite is Dangerous.

Editor Forest and Stream:

On Friday, Aug. 18, one David Christian, a day laborer, living one mile east of Lynn, Pa., was killing fish by the use of dynamite, in the deep pools along the Meshoppen creek. Christian fixed his cartridges and lighted the fuse and held it in his hands while waiting for a companion to bunch the fish by splashing stones in the water. Waiting too long, the thing exploded while yet in his hands, blowing both entirely away above the wrists and leaving the flesh from the elbows down hanging in shreds. One eye was blown out and other parts of his body badly burned. The quantity of dynamite used was small, else the man would have been blown to atoms. The following morning both arms were amputated just below the elbows. At present he is out around the neighborhood. The man has a wife and two children now in destitute circumstances.

BON AMI.

### Striped Bass in the Raritan.

PERTH AMBOY, N. J., Oct. 4.—Striped bass have been biting finely in the Raritan River since last Sunday, strings of ten to forty being taken. Snappers of 8 to 11lb. in length are caught in great numbers at the C. R. R. drawbridge.

J. L. K.

### To the World's Fair.

All roads lead to—Chicago; at least they will this summer, and will continue to until next November. But, then, there's a great difference in roads. Some people with time hanging heavily on their hands, and unthoughtful of the comforts and conveniences of travel, may say, "Any road so that we get there." To such we have nothing to say, but address ourselves to the wide-awake business folks who have a true estimate of the commercial value of time, an adequate appreciation of the conveniences of modern methods of travel in their highest development, and are capable of knowing a good thing when they see it. To such is commended the admirable route via the New York Central & Hudson River Railroad. The "Central's" four-track, stone-ballast road-bed, insuring almost perfect smoothness of motion; its superb equipment in most approved and improved rolling stock; its admirable service rendered by trustworthy and obliging attachés; its maximum of speed combined with minimum of risk; its route through so many great centers of population, and so much of scenic attractions; all justify its claim of being the route par excellence to "The White City." Take the New York Central and be happy.—*Adv.*

## "FOREST AND STREAM" AT THE FAIR.

FOREST AND STREAM's nook in the Anglers' Pavilion of the Fisheries Building is a gathering point of people from all parts of the continent who love the woods and streams. It holds a place in their affection, an affection which comes from friendly appreciation and esteem. Sometimes the visitors, gentlemen and ladies, come into the exhibit by twos or threes, and sometimes there is hardly room to hold the large number who enter at one time. Such exclamations as "Why, here's FOREST AND STREAM!" "This is FOREST AND STREAM's exhibit!" "That's FOREST AND STREAM's big fish I told you about!" are common. Then follow chatty reminiscences, pleasantly told, of the good FOREST AND STREAM has brought and brings to them weekly. All have some kindly remembrance. One has been a subscriber ten years, or since it was published, another would not be without it, while others appreciate it for its earnest efforts in game protection, or for the manly sports of land and water, and rod and gun. All praise its high literary excellence, impartiality, justness and ability. Strange as it may seem, there are many ladies who appreciate FOREST AND STREAM too, from the practical standpoint of sportsmanship. That is, they are devotees of the rod or gun themselves. Many more ladies than are known of now indulge in the gentle art of angling. They take outings with husbands or family parties, and enjoy the sports of gun and rod with quite as much or even more zest than the gentlemen do. They display more enthusiasm in their descriptions of fishing or hunting events, seemingly living them over again in the telling. And what were really more lasting and beneficial than the pleasant memories were the color of health on the cheeks, the bright eyes, active minds and elastic step, which they brought with them from the woods and waters.

The visitors come from everywhere. In the past week FOREST AND STREAM's register has addresses of people from Iowa, Ohio, Michigan, Mississippi, Vermont, Missouri, Ontario, Manitoba, Pennsylvania, New York, Kentucky, Michigan, Nebraska, District of Columbia, Wisconsin, New Hampshire, Texas, Alabama, Maryland, Louisiana, Kansas, Florida, Michigan, Massachusetts, Indiana, New Jersey, Dakota, North Carolina, Nova Scotia, Canada, Maine, Rhode Island, California, Connecticut, Minnesota, Delaware, Virginia, Montana, Illinois, British Columbia, Arkansas, Colorado and Oregon. An enumeration of the cities would require too much space, and the names would fill a large part of the paper.

It would be pleasure indeed to mention all the visitors who have called and said pleasant things of FOREST AND STREAM. Space will not permit more than a brief mention of a few of them.

Mr. Edward Brooks, President of the New England Kennel Club, called on Friday, and told of some good fishing he had while in the West. He regretted that the West had not shown more interest in the A. K. C. meeting.

Mr. and Mrs. Robert Mackey and son, of Philadelphia, arrived in Chicago at 11 o'clock Thursday, and called at FOREST AND STREAM's exhibit on the same day.

Mr. J. H. Rushton, famous throughout the land as a maker of canoes, called on Thursday.

Hon. H. S. Haskell and wife, of Derby Line, Va., left their autograph on FOREST AND STREAM's register.

A pleasant talk over beagle prospects was had with Mr. G. A. Buckstaff, of Oshkosh, Wis., President of the N. W. Beagle Club, during the short time he remained in the exhibit.

Fishing formed a charming topic of conversation during the stay of Mr. Charles W. Walker, of Fairmont, W. Va. He mentioned that Mr. W. H. Hall, of the same town, had assured him that catfish in a stream thereabouts would take the fly. I mentioned this incident to Col. Lough, who is something of a fish gladiator, and he treated it as being commonplace. "Why," said he, "down in Arkansas there is a stream in which the catfish will rise regularly to the fly, and they practice rising when there aren't any, so that they can rise correctly when there are flies. Those catfish, too, sometimes rise on a fence and mew." I presume there must be yeast in those waters.

Mr. C. H. Birdsall, of Scranton, Pa., admires FOREST AND STREAM, of which he is a regular reader, for the great work it has done and is doing in the cause of game protection. Its wisdom, he says, was shown in its warnings, many years ago, of the extermination of the buffalo, and in its energetic efforts to save the noble animals from destruction.

Messrs. J. Thompson and J. P. Anderson, of Carberry, Manitoba, reported an abundant moose crop near Selkirk, and that several had been seen near Carberry. They admired FOREST AND STREAM's energy and enterprise.

Messrs. S. C. Pirie and J. T. Pirie, Jr., of Brooklyn, N. Y., were enthusiastic in their appreciation of FOREST AND STREAM. They admired the numerous pictures. Their remarks showed that they keenly appreciated the beautiful in nature and the higher requirements of sportsmanship. The enlarged photograph of a dog on point claimed their special attention and recalled pleasant reminiscences.

Mr. Hough has many admirers every day, but were he a good modern dog man I feel sure he would have more of them. His ideas that a setter should hunt birds industriously and point them for the hunter to shoot are behind the times. I note the following on the register, Sept. 29: "J. B. Evans, Steubenville, O. To the FOREST AND STREAM, the sportsman's journal: Sorry not to have met Mr. Hough. His letters to FOREST AND STREAM are all." There seems to be a current of opinion, about 3,000 miles wide, that Mr. Hough is a writer of the first flight.

Mr. Frederick R. Shattuck, Jr., of Boston, made a short visit on Thursday, Sept. 29.

Mr. Claude E. Mellen, of Dallas, Tex., is full of enthusiasm over a prospective hunting trip through Texas on his way to California next December. He takes six months each year for hunting. He thought of purchasing a launch at the World's Fair and going to Florida for the winter, but changed his mind. His love for the rod and gun never, he says, diminishes.

Mr. Waldo F. Kennard, of Boston, recently arrived from the Old World, where he has been wandering for the better part of two years, called in one day and was anxious to get back numbers of FOREST AND STREAM for three or four weeks. In Italy and England he had

seen much shooting, his last experience in England afield being battue shooting, of which he had not a favorable impression as compared with sport with dog and gun. He was contemplating shooting over a spaniel in the future when after birds.

Dr. Heber Bishop, of Boston, of Megantic Club fame, left his autograph on the register.

Mr. H. Olsen, Adlesund, Norway, showed an interest in FOREST AND STREAM by calling and leaving his autograph.

Mr. A. F. Young, Escanaba, Mich., patriarchal in appearance but as sprightly of mind and full of enthusiasm in his devotion to rod and reel as a youngster, made us several calls, in which he reeled off most delightful reminiscences of fishing.

Mr. E. Wilder and wife, of Red Wing, Minn., specially admired the big tarpon caught by Mrs. Geo. T. Staggs, said tarpon apparently having a world-wide reputation, inasmuch as the people from all parts of the world, who stop and gaze upon its long stretch of 7 ft. 3 in., as it lies across the back of the case which incloses it, seem to have heard of it before. The winters of eighty years have whitened the beard of Mr. Wilder, but he was as erect, alert and active in mind as a youngster of twenty. He, too, was a tarpon fisherman, and he had a charming way of relating his experiences and describing the habits of the fish and manner of taking them. He is one of the men who bring sunshine with them.

Mr. A. C. Shallenberger, of Alma, Neb., stopped twice at the exhibit, and in his pleasant manner, discussed the events of the day.

The big tarpon caught by Mrs. Staggs, had a witness in Mr. Jas. M. Raleigh, of St. Augustine, Fla., who left his autograph on the register. He knew of it by personal observation at the time of the battle, if I remember his description of the occurrence correctly.

Mr. F. H. Beall, of Linwood, N. C., discussed the field trial prospects. He will start a dog or two in one or two of the field trials. The writer is the recipient of a kind invitation, to shoot with him in December after the trials. He says he has only a dozen dogs or so.

Mr. Chas. Kinney and wife, of Columbus, Ohio, whiled away some short moments by relating incidents of Mrs. Staggs' prowess with rod and reel. They had been at the fishing resorts in the North, where Mrs. Staggs, too, had sojourned. Mrs. Kinney described her as being perfectly fearless of the biggest fish or roughest water, and her skill in manipulating the rod and reel was that of the finished expert.

Mr. E. S. Nowotny, of Odell, Ill., member of the executive committee of the A. F. T. C., talked for a few minutes about field trials and shooting. The chicken crop, he said, was very meagre, and made still more so by illegal shooting. The dry summer checked the growth of vegetation so much, that the wheat stubbles have no weeds. Consequently, all the shooting is in corn. A dog is useless save as a retriever. Mr. Nowotny thinks of moving to Oregon or Washington.

Mr. W. H. H. Comstock, of New London, Conn., put his autograph on the register and mentioned incidentally that he had taken the paper ever since it was published. It took him some moments to realize that I was a dog man in the Fisheries Building.

These are but a few of the names. More next week.

### FIXTURES.

#### DOG SHOWS.

Nov. 21 to 24.—New Jersey K. L. at Newark. Dr. W. F. Seidler, Sec. Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

#### FIELD TRIALS.

Oct. 23.—Brunswick Fur Club field trials, at North Acton, Mass. Bradford S. Turpin, Dorchester, Mass., Sec'y.  
Oct. 30.—National Beagle Club trials, at Nannet, N. Y. Geo. Laick, Tarrytown, N. Y., Secretary.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—New England Beagle Club trials. W. S. Clark, Linden, Mass., Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lellingier, Sec'y.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

## THE OTTAWA SHOW.

[From a Special Correspondent.]

OTTAWA, Sept. 6.—*Editor Forest and Stream:* The fifth annual dog show held in connection with the Central Canada Fair was not the success it has been in other times, owing, no doubt, to the want of proper advertising. The number of entries was not as large and the quality not as good. Mr. Geddes was superintendent and he was ably assisted by the committee, H. Kirby, chairman, F. H. Cunningham, W. H. Middleton, L. N. Bate, F. P. Robson, Dr. S. Davidson, A. J. Grant, F. McLean and J. Walters. W. G. Gilpin was the vet. and attended strictly to his duties. The building was well lighted and ventilated, with a large yard for exercising. Spratts food was used, with Sanitas for disinfecting. The place was kept neat and clean, at all times free from bad odors. J. Otis Fellows, of Hornellsville, judged all classes and his awards gave satisfaction as a general thing, but, of course, the chronic grumbler is not dead yet. The judge's work was rendered quite easy, owing to the perfect arrangement by secretary and superintendent, Mr. Alfred Geddes, ably assisted by the stewards. The catalogue showed 136 dogs, with a few absent.

Among the visiting fanciers I noticed Messrs. A. A. MacDonald, F. Lyndon and John Bennett, Toronto; C. H. Corbett, Kingston; Philip Hart, Belleville; F. S. Wetherall, Compton; W. J. Tulk, Hamilton.

MASTIFFS.—Only two were shown. Attraction, first in challenge class, is not at all attractive, light eye, and fiddle headed, a very fair mover, but how he ever got in the challenge class is a mystery. Grimsby Caution, first in dogs, although a small dog, is much better than the challenge class winner; light eye, head and expression good; mask too light and wrinkle wanting, a good moving little dog.

ROUGH ST. BERNARDS brought out two dogs. Lord Aberdeen absent, let Sir John have a walkover; he is a black, brindle and white, nearly black but still he does show some brindle; shown much too light; which makes him appear more leggy than if shown with more flesh; light in head,

weak in muzzle, ear too large, marking and expression good, and a nice mover. Bitches (5), Miss Benmore absent; Mr. Philip Hart's Queen Vic first, fairly smothered her opponents; she has a grand body, color and markings good, fine mover, but too light in head. Maypole, second, bad in head and very leggy. Stiva, third, not right in head, shown heavy in whelp, should have been left at home. Bridget, c., bad in head, short in body very common.

GREYHOUNDS.—Dogs (8). Lord Torrington, first, a very nice headed dog, eye too full, mouth not level, does not stand just right in front, bone rather light, neck and feet good, body fair, loin not right, quarter fair, lacks in second thigh, has been sick and was shown too thin. Justinian was beaten by age for first, all gone in mouth, showing age. Edgewood, third, common in head, snipy muzzle, skull round and heavy, good neck, shoulders loaded, good bone and front, a little weak in pasterns, good body and outline, also loin, quarter fair, lacks in second thigh. Bitches (5). Jetsam, first, shown too fat and soft; she is gray and mouth gone, a good bitch that should be retired now before she is beaten by age. Bed of Stone, second, small, nice outline, fair head and neck, front good, shoulders getting thick, bone feet and chest good, rather flat sided, does not stand over enough ground, hocks too high, quarter fair. Meda, third, like her brother is common in head, neck, front and shoulders good, weak in pastern, body and loin good, quarters fair, lacks in second thigh. Galatea, vhc., is not nearly as good as when shown at Kingston, 1890. Pee Dee Qu, c., is light and common all through.

DEERHOUNDS.—Prince first, the only entry; a big common dog, badly overshot; should live on the seashore, as his mouth is just right to scoop clams out of the shell.

BEAGLES.—Dogs (2). Bob Krueger, first, is quite a good little dog, muzzle light and skull too round, ears a bit short, good body, feet and legs, coat scant, but good texture, stern carried like his sire's, rather too gaily. Friar Tuck, second, is not so good in head, ear too short, light in bone and high on leg, stern bad, coat scant and soft. Bitches—Effie, first, is too toyish, head fair, very cobby, good body, chest and coat, nice ear well hung.

GREAT DANES.—Minerva's Fawn, alone in challenge class, is well known; she was shown in splendid condition. Dogs, open class (3)—Royal Minor, first, is dish-faced and lacks character in head, neck too heavy, wide in front, good bone, feet too long, body good, but too long cast, stern carried too gaily; a nice mover. Royal Major, second, better in head than the first prize winner, but has same faults, and is very thrifty, better bone, front and feet, but light in body and not deep enough in brisket, stern coarse. Rex, third, is very common all over, just an Uncle Tom's Cabin dog. Bitches—Ruth, first, head a good type, very thrifty, short in neck and wide in front, good bone, fair body; shown too fat. Juna, second, small and light all through, but a fair type. Melina, third, is weak in head, heavy ear, lacks quality.

ENGLISH SETTERS.—Lady Howard, first, is very small, but quite a good one.

IRISH SETTERS.—Dogs—Toronto Jim, first; his head lacks Irish type, ear too heavy, coat not right and feather scant; small, but quite a good one back of the head, but a trifle long cast. Bitches—Madcap II., first, is a little out at elbows and ribs not well sprung. She beats Mollie, second, in coat, color, expression, bone and feet. Madcap was shown in beautiful shape, while Mollie acted sick, dull and listless. It was impossible for her handler to get a move on her, although he showed her for all she was worth. Her head is best, but plain, her feet not right and tail short.

GORDON SETTERS.—Mount Royal Wanda first, a nicely formed one; good coat and markings, but too round in body. Floss, second, tan is too light; has good head, legs and feet. Both are fine, stylish movers.

IRISH WATER SPANIELS.—Only one shown, Dan Rice, first, a little heavy in head, coat very fair; body, feet, legs and stern fair, topknot lacking.

CLUMBERS were not the fine lot usually shown in Ottawa. Darby, first in challenge class, is better in coat than at Toronto. His head is not right, in fact, none are right now. Quester, first in dogs, I thought much better than the Toronto winner, Rake II. Quester is light in eye and he is not large enough; coat and condition excellent. Grouse, third, is high on leg, eye light, weak in head, color good, ear well shaped, bone and feet fair; coat too open.

FIELD SPANIELS.—Queen, first in challenge bitches, a good, well built bitch; good head, legs and feet; ears well set, but not shown in good condition. Open dogs, Corktown Cupid first; head and muzzle fair; ears good; length, but set too high; loin good, but too short coupled for a field spaniel; throaty, good bone, feet bad, too wide in front. Nig, second, has a cocker head; he is small, but a good mover, just the kind that could win a few years ago in the cocker class; long and low; not right in front, bone good, feet open, coat harsh. Workman, third, is good in head and ear; not right in muzzle, a grand body. Bitches—Dot Smirle is neither a field nor cocker spaniel, but wins in both classes; a nice mover; coat and condition good; a bit flat-sided and short in coupling. bone good, feet open, ears of good length and well set on. Mona, second, shows cocker type; rather short in ear, good bone, but crooked in front and feet open; coat, loin and body good.

COCKERS.—The well-known and often described Red Roland won; he was looking well but appears coarse. Open dogs, Chancellor, first, is too full in eye and is undershot, ears short but well set, skull too wide, too wide in front, feet open, a nice mover, loin not yet well developed. Roy and Ajax I could not find on bench when taking notes, but I remember that Ajax was a field spaniel pure and simple. Bitches, Doris, first, was shown quite heavy in whelp, and would not move well; too long and wedgy in head, skull not right, ears well set, but too short, bone and feet good, coat a bit harsh, a little flat-sided and not clean-throated. Raven Cryo, second, muzzle weak, ears short, too long in head, bone good, feet open, loin fair, well ribbed, a bad mover. Carrie, vhc., ears too short, muzzle and skull good but too heavy, expression bad, crooked in front, body and loin good; a very fair bitch but rather small. Rideau Reine, third, is a very good one, but shown much too fat; muzzle, skull, ears and eyes good, also bone, body, loin and action; feet open. Dogs, other than black—Red Obo, first, is a fine little cocker, a bit small, but of great quality, nice in head and eye, a bit undershot, too wide in front, feet open, loin and body good, a cobby little cocker and a nice mover. Hamilton Jack, second, is wide in skull and weak in muzzle, bone light, nice eye and ear; body and loin good. Sunlight, third, an active little dog, muzzle wrong, undershot, skull and ear good, also bone and feet, loin light, quarters good, eye too full. Red Justice, vhc., good in body, bone and loin, a workmanlike dog, head too heavy but expression good, undershot, a nice mover. Red Star, vhc., is poor in head and bad behind. Russet, hc., weak in head and high on leg. Bitches, other than black—Rideau Robina, first, too long in head, ears not set right nor long enough, front and bone good, ribs well sprung, feet open, loin good. Raglan Russet, second, skull well made, but heavy, weak muzzle or pinched in face; expression, bone and feet good, body fair, quarters good. Tonita, third, an old-style liver and white with nicely chiseled head, good front, feet and bone, just a little high on leg, loin and body good. Hamilton Jill, hc., too head and too small. Capet, hc., muzzle snipy, eye too prominent, body and bone fair. Gypsy Queen, hc., weak in head and short in ear. Selling class—Rideau Rhea, first, has head of a field spaniel type, ears very good, eyes and expression fine, bad in front, but a fair mover. Mollie, second, muzzle not right, elbows out, eye and ear good, set fair, loin good.

COLLIES.—Jack first; head coarse and ears not well carried, body too long and chest shallow, loin fair and coat of good

texture. Homer, second, is not a good type; coat soft and no undercoat, he is leggy, stern well carried. Bruce, third, is not at all a good one. In bitches Anchairnie Judie won first; quite a good type with a fair head, body and loin good, overcoat of good texture, but no undercoat. Otterburn Lassie, second, not at all a good one.

**BULLDOGS.**—Lady Winnie, first, is not a showy bitch, she is well out at elbows, is plain in face, body and legs fair.

**BULL-TERRIERS.**—Slick, first, has butterfly nose, is thick in skull and weak in jaw, stands on good legs, bone and loin good, stern carried too gayly and is sandpapered too much. The well-known Vesper Bell was alone and won in bitches; she is quite a good one.

**FOX-TERRIERS.**—Hemton Trump won in challenge class; he is a bit coarse, but a good one that has been greatly underrated; he also won special for best smooth fox-terrier. Tom Tom, first, has good coat, legs and feet, but his ears are heavy and skull thick, shoulders bad. Tallyho, second, is a nicely marked, stylish little dog, mouth not level, body and coat quite good, a very stylish dog. Calchas, third, is quite thick in skull and heavy in shoulders, but still a fair dog. In bitches Stardale Belle was first; a nice little bitch, but weak in face, eye too full, ears good, mouth not level, wide in front, bone light, a good mover, body, coat and loin good. Vixie second; mouth not level, skull thick, ears well carried, but heavy, body and loin good, feet open, coat of good texture, an active, stylish terrier. Policy, third, not level-jawed, head not right, heavy in ear, coat soft, body and loin good. Cambridge Girl is very common.

In wire-hairs Undercliff Cornet won; coat good but too much of it, a large dog with good head and jaw, bone and feet good. Compton Venom, second, is a good puppy, not deep enough in chest nor just right in front, good coat, bone and shoulders. He was closely pressed by Dark Eye, who loses in front and hocks, his ears, coat and expression being good. Tunderbox, he, not right in front and head. Compton Bruiser is round in skull and light in body, his ears are not right. Marksman is not a good one in any particular. In bitches Bonet won first, ears not well carried, muzzle light, also light in bone, loin and body good, quarters fair.

**IRISH TERRIERS.**—Carleton Blarney, first, is much too large and a bit light in bone, head rather heavy, but he has a good front and expression, he is a little too long cast, and ribs could be better sprung. Carleton Pat, second, is also too large, and his head is heavy, coat good, front and body good. Canadian Ambassador, not improved on his Elmiria form, is of good size, but he is weak in muzzle and thick in skull, good bone and front, feet not just right, ear too large. Jack, vhc., is light in bone and wide in front, weak in head, elbows out, good in body, coat and loin. Jack, he, a bad "un." Bitches: Ballymoney, first, is a very good type, she is a bit cheeky, and head is not just right, front and feet good, bone a little small, body very good, coat all gone but texture good. Bissie, second, should have changed places with Biddy Flynn third, but both lack in type and character.

**SCOTCH TERRIERS.**—Only one shown, Compton Belle, 1st, quite a good little bitch, but not a flyer.

**BLACK AND TAN TERRIERS.**—Stadacoma, first, is too large, and his skull is heavy; feet, bone, body and loin good, stern a little coarse, tan smutty and markings poor. Vortex, second, is worse than the first prize winner in size, skull too wide, stands good in front, but feet are bad, body and bone fair, rather long cast and stern coarse, tan smutty, markings bad. Darkie, third, uncropped, ears large enough for boat sails, Roman-nosed, but head is really better than the rest of the class, bone good but not just straight in front, well ribbed, stern coarse.

**YORKSHIRE TERRIERS.**—Four entries, but I could not find them when taking notes. They were common. Bitches: Mona, first, won just by a hair, as she showed herself well, she is a bit weak in muzzle, good bone, front, feet and stern. Tan good but lacks thumb marks. Rochelle Majestic is small but neat, she is in whelp and when in the ring appeared soft and listless, teeth not level and eye a bit full, good drop ears, nice front, good bone and feet, but one is a squaw foot, markings first-class.

**TOY SPANIELS.**—In challenge class the well known Toronto Royal Duke was alone and won. In open dogs Blen, first, is a good cobby dog but shown too fat, good in head and markings, ears not well feathered. Bijou, a Blenheim, and Romeo, a Prince Charles, are both too long in muzzle. Bitches: Ruby, also well known, won well over Yum Yum II., who is small and a little pet; her ears lack feather. Sulby Glen III., fair in head and muzzle, good coat and color, but it should not be ticked. The others are all too long in muzzle.

**PUGS.**—Two poor ones shown; first prize withheld and second given to Sport, who is best in body. First in bitches also withheld. Cherub won second; she is not a good one.

**DACHSHUNDS.**—Frida, first, weak in muzzle, wide in skull, body too short, crook not right. Hulda, second, is better than Frida in color and style but has same faults.

**BEDLINGTONS.**—Tibbie, the winner, is not first class, out of coat and what she has is linty; her head is also heavy.

J. OTIS FELLOWS.

#### AWARDS.

**MASTIFFS.**—Challenge—1st, H. Falconer's Attraction.—OPEN—Dogs: W. D. Forbes's Grimby Cauton.

**ST. BERNARDS.**—Dogs: 1st, Fred. Hatch's Sir John. Bitches: 1st, Philip Hart's Queen Vic; 2d, M. M. Fenwick's Maypole; 3d, Mount Royal Kennels' Stiva. Com., Robert McNair's Bridget.

**GREYHOUNDS.**—Dogs: 1st, H. Barker's Lord Torrington; 2d, J. W. Wurtel's Justinian; 3d, L. N. Bate's Edgewood. Bitches: 1st, J. W. Wurtel's Jettie; 2d, Shirley Stewart's Bed of Stone; equal 3d, Hamilton Greyhound Kennels' Tee-Dee-Qu and L. N. Bate's Meda. Very high com., L. N. Bate's Galatea.

**DEERHOUNDS.**—1st, Dr. L. Duhamel's Prince.

**BEAGLES.**—Dogs: 1st and 2d, F. P. Robson's Bob Krueger and Friar Truck. Bitches: 1st, F. P. Robson's Elsie.

**GREAT DANES.**—Challenge—1st, Mount Royal Kennels' Minerva's Fawn.—OPEN—Dogs: 1st, H. Barker's Lord Torrington; 2d, J. W. Wurtel's Justinian; 3d, Jean B. Duhamel's Rex. Bitches: 1st, H. P. Brey's Ruth; 2d, Dr. Hurdman's Juna; 3d, Mount Royal Kennels' Melina.

**IRISH SETTERS.**—1st, W. H. Apted's Toronto Jim. Bitches: 1st, C. H. Corbett's Madcap II.; 2d, Douglas & Chambers's Mollie.

**GORDON SETTERS.**—Bitches: 1st and 2d, Mount Royal Kennels' Mount Royal Wanda and Mount Royal Floss.

**IRISH WATER SPANIELS.**—1st, T. A. Carson's Dan Rice.

**CLUMBER SPANIELS.**—Challenge—1st, G. Bogue Smart's Darby.—OPEN—1st, W. H. Middleton's Queter; 2d, W. A. Fleming's Rake II.; 3d, J. T. Bartram's Grouse.

**FIELD SPANIELS.**—Challenge—1st, J. A. Spracklin's Queen.—OPEN—Dogs: 1st, Cortkown Kennels' Cortkown Cupid; 2d and 3d, J. A. Spracklin's Nig and Workman.—OVER 28LBS.—Bitches: 1st, Cortkown Kennels' Dot Smirle; 2d, J. A. Spracklin's Mona.

**COCKER SPANIELS.**—NOT LESS THAN 18 OR OVER 28LBS.—CHALLENGE—1st, Brant Cocker Kennels' Red Roland.—BLACK—OPEN—Dogs: 1st, Raven Cocker Kennels' Chancellor; 2d, F. H. Cunningham's Ajax; 3d, H. Barker's Bay. Bitches: 1st, Raven Cocker Kennels' Ragsie Rust; 2d, A. Laidlaw's Ragsie Rust; 3d, A. Laidlaw's Ragsie Rust. Very high com., F. H. Cunningham's Corrie.—OTHER THAN BLACK—OPEN—Dogs: 1st, T. McK. Robertson's Red Obo; 2d, T. Clappison's Hamilton Jack; 3d, Raven Cocker Kennels' Sunlight. Very high com., Brant Cocker Kennels' Red Star and F. Flynn's Red Justice. High com., W. B. Palmer's Sturdy, and W. C. Niblett's Russett. Com., H. Quinn's Kip. Bitches: 1st, A. F. Grant's Ragsie Rust; 2d, J. G. Mitchener's Ragsie Rust; 3d, A. Laidlaw's Ragsie Rust. High com., T. Clappison's Hamilton Jack, J. S. Allen's Caper and W. C. Niblett's Gipsy Queen.—SELLING CLASS—1st, Rideau Kennels' Rideau Rhen; 2d, A. Laidlaw's Mollie; 3d, F. H. Cunningham's Ajax.

**COLLIES.**—Dogs: 1st, E. Daubney's Jack; 2d, C. D. Frapp's Homer; 3d, W. G. Larmouth's Bruce. Bitches: 1st, Mount Royal Kennels' Anchairnie Judie; 2d, V. Myrie's Otterburn Lassie.

**BULLDOGS.**—1st, A. D. Stewart's Lady Winnie.

**BULL-TERRIERS.**—Dogs: 1st, B. Guimond's Slick. Bitches: 1st, W. Hamhall's Vesper Bell.

**OX-TERRIERS.**—SMOOTH—CHALLENGE—1st, A. A. Macdonald's

Blenion Trump.—OPEN—Dogs: 1st, Clover Hill Kennels' Tom-Tom; 2d, Brodie & Lyndon's Tail-Ho; 3d, A. A. Macdonald's Calchas. Bitches: 1st, J. C. Bennett's Stardale Belle; 2d, A. A. Macdonald's Vixie; 3d, A. D. Stewart's Policy. High com., Clover Hill Kennels' Cambridge Girl.—SELLING CLASS—1st, Rideau Kennels' Rideau Rosebud.—WIRE-HAIRED—Dogs: 1st and very high com., A. D. Stewart's Undercliff Cornet and Marksman; 2d and high com. (2), Compton Kennels' Compton Venom, Compton Bruiser and Tunder Box; 3d, A. A. Macdonald's Dark Eye. Bitches: 1st, Compton Kennels' Bonnet.

**IRISH TERRIERS.**—Dogs: 1st, L. N. Bate's Carleton Blarney; 2d, A. Geddes's Carleton Pat; 3d, J. B. McLean's The Canadian Ambassador. Very high com., E. Northcote's Jack. High com., E. Kirby's Jack. Bitches: 1st, A. Geddes's Ballymoney; 2d and 3d, R. J. Graveley's Bessie G. and Biddy Flynn.

**SCOTCH TERRIERS.**—1st, Compton Kennels' Compton Belle.

**BLACK AND TAN TERRIERS.**—OPEN—Dogs: 1st, F. McLean's Stadacoma; 2d, J. Walters's Vortex; 3d, Mount Royal Kennels' Darkie. Bitches: 1st, A. Geddes's Mona; 2d, F. McLean's Rochelle Majestic.

**YORKSHIRE TERRIERS.**—Dogs: 1st and 2d, Mrs. J. A. Pitt's Little Pop and Bill Nye. Bitches: 1st and 2d, Mrs. J. A. Pitt's Baby Bunting and Minnie.

**TOY SPANIELS.**—CHALLENGE—1st, A. Trebilcock's Royal Toronto Duke.—OPEN—Dogs: 1st, 2d and 3d, E. Bradford's Blen, Bijou and Romeo. Bitches: 1st, A. Trebilcock's Ruby; 2d, reserve, very high com. and high com., E. Bradford's Yum Yum, Belle, Topsy and Minnie; 3d, J. Gordon's Sulby Glen.

**PUGS.**—Dogs: Equal 2d, M. Bennett's Jack and Sport. Bitches: 2d, H. Falconer's Cherub.

**DACHSHUNDS.**—1st and 2d, C. W. Ricketts's Frida and Hulda.

**MISCELLANEOUS** (Not over 30lbs.).—1st, Mount Royal Kennels' Tibbie.

Special prizes for best: St. Bernard, Queen Bess; greyhound, Jet-sam; cocker, Red Obo; Irish terrier dog, Carleton Blarney; Irish terrier bitch, Ballymoney; black and tan terrier dog, Stadacoma; black and tan terrier bitch, Mona; Yorkshire terrier, Baby Bunting; brace fox-terriers, A. McDonald and Compton Kennels divided; fox-terrier, Blenion Trump.

### MINNEAPOLIS DOG SHOW.

THE first bench show of the Minneapolis Kennel Club, held in connection with the Minneapolis Industrial Exposition, on Oct. 3 to 7, four days, was far from being a success. That it was not can be attributed to the mismanagement which comes from inexperience in bench show matters on the part of those having it in charge. The preliminary arrangements which the secretary had in charge had not received much attention, that is, beyond the mere announcement of the dates and the sending out of a few circulars nothing of an energetic character had been done to secure a good entry. As to the mere routine details of running the show, the same inattention was observed as in other matters. There were no catalogues, thus there were no means of identifying dogs or learning their pedigrees and ownership without the most troublesome inquiry. There was no bulletin board to announce when the judging would begin or what were the winnings of the dogs. There were no books for the judges in which to record their awards. In short, the management was much as it happened and it was most primitive in every detail. Had the show been a large one there would have been inextricable confusion and irritation. No management could well be more inefficient or inattentive to preliminaries.

All information was inclosed between the covers of the secretary's book, a narrow memorandum book of pocket size, modest in cost, which contained merely the owners' names and addresses and the names of their dogs. It served in its way a multiplicity of purposes. It was a reference book for the ring steward, but as it had the names of the dogs without also having their numbers, it was an imperfect reference book for him. The omission was remedied by a dog to dog inquiry for numbers as the classes were brought into the ring.

The same little book served for the judges to record their awards in.

It served, too, for a reference volume for the reporters. In the matter of breeder or pedigree, it was necessary, however, to refer to the original entry forms, which were in a loose pile conveniently at hand. That undignified little book was in demand.

As the records grew with the judging, the little book grew in popularity. It was then needed constantly by the secretary, the ring steward, the judges and the reporters. Sometimes all wanted it at the same time, other times but two or three wanted it. Had the little book been purely informal, for a while at least, would have been purely informal. The little book preserved the formality and the dignity and the usage. It was the keystone. It was all there was between order and chaos.

At other shows, which follow what is considered the proper procedure, there are two special books made out alike for each judge and his steward, that is, a like book for each. Each book contains duplicate lists of the numbers of the competitors in a class. Then the judge and steward have everything in their own hands and can work intelligently, independently and quickly. There is no need of the secretary to be on hand to manage the classes by painful reference to the records. When the judge enters his awards in his book the steward quickly copies them into his own book in duplicate lists. He tears out one list, which at most shows is tacked to the wall in a convenient place for the information of the press or public. Often in addition a bulletin board is placed in the ring. On it the awards and numbers of the dogs are marked as the classes are judged. Thus the judge has uninterrupted possession of his book, the steward has his own book, the public gets the information promptly and systematically, and the secretary is free to attend to the other duties which are in direct connection with other interests of the show. Concentrate all the records and routine business in one little memorandum book, and the book then simply becomes a big monument to awkward management.

There being no catalogue the public had no fixed data to refer to. The floating gossip or what was visible to the eye made to them all the particulars of the show. They were not educated in what makes up a show or what a well conducted show really is.

There were about 75 dogs in the competition, of which the beagles, greyhounds, pointers and setters were the only classes noticeable for merit above the ordinary, and their classes were not well filled. Minneapolis being in the midst of the great game bird section of America ought to have shown a magnificent collection of setters and pointers.

The dogs were benched comfortably on wooden benches in a corner of the first floor of the Exposition Building. Spaces two or three inches wide were left between the boards on the sides and back of the stalls, which greatly relieved the heavy appearance of this benching as compared with the solid board benching commonly used, and it afforded better ventilation and light to the occupants. The show was kept sweet and clean, which was not a difficult matter considering the few dogs and the small space occupied by them. Yet as a mere local show it was quite a fair one.

Mr. John Davidson judged the sporting classes. Mr. Gustav Hansen, of Osceola Mills, Wis., a gentleman famous as a dog breeder and owner, and also as a fish culturist, judged all other classes. *En passant*, it may be mentioned that in the fish exhibit in connection with the exposition, there were many small and large trout which were furnished by Mr. Hansen.

The judges were ready to begin their task on Tuesday, the first day of the show, but the management did not have the classes ready for them; therefore, the judging was postponed to the following day, when it was begun shortly after 10 o'clock A. M. and was finished in the afternoon.

Mr. H. E. McCullough was superintendent. Mr. H. Y. Van Dusen, the secretary, attended to the general management of the show. It is but fair to state that he was most

willing to do all within his power to promote its interests; but, not being familiar with the duties of his office, he did not know what action was necessary or what was required to proceed properly. Running a dog show is not a matter of inspiration. Practical knowledge is as necessary as it is in any other enterprise.

The show had very little advertising, that important matter having been quite neglected too. Some owners, while the show was running, were inquiring as to whether they could then enter their dogs. They could not have easily learned differently. Information on that and kindred subjects had not been properly advertised in the journals specially devoted to dogs, nor had the local press been engaged in publishing the merits of the show. The sportsmen's journals gain the interest of the exhibitors, while the local press has a mission in bringing in the attendance. Yet, with all the inefficiency displayed, the dog show corner proved to be one of the greatest attractions of the exposition.

The club is composed of excellent material. I believe that it can hold a first-class show in Minneapolis, but better management is necessary. The criticism offered hereinbefore is with an intention to point out errors, to the end that the club will know hereafter how to avoid them. They should strive to have a show worthy of the club and the locality. It would be unjust to them and the public to assert that the recent efforts were good, or even the best the members could make. There are kennels in every direction, containing good material for bench show purposes. Out of such abundance it would not seem to be within the power of any one man to make a tiny show.

As many of the classes had but one entry and the others but a few, consequently the actual competition being little, the comments on the dogs will be as brief as possible. There was but one prize in a class. Though ribbons were given out as representing second and third prizes, they were more as reserve and vhc.

**MASTIFFS** had but two competitors, Victor Hugo, a rather leggy specimen, alone in the dog class, and Queen, light in bone and muzzle, alone in the class for bitches.

**ST. BERNARDS** had, compared to the others, well filled classes. There were ten in the open class, and of these there were but three or four which were in the competition, the rest being poor specimens. Major Pendennis, light in muzzle, poor head, undersized, took first. Prince Arthur II., second prize winner, I liked better than the Major. He is a larger dog though inclined to legginess, or rather he is not heavy enough in body, and he moves better. His legs and feet are good and he has good color and markings. The third dog, American Ben Hur, was quite ordinary. Margie Daw had a walkover in the puppy class. There was but one smooth coat, Me Too, a bitch of ordinary quality, and she had no competition.

**GREAT DANES**, six in the dog class, were in quality from fairly good to downright poor. First went to Duke, a dog lacking in symmetry. He does not stand squarely on his legs, nor is he without blemish in his knees. Pluto, a large, brindle, won second. His head is coarse, ears badly cropped, and he shows some throatiness. In bitches Minka, high behind, coarse stern, took first. Dora, a light-boned, ordinary specimen, took second, and Coaxmer II., an inferior specimen, took third. Mr. Hansen sent his fine bitch Nevezel out of the ring, he refusing very properly to allow her to compete under his own judging.

**GREYHOUNDS.**—A good pair were shown in the dog class, Bounce, winner of first, being a well built dog. He was shown too high in flesh. Bruno, Jr., second, was more than an average good specimen. There were two bitches in their class. Innocence, a pretty small bitch, light in bone, took first, second going to Frances Cleveland, an ordinary good bitch. In the puppy class Boston won easily over his two competitors.

**FOXHOUNDS.**—Two puppies, apparently having a bloodhound cross, were the only competitors. They were not noticeable in possessing good quality. Cap was first and Major was second, yet there was very little difference between them. It was said that they were under six months of age.

**POINTERS** had one competitor in the open dog class, Jack, a good small dog. Two bitches appeared in their class, Devonshire Jennie winning easily, though too thin in flesh, from work afraid, to show at her best. She is a symmetrical bitch of muscular development. Lady Bell, second, was too fat, and was lacking in symmetry as compared to her competitor.

**ENGLISH SETTERS.**—There were two out of the four in the open dog class which were really good ones. Count H., first, had the better muscular development and was better in head and front. Monk, second, is a very superior setter also. Sport, third, had a profusion of feather and a good coat. He is quite a handsome, fat dog, but is more after what is considered the Laverack type. Queen Noble II., quite a superior bitch, had a walkover in her class. A symmetrical, well developed puppy, A. C. Furness, had a walkover in its class.

**IRISH SETTERS.** had two, both dogs of superior quality. Peko, better in knees, head, coat, color and muscular development, won over Duke Elcho, Jr. The owner of the latter felt quite indignant at the decision and entered a protest, the data of which was his own opinion.

**GORDON SETTERS** brought out two in the dog class, Highland Kent and Highland Killbride, first and second respectively. The latter is light in bone, but both have merit above the average. There were two competitors in the bitch class, Highland Yula and Highland Nellie, first and second in the order mentioned. The latter is a small bitch. Both are above the average in quality.

**CHESAPEAKE BAY DOGS** had one dog and one bitch in the one class provided. Gabe was first and Juno second. The former was fairly good, the second quite ordinary.

**DACHSHUNDS** had one ordinary bitch, Tressie, which was awarded first. A large dog, Feldmann, of excellent quality, was for exhibition only.

**COCKERS.**—Lady Toots had a walkover.

**FIELD SPANIELS.**—Shamrock had a walkover.

**BEAGLES** had one class. Three good ones competed. The dog, Troop, winner of first, has good bone, type and symmetry. The bitches were a bit light in bone. Mattie was second, Fannie third.

**COLLIES.**—Shep, a rather coarse dog, won first in the dog class. Jim, ordinary in quality, won second. Two competed in the class for bitches. There were two bitches, of which Queen, the first prize winner, was a good one, while Cactus was but fair.

**SKYE TERRIERS** had but one entry, Toodles, which had a walkover.

**PUGS** were very ordinary. Nickey Boy and Judy B. had a walkover in the dog and bitch class respectively.

**BULL-TERRIERS.**—There were two, ill-conditioned, thick set specimens with coarse heads, more of the "business" dog in appearance. Jesse had no competition in the dog class nor Daisy in the bitch class.

**BLenheim and KING CHARLES SPANIELS.**—This class produced the first open unpleasantness of the show. The owner of the two Blenheim spaniels insisted, notwithstanding that the judges and the management ruled against him, that the King Charles and Blenheim spaniels, being of two different breeds, should be in separate classes, notwithstanding that they were put in one class in the premium list. These breeds never have many entries at shows, hence nearly all dog show managements provide but one class for them. The entry fees rarely equal the prize money. It was most unreasonable in the instance cited, to insist on a special class being made for Blenheim spaniel, against the ruling of the management, particularly when said spaniels were required to pay but \$1 entry fee, when the premium lists specifically designated their

class, and more particularly when they were owned by the vice-president of the club. Under the circumstances, the matter looked in exceedingly bad taste, in addition to being wrong. Bentick, the King Charles, was awarded first.

ITALIAN GREYHOUNDS were an ordinary lot. The two dogs were both rather large, Frank winning first, Stanley second. Pink was a walkover, and hardly merited the prize she received.

MISCELLANEOUS CLASS.—There were three competitors in this class, one of which was called a Japanese pug. The other two were Ruby spaniels, owned by the vice-president of the club. Again there was a long wrangle, the arrangement of the class not pleasing Mr. Eastman. The judges and managers held that, as there was no regular class provided for the Ruby spaniels, they would necessarily and properly under the rules compete in the miscellaneous. Mr. Eastman, not being permitted to have his own way, wouldn't play, and took his dogs out of the ring, an act which didn't seem very amiable or dignified or exemplary for the vice-president or any one else to do.

#### THE PRIZE LIST.

MASTIFFS.—Dogs: 1st, A. S. Babcock's Victor Hugo. Bitches: 1st, M. Dwyer's Queen.

ST. BERNARDS.—ROUGH-COATED.—Dogs: 1st, F. A. Ingalls's Major Kendrick; 2d, John S. Barnes's Prince Arthur II.; 3d, Chas. Lovatt's American Ben. Hur. Bitches: 1st, John S. Barnes's Margie Daw.; SMOOTH-COATED.—Bitches: 1st, C. T. Whiting's Me Too.

GREAT DANES.—Dogs: 1st, F. W. Eastman's Duke; 2d, R. Kohlman's Pluto. Bitches: 1st, R. Kohlman's Minka; 2d and 3d, Dr. Kern's Dora and Caxmer.

GREYHOUNDS.—Dogs: 1st, B. H. Barrison's Bounce; 2d, T. Hay's Bruno. Bitches: 1st, N. P. Whiting's Innocence; 2d, Mrs. M. M. de la Barre's Frances Cleveland. Puppies: 1st and 2d, Mrs. M. M. de la Barre's Boston and Minneapolis.

FOXHOUNDS.—1st and 2d, Chas. C. Smith's Cap and Major.

POINTERS.—Dogs: 1st, Mr. Alexander's Jack. Bitches: 1st, Highland Kennels' Devonshire Jennie; 2d, Fred Kleis's Lady Bell.

ENGLISH SETTERS.—Dogs: 1st, L. S. Menkey's Count H.; 2d, J. P. Balsam's Monk; 3d, Joe St. Marie's Sport. Bitches: 1st, Ad. J. Kiofanda's Queen Noble II. Puppies: 1st, Al. C. Anderson's Al. C. Furness.

GORDON SETTERS.—Dogs: 1st and 2d, Highland Kennels' Highland Kent and Highland Kallide. Bitches: 1st, Highland Kennels' Highland Yula and Highland Nellie.

SHESAPEAKE BAY DOGS.—1st and 2d, J. T. Cook's Gabe and Juno.

DACHSHUNDS.—Bitches: 1st, E. Brunhoff's Tressie.

SPANIELS.—COCKERS.—Bitches: 1st, W. C. Browning's Lady Toots. FIELD.—Dogs: 1st, Adam B. Patterson's Shamrock.

BEAGLES.—1st, Percy Vittum's Troop; 2d, R. Wood's Mattie; 3d, Stephens & Wennberg's Fannie.

COLLIES.—Dogs: Chas. Stone's Shep; 2d, C. McV. Tobey's Jim. Bitches: 1st, F. W. Eastman's Queen; 2d, Chas. Stone's Cactus.

SKYE TERRIERS.—1st, E. A. Wheatley's Toodles.

PUGS.—Dogs: 1st, John S. Barnes's Nickey Boy. Bitches: 1st, John S. Barnes's Judy B.

BULL TERRIERS.—Dogs: 1st, F. W. Eastman's Jesse. Bitches: 1st, F. W. Eastman's Daisy.

ITALIAN GREYHOUNDS.—Dogs: 1st, James J. Koehn's Frank; 2d, A. H. Upsell's Stanley. Bitches: 1st, A. H. Upsell's Pink.

B. WATERS.

#### Danbury Dog Show.

[Special Report.]

THE dog show given last week by the Danbury Agricultural Society in connection with their fair, was the twelfth annual, and as American Kennel Club recognition had been secured, it was of greater importance than usual. For years past, the exhibition has been one of the most important of the fall fixtures, and though Providence with a more liberal premium list and Mr. Comstock's influence, combined with a popular superintendent in John Read, outdid it this year, still the wise policy of Mr. Geo. Sears (manager of the department) in gaining A. K. C. recognition, insured a good show. The best specimens from Providence and about all the first class dogs from Mount Holly came on, so in point of quality it must have excelled the Canadian events and it certainly maintained its position.

To secure a circuit of such shows in the autumn in the Eastern States is highly desirable, and though in many cases the winnings cannot exceed expenses, exhibitors are willing to do their share in view of the benefit to kennel interests. From conversation with those present, it would seem that the managers of such shows ought to understand that on their part some system and adherence to the A. K. C. rules are necessary, as well as competent judges, because of the greater importance of the winnings, if not for other reasons. If these matters are overlooked for any length of time, there will soon be many evils demanding remedies and the American Kennel Club will soon have something more tangible than the Western bogus cyclone calling for legislative action.

It must be clear to the Fair authorities that dog shows are of far greater interest to those who visit such affairs than any other similar attraction, and that in comparison poultry shows are far in the rear. This was evident at Providence and Danbury, for sometimes the dog shows were crowded when the poultry only secured a meagre throng. There were about 230 dogs on hand, which were fed on milk and bread under Mr. Lewis Reed's superintendence, and as the handlers present remedied the lack of attendants, by exercising many dogs that were not as well cared for as their own, all went smoothly. Dr. James E. Hair judged the sporting division and James Watson took all other classes, and in remarks on the awards it will be necessary to point out some flagrant errors which may do harm to good specimens, or make it appear from wins at an A. K. C. show, that the winners are really worthy of such distinction, and thus bring contempt upon records and reflect upon the policy of the American Kennel Club. Dr. L. C. Knox carried out the duties of veterinarian with his usual attention and skill, and Mr. Geo. Sears did all in his power to make it a pleasant time for exhibitors. Unfortunately, the catalogue was very incomplete and full of errors, and the A. K. C. Secretary should demand something different in future.

MASTIFFS.—Challenge class, first prize went to Ethel, shown in good condition, and as Kaiser William was the only other specimen on exhibition he also secured a blue ribbon. These dogs are of average merit.

ST. BERNARDS.—The country folk had never before witnessed such a grand exhibit of these dogs as Mr. Fred Schmidt had on hand, and it was at their benches that the crowd gathered. Otos, first in the challenge class, has often been described, and was shown in first class condition. Roland, Jr., first in open dogs, was also looking well; he has not lost any of his activity and beat Lord Walbeck, second, in legs, action and shape of head. Pontiff II, vhc., is a dog of substance, good in color and marks, but too long in head and lacking stop. Milton, unnoticed, was worthy of some attention, for though being orange tawny, which looks black on the head, and therefore worthy of nothing but condemnation in the judge's estimation, he is a sturdy, well-proportioned dog, with character, agility and no very bad point, and as Alton was his grandsire, and there have been many fine St. Bernards of a dark tint, the judge's dread of black was not well founded, and an injustice was done this dog. In bitches a class was made for smooths, Guess Noble taking the blue ribbon in this division, with size, bone and character in her favor. Miss Wrinkles, second, is a white with orange marks, without enough size in head, eyes rather close together, and inferior to the winner in every respect. In roughs El'Orv won, Lady Bountiful second; as the latter has length, height, legs, skull, muzzle, stop and agility in her favor we cannot see wherein a bitch like the one with the

curious name, that is only superior in color, could be justly placed before her, and it was quite interesting to hear the way the judge tried to avoid explaining it to Mr. Schmidt afterward. He had no reason, and it was a great mistake. Of the pups Rollo, a son of Roland, Jr., seemed to have fewer faults, and enough promise to have secured the blue, but he went without notice, and first was given to Veragua, a light orange, with eyes rather close, and a badly carried tail, Donna Maria coming second with lack of character and a light body.

GREAT DANES.—Bismark, a big dark dog of little character and aptly described as a "weed" by one of the Fatherland present, won first. Shult Nero coming second, with some little merit. In bitches, Emilie won over Shult Flora, both being of but moderate worth.

NEWFOUNDLANDS were represented by Rex, a black dog of medium size, fair head and good eye, and hence something of a Newfoundland, and though firsts have been given at larger shows for specimens with very little of the Newfoundland in their composition; this dog only took second. Mr. Reed's Carlo, which the judge gave a prize to last year, was not good enough this time, and another Carlo owned by Mr. J. Walsh, of some little merit, was also sent out without a letter.

GREYHOUNDS.—In the challenge class Pious Pembroke was alone and was looking well. In open dogs the best dog was again sent out of the ring without a letter; this is Cheeky. He is a fawn of unusually grand outline and form, his size is about right, he has a good head, with capital expression, which needs but better carried ears to place beyond a fault, his neck is of good length, strong, set into a good front, showing depth of chest, spring of ribs, oblique shoulders, legs as straight as gun barrels and feet of good shape, well padded, in loin he is well arched, well muscled, in quarters he is also good and he has a well-bent stifle, with plenty of muscle. In fact, he is a superb hound, such as one rarely sees, and if a fault can be found it is in ears (but they do not prevent a dog reaching the game) and, perhaps, in the muscles which unite the hindlegs with the loin, but it does not seem to interfere with his action. Imperator, first, is a well-made dog throughout, but rather bitch-like in size and other respects. Sir Launcelot, second, is the Gem of the Season—Lady Clare saying that has been frequently at the top. The others in this class were Baritone, vhc., and a few ordinary specimens, and little better were those in the bitch and puppy classes.

WOLFHOUND classes were made up of excellent specimens sent from the Searcroft Kennels and were correctly placed. Sowanets, the first dog, is a comparatively new dog; he is white and dark orange in color, symmetrical, strong, well muscled, good in depth of chest, fair in spring of ribs, better than usual in shoulders and legs, he has a powerful neck, long strong head, with capital expression; in feathering he is also good and is one of the best, if not the best, specimens of the breed we have seen in America. Peter the Great, second, though a noted winner, was far below his excellent rival. In the bitch class Flodeyka won over Obrouga, and is a better one in nearly every respect.

POINTERS.—In challenge class Duke of Dexter met Launcelot and won the blue, Glenmorgan being the unfortunate in such company. The open dog class brought forward for first place Rock II., which it was said had not been entered. I Dare came second, with fair quality, and Perry third, of hardly average merit. Dash A. and Royal Dan took vhc., but hardly rank together. The open bitch class was much better, but for some reason no third award was made. Wild Eilly, the first prize winner, is a liver and white of a somewhat racy outline, without enough depth of chest, and plenty of length to loin. Moderation, second, is a lemon and white of the cobby order, of more than average merit throughout, and whose chief fault seems to be a short neck. Countess Vernon, reserve, was below these in most points, and is a liver and white, with dash and style, but hardly enough quality. Kathleen Kent, vhc., needs improvement in pasterns.

ENGLISH SETTERS.—In the challenge class Daisy Foreman was alone, and carries her years well. In open dogs the well-known Glendon came first. He has improved somewhat in loin, which is well muscled and arched, so it cannot be as great a defect as some critics would have it appear. Gary, second, is a dog of strong head, showing pronounced characteristics, but in body and quarters he is not as good as Benzine, reserve. Canadian Lockey, vhc., has seen better days, and would certainly have been higher were it not for weakness behind. In the corresponding bitch class Spectre came first. She was looking fairly well, and is well known. Dorretta, second, might be better in shoulders, and Nora Gladstone, third, is a bright, active bitch, with good chest, loin and quarters fair. Roi Di and Nellie Bondhu both got three letters, but surely it was not difficult to see a fault in one to make a distinction. In the puppy class Daphne was alone, and is quite a promising youngster.

IRISH SETTERS.—These classes contained some very excellent specimens with champion Tim at the head of the challenge dogs. He was shown in excellent form, but there are signs of age not only in his appearance but in his action. Pride of Patsy, reserve, in this class needs a better head to be on an equality with the old champion. In the corresponding bitch class champion Elfreda beat Blarney, Jr., and the award needs no comment. In open dogs Montauk, Jr., took the blue, and in size, shape of head and general conformation beats Jim's Dandy, the second prize winner, he being more rangy perhaps, and certainly stands higher enough on his legs. Chinchquin was given third, but as he lacks chest development, and needs fitting up throughout, as well as a more characteristic head, it is hard to find a reason for an additional prize, and in the interest of the show it may be wise to put such awards in the premium list on future occasions. Clounel, reserve, has good color and coat, but is somewhat leggy. Bantry, hc., is a coarse one, and Gyp needs a general toning up for such company. In the open bitch class first went to Coleraine, the English field trial winner, and she deserved it, for she is a good all-round bitch, more of the cobby than the rangy order, of excellent color, capital legs and feet, ribs well sprung and chest deep enough, quarters in proportion, and well muscled, head of good shape, well moulded, and a true Irish setter eye; if any fault can be spoken of as worthy of mention, it is that she is light in bone, but her quality throughout would seem to call for this tendency. Lady Cleveland was second. She is a trifle light in color, and a plain one far below Coleraine's standard. Mollie got the reserve and is somewhat of the same order. Biddy, vhc., is also but moderately good.

GORDON SETTERS were from two kennels, Dr. Dixon's, and a team from the Mont Kennel, and represented the old type, and a modern Gordon built on more racy lines, and minus the lumber some critics have condemned in this breed. The judge liked the ancient, so Dr. Dixon did best, beating Brillmont—second to Ranger B. at Providence—with Duke of Wellington and Homer S., but being defeated for second place in the bitch class by Fairmont, a young bitch that has a score of four firsts already to her credit.

SPANIELS.—Irish water spaniels and Clumbers were not provided for, and entries did not come in to secure classes. Though field spaniels had three classes there were only two entries, one dog that was sent out without notice and Dainty, the bitch that secured first by default. In cockers the challenge class had Middy and Bambo, and the result was a win for former, shown in excellent condition. In open dogs Branforth Jet secured the blue, with front legs of the dachshund order; favored by a few judges, condemned by a few, and yet sufficiently near the standard concocted for the club from the field spaniel Beatrice to afford an excuse for the award.

Cloudy, Othello and Jay Jay each got vhc., and yet if one is right the others are wrong, according to the field spaniel-cocker standard. In the bitch class Miss Chip got the blue, and as she has been spoken of so glowingly by those who doubtless know what is wanted for the woodcock haunts of America, and have also correct ideas of the true cocker type and the qualities required for ladies' pets, it would be folly to more than hint that it is just as well to have it decided what is really to be expected in the future, for to breed for all those purposes may be found a somewhat difficult undertaking. Woodstock Dora and Corktown Cleo both seem to have had a struggle with this question in their puppyhood, and as a result got a regulation dachshund twist in front, thereby they avoid being taken as shooting, and are nice and small and so suitable for a lady's lap. Both of these took equal second, perhaps as field dogs, because their front legs make them particularly adapted to paw the earth from the furry vermin like the dachshund, or perhaps because they are only somewhat less attractive than the pet spaniel family, certainly not because they could come out of a woodcock haunt, if they got in, or could lift a bird from the ground in retrieving it.

FOXHOUNDS were very much superior to those generally exhibited, and the beagles were well represented by Doctor and Snowflake, though not numerically strong.

FOX TERRIERS.—These classes were well filled, Grouse II. being alone in the challenge class. In the open dog class Poverina secured the blue, but it is a mystery for what, for he could do with a longer head, deeper chest, and there were better terriers in the class besides the better bodied second prize winner Arrandale Mixture; in Searcroft Bourbon c., is a good all around dog, fit to get vhc., if not higher, in the best of company, when other things besides color are looked at, he is rather too heavily marked with black, but color is but ten points, and does not make the terrier. Venio, Jr., vhc., is thick in head. Spot, hc., has a rounded skull, and a poor front, and Fire Tail, c., is well—just a little below the rank of Bourbon that was placed equal, and has been referred to. In fox-terrier bitches, Lady Rosebury secured the blue; she has a round skull. Trim, second, is light in bone, has poor ears and is not strong enough below the eyes; hence if Searcroft Myrtle, unnoticed, had come before the other two, she would be where she will be if she meets them again under a terrier judge, for she is a very promising youngster, with little that can be found fault with. The pups were placed, Searcroft Rachel, first, with full eyes and better head and body than Searcroft Jessie, second, that has not yet filled out. Poverina took a special for the best terrier in the show, but why, is a mystery.

COLLIES.—In the challenge class The Squire, looking well for his years, scored another first. In the open dog class Curzon got the blue, and Royal Monarch came next, giving way because of Curzon's better head; in build the first is light and the second is sturdy, and in coat the second has a slight advantage, though neither is good. Royalston Chief, vhc., has good body and legs, but is thick in head. In the bitch class Highland Floss won. She is a remarkably sweet bitch, with a good head, capital body, legs, feet and coat. Had she a more wideawake than sweet expression, and were the curve out of the end of her tail, few of her breed could surpass her, and it is very doubtful whether she can find her equal in America. Mattie, second, is of quite a different order, and to compare them would be like comparing the fine lady with the servant girl.

BULL TERRIERS.—Starlight had the challenge class to himself. In open dogs Cardona won. This is Frank Dole's latest importation of Gully the Great, and it is a fine dog, good in head, body, and without any more conspicuous fault than being a trifle close to the ground. Topsparkle, second, is faulty in front and his feet are not good, besides he could do with more jaw, or rather it is a bulldog that has this dilated upon, and it is more correct. Topsparkle could be longer and stronger in muzzle, and as Lord Blandford, hc., is not weak in either of these places, and Young Marquis, vhc., is also right in these respects, we should have preferred either of them for second place. The bitch class was divided by weight, thus Kit and Edgewood Fancy II. had to fight for honors, and Kit secured the blue rightly enough. There is not much to choose between them in head, but is better on her feet, less cloddy, stands higher from the ground, and is more bull-terrierlike. She was hardly in the best condition in skin, and Fancy had one of the pads of her foot out, which may account for some little awkwardness. In the light-weight bitches Lady Rochester beat Pearl of Rochester; the latter has the better body of the two, but she loses in head somewhat.

BLACK AND TAN TERRIERS.—The black and tan terrier classes were stronger than usual, for in addition to the Rochelle Kennels' team, Henry Bartow, a new exhibitor, had some capital specimens on exhibition, and as they were placed in order of merit, no remarks are required.

There was but little provision and poor accommodation for pet dogs, yet some very good specimens were on hand. In Yorkshire terriers Mr. Henry Bartow, the new exhibitor, had some capital specimens, and with Phebe, a very promising pup, won first in open as well as puppy class, and in Ursula, second in pups, has a sure winner. The pug classes were quite showy, Bob Ivy and Midget coming in this order in the challenge class, and Attraction and Treasurer being correctly placed in open dogs, but Penrin Boy scarcely got all he deserved in c. In the bitch class it was quite a close thing between Bess and Lady Bonsor.

ITALIAN GREYHOUNDS.—It was to be expected that if the judgemade so glaring an error in English greyhounds he would be at fault in the pet order of the graceful and symmetrical, and such was the case, and it was such a curiously mixed up judging that it will be best to take each dog in order, and afterwards give ideas of how it would have pleased us to see them placed. Vito, first, is a dull fawn, not good in arch of loin and shape of hindquarters, therefore not of excellent symmetry, moderately good in head and other respects. Folly, second, is a rich, dark fawn, the best for color in the class; in symmetry she was almost perfect, in size the best in the show, being smaller than the rest, and in chest and arch of loin distinctly beat Vito. Flossie S., the vhc. dog, is a little apple-headed specimen, without any points worthy of much praise. Trinkets, hc., was the largest of the class, had white on the breast, and was scarcely an average specimen. Souries, also hc., was good in color, symmetry, size, and has a fairly good head, and should have come second to Folly, with Vito third, Flossie S. next and Trinkets last.

The King Charles spaniels were Royal Roy, the well known winner, and Twinkle, a bitch with some very good points, and they were placed in this order.

Schipperkes were fair and dachshunds much below those seen of late at our shows.

#### AWARDS.

MASTIFFS.—CHALLENGE—1st, B. B. Lewis's Ethel.—OPEN—1st, G. E. Sears's Kaiser Wilhelm.

ST. BERNARDS.—CHALLENGE—1st, Fred. Schmitt's Otos.—OPEN—Dogs: 1st, Fred. Schmitt's Roland; 2d, J. S. Miller's Lord Walbeck. Very high com. Thos. M. Burke's Pontiff II. Bitches: 1st, Shult & Thiman's El'Orv; 2d, Fred. Schmitt's Lady Bountiful. SMOOTH—1st, Fred. Schmitt's Guess Noble; 2d, McCarl & Cataneo's Miss Wrinkles. Puppies: 1st, Thos. M. Burke's Veragua; 2d, J. W. Churchill's Countess Melrose.

DEERHOUNDS.—CHALLENGE—1st, Frank F. Dole's Douglass.

GREYHOUNDS.—CHALLENGE—1st, A. W. Purbeck's Lewis Rem buke.—OPEN—Dogs: 1st, D. B. Lemley's Imperator; 2d, Edwin H. Morris's Sir Launcelot. Very high com. Harvey M. Nelson's Baritone High com. Bronx River Kennels' Bronx. Bitches: 1st, A. W. Purbeck's Lady of Northcote; 2d, G. R. R. Hair's Maud. Puppies: 1st and 2d, M. T. Mason's Spouter and Ben Bristol.

NEWFOUNDLANDS.—1st withheld; 2d, John Callhan's Rex.

POINTERS.—CHALLENGE—1st, C. D. Roberts's Duke of Dexter

RES. M. T. Mason's Laurels. — OPEN — Dogs: 1st, C. H. Conell's Rock II.; 2d, A. George's I Dare; 3d, M. T. Mason's Perry. Very high com., G. W. Lovell's Dash A. and Palace Kennels' Royal Dan. Bitches: 1st, G. W. Lovell's Wild Lilly; 2d, J. H. Winslow's Admirer. Reserve and very high com., M. T. Mason's Countess Vernon and Kathleen Kent.

ENGLISH SETTERS. — CHALLENGE — 1st, G. W. Neal's Daisy Foreman. — OPEN — Dogs: 1st, Wilson Fiske's Glennon; 2d, James McGann's Albert's Garry. Reserve, W. C. Downing's Benzine. Very high com., Wild Crow Kennels' Canadian Locksley. Bitches: 1st, Wm. Bryce, Jr.'s Spectre; 2d, Roscroft Kennels' Doretta; 3d, Dr. Littleton's Nora Gladstone. Very high com., M. T. Mason's Roy Di and William Knott's Nellie Bonduh. Puppies: 1st, Roscroft Kennels' Daphne.

IRISH SETTERS. — CHALLENGE — Dogs: 1st and reserve, Seminole Kennels' Ch. Tim and Pride of Patsy. Bitches: 1st, Seminole Kennels' Ch. Elfreda. — OPEN — Dogs: 1st and 2d, Seminole's Montauk, Jr., and Tim's Dandy; 3d, Wm. Knott's Chinchquin. Reserve and high com., L. W. Barnes's Cloumel and Bantry. Bitches: 1st, Mr. Bishop's Coleraine; 2d, Dr. Dixon's Lady Cleveland. Reserve, B. F. Lewis's Mollie. Very high com., Seminole Kennels' Biddy.

GORDON SETTERS. — CHALLENGE — 1st and 2d, Dr. Dixon's Lady Waverly and Duchess of Waverly. — OPEN — Dogs: 1st and 2d, Dr. Dixon's Duke of Wellington and Honer's Reserve, E. H. Morris's Brillmont. Bitches: 1st, reserve, Dr. Dixon's Princess Louise and Katherine; 2d, E. H. Morris's Fairmont. Puppies: 1st, E. H. Morris's Redmont.

FIELD SPANIELS. — Dogs: Prizes withheld. Bitches: 1st, Thomas Turner's Dainty.

COCKER SPANIELS. — CHALLENGE — 1st, Swiss Mountain Kennels' Middy. — OPEN — Dogs: 1st, H. B. Field's Brantfort Jet; 2d and very high com., Swiss Mountain Kennels' Jack of Clubs and Cloudy. Very high com., E. W. Fiske's Jay Jay, and F. F. Dole's Othello. High com., M. T. Mason's Spot Boy. Bitches: 1st and equal second, Swiss Mountain Kennels' Miss Chip and Miss Chub; equal 2d, E. W. Fiske's Corktown Cleo. High com., H. B. Field's Lady Phyllis. Puppies: 1st, Swiss Mountain Kennels' Cloudy.

FOXHOUNDS. — Dogs: Equal 1st, Seminole Kennels' Ranger and R. C. Williams's Commodore; 2d, M. T. Mason's Felix. Bitches: 1st and 2d, M. T. Mason's Fancy and Norah.

BEAGLES. — Dogs: 1st, B. F. Lewis's Doctor. Bitches: 1st, W. H. Childs's Snowflake.

FOX-TERRIERS. — CHALLENGE — Seacroft Kennels' Grouse II. — OPEN — Dogs: 1st, B. F. Lewis's Poverina; 2d, C. D. Purroy's Arrandale Mixture. Very high com., F. F. Dole's Venio, Jr. High com., B. F. Funder's Spot. Com., Seacroft Kennels' Seacroft Bourbon and Mrs. A. L. Churchill's Fire Tail. Bitches: Equal 1st, Turner's Lady Roseberry and H. W. Smith's Sister Janet; 2d, B. F. Lewis's Lansdowne Lady. Puppies: 1st and 2d, Seacroft Kennels' Seacroft Jessie and Seacroft Rachel.

COLLIES. — CHALLENGE — 1st, Seminole Kennels' The Squire. — OPEN — Dogs: 1st and 2d, Seminole Kennels' Royal Monarch and Curzon. Very high com., J. R. Horne's Royalton Chief. Bitches: 1st, Lambert & Stuffle's Highland Floss; 2d, Seminole Kennels' Mattie.

BULLDOGS. — CHALLENGE — 1st, F. F. Dole's Leonidas. — OPEN — Dogs: 1st, Toon & Symond's Romance.

BULL-TERRIERS. — CHALLENGE — 1st, F. F. Dole's Starlight. — OPEN — Dogs: 1st and 2d, F. F. Dole's Cardommo and Topsparkle. Very high com., W. J. Higginson's Duke of Rochester, Mrs. J. N. Henry's Young Marquis. High com., W. J. Higginson's Billy Bulger, Castle Point Kennels' Lord Blandford. Bitches: Equal 1st, Castle Point Kennels' Kit and W. J. Higginson's Lady Rochester; equal 2d, W. J. Higginson's Pearl of Rochester and F. F. Dole's Edgewood Fanny II. Puppies: 1st and 2d, W. J. Higginson's Duke of Rochester and Lady Rochester.

SKYE TERRIERS. — Dogs: 1st, C. A. Shin's Sir Stafford; 2d, Samuel Barr's Sir Thomas.

BLACK AND TAN TERRIERS. — CHALLENGE — 1st, H. T. Foote's Broomfield Madge. — OPEN — Dogs: 1st, H. Bastow's Lord George II.; 2d, Rochelle Kennels' Rochelle Lord. Bitches: 1st, T. Turner's Rosette; 2d, H. Bastow's Ophelia. Very high com., Mr. Brushmeier's Rochelle Silk. High com., Rochelle Kennels' Rochelle Topaz. Puppies: 1st, Rochelle Kennels' Rochelle Lord.

YORKSHIRE TERRIERS. — Dogs: 1st, Rochelle Kennels' Unnamed. Bitches: 1st, H. Bastow's Phebe; 2d, Mr. Foster's Unnamed. Puppies: 1st and 2d, H. Bastow's Phebe and Ursula.

PUGS. — CHALLENGE — 1st, B. F. Lewis's Boby Ivy. Reserve, Seminole Kennels' Midget. — OPEN — Dogs: 1st and 2d, Seminole Kennels' Attraction and Treasurer. Com., J. Bowden's Penrice Boy. Bitches: 1st, M. H. Cryer's Bess; 2d, J. Bowden's Lady Bonsor. Puppies: 1st and 2d, J. Bowden's Flossy B. and Paver.

MISCELLANEOUS. — Equal 1st, Dr. Sherwood's Toom and Jewel; 2d, T. Turner's Scotch Hoyt.

ITALIAN GREYHOUNDS. — 1st and very high com., C. F. Smith's Vito and Flossie; 2d, C. Lohmann's Foley. High com., C. F. Smith's Trinkets and C. Lohmann's Sours.

GREAT DANES. — Dogs: 1st, Bronx River Kennels' Nora; 2d, Palace Kennels' Shult Nevo. Bitches: 1st and 2d, Palace Kennels' Shult Flora and Emilia.

POODLES. — CHALLENGE — 1st, B. F. Lewis's Berri. — OPEN — 1st, B. F. Lewis's Mercer.

SCHIPPERKES. — 1st, 2d and high com., M. T. Mason's Prince, Jr., Flossie and New Yorker.

KING CHARLES SPANIELS. — 1st, E. H. Morris's Royal Roy; 2d, Miss Albert's Trinkle.

IRISH TERRIERS. — Dogs: 1st, T. Wise's Penderick Rae; 2d, B. F. Lewis's Galton. Bitches: 1st, T. Wise, Jr.'s Coleen Rue; 2d, H. O'Connor's Mary Jane. Puppies: 1st, T. Wise, Jr.'s Mickey Rue; 2d, B. F. Lewis's Mick.

DACHSHUNDS. — 1st, 2d and high com., Dr. Motishenbasher's Daches, Nellie and Ruby.

WOLFHOUNDS. — Dogs: 1st and 2d, Seacroft Kennels' Sowanets and Peter the Great. Bitches: 1st and 2d, Seacroft Kennels' Flodeyka and Oubroun.

#### SPECIALS.

Handler having most dogs, Ben Lewis; second, O'Connor. Gordon setter first in open class, Princess Louise. St. Bernard, Altos. Greyhound, Lady of Northcroft. Mastiff, Kaiser William. Newfoundland, Rex. English setter dog in open class, Glennon. Fox-terrier, Poverina. Bulldog, Leonidas. Collie, Curzon. Bull-terrier, Cardona. Cocker spaniel, Brantfort Jet. Irish setter, Montauk, Jr. Greyhound dog, Imperator.

### New England Field Trials.

Editor Forest and Stream:

With your kind permission I would inform the public and especially those having entered and those intending to enter dogs in the New England Field Trials, something concerning the facilities offered at Oxford, where the trials will be held and the ways in which it may be reached. Oxford is situated in the central portion of Massachusetts, and has a population of some 2,600. It is twelve miles from Worcester, on the Norwich division of the New York & New England R. R., and about forty-five miles from Norwich, Conn. Parties from Providence and Fall River change cars at Webster five miles below Oxford, and those coming from Boston and vicinity change at Worcester. An excellent hotel, the Bacon House, will furnish ample accommodations, and the cuisine is excellent. Hotel rates will be \$1.25 per day, for those who stay out the entire trials, and slightly more for transients, who remain only for one or two meals. Barges will meet every train and the fare to and from the grounds will be 25c., 12½c. each way, and this includes cartage of dog also, which are boarded and housed at the club's expense. The entries to our "all age" classes close Oct. 14, and as we have \$400 in cash prizes offered and have at considerable expense secured two of the most competent judges in the country, we anticipate a large entry. I would especially call the attention of dachshund and basset owners to the fact that a class has been provided for these breeds and to urge them to come forward and embrace this first opportunity. I believe, in the history of the world, to publicly test the rabbit hunting abilities of these breeds. Further information regarding the trials as well as entry blanks, running rules, etc., can be obtained of Mr. W. S. Clark, Secretary, Linden, Mass.

F. W. CHAPMAN, President N. E. B. C.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

### United States Field Trials Entries.

SECRETARY P. T. MADISON sends us the list of entries for the U. S. Club Derby, as follows, all having been whelped in 1892:

#### POINTERS.

ALICE LESLIE—E. M. Beale's liver and white bitch (King of Kent—Belle Randolph), June 24.  
RHET—W. J. Wilson's liver and white bitch (Dan—Martha), Aug. 13.

DON—D. P. Ritchey's liver and white dog (Trinket's Coin—Moulton Patti), March 17.

BUD ROGERS—C. G. Stoddard's liver and white dog (King of Kent—Meally IV.), July.

RIDGEVIEW CAVALIER—C. G. Stoddard's liver and white dog (Lad of Kent—Ridgeview Lass), June.

DELMAR—C. G. Stoddard's black and white dog (Osborne Ale—Croxey), May.

KENTZO—H. G. Smith's liver and white dog (King of Kent—Croxill), April 8.

STRIDEAWAY—Geo. E. Gray's liver and white dog (King of Kent—Pearl's Dot), Feb. 14.

VENTURE—F. R. Hitchcock's liver and white bitch (Rip Rap—Lapford Pearl), July 8.

NOT NAMED—Hempstead Farm Kennels' liver and white bitch (Duke of Hessen—Woolton Game), July 27.

NOT NAMED—Hempstead Farm Kennels' liver and white dog (Duke of Hessen—Woolton Game), July 11.

NOT NAMED—Hempstead Farm Kennels' liver and white dog (Duke of Hessen—Woolton Game), July 11.

NOT NAMED—Hempstead Farm Kennels' liver and white dog (Duke of Hessen—Woolton Game), July 11.

HESSEN'S BOY—Louis McGrew's black and white ticked dog (Duke of Hessen—Barnard), Oct. 8.

HOP'S HESSEN—Lewis McGrew's black and white ticked bitch (Duke of Hessen—Barnard), Oct. 8.

KENT'S RUBY—Dr. E. C. Michel's liver and white dog (King of Kent—Zero), Nov. 12.

KENT'S PEARL—Dr. E. C. Michel's black and white bitch (King of Kent—Zero), Nov. 12.

FLY B.—L. W. Blankenbaker's black and white bitch (Buck—Jilt II.), June 4.

PRIDE OF AYONDALE—T. W. Clelland's liver and white bitch (Rush of Lad—Graphic's Pride), Sept. 19.

FRED OF IDSTONE—Idstone Kennels' liver and white dog (Shotmaster—Pearl of Idstone), March 21.

THE TRIAL OF IDSTONE—Idstone Kennels' liver and white dog (Shotmaster—Pearl of Idstone), March 21.

KING OF LYNN—Robert Leslie's lemon and white dog (Tempest—Madge of Naso), March 18.

WRECKER—Charlotteville F. T. Kennels' black and white dog (Rip Rap—Croxie Wise), April.

RIFFLE—Charlotteville F. T. Kennels' black and white bitch (Rip Rap—Croxie Wise), April.

TIP C.—W. B. Stafford's liver and white dog (King of Kent—Keeswick II.), March 12.

KESWICK III.—W. B. Stafford's liver and white bitch (King of Kent—Keeswick II.), March 12.

KENT H.—W. B. Stafford's liver and white dog (King of Kent—Duchess), June 10.

BLACK BEAUTY—A. T. Latta's black bitch (Rex II.—Fanny), March 14.

LULA K.—G. R. Howse's liver and white dog (Ossian—Pearl's Ridge), March 17.

NOT NAMED—B. M. Stephenson's liver and white dog (Tribulation—Lalia), March 17.

NOT NAMED—B. M. Stephenson's liver and white bitch (Tribulation—Lalia), March 17.

#### IRISH SETTERS.

DAKIN—F. E. White's red dog (Finglas—Ruby Glenmore), June.

MAID—F. E. White's red bitch (Duke Elcho—Aurore), June.

#### ENGLISH SETTERS.

GLEAM'S PRIDE—W. W. Newson's black, white and tan dog (Gleam—Pride's Bell), March.

LITTLE SISTER—D. G. Rowland's black, white and tan bitch (Rodgerio—Topsy A.), July 4.

HARRY MANDAN—Jeannette Kennel Club's black, white and tan dog (Jerry Mandan—Lady Pitts), August.

JEANNETTE—Jeannette Kennel Club's black, white and tan bitch (Jerry Mandan—Lady Pitts), August.

ROD'S CLIP—West End Kennels' black, white and tan bitch (Rod's Ace—Rosa Noble), March.

BLUE RIDGE MARK—Blue Ridge Kennels' black, white and tan dog (Gath's Mark—Ollie T.), March.

ALLIE BRYAN—Blue Ridge Kennels' black, white and tan bitch (Dan Gladstone—Belle of Blue Ridge), March.

ANTON—Blue Ridge Kennels' black, white and tan dog (Antonio—Fanny M.), March.

LILLIAN O'B.—Blue Ridge Kennels' black, white and tan bitch (Pegbid—Miss Nelly Y.), March.

ALLEN—Chas. P. Stokes's black, white and tan bitch (Gath's Mark—Ruby's Girl), May.

BESSIE SHARPE—Chas. P. Stokes's black, white and tan bitch (Gath's Hope—Countess Rush), May.

COUNT RODERICK—Charles H. C. Mills's black, white and tan dog (Toledo Blade—Grace M.), July 8.

ROD'S MARK—Greensboro F. T. Kennels' black, white and tan dog (Rodgerio—Mark's Maid), April 29.

MISS HATTIE—E. L. Gilmer's black, white and tan bitch (Gath's Hope—Queen Noble), Jan. 4.

JEFF BROWN—Porter & McGee's black and white dog (Darby T.—Lucretia), July 29.

MARKELL—Chas. F. Field's black, white and tan dog (Antonio—Field's Cossette), July 28.

MISTY MORNING—Chas. F. Field's black, white and tan bitch (Antonio—Field's Cossette), July 28.

MARY EARLY—Capt. Patrick Henry's lemon and white bitch (Gath's Hope—Gladstone's Girl), May 3.

BOUNDLESS—Capt. Patrick Henry's lemon and white dog (Gath's Hope—Gladstone's Girl), May 3.

GLEAM'S SAM—H. J. Smith's chestnut, white and tan dog (Gleam—Scamp S.), Aug. 5.

MAY—A. L. Finney's lemon and white bitch (Gath's Hope—Gladstone's Girl), May 3.

OPEL—Geo. E. Gray's black, white and tan bitch (Count Gladstone—Diamond), July 1.

FUTURITY—Herbert Merriam's black and white bitch (Gath's Mark—Eve), May 10.

SOLITAIRE—F. R. Hitchcock's black, white and tan dog (Roi d'Or—Tory Diamond), Jan. 2.

JE S—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Molly), Sept. 24.

SANDSTONE—F. R. Hitchcock's black, white and tan dog (Count Gladstone—Tory Diamond), July 1.

AMETHYST—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Tory Diamond), July 1.

TOPEZ—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Tory Diamond), July 1.

ROD—F. R. Hitchcock's black, white and tan dog (Roi d'Or—Tory Petrel), June 18.

CALLIE WHITE—Manchester Kennel Co.'s black and white bitch (Gath's Mark—Georgia Bell), March 22.

NELLIE GLADSTONE—Manchester Kennel Co.'s black and white bitch (Dan Gladstone—Queen Novice), May 17.

LIVINGSTONE—J. W. Schriver's black, white and tan dog (Gath's Mark—Cossette), June 3.

DAME DURDEN—Bevan & Moss's black, white and tan bitch (Eugene T.—Dell Rivers), Jan. 16.

LOOKOUT—Bedford & Bryson's lemon and white dog (Fremont—Sue II.), June 10.

FLUKE SKILLMAN—E. C. Payne's blue belton dog (Doctor M.—Fussy), May 2.

JUNO M.—P. B. Mosby's black, white and tan bitch (Eugene T.—Bess of Hatchie), July 23.

IGHTFIELD MUKAT—P. Lorillard, Jr.'s black, white and tan dog (Farfun—Maggie), April 22.

IGHTFIELD ROSALIE—P. Lorillard, Jr.'s orange and white bitch (Fred—Rosa), July 6.

ANTOINETTE—P. Lorillard, Jr.'s black, white and tan bitch (Antonio—Daisy Hunter), Feb. 28.

BERTY—P. Lorillard, Jr.'s lemon and white bitch (Gladstone's Boy—Ruby D.), July 17.

ALMONTA—P. Lorillard, Jr.'s black, white and tan dog (Gloster—Mopsa), Feb. 10.

VELMA—P. Lorillard, Jr.'s black, white and tan bitch (Gloster—Mopsa), Feb. 10.

OPHELIA—P. Lorillard, Jr.'s black, white and tan bitch (Gloster—Mopsa), Feb. 10.

LEONA—P. Lorillard, Jr.'s black, white and tan bitch (Eugene T.—Bess of Hatchie), July 23.

LADY ARAMINTA—P. Lorillard, Jr.'s black, white and tan bitch (Eugene T.—Dell Rivers), Jan. 1.

LONGFELLOW—P. Lorillard, Jr.'s black, white and tan dog (Blade—Maggie Gladstone), Jan. 1.

FANNY RICE—Jackson & Denmark Kennels' black, white and tan bitch (Gladstone's Boy—Manitoba Peggy), May 23.

EARL PALMER—Jackson & Denmark Kennels' black, white and tan dog (Frank Whitley—Dulencia), Jan. 7.

DUKE OF VERAGUA—L. W. Smith's black, white and tan dog (Rodgerio—Fannette), June 1.

NOT NAMED—James H. Trezevant's black and white bitch (Rodgerio—Parepa Rosa), March 1.

DAISY CROFT—Charlotteville F. T. Kennels' lemon and white bitch (Antonio—Daisy Hunter), Feb. 28.

MAY WIN—S. E. Corbett's blue belton and tan bitch (Prince Lucifer—Lady Gladys), April 12.

SCOTT'S WOOD FAUST—W. B. Stafford's blue belton and tan dog (Pembroke's Grouse—Blue Fan), May 1.

BOWDRE—Avent & Thayer Kennels' blue belton and tan dog (Rodgerio—Novelist), March 23.

CIGARETTE—Avent & Thayer Kennels' blue belton and tan bitch (Rodgerio—Norah II.), May 17.

HESTER PRYNE—Avent & Thayer Kennels' blue belton and tan bitch (Rodgerio—Norah II.), May 17.

Topsy's Rob—Avent & Thayer Kennels' blue belton and tan dog (Rodgerio—Topsy A.), July 4.

THALID—Avent & Thayer's blue belton and tan bitch (Val Jean—Lucy A.), March 4.

PRAIRIE LAD—Avent & Thayer's blue belton and tan dog (Val Jean—Zazel), May 15.

SAN ANTONIO—John A. Gude's (agent) blue belton and tan dog (Antonio—Nelly Hope), May 23.

HOPE'S PRIDE—W. A. Hinesley's blue belton and tan dog (Gath's Hope—Lula Hill), Aug. 17.

LORTIE H.—W. A. Hinesley's chestnut, white and tan bitch (Gath's Hope—Lula Hill), Aug. 17.

HOPE'S GLIDE—G. T. Kerr's black and white dog (Gath's Hope—Lady Lit), April 23.

SADIE ROSS—Bob Cooper's black, white and tan bitch (Gath's Hope—Tempest), February.

### Flaps from the Beaver's Tail.

TORONTO, Canada.—It may serve to settle a disputed point when I say that Mr. Stone positively assures me that he was not informed as to the conditions of competition for the Ashmont trophy, but of course he had a general idea of what these conditions were. As far as the bench show committee is concerned, the special was awarded according to the published rules, for which see FOREST AND STREAM of Aug. 12, where Mr. Stone says, "Dr. Perry has kindly donated the Ashmont trophy to be competed for at our coming show, the same being for the best dog in the show and to be judged by Mr. C. H. Mason."

Mr. H. Bedlington's Bedlington terrier Sentinel, a winner of several prizes, has gone to the final "dogs' home." Death was evidently due to a fit.

We are about to lose one of the landmarks of Canadian dogdom in A. A. MacDonald's smooth fox-terrier champion Blenton Trump. He has been sold to Mr. Waterman of Santa Barbara, Cal., and will remain but one month longer in his old home to fill engagements. Any puppies the product of service while in Mr. MacDonald's possession will be eligible to compete for the special prize of \$100 offered by him at the Toronto show of 1894, but of course not afterward.

Mr. Waterman also bought a nice bitch puppy of the Dark Eye—Bonnet litter. H. B. DONOVAN.

### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

M. J. W., Hartford, Conn.—Can you send me the address of any reliable man who has brown French poodles for sale? I want to find some one near New York, where the dogs can be seen. Ans. Write to Hill Hurst Kennels, Wellesley, Mass.

G. E. J., New York.—1. Beagles are considered the best for rabbit hunting, although dachshunds are also used to good purpose. 2. The two parties you mention first are reliable and have good stock; the other we know nothing of but suppose they are all right. 3. If you want to register the beagles you purchase, you can do so by writing to the secretary of the American Kennel Club, 44 Broadway, New York, for blank forms, giving full particulars. The fee is \$1 per dog for registering. 4. Write either to the president, H. L. Kreuder, Nanuet, N. Y., or secretary, Geo. Laich, Tarrytown, N. Y., and they will attend to your election at the next meeting of the National Beagle Club, due notice of which you will find in our Hunting and Coursing column.

J. G. H., Emporia, Kan.—I again address you for help. I am down here in Kansas from Idaho, and want your advice, which I have had several times. I have a well-bred Gladstone bitch 4 mos. old. She is covered with warts—some say the mange, I say warts. The mouth and rectum the worst; if I can cure her I shall take her back to Idaho with my spaniels. Can I cure the ailment, and how? Is it contagious and will my spaniels catch the disease? I keep them separate. She eats well and is improving under the treatment. I am giving Sargent's pills and dressing with carbolic soft soap twice a week. Ans. Dress the dog all over with a mixture of sulphur, oil of tar and cottonseed oil, and give internally the following mixture:

R. Ferri phosph.  
Liq. arsenicalis.....aa 3 i  
Aq. ad.....ss 5 vi  
Mix. Give one tablespoonful twice a day.

### "No Other Paper Could Take Its Place."

FOREST AND STREAM is among the welcome weekly visitors to our rooms. When we were making up our list of papers for the year, one of the readers of FOREST AND STREAM, expressing his desire to have it continued another year, said, "No other paper in the United States could take its place in my estimation." In this part of the country where the rod and gun is used so much, such a periodical is of inestimable value.—Y. M. C. A. (Bath, Me.) Magnet.

### Business.

HOPE, Ind., Sept. 15.—Editor Forest and Stream: I am pleased with my last adv.; will send you another adv. before long. C. A. PARTZEL.

## Hunting and Coursing.

### FIXTURES.

Oct. 17.—Kenmore Club meeting at Goodland, Kan. Frank L. Webster, Sec'y. Entries close Oct. 16.  
Oct. 24.—American Coursing Club. Ira D. Brougher, Sec'y.  
Nov. 7.—The Cowley County Coursing Association, Winfield, Kan. J. R. Ballard, Secretary.

### INTERNATIONAL COURSING MEETING.

ANY one who has an ounce of sporting blood in him must concede that coursing in such a country as that around Huron, S. D., is glorious sport. The plains stretch far away to every point of the compass, and only dotted at wide intervals with little clumps of trees, which shelter some lonely farm home. There is scarcely any wire six miles from town. It is an ideal coursing country, and the Huron Coursing Club must be congratulated upon bringing such an important meeting to a successful conclusion. When we arrived on Monday (Oct. 3) afternoon a number of coursers were already there, Messrs Watson, Williams, Lowe, Van Hummel, Page, Bradbury and others having arrived several days ahead. We had the slipper, John Brett, in our party, so we felt quite indifferent over the slowness of the train or whether it ran off into the prairie somewhere.

Huron is an ambitious town of about 3,000 people, and they seem to be all fond of coursing. Several fine brick business blocks adorn the town. The accommodations at the Depot Hotel are very good and a great improvement on anything of the sort we have ever had at field trials. The town has electric lights, postal delivery, and almost every modern convenience. We speak of this because we wish to bring this place to the favorable notice of coursing men; for if they are seeking a locality to run a meeting off, no better could be found.

The meeting commenced on time, Oct. 3, and was concluded on Friday afternoon. The local interest in the meeting was very keen, and at no similar sporting event have I seen such a crowd and their bearing at all times was orderly. In fact, it could not be otherwise; the hoodlum element was absent, the spectators being chiefly the solid citizens and citizenesses of Huron.

The hares can be seen nearly all the time when running, there being very little grass a foot high. The only trouble is the scarcity of water and the quality of it, and the alkali dust, which at times is rather annoying, creating a thirst which cannot be assuaged. Among those we met who were interested in the coursing besides those mentioned were W. J. Alley, Mr. Allen, A. P. Slocum, Tom Hall, all the way from Merced with three dogs, Banboy, Joe McAuliffe and another; F. B. Coyne, E. H. Mulcaster, C. H. Vinton, J. A. Busfield, A. C. Bradbury, Mr. Charlton and Harry Eller. Of the ladies present we noticed Mrs. Sterling, Mrs. Eller, Miss E. Ingham, Miss K. Fayant, Miss B. Bick and Mrs. G. McEathron.

Throughout the meeting there was nothing to mar the general good feeling among the coursing men, excepting perhaps in the Ramona-Flake course, after which the owner of the latter rather questioned the decision, but there was nothing in it. The last day, after the Touchwood-Princess May course, Judge Williams fined Mr. E. H. Mulcaster \$5 for running into him during the course, as he stated it was the third time he had done so. Mr. Mulcaster handled Messrs. Allen & Rew's dogs. Mr. Mulcaster afterward apologized and the affair ended with the remittal of the fine. Mr. Roger Williams showed conclusively that as a coursing judge there are few to equal him. The riding is hard and at times dangerous in the extreme, on account of the hidden badger holes. One of the judge's horses broke a bone in the pastern, and his two other horses were knocked out by the first day's work.

Mr. Williams is a hard and vigorous rider for a heavy man, and there is no hesitation whatever in giving his decision directly the dogs stop. Another important officer must also be praised. We in New York poked fun at our friend at Closter when it was announced that he would slip. Those who didn't know him thought he couldn't walk it out. All a mistake; he went a bit duckey in his hindlegs the second day, but Friday he was going stronger than ever and was told repeatedly to go slower. Except for the accidents mentioned below, which he could not help, the slipping was well done and gave general satisfaction. The officers of the club did their duty well. There was no undue assumption of authority, they treated every one firmly but kindly while out in the field and thus kept excellent discipline and their lines in almost martial precision. The flag steward was Mr. Clarence Pratt, of Huron, a good rider, and only once did the judge get away from him, in the Fanny and Drytime heat.

Mr. Page, as slip steward, was always there when wanted, and in the language of the dog show, "the rings were well served." The field stewards were Messrs. C. R. Huntly, the president of the Huron Coursing Club, formed in April last; John Longstaff, the secretary and treasurer; E. H. Aplin, John A. Sauer, R. O. Richards and F. B. Coyne, and these also constituted the active members of the club. Mr. J. Herbert Watson was chairman of the committee and the committee itself, for his fellow members did not put in an appearance. Mr. Horatio Nelson, one of the committee, was sick, and his enforced absence must have been a great disappointment to him, as he had a number of dogs entered. Mr. Watson was here, there and everywhere, and attended to the whole business generally. The coursing men owe him a vote of thanks for the trouble he took in the whole affair, and all who know him were pleased to see his plucky efforts at last rewarded by substantial wins. Mr. A. C. Bradbury had his dogs in hand for a month before the meeting out here, and the running of his dogs show that he was not lazy, and he was particularly handicapped by having the two dogs in a course several times, running three out of the four last dogs left in the purse, a capital record. He had Mr. Watson's dogs as well as the Maybrook Kennels'. The fact that H. C. Lowe and Dr. Van Hummel divided the principal honors must be particularly gratifying to them, especially Mr. Lowe, as he bred the winner and runner up, besides Sir Hugo, Ramona and Voltaire; they have kept at the game in spite of every setback, and the result was a popular one.

In the large number of courses run off many of them must of necessity become more or less indistinct to the memory, but there are several that stand out prominently on the mind's tablets. Notably the Van's Peter—Willy Nilly course, where Peter gave such an exhibition of dogged pertinacity and pluck when thoroughly pumped, and killing his hare after all. Then the course between Willis H. and Voltaire was one to remember in years to come. Voltaire always seemed to have the luck to get a hare that gave a long, grueling course.

There is little more to be said when we relate that the occasion of the draw was made quite interesting and spectacular. In the pretty opera house, main floor, covers were laid for 200, but before the performance with the chop sticks a musical entertainment was given, and then the draw took place on the stage, the president opening the slips from the hat. Then followed the supper and the speeches. Mr. Longstaff was the toast master, Mr. E. H. Aplin welcomed the guests on behalf of the city, and Mr. J. Herbert Watson, of New York, responded. The following gentlemen made speeches appropriate to the occasion: Rev. A. S. McGogney, Huron; Dr. Q. Van Hummel, Indianapolis; Wm. Sterling, a lawyer of prominence in the city; C. G. Page, Aurora, Ill., and Basil Hay-

man, Chicago. The coursing cards were well gotten up, accurate and moderate in price.

### TUESDAY.

This the first morning of the meeting dawned clear and frosty, but the sun coming out before we started just dampened the surface of the ground sufficiently to promise good going. A crowd of wagons and horsemen had assembled round the headquarters when a late start was made for a part of the prairie three miles from town. The whole sporting element of the town seemed to have turned out, and there must have been over a hundred teams on the ground. Several ladies followed the sport throughout the day and lent an additional charm to the scene. During the day we had a taste of pretty nearly every kind of weather but rain and snow. Toward afternoon a stiff wind came up which must have been chilling to those compelled to sit in wagons, and it made the tears come to the eyes of those who had to follow the dogs. The crowd was orderly and very different from those at Great Bend judging from reports. Good discipline was kept, the line dressing well nearly all the time. There were several weary tramps during the day, as jacks were not very plentiful, but when found were fairly strong. The judging was well done and so was the slipping, with the exception of one or two of the early ones, which circumstances excused. The courses throughout were never very close, and there was no questioning the correctness of the decisions.

### Columbus Cup.

#### First Round.

LORD NEVERSTILL AND DOVER.—This opening brace was put into slips at 10:12 A. M. A hare was soon up, and the slipper holding the dogs a trifle too long, Lord Neverstill became unruly, finally breaking away and indulging in a short course, losing the hare on the hill. Brought back they were slipped again to a rather weak hare. Neverstill led in the run up, scored, placing Dover, who never let the other in again, the hare getting clear away with Dover, after Lord Neverstill quitted. Dover won.

DICK ALLEY AND DELSARTE.—This brace in slips 11:05. It took a walk of 30 minutes to find puss, and when slipped Delsarte was unsighted, but following Dick Alley he soon sighted, and passing Dick led to the hare and running right in for a good kill in full view of the crowd, beat the other dog pointlessly. Another hare got up before Dick was collared and he killed.

SIR HUGO AND ROYAL CREST.—These were sent off to a good slip, and after a sharp burst Sir Hugo led, and turning with the hare shot in and killed cleverly within 300yds. of the crowd. Sir Hugo won. An unfortunate course for the black dog.

VIOLA AND DRYTIME.—A clever looking brace. Slipped at 12:06 with Drytime leading to the hare a couple of lengths. Drytime held possession for half a mile and then placed Viola. Rapid exchanges followed, till Viola, giving the other the go-by as they turned to the hill, worked puss alone until it sought safety in a friendly earth after a rattling long course. Drytime was outpaced, though she kept to it gamely. Viola won.

FANNY AND RAVEN.—In slips at 1 P. M. Hare soon found and from a good slip Raven led up and did the greater part of the work, working close to the scent and finally clinched her advantage with a good kill. Raven won. Lunch was then in order at 1:40 P. M.

JOE MCAULIFFE AND NANCY were put in slips, but a half an hour's walk ensued before a hare was started. Nancy led to the turn, and placing Joe, a ding-dong exchange followed, in which Nancy showed the cleverer, and working the hare toward the spectators finally ran puss to earth. This was a capital course. Nancy won.

FLYING FANCY AND TOUCHWOOD III.—The bitch led to the turn from a good slip, but falling, Touchwood gained possession, rattled up several points to the fence, where Fanny joined issue and reduced the score one-half, but puss holed or was lost in the corn, leaving Touchwood a good winner of a fast course.

WOODFORD BOY AND WILLIS H.—In slips at 2:38. After two hares had escaped the dogs were slipped to a good one and Willis leading, scored several points, and though the brindle was well placed for a couple of turns Willis always had him well in hand, and bustling his game to the woods puss sought refuge and escaped. Willis H. won and showed himself a smart hound.

LAPLANDER AND GREENSHINE.—In slips at 3:02. This was a one-sided course, Laplander piling a handsome sequence, scarcely allowing the black dog a look in, and after a bruising course of about three miles puss vanished in a hole just in time to save its cotton.

CYCLONE AND BICKER.—In slips at 3:25. A jack was soon up and a burst of half a mile took the dogs from view with little advantage to either; when seen the hare was favoring Bicker; he turned her sharply and placed Cyclone for several exchanges, Bicker being far the smarter of the two in recovery; running over the mound the blue dog was seen to be doing all the work and using his teeth cleverly, never left the result in doubt. Bicker won.

WILL-O'-THE-WISP AND PRINCESS MAY.—In slips at 3:45. In ten minutes a moderate hare was started, and after a short run-up in favor of Will-o'-the-Wisp, Princess May took possession on a strong outside, scored several points, and bearing the hare round ran rather slovenly into her game, killing after a short course. Princess May won.

ST. LAWRENCE AND BAN BOY.—Put in slips at 4:08 Ban Boy acted very meanly, breaking from slips. Caught and tried to repeat when returned. Finally they were sent off in single slips and Ban Boy sighting a hare first shot to the front, while St. Lawrence, being unsighted, held back so that Brett was strung out like a cross roads sign post. To a bad break Ban Boy led several lengths a faltering hare. St. Lawrence having made good his ground tried to kill and coming again he accomplished his object with the help of the other. No course. Slipped again in a much better manner the hare led them a merry dance, neither being able to get on terms at first, till puss favored Ban Boy, he improving the opportunity for several points, and St. Lawrence falling he further increased his score, finally losing puss in a corn patch a half mile from crowd.

RAMONA AND DAZIEL.—At 4:40 slipped to a long run up, Ramona first to score after running even for some time. Placing Daziel hot exchanges followed, but Ramona always having the foot of the other held well to the scent till she lost puss in a corn patch.

WILLY NILLY AND FLAKE.—In slips at 5:03 P. M. A hare was found quickly and from a good slip they were soon on terms of intimacy with puss, and a give and take course ensued, both doing good work, till Willy was unsighted in corn and came back. Flake kept to it and ran some time after her flag went up. A rather unsatisfactory course.

PRINCE CHARLEY AND VAN'S PETER.—This was one of the best courses during the day. Charlie led to the hare and placing Peter neither had any advantage in the exchange work that ensued, puss being pressed hotly all the time. The pace began to tell on Peter and Prince Charlie forging ahead soon ran into puss for an easy kill. Prince Charlie won.

MISS DOLLAR III. AND VOLTAIRE.—This was another good course that must have covered three miles at least. They were sent off at 5:55 to a good hare. In the run up Miss Dollar had the advantage, and bearing the hare back to crowd some smart work on both sides took place. Getting among the wagons it looked all over Miss Dollar's course, but the hare drew right away afterward, led them a buster over the rising ground till, having gone nearly a mile, Miss

Dollar gave it up, leaving Voltaire to carry the hare a couple of miles further, working most of the time.

This finished the card and as it was past 6 P. M. a start was made for town. The wind had died down and a 10 mile drive gave us plenty of time to ruminate on the vastness of this country and the glorious sunset.

### WEDNESDAY.

#### Second Round.

When we pulled up our blinds this morning the weather seemed anything but promising. Heavy clouds hung over head and the air was raw, with a drop or two of rain falling now and then. A start was made for a different part of the prairie where hares were said to be more plentiful, and this was found to be the case. There was a large crowd out to-day. At noon I counted 147 carriages, besides a number of horseback riders, including several ladies. A good deal of the work done was sharp and decisive, hares being plentiful.

No time was lost in getting to business at 10:25, Dover being drawn, owing to a lame shoulder.

VOLTAIRE ran a bye with Little Climber, and was indulged with another long, grueling course.

DELSARTE AND PRINCE CHARLEY.—Put in slips at 10:43. These two were sent after a strong, fast hare at once. Delsarte was the quickest away, but Prince overhauled him and getting up with his game scored and placed Delsarte for some rapid exchanges, Prince having the advantage. The latter turned the hare toward the crowd, and when 100yds. away puss was so hard pressed she ran to earth, and the white flag was raised denoting Prince Charlie's victory.

SIR HUGO AND VIOLA.—In slips at 11. Starting a hare to one side of spectators from a fair slip, Sir Hugo led to the hare. Viola, being unsighted, made a wide circle and lost twenty lengths; but making this up, both dogs worked the hare very prettily. Presently Viola carried puss on alone several lengths ahead of Sir Hugo, who seemed in trouble; but, coming again, he nipped in for possession and killed, bringing a two-mile course to a fitting close. Sir Hugo won.

RAVEN AND NANCY.—In slips 11:25. A hare was soon up, but got a long start before Brett let them out. In the run Nancy had a slight advantage, and turning placed Raven for a wrench; both scored well in subsequent exchanges till, Raven bearing the hare to the left, Nancy shot in and killed handsomely. Nancy won.

TOUCHWOOD III. AND WILLIS H.—In slips 11:40. Slipped shortly after, and Willis proved superior in the run up; the hare ran back through the crowd, Britt handling the dogs very cleverly, for they were quite wild. Willis H. scored and then placed Touchwood, who could not hold his advantage, but bearing the hare to right let Willis in, and he never gave the other dog another chance, but keeping close to the scent the hare dodged back, and Willis working close to the ground nabbed her as she passed and it was all over, and a clever kill was the verdict. Willis H. won.

LAPLANDER AND BICKER.—In slips 11:51, and a hare getting up under the dogs they were sent away on even terms, but the hare turning sharply to right by a fence both dogs were unsighted. Laplander was quickest in sighting and gained twenty-five lengths on his opponent, scoring a capital turn before letting Bicker in. Lap then pressed the other for possession again, handling the game cleverly, scored repeatedly and bringing the hare in front of the crowd killed nicely. Laplander won. This was a very pretty course, most of it in view of the spectators.

PRINCESS MAY AND BAN BOY.—Brett took them in hand at 11:55 and a hare was soon up. Princess led and getting possession held it for several points; placing Ban Boy he reduced the score but falling at the fence he lost sight, besides cutting himself in both forelegs, but nothing daunted he came again and gave the other a go-by, scored and placed Princess, who carried puss to rough grass in a fast course. Then ensued a procession, the hare leading Ban Boy three lengths and Princess some distance behind; this kept up for a mile, when, getting to farmhouse, Princess stopped and the flag went up for Ban Boy. This was a long, bruising course.

RAMONA AND FLAKE.—In slips 12:25. Ramona led from a good slip and turning puss toward the crowd she hustled her so smartly that she took refuge underground, the course ending with most of the work in favor of Ramona. This concluded the second round of the cup ties.

It was now time for lunch and we were all quite ready for it; the air on these prairies must be conducive to good appetites and digestion judging by results. The first round of the

### Columbus Purse.

For dogs beaten in the first round of the cup, was now started at 1:40 P. M.

LORD NEVERSTILL AND DICK ALLEY.—After the slip both dogs were unsighted, Lord Neverstill soon sighted and getting on terms with the game, scored rapidly at first, Dick had now come in to take a hand and was well placed when puss suddenly ran to earth which unluckily for Dick left the verdict in favor of Lord Neverstill.

ROYAL CREST AND MISS DOLLAR III.—In slips 1:50. When game was started it got well ahead of the dogs before Brett let them go and they were unsighted for a short time; Royal Crest got the line first and had it all to himself for several turns and wrenches before Miss Dollar made up her leeway, and reduced the score on a couple of turns. Royal Crest coming again took possession and never giving Miss Dollar a chance, took the hare over the hill and down toward the ravine, Miss Dollar stopping. The dog was seen to be working his hare for a mile or more and ran a strong resolute dog.

DRYTIME AND FANNY.—It had now become very warm and trying to all those engaged in active work and especially so for the dogs. At 2 P. M. they slipped but lost view of the hare at once in the long grass, but catching on shortly, Drytime closed up and turned puss twice before it went through the crowd, seeming to hold the other well in hand. Doing all the work she tried twice to use her teeth; leading Fanny five lengths she hustled bunny over the hill, but the pace told and her bolt was shot. Fanny took possession but finally lost in a cornfield after some good work, but not sufficiently so to wipe out Drytime's score. The latter won.

JOE MCAULIFFE AND FLYING FANCY.—In slips at 2:40. After a capital slip Joe showed in front and put a couple of turns to his credit before placing Fanny, who turning hare, Joe got possession again and shot in for a good kill. Joe McAuliffe won.

WOODFORD BOY AND GREENSHINE.—From a capital slip at 3:20 on a marked hare, Woodford led to the quarry, turned and placing Greenshine several exchanges were indulged in, Greenshine having the best of it till the hare made straight away over rising ground, and was finally lost in corn, Greenshine stopping at the edge. Greenshine won.

CYCLONE AND WILL-O'-THE-WISP.—Found hare at 3:36, and in a short run up Cyclone had the best of it, and one of the prettiest courses of the day followed. Round and round went puss, the dogs alternating at the scent. Will-o'-the-Wisp soon proved smarter in this clever work, Cyclone being too big, and giving him a go-by he never gave Cyclone but one more chance to kill and then he finished the course with a clever death. Will-o'-the-Wisp won.

ST. LAWRENCE AND DAZIEL.—Slipped at 4:31. Daziel dwelling in slips allowed St. Lawrence to get well ahead, when he rolled up a big score, and although Daziel got in for once or twice the issue was never in doubt, even had the white and black dog not made a nice kill. St. Lawrence won.

WILLY NILLY AND VAN'S PETER.—This was expected to be a good course, and they did not disappoint us. In slips at 4:10. In the send-off Van's Peter led and knocked together several points before Willy could get placed. Giving Van's

Peter the go-by he rapidly evened the score and put something to the good before he got unsighted, and gave up, coming back to us. Then Van, though pumped, gave an exhibition of pluck, working the hare alone in a potato patch up and down, back and forth, then out into the open where he turned the hare to Willy, who was looking for it. He flecked, but Van got up to the scut again and nearly ended the course several times unaided. Another turn in the patch and then he shot out and nabbed his game. This was the most determined, plucky course of the meeting on Van's Peter's part. The latter won, of course. This completed the card for the day, seven miles from town.

THURSDAY.

It was raining as we came from breakfast this morning, and the outlook was dreary in the extreme, while the air was far from being warm. About 10 o'clock it cleared, however, and a start was made in the same direction as yesterday. Though few comparatively turned out this morning, by noon there were quite as many as yesterday. A number of ladies on horseback graced the proceedings, to say nothing of a bevy of "schoolmarm's" who came to see the fun in a large wagonette. The stewards kept good order, though toward the finish this evening a lot of young fellows on horseback renounced all authority and followed the courses contrary to rules. With this exception all through the meeting so far the people have been most amenable to the field discipline. The card commenced with the

Columbus Cup—Third Round.

SIR HUGO AND NANCY.—In slips at 11 A. M. Sir Hugo had cut himself pretty badly on the near hindleg but it did not seem to affect him much. Putting fire when the word came and Sir Hugo got a lead of ten lengths. This Nancy closed on the run up but Sir Hugo scored the turn, and placing Nancy she knocked together several points and finished with a good kill, aided by Sir Hugo. Nancy won.

WILLIS H. AND VOLTAIRE.—There was considerable interest in this heat, Willis H. being a local dog. In slips 11:47. A hare was put up at once and the bigger Voltaire led and turned, placing Willis H. for a turn and two wrenches. Taking puss to the crowd, some long grueling runs took place, first one having the advantage, then the other; in a sharp rally Willis H. rolled over, but placed himself again on Voltaire's turn. After working the hare upward of three miles puss saved his fur by dodging into an ear, with Willis close to his scut. Willis H. won a bruising, clever course.

LAPLANDER AND BAN BOY.—This was the only course where there seemed to be room for doubt as to the correctness of the judges' decisions. Ban Boy wore the white collar and my eyes are good for nothing if I didn't see that white collar in front most of the time. They were off with a good slip at 12:06 and Ban Boy scored a turn and two wrenches before Laplander could place. Ban did most of the work in front of the crowd and kept close to the hare the most of the time and finished with a good kill. The red flag went up and Laplander won. Ban Boy had the speed of the other at all points of the game. If Laplander did that work then there must be something in second sight. We may have been mistaken, as Mr. Williams is equally certain of his part and he must know best.

RAMONA AND PRINCE CHARLIE.—These are two very handsome dogs. A hare got up at 12:30 and dogs sent on the journey on equal terms. Ramona proved the speedier and was first to score, placing Prince nicely, who cut the score down and added some for himself. Some rapid work on both sides followed, and Ramona tried for the kill but missed, placing Prince Charlie, who did the rest of the work, finishing with a smart kill. Prince Charlie won.

It was now lunch time, and Mr. E. H. Mulcaster afterward took occasion to sell by auction a draft of pups from his kennel, particulars of which sale will be found elsewhere.

After lunch the

Columbus Purse—Second Round.

was run off, commencing with

LORD NEVERSTILL AND ROYAL CREST.—A move of two or three miles was made to other grounds to get out of the way of wire fences, and at 2:35 the first brace were put in; but this ground would not do and we moved still further out, and they were finally slipped about 3 P. M. The dogs were unruly in slips, Lord Neverstill behaving, as usual, very meanly. Straightened out they broke badly, Lord Neverstill being unsighted, but following Royal Crest, he got up in time to see the black dog turn the hare. Royal Crest always had the foot of the bigger dog and rapidly increased his score, Lord Neverstill getting one or two wrenches in the sharp exchanges. Royal scored several go-bys and finally pressed puss to seek refuge in a hole after a bout of three-quarters of a mile. Royal Crest is a smart performer, works low and close to his game, and has lots of speed at command.

DRYTIME AND JOE MCAULIFFE.—This was New York versus California. Mr. Watson as usual had his dogs follow on in their courses. A hare was found at once, in slips at 3:14. Drytime scored in the run up and turn, and puss coming through the crowd put for the open, Drytime working close up tripped, thus placing Joe for the kill which they managed satisfactorily between them. The hare getting off a few yards and falling. Drytime won.

GREENSHINE AND WILL-O'-THE-WISP.—Game was soon found, but Greenshine was unsighted at start and made a wide detour, letting Will in for first points. Then he joined issue and working the hare through the crowd made several minor points, when the hare put for the rising ground, Greenshine working him all the time till puss holed. Greenshine won.

ST. LAWRENCE AND VAN'S PETER.—In slips at 3:50; getting a hare quickly Van proved the faster in the run up, placing St. Lawrence on the turn for a minor point, but Van's Peter giving him the go-by, worked the hare with little chance for the white and black, finally shooting out and using his teeth to good effect, after a two mile course. This ended second round of the purse.

Columbus Plate—First Round.

DELSARTE (A BYE).—This dog ran a good course and was doing bustling work, as they disappeared over rising ground.

VIOLA AND RAVEN.—In the slip at 4:12. Viola started best, but Raven shot across, made a strong run up and scoring placed Viola, who rattled up several points before they got out of sight over a ridge of grass, running puss to earth and winning handsly enough.

TOUCHWOOD AND BICKER.—Sent off at 4:27 to a fair slip, but Touchwood proved the speedier to the hare by several lengths and turned his hare, keeping well to the scut, and after going a half mile tried for the kill, flecked and then the black was placed, and nearly turned a somersault in his efforts to nab puss. Touchwood then gave him the go-by and killed smartly. Touchwood won.

PRINCESS MAY AND FLAKE.—Put in slips at 5:48 P. M. Princess proved the speedier, and never letting the other dog in tried for the kill, but tripped only; starting out again she nabbed puss this time and was an easy winner.

A match race was then decided, the brace being Mr. J. Herbert Watson's The Judge vs. Dr. Van Hummel's Rhea. The course was oneided, The Judge having the speed of the other, and working his hare well in a burst of half a mile to the corn when he lost.

FRIDAY.

This morning opened bright and clear with a touch of frost. A large number of spectators was expected out to see the finish in the different stakes, and we were not disap-

pointed. During the day it became rather warmer than comfort demanded, but going to the place where we left off last night, about eleven miles from town, rabbits were found in quite sufficient numbers to allow of good coursing and in only one or two cases had the dogs to walk much distance in slips. The crowd was the largest during the meeting, over 600 people watching the sport from wagons and horseback, and they seemed to come from all points of the compass. They were very orderly, too, the field stewards having no trouble at all in keeping the line. It was not necessary to hurry in starting, as we had all the day before us, so that it was 10:56 when the first brace in the closing ties of the cup were put in slips.

Columbus Cup—Fourth Ties.

NANCY AND WILLIS H.—The crowd was much excited over this course, as Willis H., having run so well through the stake, was thought by the Huronites to have a fighting chance for the money. A hare was soon started, and to a good slip Nancy held well to her course, but Willis somehow was unsighted for a few seconds, losing many lengths which he found it hard to make up against so speedy a one as Nancy. The bitch turned smartly and, keeping close up she pressed puss for a couple more points, when Willis now being on terms with the game shot in and turned very handsomely placing Willis for a couple of scores. Nancy coming on the outside tried for the kill, but it resulted in a trip, placing Willis, who accepted the favor and killed too soon to equalize the score. Nancy won.

LAPLANDER AND PRINCE CHARLIE.—In slips 1:10 and getting away from one of Brett's best efforts; both ran as if coupled for some distance till Prince Charlie drew out and getting to puss worked her for several points back and forth, his recovery being marvellous for a dog of his size. The hare nearing Laplander the latter reduced the score a point or two bearing puss toward the crowd, and the hare thinking it too warm in every way made for Jack's Harbor, as the old wife is now called. Prince led the other by a couple of lengths in a long run, but he could not prevent puss from seeking safety in the well. This was a grand course and must have been two miles, both dogs showed their good condition. It now looked, with ordinary luck, all over Prince Charlie's cup.

Final.

NANCY AND PRINCE CHARLIE.—Though, this of course did not follow we might as well close up the cup. In slips at 2:40 P. M. From a capital slip to a quickly found hare Charlie's stride gave him the advantage of the little bitch and L. was first to score, keeping possession for a nice sequence when turning puss abruptly the judge's horse ran right into the dogs, Nancy narrowly escaping death, the horse jumping over her. She lost ground, but nothing daunted, was soon on terms with Charlie and in the sharp work that ensued helped herself to a few points and being cleverly placed made a capital kill. A bruising course and a good deal of it in sight of the crowd. Prince Charlie won the stake and deservedly so. He ran a good greyhound right through, has lots of speed and for a dog of his height works very close to the ground, and is extremely quick in recovery. He is a handsome black and white dog, weight about 60lbs., and can win on the bench so well formed is he, especially from ribs back. Nancy is a smart looking brindle of 46lbs., well put together. There were no freaks at this meeting. Nancy is very quick in recovery and has an even snaky glide that is dangerous to the smartest hare. Laplander and Willis H. are also well made dogs of about 60lbs. weight, all black and seem to know the ways of puss at every point. They are a dangerous brace in any stake, and Huron should be proud that it owns such dogs. Congratulation over, we return to the

Columbus Purse—Second Ties.

ROYAL CREST AND VAN'S PETER.—In slips about 11:25. In a long run from a good slip they ran head and head, but nearing the hare Royal Crest drew out and pressing puss for the turn, followed up his advantage, and keeping close to the scut forced a wrench and placed Peter, who scored, and Royal Crest soon getting possession tried for a kill, went by, but recovering on Peter's place used his teeth effectively for a good kill. A hard course of about 1½ miles. Royal Crest won, and Mr. Watson's stock was high in the market.

DRYTIME AND GREENSHINE.—This course was enough to make any man's heart bleed for poor Drytime. She was put in slips at 11:55 with one leg up—a pad and a toe-nail torn off. There was quite a little walk before puss was found, and this did not improve matters for the bitch. Eventually when slipped the cord broke and Drytime was seen to be running as if she had all her toes and a few others besides, but the slips were fast to her neck. The slip was, barring this, a good one and the hare strong. The cripple led to the hare and keeping possession worked it through the plowed ground, scoring several times, placing Greenshine for a couple of turns and a wrench or two. Then the hare went clean away down to the bottom and was holed. Drytime won, a hard, rough course at any time, but handicapped as she was she showed herself a wonderfully game bitch, and now that she has earned her brackets she should be retired. She is in her fourth season, and Mr. Watson says this will be her last appearance. It was lucky the bitch did win or it would have been declared no course. Mr. Watson owning both dogs left in for the final, they decided.

Royal Crest is a black dog of about 60lbs. weight. He is well made and a clever, improving dog. With more experience he is bound to do even better, for he seemed to get smarter every day, and needed his first day's work to tune him up.

Drytime is a light fawn-colored bitch, and has been seen on the bench, where she won second at Boston a couple of years ago. Royal Crest has also been favorably mentioned at New York.

The Columbus Plate.

First Ties.

DELSARTE AND VIOLA.—In slips at 12:18. A hare was quickly found and from a good slip Delsarte got into her stride the quickest, but Viola followed the judge instead of the hare, and had to make a wide circle before getting up to the other dog again, who meanwhile had been pressing the hare for several points that did him no good. Placing Viola, she soon made good the little contretemps at the start and knocking together a nice sequence, working close to the scut and never giving the hare much leeway, placed Delsarte well, who made the best of his opportunities in some rattling exchanges, when Viola tripped, and before they recovered the hare had a good start, and quite a course ensued before Viola, making no mistake this time, shot in for a clean kill. Viola won with something to spare in a rattling course of over a mile.

TOUCHWOOD II. AND PRINCESS MAY.—Sent off to a good slip Princess led to the hare over the rising ground and turned to Touchwood, who got in a couple of good turns, then placed Princess who pressed Jack so hotly that he was fain compelled to go straight away for Jack's Harbor, when he disappeared as Princess's jaws were closed on his cotton. The flag went up for Princess May.

A match race was then run off between Maybrook Kennels' Miss Dollar III. and Dr. Van Hummel's Black Bess, in which, after a pumping course, Miss Dollar was declared the winner, both dogs going out of sight of crowd.

Luncheon was then the order and several photographs of the dogs and officers of the club, judge, slipper, etc., were taken by Mr. Bushnell, a photographer from Huron. After this the final in the Cup Stake was run off as described above and then the dogs were put in slips for the last course of the meeting to decide the Columbus Plate.

Final.

VIOLA AND PRINCESS MAY.—This was a sharp course on a strong dodging hare. From an excellent slip Princess May showed the faster and scored the turn, placing Viola, who put in some good work. Getting over to the rising ground she pressed Jack again for a good score in a lot of dodging work, in which Princess May got a share of the honors. Finally Viola, running in for the kill, flecked and placed Princess May, who picked Jack up in a smart, straight run in. The red flag went up, denoting Viola's victory, and the finish eleven miles from town of notably the most successful coursing meeting ever held in this country.

Puss was presented to FOREST AND STREAM.

SUMMARY.

COLUMBUS CUP.—For 32 greyhounds of all ages at \$50 each, to which was added \$1,000. Winner, \$1,000; runner-up, \$500; third and fourth, \$125 each; 4 dogs \$40 each.

First Round.

May Brook Kennels' bd d Dover (Greentick—Buxton Lass)	beat	Woodhaven Kennels' bd d Lord Neverstill (Lord Neversett—Partera)
Allen & Rew's bd w b Del Sarte (Lord Neversett—Partera)	beat	W. G. Alley's bd d Dick Alley (Carter—Nell)
Allen & Rew's bk w d Sir Hugo (Lord Neversett—White Lips)	beat	J. Herbert Watson's bk d Royal Crest (Greentick—Royal Rate)
Landseer Kennels' bd b Viola (Babazon—Verdure Clad)	beat	J. Herbert Watson's f b Drytime (Britain Still—Haytime)
A. P. Slocum's bk b Raven (Major Glendyne—Humming Bird)	beat	Allen & Rew's bd b Fanny (late Retzel's Fanny (Keno—Jennie)
Landseer Kennels' bd b Nancy (Lord Neversett—Partera)	beat	Thomas Hall's bk d Joe McAuliffe (Pat Molloy—Ban-shee)
N. P. Whiting's f d Touchwood III. (Thornwood—Burning Shame)	beat	F. B. Coyne's f b Flying Fancy (Norwegian—Bueneritero)
F. B. Coyne's bk w d Willis H. (Lights o' London—Little Nell)	beat	Allen & Rew's bk w d Woodford Boy (Lord McPherson—Jessamine)
F. B. Coyne's bk d Laplander (Trales—Dick's Darling)	beat	Maybrook Kennels' bkd Greenshine (Mullingar—Greenfinch III)
J. A. Bushfield's bd d Bicker (Carter H.—Nell)	beat	C. H. Vinton's r d Cyclone (Brindle Duke—Nell)
H. C. Lowe's bk w b Princess May (Lord Neversett—White Lips)	beat	J. Herbert Watson's bk d Will-o'-the-Wisp (Burnaby—Drytime)
Thomas Hall's bk d Banboy (Beneloug—Baashee)	beat	H. C. Lowe's w bk d St. Lawrence (Lord Neversett—White Lips)
F. B. Coyne's w r b Ramona (Lord Neversett—Partera)	beat	Thomas Hall's bk d Daziel (Monarch—Mischief)
Thomas Wallace's f d Flake (Joe—Nell)	beat	J. Herbert Watson's bk d Willy-Nilly (Burnaby—Drytime)
H. C. Lowe's w bk d Prince Charlie (Lord Neversett—White Lips)	beat	Landseer Kennels' r d Van's Peter (Babazon—Carmine)
H. C. Lowe's w bk d Voltaire (Lord Neversett—White Lips)	beat	Maybrook Kennels' bd b Miss Dollar III. (Eden Castle—Miss Harkness)

Second Round.

Voltaire a bye, Dover withdrawn. Willis H. beat Touchwood III. Prince Charlie beat Delsarte. Laplander beat Bicker. Sir Hugo beat Viola. Ban Boy beat Princess May. Nancy beat Raven. Ramona beat Flake.

Third Round.

Nancy beat Sir Hugo. Willis H. beat Voltaire. Laplander beat Ban Boy. Prince Charlie beat Ramona.

Fourth Round.

Prince Charlie beat Laplander. Nancy beat Willis H.

Final.

Prince Charlie beat Nancy and won. COLUMBUS PURSE.—For sixteen dogs beaten in the first round of the cup. Winner \$150, runner-up \$50, third and fourth \$25 each.

First Round.

Lord Neverstill beat Dick Alley. Greenshine beat Woodford Boy. Royal Crest beat Miss Dollar III. Will-o'-the-Wisp beat Cyclone. Drytime beat Fanny. St. Lawrence beat Daziel. Joe McAuliffe beat Flying Fancy. Van's Peter beat Willy-Nilly.

Second Round.

Royal Crest beat Lord Neverstill. Greenshine beat Will-o'-the-Wisp. Drytime beat Joe McAuliffe. Van's Peter beat St. Lawrence.

Third Round.

Royal Crest beat Van's Peter. Drytime beat Greenshine.

Final.

Royal Crest and Drytime divided.

COLUMBUS PLATE.—For eight dogs beaten in the first ties of the cup. Winner \$100 and runner-up \$40.

First Round.

Viola beat Raven. Princess May beat Flake. Touchwood III. beat Bicker. Delsarte a bye.

Second Round.

Viola beat Delsarte. Princess May beat Touchwood III.

Final.

Viola beat Princess May and won. Ten per cent. was deducted from the winnings in the Cup and Purse, and five per cent. from the winnings in the Plate for expenses.

H. W. LACOT.

Commendation.

At a meeting of the Huron Coursing Club, held at the close of the International Coursing meeting, the following resolution was presented and adopted and signed by the persons present:

Whereas, The International Coursing Meeting just held in this city has been conducted with great success, and great satisfaction is manifested at the outcome of the meet;

Therefore be it resolved, That we hereby express our sincere thanks to Mr. Roger D. Williams for the eminent fairness and impartiality with which his decisions have been rendered, and commend him as a just, fair and upright judge.

That we likewise commend Mr. John Brett for the care and discretion manifested by him as slipper at said meeting and for the ability manifested by him in said position. F. B. Coyne, N. P. Whiting, C. R. Huntley, H. C. Lowe, C. G. Page, Tom Hall, A. C. Bradbury, J. A. Sauer, E. H. Mulcaster, Q. Van Hummel, H. W. Lacy, E. H. Aplin, J. Herbert Watson, A. Melrose, C. H. Scott Durben, Basil Hayman.

The Huron Coursing Club also passed a resolution thanking Mr. Page, who acted as club field steward, for the able manner in which he handled the spectators.

Brunswick Fur Club Trials.

DORCHESTER, Mass.—The fifth annual field trials of the Brunswick Fur Club will be held at No. Acton, Mass., commencing Oct. 23, and continuing till the various classes shall have been run off. These trials are open to the world, and all the best known strains of foxhounds in this country will be represented among the entries.

The club headquarters will be at the Nagog House, which is one mile from No. Acton station on the Framingham and Lowell Division of the Old Colony Railway; and the rates will be \$1 per day.

All foxhunters are requested to bring their best hounds with them. Entries close at 9 P. M., Oct. 23.

BRADFORD S. TURPIN, Secretary.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable

## Yachting.

The wind in the first two trials has been too light for any satisfactory test of the yachts, even in light weather, the gain in each trial being due to a fluke. At the same time enough has been seen of the two yachts to make possible a comparison of some important points. It is generally conceded that Vigilant's sails are the equal of any yet produced on this side, and represent the highest progress in the weaving of canvas and the making of sails. Compared with them the sails of Valkyrie are quite as good, not only much better than those of Thistle, but of Volunteer as well. The materials in the English and American sails are different, but we have the word of one of the leading sail makers that the canvas used on Valkyrie is superior to that made in this country, the much vaunted Sea Island cotton included. The experts profess to see slight differences on one side or the other; for instance, we hear that Valkyrie's headsails are better than Vigilant's, while her mainsail is not quite as good. This may or may not be so, but on the whole there is little to choose between the two rigs.

In the matter of rigging, the Herreshoff gear of Vigilant is generally commended as lighter than that of Valkyrie, yet strong enough and the appearance is certainly in its favor; on the other hand it has not been tested through a whole season as Valkyrie's has, nor does the supposed extra weight aloft have any apparent effect on the stability of the narrower boat.

The handling of the two boats is another important matter over which there are differences of opinion, but thus far the honors in quick and dextrous setting and shifting of sail rather rest with Valkyrie. Both boats are well handled, both at the helm and about the deck, but Valkyrie has been a little quicker in setting her sails.

The fickle nature of the public favor is well shown by the comments on Vigilant's skipper after the first race, the blame for a mere accident being thrown entirely on him by some of the papers. Had Vigilant caught the wind she looked for, he would have been praised as unreasonably and, as extravagantly as the skippers of other Cup defenders have been at times; while the whole crew of Vigilant would have shared the credit of outwitting the Englishman. In yacht racing nothing succeeds like success.

The "one gun" start adopted for the Cup races has been criticised as unfair to Americans because it is generally used in British racing, and the assertion is even made that the committee recognizes that it made an error in acceding to Lord Dunraven's suggestion, and that this mode of starting will not be admitted in any future international races. While the "one gun" start is almost universal in England, it is by no means unknown here, and there are very few American yacht sailors who have not started in this way at times. Of course it takes more skill to make a good "one gun" start than to lumber over the line any time within ten minutes and in any chance position, as may

MANEUVERING FOR THE START.

be sometimes seen on the New York cruise; but it takes no more skill to make such a start than it does to place a boat properly in a large fleet for a start with a limit to cross in. Any one who has watched Volunteer or Titania in their races must appreciate the skill with which each boat was berthed just where she should be, according to the wind and tide and the positions of the other boats; and must realize that the task of deliberately making the first start in one race or the last in another is as difficult as getting over the line with the gun.

The "one gun" start is fair in that it compels all boats to start in the same wind, and prevents the boat from laying back five or even ten minutes for a fluke and yet being credited with all the time saved. That it penalizes the tardy and slovenly skipper is no argument against it, and if it were more general the standard of skill in racing would be raised still higher.

The allowance of 1m. 48s. given by Vigilant to Valkyrie over a 30 mile course has been a matter of complaint among many of the outside spectators of the races, and even some who consider themselves yachtsmen, cannot understand why one boat should give another time. If it were a matter of horse racing or prize fighting, they would readily admit the justice of a handicap, or an equality of weight, but in yacht racing they fail to see why "their" boat should allow a minute and three-quarters merely because she is 8in. longer and carries 1,200sq. ft. more sail.

The attendance and interference of a very large fleet of steam vessels is nothing new here, but it is a surprise to Lord Dunraven and Captain Cranfield, and an unpleasant one, too, though the attentions of the tugs and steamers have been divided very impartially between Vigilant and Valkyrie. Most of the harm done has been unintentional but even with the greatest care the wash and windage of such an immense concourse of steamers is hurtful, and especially in light weather. The suggestion has been made that it may be necessary in the future to sail the races away from New York; and Newport and Marblehead have been mentioned, but we fail to see what is to prevent the excursion fleet steaming to either point, certainly a profitable charter in the dull season would pay well for a trip of a couple of hundred miles. Unusual efforts have been made this year to keep the course clear, a number of special police tugs being on hand, but unfortunately there is no legal punishment for the captain or pilot whose hoggish instinct leads him to place his boat where the wash or windage must hurt the yachts. One of the worst cases thus far was that of the Sandy Hook steamer Monmouth, which lay on the line to windward of the yachts in the start on Saturday, and again after Vigilant had finished ran to the line just ahead of Valkyrie, giving a heavy wash to the cutter, and then stopped on the line, so as to shut out the view of the committee on the flagship. The captain of the Richard Peck has also made himself unnecessarily obnoxious in another way. The boat is the largest and probably the fastest that has followed the races, and all on board have been on the lofty upper deck, where they could overlook all the smaller steamers. In spite of this advantage the Peck has been nudged so as to shut off completely the view of many of the smaller steamers with no gain to her own party.

## AMERICA'S CUP RACES—1893.

While the ultimate end of the great series of international races now being sailed is the possession of the America's Cup, the two contestants are so thoroughly the representatives of the highest progress in yachting that a fair and satisfactory test of their real merit is desired by both parties. Unlike many previous Cup contests, the conditions of the present one have been planned with the view of favoring neither boat, but of affording the fairest possible test in open water and a good sailing breeze. Up to the time of writing, however, the efforts of the committee have failed completely, and the races have been sailed under the same light and paltry conditions which so often spoil the June regattas and the races of the August cruise.

In spite of the cold and stormy weather at the end of last month, and of the serious storms along the coast, the days of the first three races have been warm and sunny to a degree that suggests the real rather than the "Indian" summer, and the open sea 20 miles outside the Hook has been as calm and dead as the Upper Bay. The winds,

THE START—"VALKYRIE" LEADING.

too, have fitted the weather—warm and light, dying out at times, shifting in direction, and bringing disappointment to many thousands of eager spectators, as well as the crews of the two yachts.

With an outside course in October and a time limit of six hours for a 30-mile course it is only reasonable to expect a moderate breeze, if not a strong wind or a storm; but until the third day nothing of the kind was seen, and the conditions of the "inside course" races of 1885-6-7 have been repeated outside.

The first day, Oct. 5, offered nothing better than a very light breeze, from the north, with a smooth sea, the course being laid out to leeward, or due south. Starting close together, Valkyrie a little in the lead, the two ran for nearly two hours with no material change, then a sudden shift of wind occurred, and good luck, backed by quick and skillful work, gave Valkyrie a lead of a mile in a very few minutes, she finally turning the outer mark with Vigilant 20m. astern. So much time had been lost, however, in this long drift, that the race had to be called with the yachts far from home.

The second trial, on Saturday, was little better, the start was very similar, in the same wind and weather, Vigilant this time going fast, and the course being east by south, 15 miles naut. For the first half hour, with both drifting under spinakers and jibtopsails, there was little change of position, then of a sudden, and from no visible cause, Vigilant ran up to Valkyrie, passed through her lee and ran rapidly ahead until she had a long lead. Although the whole change was as much of a fluke as on Thursday, the cause was not as clear, the two yachts were within 200yds., and with the same wind to all appearances, but one moved much faster than the other.

The last five miles of the outward course and the whole of the reach in were made under more even conditions, but the expectations of leeward and windward work were not realized, and after the shift of positions the race was a reach out and in, the gain and loss being little. After once getting the lead, Vigilant sailed faster than Valkyrie over the balance of the outer leg, adding a little to her accidental gain; but on the inward course the times show a gain of half a minute for Valkyrie. The actual sailing, such as it was in these two races, shows only that the two are very evenly matched in very light weather.

The weather on Monday differed from the preceding days only in being warmer and even more like midsummer, the afternoon and night being hot in spite of the breeze. The wind, however, was very different, blowing from the southwest with a force of over ten miles at the start, and increasing, according to the reports from the observatory at Sandy Hook, to 23 miles in the latter part of the race. How such conditions might suit Valkyrie was a matter of conjecture, but with a good club topsail breeze and practically smooth water Vigilant was presumably at her best. The direction of the wind just allowed of the first leg being laid to windward, making a free reach on each of the other two legs, the wind heading, however, at times, especially toward the finish. Vigilant carried her second club topsail and Valkyrie her largest all day, and jib topsails were set at times.

After starting in the weather berth, Vigilant was pinched for a time, and Valkyrie outfooted her, but she began to gain as soon as she was eased a little, and finally turned the first mark with a lead of about 5m. This she increased by 4m. on the second leg and 3½m. on the third, making her lead at the finish over 12m. There were no flukes, and both boats were well handled; the race being a perfectly satisfactory test under the best conditions which prevail in summer racing, fresh to strong breezes and smooth water.

That Valkyrie was beaten by Vigilant, in spite of her reputation as a light weather boat, is not in itself surprising; but the remarkable point is the extent of Vigilant's victory, as 12 minutes is a great deal between two new boats in a 30 mile race.

The course of designing during the previous races for the Cup in 1885-6 and 7 was a very rapid one compared with previous years, but, looking back over the three years since Gloriana first appeared, the work of Mr. Burgess and then of Mr. Paine seems but a slow and gradual course of evolution after the first bold step was made in Puritan. Great as the advance was from the existing yachts of 1884 through Puritan and Mayflower to Volunteer, compared to the striking features and radical experiments of the last three seasons, it seems but a slow and gradual growth.

The return of Mr. Herreshoff to the field of sailing yachts has been marked by bold disregard of the traditions of the past, and the result has been that his best shows itself in the carrying to an extreme of several features that heretofore had only been handled carefully and experimentally by other designers. The value of a full and even convex waterline had been demonstrated by others before Gloriana was built; but in her Mr. Herreshoff proved that this fullness could be carried to an extreme, not only without disadvantage, but with positive gain. The canoe hull had been fixed and the fixed hull had been proved the advent of Dilemma, but it rested for her and her sisters, Wenonah and Wee Win, to prove the superiority of the extreme fin form in which the lead ballast is concentrated in the bottom of the fin rather than distributed through the whole depth.

Bold and radical as Mr. Herreshoff's experiments have been, the greatest extreme of all is reached in the third of his large yachts, the successful and fast defender, Vigilant. In the first of the three large boats he has been content with a moderate beam of 23ft., the same as Volunteer, and in the second he has taken another foot, in the third boat he has gone to an extreme before reached only in the old type of shoal centerboard sloop, or 28ft. beam on a waterline of 86ft., or a proportion of 3½ beams. Compared with Volunteer and

THE PROCESSION BEGINS—12 M.

Priscilla, with a proportion of nearly 3½, this is a material increase of beam over the best standards of modern American practice, and the contrast is still greater when the form of the hull is considered.

While not a "fin-keel" in the common acceptance of the new term, Vigilant, in common with Wasp, Gloriana and Colonia, approaches so closely to the type that the hull proper may be considered as one distinct member, and the deep keel or fin as another. Looked at in this way, the hull is comparatively wide and shoal, with a high center of buoyancy, and having more in common with the old American type than any successful yacht of the past ten years. On the other hand, this resemblance is largely destroyed by the immense keel or fin, deep and thick, which makes the extreme draft of the yacht something over 14ft. Seen from ahead, there is not the faintest indication in keel contour or the ends above water of the old sloop; but viewed head on, the extreme beam, high bilge and greasy hollow of the floors are all suggestive of the old Shadow, and the view of the yacht under way, with a crew of sixty to seventy men to windward, a weight of fire tons on a wide boat, is even more suggestive of the successful racing which Mr. Iselin did many years ago in the old sandbagger Mary Emma.

The Forest and Stream has always opposed the misapplication of the term sloop to the great singlestickers with cutter rig, deep hulls, English shear and lead keels, such yachts having little in common beside the centerboard and a part of the beam with the American sloop as she was for ten years preceding the advent of Madge. Even her greater beam, centerboard and laced mainsail have failed to place her in the category of sloops when the innumerable points of difference in design, construction and rigging are carefully summed up. In the case of Vigilant, the rig is utterly unlike any ever seen on a sloop, the extremely full waterline and the greatest opposite in the very hollow bows of the old Arrow, Fanny and Gracie, the centerboard is a mere auxiliary to an extravagantly deep keel,

while the method of ballasting is the exact opposite of that of the sloop.

Whether she is to be classed as cutter, sloop or fin-keel, the one important point is that she is an attempt to apply the principles of the sloop to a large vessel, and whether successful or not as a racing yacht, the type cannot be regarded as a desirable one, and compared with the Burgess Cup defenders she represents anything rather than progress.

The general type of yacht now common in the larger classes and best represented in Volunteer, though primarily designed for racing, and the defense of the America's Cup, has proved the most satisfactory union of all-around good qualities on a moderate and practicable limit of draft that has ever been attained by yacht designers, especially for American waters and uses; and in the sizes above 80ft. it is unlikely that such craft as Volunteer, Lasca, Ariel and Iroquois will soon be replaced by anything better in general good qualities. The possible success of Vigilant in the present races, and the adoption and imitation of her peculiar features which is certain to follow such a result, must be regarded as anything but a desirable advance in yacht designing, however speedy the new type may prove in normal racing weather.

All that has been urged against the old cutter on the score of excessive draft applies still more forcibly to this type, and it is yet to be proved that great beam and extreme low weight make other than a very bad boat in real sea-going. Much has been said of late about the machine-like nature of the fin-keels, but from a sailor's point of view of a strong, safe and seaworthy vessel, it is hard to see any advantage of Vigilant over Jubilee.

When called upon last fall to define the most desirable requirements of a modern yacht, the council of the British Yacht Racing Association declined to attempt this difficult task, and for want of such a definition as a starting point for comparison, their long and thorough conference with the designers failed of any result.

The task would probably prove quite as difficult for American yachtsmen; but such a definition hardly enters into racing, and certainly not into the great international races. The sole requirements are speed, with only such a fair limit of safety in model and construction as to satisfy the underwriters in the event of an Atlantic voyage such as Navahoe and Valkyrie have made. For home racing, speed alone is considered, and in the present races the contestants must be judged from the point of speed alone, with little regard to any influence they may have on designing at large. The success of Vigilant would lead no one to build other than a racing yacht from her model, and no possible speed of Valkyrie can make her draft of practical use in American waters, while even at home it must prove a serious disadvantage.

The question of type has been worked out to a fairly conclusive and satisfactory answer in practice: omitting the craft of extreme shoal draft in use in special localities, the prevailing type of racing and cruising yacht in the small classes is the keel boat, from Wasp and Gloriana down to Minerva, Pappoose and the 30-footers, while in the larger classes it is the compromise type, of about 10ft. draft, and with a centerboard. Undoubtedly the success of one boat or the other will have a certain influence on the next challenger and defender, whenever they may be built, but so far as yachting at large is concerned, it matters little which type wins, or whether the final result depends on fair sailing or flukes.

There had been some talk of docking Vigilant and Valkyrie together in the Erie Boat Dock company wharf, and many had offered to take the dock free to Mr. Iselin, but he declined, and the opportunity to compare the two directly was lost. Many, however, made the long trip to City Island to see Vigilant, and later went down to South Brooklyn to inspect Valkyrie. The yacht was docked at noon Monday and was dry late in the afternoon. Early on Tuesday men were at work replacing some of the copper sheathing that was a little damaged, while the other work was carefully avoided, and the hull was carefully examined, with blocks of hardwood and with paddles made of a sheet of copper folded into a broad flat end. Mr. Congdon, Lloyds surveyor, visited the yacht and made a survey, pronouncing her in good condition. The copper was fouled and a little wrinkled in places, but by noon on Wednesday it was in very good shape, smooth and bright.

"VIGILANT" PASSING "VALKYRIE."

From morning to night on each of the three days the sides of the dock were crowded with yachtsmen, ladies, workmen from the yard and sailors from other yachts. Comments of all sorts were passed on the strange cutter, so unlike Genesee or even Thistle. As she lay, below the level of the top of the dock, and with the spectators looking down on her, the bow and forebody stood out in relief, looking very long and lean as it projected beyond the highest of the tiers of keel blocks, with only a light shore under the fore end of the waterline. The comment was frequently made that the whole bow was too fine and would carry itself in the sea, some going so far as to say that there was but half a boat, a good after body, but no bow. The view from above, however, was misleading, from the dock below the bows showed plenty of bulk, both above and below the waterline.

The yacht's form is of a shape that is difficult to describe without lines or photos, and no one was allowed to bring a camera into the yard. Compared with the Herreshoff boat, it must be said that Mr. Watson has carefully avoided extremes and has selected only the best qualities of the design with moderation and judgment and combined them with an artistic taste which is entirely lacking in all of the Herreshoff boats. Judged by past practice, the draft, at least 17ft., is extreme; but judged by the smaller keel boats it is no more than experience justifies. The beam, 28ft. or more, is considerable for a British yacht, but rather less than the American average. The overhang forward is 10ft. The loss of the waterline sheer, rather straight forward and rounded aft, and the counter is much like Thistle, long, with nearly square corners and straight across, while Vigilant's is more nearly round. While the odds are with Valkyrie's counter in looks, that of Vigilant is probably more serviceable for sea-going.

The sections of the bow are nearer to a V, and those of the afterbody and counter are also of the general V form rather than flat and then round on the outer end, as in all Herreshoff boats. The freeboard is moderate, in fact, low, and the bow is shorter and lower than in Vigilant. The loss of the waterline sheer, rather straight forward and rounded aft, and the counter is much like Thistle, long, with nearly square corners and straight across, while Vigilant's is more nearly round. While the odds are with Valkyrie's counter in looks, that of Vigilant is probably more serviceable for sea-going.

The side amidship is nearly straight, running down into a hard bilge, and below the section is very much thicker through the floors, between the keel and the bilge, than any of the Herreshoff boats. The keel is very thick, probably 3ft., but it is beautifully tapered into the stem and outwater. The curve of the stem above water is quick aloft, making a shorter overhang than in Vigilant, but the line of the stem makes the same small angle with the water. Below water the line is straight for a long distance, then it curves downward quickly and meets the straight line of the keel. This line is probably 30ft. long from the keel of the sternpost, and in this length it rises perhaps 1½ft. The post rises at an angle of under 50°.

At noon on Wednesday the bottom was ready and the sterging was removed, the water being admitted first from one of the big sluice gates in the caisson. A dirty, turbid stream flowed slowly over the floor of the dock, gradually reaching the keel blocks; then, as the sluice gates were opened, the water rushed in rapidly, swirling and frothing until half of its surface was covered with a pretty brown and white foam that drifted back and forth. The water lapped the keel and then covered it for a foot, showing clearly the exact curve of the waterline at this lowest point, and indicating a very strong swell near the fore end, tapering aft to the thickness of the sternpost. As the water slowly rose each waterline in succession was cut from the hull, and a beautiful view of the whole form was given. The lean appearance of the bow rapidly disappeared as it lifted a little to put the yacht at her proper waterline, and the full nature of the line was disclosed.

First the head lifted a little and then the yacht left the last of the keel blocks and was fully water-borne. With shining, bright copper and glossy black topsides, she was a different-looking craft, all the stains and scars of her long voyage being carefully removed. The four shoes were dropped and floated away, and she lay freely afloat once more.

Before the dock was full Mr. Hyslop, the official measurer, went on board with an assistant, and the measuring began with the spars. When it came to measuring the boom, beauty gave place to utility, and the circular piece of inch board with its carved and gilded star was removed, leaving the bare wood. The spars were all measured, and then the four beams were measured from below, the beams and dunnage, tossed hastily over the side into boats and on to a big float, until the yacht suggested a fire on the east side of the city. The yacht was designed

sail was hoisted, while Valkyrie went straight out to the Lighthouse, setting her sails when well down the Bay. After sending up her largest club sail, the sail was lowered, and the halyards were set anew, after which it was again sent up. Vigilant, at her second club topsail, throwing over the big topsail yard to be picked up by the Commander.

A thick haze covered the water at 9 o'clock, but it lifted before 11 and the sun shone from a clear sky. The wind had been increasing all the morning and ranged from 10 to 12 knots at the time of the start. The three club signals set on the May read: South by southwest by south, east  $\frac{1}{2}$  south and north northwest  $\frac{1}{2}$  west, each 10 miles, north, the first leg being dead to windward. The May anchored east of the Sandy Hook Lighthouse and the Luckenbach was sent away to log and mark the first leg, another tug starting for the second mark. Lord Dunraven's elder daughter was on board of Valkyrie, while the younger, with Lord Wolverton, was on board the Luckenbach.

With a start to windward, the weather berth was worth working for, and after the first gun fired at 11:15 the pair circled cautiously around, with headsails set and small jibtopsails aloft in stops. Vigilant ran along on port tack above the line, with Valkyrie just to leeward, and as she ran ahead Valkyrie passed under her stern and on over her weather. Vigilant, jibed over and Valkyrie, crossing her bows, went on starboard tack near the Lighthouse with about 3m. to go. As Valkyrie ran ahead Vigilant swung about on her weather quarter and the two headed for the line together, with Vigilant in the coveted weather berth. The times over the line were:

Vigilant.....11 25 19 Valkyrie.....11 25 21  
Both broke out baby jibtopsails, and the windward work was fairly done. Vigilant was held very high and her headsails shaking and her head of her staysail showing very badly. Valkyrie was sailed a little freer and her sails showed full and hard, without a flutter or a wrinkle. From the time she crossed the line she began to foot ahead, all the time holding a good wind. In a few minutes she was clear ahead, and a little later she had opened quite a gap. For twenty minutes this was the case, and then the wind shifted and the gap was closed. A little and her staysail began to do better work after a man was sent up the lee-chin in a boy's swim chair to do something to the sail.

At 12:05 Vigilant took in her jibtopsail, and a couple of minutes later Valkyrie went on port tack, Vigilant at once going about with her, being now to leeward but ahead. Vigilant could have forced Valkyrie about, being on starboard tack, but she made no effort to do so. From this point on Vigilant's gain was steady and rapid; she drew clear and at the same time held better to windward. The sea had an easy roll and the wind was freshening, the two were heeling to nearly the same angle, each carrying her sail easily; but in spite of lower free-board, Valkyrie showed quite as much side to leeward. Neither was now carrying a jibtopsail, but at 12:42 Vigilant again sent up her baby, taking it in at 1:45, when she went on starboard tack, Valkyrie having tacked a minute before.

They had now gone about 6 miles, and the mark was plainly visible under the Jersey shore off Long Branch. Valkyrie went on port tack at 12:52, half a mile astern of Vigilant, the latter tacking a moment later. At 12:58 Valkyrie made a short leg on starboard tack, only holding it for three minutes, and then she stood on in Vigilant's wake for the first time, around which the steamers and tugs to the number of at least 50 were lying. Vigilant made her last tack at 1:04:30, jibing around the mark at 1:06:35. The large jibtopsail was set in a couple of minutes and then the balloon foresail.

Valkyrie made her last tack about a minute before she rounded the mark, her time being 1:11:30. In the beat of ten miles, with a wind increasing from 10 to 12 miles per hour at the start up to 15 at the turn, Vigilant had beaten Valkyrie.

It was now a reach before a strengthening breeze and in a little pop of sea on the weather beam. The steamers kept further from the yachts than on the previous days, and there were fewer of them; while no intentional harm was done, the following boat probably suffered some from the wash on each side. Valkyrie was for once slow with her sails, the jibtopsail was sent partly up the stay and hung there for some broken being broken by the wind after she had turned; two minutes later the balloon foresail was sheeted home.

Vigilant took in her jibtopsail at 1:26, but set it again at 1:45, sending it up flying. When near the mark, at 1:53, she lowered the sail again, jibing round at 1:59:55. Valkyrie was now a long way astern and losing steadily, taking in her jibtopsail at 2:03 and jibing around at 2:05:53, or 8m. 5/8, after which Vigilant, the latter having gained 4m. 1/8, in the reach. The wind up the bay was now a strong breeze, and was still increasing, blowing about 25 miles on the last half of the third leg. Vigilant set her baby jibtopsail at the turn, but took it in at 2:16 and shifted to balloon foresail. The wind had been drawing to the westward for some time, and on this leg was about S.W. by W. Valkyrie set her jibtopsail at 2:09 and carried it for over half an hour, until well up down the bay, after the last five miles Vigilant was heeled well down, and the wind was now puffy, her jib was shaking at the head but the other sails were sitting well, and she was traveling very fast. On she came, crossing the line at 2:50:01, and leading Valkyrie by 12m. 23s, elapsed time, having gained 3m. 26s. on the last ten mile leg. Valkyrie finished at 3:02:24, making the official times:

	Start.	Finish.	Elapsed.	Corrected.
Vigilant.....	11 25 01	3 02 24	3 37 24	3 35 01
Valkyrie.....	11 25 00	3 02 24	3 37 24	3 35 01
1st Mark. 2d Mark.				
Vigilant.....	1 06 35	1 06 35	1 06 35	1 06 35
Valkyrie.....	1 11 30	1 11 30	2 05 52	2 05 52

VIGILANT'S GAIN.  
First leg.....4m. 45s.  
Second leg.....4m. 12s.  
Third leg.....3m. 26s.

The elapsed times of Vigilant were:  
First leg to windward.....41 35 6 knots.  
Second leg free reach.....50 20 12 knots.  
Third leg reach.....53 06 11.3 knots.  
Whole course.....3 25 01 8.7 knots.

After the race it was announced that Vigilant had sprung her bowsprit, though the extent of the injury was not known. It was given out. The tug Commander, towed Vigilant to Bay Ridge and then started for City Island for the duplicate bowsprit. She returned to Bay Ridge at midnight, and Mr. Wintringham with a force of ship carpenters went to work to finish and fit the spar, which was only roughed out. It was completed and shipped on Tuesday morning, so that the yacht was ready for the third race on Wednesday. Lord Dunraven, Messrs. J. Watson and Capt. A. H. B. Brewer, were on board, and the merit of Vigilant's performance and her great speed, the only complaint made being against the wash and interference of some of the tugs and steamers with the second boat.

The illustrations are from photographs taken from the steamer St. Johns on the second day.

### The A. C. A. Board of Trustees.

*Editor Forest and Stream.*  
"The proposal which is brought up again this year for a permanent board of (A. C. A.) governors or trustees" by Mr. Wilkin in your issue of last week is certainly "interesting." Personally I did not know it had ever been brought up before, and therefore I was somewhat surprised to find no explanation from Mr. Wilkin of the reasons which led him to propose this amendment. This amendment, if adopted, would radically change the methods of managing the American Canoe Association, and before being adopted it should be carefully thought out in every detail and the reasons for making such a change fully explained. In your editorial, Mr. Editor, you mention one advantage of a permanent governing body, viz: the power it would have to make a contract for the publication of a year book for a period of three or more years. This point I fully appreciate. It is less than a month to the time the executive committee annual meeting, certainly a long time in the history of the association, so important an amendment. I presume an earnest desire for the permanent good of the A. C. A. is alone responsible for this proposed change, and therefore I would call attention to the fact that the executive committee is an unwieldy body even now. I have believed for years that the work would be better done if there were fewer hands to do it. If there are good reasons for the establishment of a board of trustees with terms of four years each—and there may be excellent reasons for it which have not yet appeared—why not economize in men by making the vice-commodores or the rear-commodores the trustees?

The amendment as it stands is a reflection on the management of the recent commodores. It says in so many words that they should not have been trusted with the management of the association, and it seems to me nothing but confusion will follow. Certain amendments must be made in other articles of the constitution if this amendment is passed in its present shape—the article covering duties of commodore, for example. If the board of governors is "to have general control of the Association" what is the use in electing a commodore, vice-commodore and an executive committee? I ask the proposer of the amendment this question. C. BOWYER VAUX.

*The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

## Rifle Range and Gallery.

### The Zettlers at the Target.

The bi-monthly shoot of the Zettler Rifle Club, at Wissel's Cypress Hill Park, on Oct. 8, brought together the usual quota of the regulars. The weather was fine, and the air of just that temperature to make the day's outing one of extreme pleasure. There was not enough wind to carry off the smoke from the rifles, and the consequence was the shooters at times found it hard to get a clear view of the bull's eye. The two lay members, Schmidt and Plaisted, who met defeat at the hands of the two experts, Messrs. Ross and Holges, in the 50-shot match two weeks ago, were on hand again looking for satisfaction. The satisfaction which was tendered to the two worthies was of such a nature as to encourage them to look for something easier in the future. Ross's score of 1106 points in 50 shots was good. Harman made a fine score of 229, his lowest shot being 22.

The next and last shoot of the present season will be on the 23d inst. Ross has a safe lead for the first prize for the best 50 scores. Harman, Holges and Plaisted are rushing each other for the second position on the prize list; there is at the present time only 19 points difference between them on a total of over 10,000 points. The next meeting will be of interest to these three shooters at least.

The scores of the 50-shot match are appended, 10 shots, German target.

G. Plaisted.....	106 211 204 220 222—1053	F. O. Ross.....	236 226 213 223 211—1106
F. Schmidt.....	212 192 213 201 199—1016	H. Holges.....	218 214 212 212 217—1061

The scores of the competing members for the club prizes are appended below, 10 shot scores, German target, three scores to count:

A. C. Ross.....	228 226 223	L. P. Hansen.....	220 209 206
G. W. Plaisted.....	220 220 216	B. Zettler.....	216 209 208
H. Holges.....	218 215 214	P. P. Schmidt.....	212 212 211
C. G. Zettler.....	218 216 213	M. B. Engel.....	207 206 199
R. Harman.....	229 212 209	G. W. Dowell.....	193 191 179
Dr. J. A. Boyken.....	226 212 211	Jos. Gunther.....	165 164 153

### Championship Shoot.

On Election Day, Nov. 7, at Cypress Hills Park, Long Island, there will be an individual sweepstake match with the rifle at 200yds., between our prominent riflemen, residing in and about New York. Chas. Wissel, the proprietor of the park, in order to forward the interests of shooting and also to bring together the best shooters in an individual match, has kindly donated a trophy for the shooters to compete for.

The management of the shoot will be left to a committee of the riflemen engaged in the contest.

The match is open to any rifleman who desires to enter the race. The entrance fee will be \$5, and after deducting the expense of the targets and one of Miss Host Wissel's first-class dinners for contestants at the balance of the cash will be divided among one-half of the contestants. Or, in other words the match will be half winners and half losers.

The Wissel trophy will be presented to the rifleman making the highest 10-shot score in his hundred shots. The match will call for 100 shots per man at the German rifle target (12in. bullseye). We trust that many of our prominent riflemen east and west of New York will avail themselves of the opportunity to enter the competition. The conditions of the match are such that even the non-winners will feel that they have had a good day's sport. In fact, it will be a match that will be worth going a long way to witness. It will be an opportunity for a rifleman with aspirations to get his proper measure. All who desire to enter can do so by communicating with the Zettler Bros., No. 219 Bowery, New York.

### A Match at Paterson.

A MATCH between the East Sides and the Columbias was shot on the Bunker Hill East Side range on Oct. 8 at 100yds.:  
East Side.....Columbia.

C. Gallagher.....	140	R. McCulloch.....	171
C. Vermorel.....	162	J. Irons.....	170
T. W. Murphy.....	161	J. W. Johnson.....	169
C. J. Welch.....	162	W. Greig.....	152
H. Maskell.....	144	T. Kelly.....	162
A. Newby.....	155	H. Wolfe.....	149
A. McKenz.....	138	R. C. Gault.....	132
J. M. Gallagher.....	157	C. Bradley.....	116
W. S. Newby.....	154	R. McCulloch.....	167
J. H. Foster.....	172—1545	W. Dutcher.....	163—1555

### Greenville vs. Puritan.

The return (Gallery) match between teams of ten men each from the Greenville and Puritan Clubs, was shot off on the range of the Puritan Club at Newark on Tuesday night Oct. 8. The previous match which was shot on last week on the Greenville range resulted in a victory for the Greenville Club by a margin of 127 points. The Puritans professed to have some hope of defeating the Greenvilles when they got them on their home range, but the Greenville team would not have it that way. The scores are appended: 10 shots each, gallery distance.

Greenville team: Kaiser 236, Robitoux 235, Purkins 241, Chavant, 234, J. Boag 236, Dadds 226, Agnew 215, Collins 235, C. Boag 239, Dorrier 234. Total 2,320.

Puritan team: Hauselman 222, Helb 238, Miller 232, C. Weller 213, Lambert 219, F. Weller 232, Tauer 213, Woods 208, J. Kopf 209, C. Kopf 240. Total 2,216.

### Greenville Rifle Club.

The weekly gallery shoot of the Greenville Club, for class medals, on Friday night, Oct. 6, was fairly well attended. Capt. Robitoux is getting back into his old form and is making some good scores. Collins keeps on rolling up first-class scores, and as a consequence at the beginning of the next series he will receive the promotion to which he is entitled. Geo. Purkess retains lead of only 5 points over the next best man. He feels comfortable, however, with even this small margin. The scores are appended: 10 shots, possible 250, distance 35 yds.: Capt. Robitoux 241, W. C. Collins 240, Geo. Purkess 239, G. W. Plaisted 226, Colin Boag 237, John Spahn 230, C. H. Chavant 229, Jns. Dadds 237, J. Boag 228, John Hill 223, C. A. Agnew 223. Scores of Oct. 6 at Greenville, also of gallery shoot of Oct. 3: Long range, 300 yds.: L. P. Hansen 223, W. Weber 204, C. Thomas 200, Jas. Hughes 199. Gallery: L. P. Hansen 238, C. Thomas 238, I. Speicher 235, R. H. Duff 227, J. Binus 224.

### New York Rifle Club.

ONLY three members of the New York Rifle Club put in an appearance at Cypress Hills Park on Saturday, Oct. 8, for the regular practice. Dr. Chadburne has just returned from his summer vacation at his old home in the Pine Tree State. Major Geo. Shorkley was out Saturday accompanied with his pet .35cal. rigged out with the telescope. In a string of thirty shots on Saturday he made seventeen consecutive (8in.) bullseyes. Dr. Chadburne tried a new .38-55 Sharps-Borchard, but it being unfamiliar to him he did not give it much of a trial. The scores are appended, Standard American target: George Shorkley, 87, 88; Hamilton, 86, 74; Dr. Chadburne, 76, 82.

### Miller Rifle Club.

The members of the Miller Rifle Club of Hoboken are doing some good shooting on their gallery range. At the weekly practice shoot on Tuesday the following appended scores were made. 10 shots, possible 250, distance 75ft.: Geo. Schlicht 246, Capt. Fisher 223, Kloeppinger 249, D. Miller 237, Meyer 235, E. E. E. 233, Leil 233, Joel 230, Vanderheyden 221, H. F. Meyer 218, Peters 232, Dewey 213, Will 213.

## Trap-Shooting.

### DRIVERS AND TWISTERS.

The annual meeting of the Parkway Rod and Gun Club was held at the club house, corner of Van Siclen and Belmont avenues East New York, on Oct. 6. The secretary and treasurer of the club both reported that the organization was in good condition, and has just closed a successful season. The election of officers for the ensuing season resulted as follows: President, Henry J. Bookman; Vice-President, James Bennett; Secretary, David J. Cummings; Treasurer, Elias Helgas; Captain, H. J. Salover; Scorer, Thomas Short; Executive Committee; A. Lehman, E. Scheeler and Louis Miller. Steward, Martin Meyer. It was proposed to donate a handsome gun valued at \$100 to be competed for as the first prize for the highest number of birds killed during the next twelve shoots. E. Helgas was the winner of the last season's prize, with 73 killed out of 84 shot at J. Bennett's was sent with A. Botty third. It was proposed to incorporate the club, and the following were appointed as a committee to carry out the arrangements: E. Helgas, David J. Cummings and Thomas Short.

LYNN, Mass., has been selected for the last tournament of the season of the Interstate Manufacturers' and Dealers' Association. Being but a short distance from the metropolis of Massachusetts, with which it is connected by both steam and electric railroads, and as it is one of the largest towns in the State, it offers unusual advantages to visiting sportsmen of every clime. The city of Lynn has long been celebrated for its famous shoe factories, while among its many other industries are the large works of the Thompson-Houston Electric Manufacturing Company, the products of whose plant are in use in various parts of the civilized world. The beautiful grounds of the Lynn Fish and Game Protective Association, where the shoot will take place, are located on the Lynn and Boston Turnpike, near the old Turnpike House, Saugus, Mass., and the accommodations and means of reaching them are unsurpassed. A hearty welcome is extended to all marksmen by the Lynn Association, in the expectation that their visit will be one of pleasure as well as profit. The programme is practically the same as those used at the other shoots during the season, and the same rules will obtain. The Oxford Hotel, on Monroe street, will be headquarters for the shooters.

Crack shots among ball players are few and far between, but what a few there are they come together shortly in a match of unusual interest. Tim Keefe called at the Standard last night and said he would back Billy Herbert, the old Metropolitan catcher, against Roger Connor or any member of the New York Club for \$100 at shooting quail, woodcock, or partridge, in the woods. He also expressed a desire to meet Roger Connor himself in a similar contest. As German and Baldwin are better marksmen than Connor, either of them may accept. Keefe's offer is a challenge, and he has begun a hunting trip in a few days so that they may be ready to meet their rivals. Keefe stipulated that if Connor would meet him the contest should not take place in the woods near Waterbury, as Roger has things fixed there.—The Sun.

The Iroquois Rifle Club of Pittsburgh, Pa., announces a rifle and trap tournament to be held on Oct. 24, 25 and 26. On the first day there will be a members' match of 50 shots each on the gallery range in Pittsburgh. On the second day the attraction will be a contest at 50 bluerock targets for the club members. On the third day, at Howard Station, Monon Division, Pennsylvania Railroad. On Thursday the third day there will be a 100yd. rifle contest and 10 target events at Howard Station, these events being open to all.

The O. K. Gun Club of Kansas City, Mo., held its monthly club shoot at Bennett's Park on Oct. 3, the birds being a fair lot. In the competition for the first and second class trophies, the first went to J. Keene on 10 kills and the second to Dr. W. K. Jones on 9. J. Granger killed 8, F. J. Smith 8, W. H. Adams 8, Judge J. H. Thompson 6, F. Mason 7, L. Ross 7, H. B. Preston 6, J. Bradley 6, H. E. Stewart 6, W. Mayor 5, J. Hubbard 5, E. Hickman 4.

An interesting three-cornered match at 50 live pigeons each, for \$50 a corner, will take place at Willard's Park, Paterson, on Tuesday, Oct. 17, the principals being Thos. W. Morley of Paterson, Chas. Vermorel of Paterson and J. Frank Class of Morristown. The match will begin at 2 P. M. The Paterson Gun Club will hold its monthly shoot on the same day and there will be a supply of pigeons for sweepstake shooting.

We have before us a neatly arranged and well-printed catalogue, describing the leather goods manufactured and sold by M. Isenstein & Co., of 424 Broome street, whose advertisement appears on another page. The pages show about everything needed by sportsmen, and the prices are reasonable while the goods are all of fine quality. A postal card sent to the above address will secure one of these catalogues.

J. Frank Class of Morristown, wishes FOREST AND STREAM to state that he stands ready to shoot a match at 100 live birds for \$250 a side, against any man in New Jersey (J. L. Brewer excepted).

The Helgons-Pluister vs. Morris-Ferguson team match, mentioned in our last issue will be shot at Dexter Park on Monday.

The members of the Parkway Gun Club are competing for a \$100 gun, to be awarded for the best out of 12 shoots.

The monthly shoot of the Essex Gun Club will be held on Al. Heritage's Marion grounds next Thursday.

The Bolling Spring Fishing and Gun Club have arranged a team match with the Newburg Gun Club.

The usual open sweepstakes will take place on John Erb's Newark grounds, on Saturday afternoon.

## WATSON'S WORLD'S TOURNAMENT.

Monday, First Day, Oct. 2.

CHICAGO, Ill., Oct. 2.—When John Watson calmly announced to the shooting world that he was going to undertake the hard task of holding a world's shoot after all, and hold it right at Chicago during the World's Fair, it seemed that he had put up a hard game for himself as well as for the shooter. Yet he was right on, and to-day it really seems as though he was to be fortunate enough to win or lose on his undertaking. One does not find many shoots in this neck of woods this summer, where there are 27 entries in a live bird event the first day, especially when that day is as unspeakably abominable as to-day has been by way of weather. The Chicago climate—but of course Chicago would not have a climate unless it were the greatest city on earth. And itself is a city. It shook out a loop or two and let go about seventeen different sorts of weather, all worse than any other weather in the world. The aggregation was too much for the exuberant spirits of even John Watson's hard birds, and some few of them acted as if they didn't care whether school kept or not. The shooters were merry in spite of all, and a great lot of shooters they were, too. A good contingent of Western cracks were on hand, and more will be in to-morrow. Capt. Money appears from New York. Mr. A. F. Deleorox, of Monte Carlo, appears as a new face, but not very familiar in the West. Mr. Crittenden Robinson, of San Francisco, is another, not a stranger here, but too rarely seen. The live bird arrangements require little comment; John Watson of course refereed. The only new feature was the use of the two revolvers, pistols, and Mr. Watson's older field dog, a setter, Hector. The latter is slower and more methodical than long work on the marsh. Cyclone is only 15 months old, but though he is crazy to retrieve, he waits for the word and has made no mistakes. This is the prettiest way of retrieving at a pigeon shoot, and the speediest, when the dogs are good as these.

### A HARD TARGET GAME.

Carrying out the traditions of the park, John Watson makes the target game a hard one too, and shows his contempt for the old walk-around by giving it no place at all in his programme, and making every event at unknown traps. The target programme is to be the same for each day, but the targets are different. Under this system John Watson will throw perhaps a third as many targets as he would under the old walk-around, know angles, but he isn't figuring on that. If there is any one man in the country who has done more than John Watson, to make good shooters shoot their best, I do not know who he is. Actually, the first one knows, one will be taking an interest in some of this shooting this week, because it may have had some live birds in it, and therefore some sporting interest to it, and be a bit free from mechanical monotony, so let us say that the Chicago Scotchman, who isn't afraid to stand in his own light when the time comes; and who, let us hope, will cast a long shadow in the opening of a better day in the history of trap-shooting than the old mechanical, sure thing days against whose regime there is now prevalent mutiny and rebellion. And so, prosper Watson's Park, and may it live forever, the home of hard birds and hard games, and the meeting ground of the hardest of hard shooters. Scores:

### THE LIVE BIRDS.

Preliminary shoot, 5 live birds, entrance \$3, two moneys, 60 and 40 per cent. B. White, C. Kleinman 3, H. W. Eager 2, A. Willey 5, C. Robinson 4, E. A. Kimball 5, C. H. Burdige 3, W. Reeves 4, W. Budd 4, F. Parmelee 5, J. W. Battcheller 4, R. O. Heikes 5, C. Young 5, M. F. Cook 4, F. S. Mead 4, A. E. Mead 3, J. S. Sedam 3, A. Kleinman 4, W. Money 5, B. Jack 4, M. Collegenberger 5, F. D. Alkire 4, A. Harris 4, L. Willard 4. Ties on first decided in 7 bird shoot following, and divided by B. White, K. O. Heikes, W. Money. Ties on second decided by 7 bird shoot divided by B. White, B. Jack and A. Kleinman. Seven live birds, entrance \$5, three moneys, 50, 30 and 20 per cent. F. S. Mead 6, E. A. Kimball 6, A. E. Mead 4, C. A. Young 6, F. Parmelee 6, W. Money 7, J. S. Sedam 6, C. H. Burdige 6, A. Willey 4, M. Collegenberger 6, R. O. Heikes 7, B. Jack 7, J. W. Battcheller 6, B. White 7, G. Kleinman 7, F. D. Alkire 6, L. Willard 7, A. W. Reeves 7, A. Harris 5, A. Kleinman 7, A. Thomas 7, A. L. Bennett 5, C. Robinson 5, H. McCulloch 5, J. S. Sedam 5, J. W. Battcheller 5, B. White 5, C. Young 5, Thomas, G. Kleinman, L. Willard, A. W. Reeves, C. Budd and C. Grimm. Ties on 6 decided in the same manner, and divided by Collegenberger and Parmelee. Ties on 5 same, divided by Harris, Bennett and Robinson. Twelve live birds, entrance \$10, four moneys, 40, 30, 20 and 10: W. Money.....230221109212—9  
F. Parmelee.....11121011122—11  
C. Robinson.....111211111112—13  
B. Jack.....102311112112—11  
J. S. Sedam.....011211212223—11  
A. L. Bennett.....212111123012—11  
A. Thomas.....22122212222—12  
M. Collegenberger.....11221011212—11  
A. Harris.....111212201112—11  
G. Kleinman.....112112222112—12

Sweep, 20 singles, \$3, sprinting system, unknown angles: Dickey 18, Barton 15, Loomis 17, Anthony 19, Heikes 18, Tee Kay 18, Miller 17.

MICHIGAN LEAGUE TOURNAMENT.

BATTLE CREEK, Mich., Sept. 27.—The last tournament of the Michigan State Trapshooters' League was held in this city Sept. 26 and 27. Owing to various reasons the attendance from the State was not as large as it should have been, but we have no doubt the excuses will be satisfactory. We were honored by the attendance of a number of well known shooters from abroad, among whom were the following: Rolle O. Heikes of Chicago; C. A. Young of Springfield, Ohio; A. G. Courtney and his Levever ejector; G. C. Coachman, Jacksonville, Fla.; W. N. Rosenthal, East Las Vegas, N. Mex., sec'y of the Sportsmen's Association of that country. Among the Michigan shooters were H. L. Gaskill, of South Bend; President W. W. Holt, of Manchester; S. E. Kirk, Geo. C. Erwin, G. A. Magoon and Wm. Dixon. The Muskegon contingency, as Joe Marks would say, showed John "Only" Parker, W. Butler, W. Renwick and Joe Marks, of Detroit, who came to win the diamond buttons in the team race and incidentally won nearly everything in sight, including the buttons, the silver trophy, the expert championship and the amateur championship. Then there were M. K. Walton, the sole representative of Grand Rapids, whose Indian name is Never-Miss-a-Shoot; Caspar Schilling of Lansing, Wm. O'Byrne of Kalamazoo, J. R. Cotton of Bay City, Wm. Spicer of Vicksburg and F. C. Marantette of Menominee.

Nearly all the shooters arrived the night before and the morning opened clear and bright, but a strong, able-bodied wind sweeping across the traps made the scores much lower than they would have been. The principal league event of the first day was the team race, which was won easily by the Detroit team. Following are the scores:

No. 1, 10 targets, amateurs:	
Heikes.....	0101111111-8
Young.....	1111010111-8
Smoke.....	1111010111-8

## SAVE YOUR TROPHIES.

Write for Our Illustrated Catalogue  
**"HEADS AND HORNS."**

It gives directions for preparing and preserving  
 Skins, Antlers, etc. Also prices for Heads and  
 Rugs, Birds and Fish, and all kinds of work in Tax-  
 iderm.

WARD'S NATURAL SCIENCE ESTABLISHMENT,  
 ROCHESTER, N. Y.

When  
 You  
 Order

A gun or a rod or a  
 thousand shells or a  
 lot of flies, tell your  
 dealer to put in a copy  
 of *Game Laws in Brief*.  
 It will only cost you  
 25 cents extra. All  
 dealers can supply it.

FROM the first issue of this paper it has been  
 used, and for nearly twenty years this particular  
 space has been occupied by

# ABBEE & IMBRIE,

who now say that they have given up advertising at least for the present.

## Notice to Fishermen! Cut Prices for 1893.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.58 until all are sold. Rods are all nickel mounted, solid reel seats, silk wound, complete in wood form and will give satisfaction. Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand. ### Routes for Sportsmen.

When planning your annual tour remember that this company controls over 4,100 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

### A FEW OF THE PRINCIPAL RESORTS.

ANDROSCOGGIN LAKES (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description.  
 THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game.  
 THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).  
 LAKE ST. JOHN REGION (via Quebec).—For omananche trout, caribou, bear, moose, beaver, otter, etc.  
 THE RIVER ST. LAWRENCE (in the neighborhood of the line for 40 miles).—For mascalouge, pike, bass, whitefish, pickerel, perch.  
 THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, mascalouge, pike.  
 MUSKOKA LAKES.—The best place on the continent for fishing, shooting and camping. All varieties of fish and game.  
 PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc.  
 LAKES ONTARIO, ERIE, HURON AND MICHIGAN via stations at all principal ports.  
 LAKE SUPERIOR (via Collingwood, Warton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same are published in a pamphlet descriptive of the "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be forwarded free on application to the company's principal agents, or to the General Passenger Agent at Montreal.

## THE CANTANKEROUSNESS OF FATE.

FATE is proverbially capricious. It is more than this, it is progressive, enterprising, Edisonsque in ingenuity and invention to devise new ways of imperiling, maiming and killing humankind. Thus, only the other day, a ship's doctor, who had braved the perils of Atlantic storms and been buffeted about in the hurricane to these many years, came at last to grief with a leg broken in the giddy mazes of the dance on board ship.

The sportsman, whether on land or sea, is usually credited with undergoing a certain degree of peril in following his chosen pursuit. If a gunner, his gun may explode, or he may be in continual danger from a fool of a companion's gun pointed full at his devoted head, or some other fool gunner may shoot him for a woodchuck or a partridge. If a fisherman, he may get lost in the woods, or a snake may bite him. If a yachtsman, he may tumble overboard, or his yacht may capsize and he be drowned. These are old-fashioned casualties, the commonplace fatalities of sport; but as has been said, froward fortune has a way of demonstrating her originality and impatience of precedent by manifesting herself in some unlooked for and unprovided against happening. Such, for example, was the killing of the Gulf Coast fisherman, recorded in our columns last week, who met his death by the blow of a tarpon, which leaping from the water dashed full-tilt upon him in his boat. Such too was the untoward experience of Mr. Charles Arns, of this town, one day during the yacht races of last week.

When we consider the vast multitude of pleasure-seeking spectators who attended the Vigilant-Valkyrie contests, and the thousand and one perils which beset them, our wonder is excited, not that there should have been this one mishap or accident, or visitation or casualty, or catastrophe, or calamity, by which Mr. Arns suffered, but that the mishaps should not have been more in number and of graver nature. It is estimated that on the first day of the races not less than 35,000 spectators were afloat on the Atlantic, on all sorts of craft, from great sea-going steamships to tiny and toppling pleasure boats. For the four races there must have been far more than 100,000 people thus carried to sea in heavily-loaded and over-crowded craft, subject at all times to danger of collision, of capsizing, of foundering, or at the very least, of tumbling overboard. Such emergencies were not unexpected. Ample provision was made for them by the police. The patrol steamer Aurora was at hand, having a complete equipment of life-saving apparatus and a trained crew of fifty patrolmen. She had on board life-boats manned by crews who were stationed constantly at the boats ready for immediate response to call. Other squads of the crew stood by, ready with life-lines and life-rings. Five police surgeons were on the *qui vive* to render their services. Taken all in all, this thoroughly fitted out and disciplined life-saving police contingent constituted an admirable and noteworthy feature of the great international occasion.

But police patrol, boat, crew, surgeons and life-lines availed nothing for the protection, the succor or the resuscitation of the unfortunate Mr. Arns. While this en-

thusiastic yachtsman was watching the race, eagerly scanning the progress of the two boats, his heart beating fast with joy as the Vigilant lengthened the space which measured her lead, he was overtaken by disaster and sorely wounded in body and in spirit. Just here it was that the elaborate system devised by the police to protect a hundred thousand pleasure seekers broke down. In the words of the political orator, it was protection that did not protect. It did not, at night after the race was done, restore him to the bosom of his family, whole in body and joyful of soul, crowing as so goodly a proportion of the hundred thousand was crowing at the victory of the brave Yankee craft over the Britisher. For one reason, Mr. Arns was not within the reach of the life-lines. He was not one of the multitude of the hundred thousand on the sea. He did not venture out on ocean's troubled breast on that eventful day. He remained on the hard, solid, substantial *terra firma*; and watching the races from afar, noted the fortunes of the day and followed the progress of the competing craft as set forth in mimic representation high up on the front of the *World* building in Park Row. A vast, surging crowd was there, and Mr. Arns was in the crowd. It was just at a most critical moment in the uncertainties of international yacht racing, that, if we accept his story, he was hit over the head with a club by Policeman Baker; or, if we accept the policeman's version of it, somebody in the crowd threw a missile which hit the unfortunate Mr. Arns over the eye. Just what did actually happen may perhaps be determined, when on Mr. Arns's complaint the Police Commissioners shall try Policeman Baker; or, baffling inquiry, the incident may go down to posterity arm in arm with that famous mystery bequeathed to us by our forefathers, "Who struck Billy Patterson?" Be that as it may, whoever dealt the blow or heaved the missile was but the unwilling agent of capricious Fate, the chosen instrument through whom, in that week of perils of the deep courted by the ten times ten thousands who went to sea, she elected to exhibit her cantankerousness by bringing calamity only upon this dry land sailorman, who was following the fortunes of the race amid the presumably safe, secure and tranquil precincts of Newspaper Row.

## VIGILANT AND VALKYRIE.

ONE good to both sides that has come from the Cup races is the renewal of a discussion over technical points of design, construction and handling; there is ample material for thought and study through the whole of next winter. This year the English are fairly ahead in the material and making of their sails. Mr. Ratsey may go home with the consoling thought that his part of the work has been well done. While the superior speed of Vigilant is freely conceded, there is much about Valkyrie, in particular in her ease of handling and in her construction, which is worth copying.

One of the most striking points of Vigilant's superiority is in her rigging; Mr. Herreshoff has departed from all conventional ideas, and, it must be admitted, with complete success, the mast being far better supported with less weight. The great fault of the rig, the extreme lightness of its component parts at the outset, was effectually remedied before the Cup races; the general arrangement of shrouds and stays has proved entirely successful, and is likely to be generally adopted by designers.

In the matter of handling many points of comparison present themselves, and both parties are likely to profit by the experience of the five races, but taken altogether it is difficult to say which crew has done the best work. Although Mr. Herreshoff's sailing has been criticised in some quarters, each of the boats was beautifully handled, though the details of working are quite different. Capt. Cranfield's work in starting and in maneuvering his boat through the race has been generally praised, and the perfect drill of the English crew has been admired by all who have seen it. At the same time Vigilant has been boldly and skilfully handled at all times, and if her crew has shown a lack of drill and discipline it has made up for it by quick and energetic work, as in the final race.

In the method of setting sails, especially the spinnaker, and in the use of the balloon jibtopsail, the American crew was distinctly superior, and Capt. Cranfield will have some new tricks to carry home with him. Taken altogether, the present races are likely to be of material benefit to both parties in the future.

## THE ELIXIR OF OCTOBER.

THIS is a day of hard matter of fact and common sense practicality; the age of magic philtres and wonder-working elixirs has passed by and been forgotten. But has it? Every town dweller country bred will tell you better than that. Every such an one, we mean, who has not utterly lost his freshness of spirit, whose heart has not been wholly withered and incrustured with the parching heat and the dustiness and mustiness of time and toil and turmoil of business. Every one, we mean, too, who shall confess the fact, concealing nothing and freely revealing to you his true self. He will own to the elixir of October days and testify to the magic of their spell on the man of the town who was the boy of the country.

Such an one may look up into the deep, mysterious blue of October heavens only through the narrow rifts of city streets; the floods of golden sunshine may gladden him but for a moment in the noonday rush; the glory of the sunset glow he may behold only as it flushes the towering summits of business blocks; of the zig-zagging fall of flaming autumn leaves he may catch but a glimpse as his elevated railway car speeds past the city parks; the tracery of bare October branches he may perceive only by down-bent gaze at night as their reflection is painted on the pavement by the high-poled electric light; yet slight as is the impression of the senses, momentary the glance, fleeting the picture stamped on the retina, all these manifestations of the changing year speak to him with their thousand tongues of the stretching fields, the wooded hillsides and the running waters; carry him back to boyhood days, and overwhelm him with heart thoughts of the old home.

Blessed is he—more blessed indeed than he can ever know while the blessing itself shall last—to whom the intimations and suggestions of October days are not of the sacred past alone, but of the present, too; to whom they bring thoughts not only of the old home that was, but of the old home that is.

A prosy, practical, matter-of-fact age? Not yet, nor ever shall be, in the season when the elixir of October is in the air and the magic of October blue in the sky.

## SNAP SHOTS

THE New York Forestry Commissioners are engaged in an attempt to restock the Catskill Mountains with deer. Last week sixteen deer, captured in Indian Lake in the Adirondacks, were transported by rail to the Catskill State Park, at Big Indian in Ulster county. With what have been put out there before and with the natural increase, it is expected that there will be nearly a hundred deer in the park next spring. With wise management this Catskill deer enterprise should prove successful; and there is no reason why the game may not become a permanent feature of the mountains.

Another and more important deer stocking experiment is the introduction of reindeer into Alaska, to furnish a food supply for the coast Eskimo. This work, undertaken by the National Government on the suggestion of Rev. Sheldon Jackson, gives promise of proving a very great success. Recent advices from Mr. Jackson report that of the original herd of 110 reindeer imported from Siberia last year none died during the winter, while the stock has been increased by the accession of 72 surviving fawns. A further addition of 37 reindeer was brought from Siberia in June of this year, and 150 more will be imported this fall. This is a beginning which appears to assure the establishment of the deer in Alaska.

A convention of Georgia sportsmen was called to meet last Tuesday in Atlanta to organize a State association and to consider needed amendments of the game laws. Georgia is one of those States which rejoice in game codes consisting for the most part of local county laws, each one differing from the rest, and the whole collection so various, diverse, complicated and uncertain that not one lawyer in ten can tell what it all means. If the sportsmen of Atlanta, Columbus, Americus, Savannah, Macon, and the other cities represented in the new movement shall set about the codification of the Georgia game statutes into an orderly, consistent and intelligible law, they will have made the first movement toward efficient game protection. Such reform is needed in a dozen other States, where codification of the laws is one of the essentials to a comprehension and respect of them.

## The Sportsman Tourist.

### THE GLADNESS OF AUTUMN.

Who sings of sadness in this happy hour  
When he is blest who can but breathe the air  
Of this October day! Who sings of death  
And melancholy days, and woods all sere;  
Of withered branch and leaf returned to dust,  
Of blight, and frost, and sombre autumn skies!  
I sing of joy, of that supremest mood  
When all-exalted, man and nature reap  
Fruit from a cycle's earnest toil!  
Who that can gaze upon New England hills  
Clad in their cloth of gold, the lambent air  
Pulsing with softest haze, the scent of leaves  
And all the forces of the autumn wood  
Distilling philtres sweeter far than June—  
Who can so look and feel no leaping stir  
Of all that sluggish tide which gives him life,  
A sense of living, working, conquering all  
The petty obstacles that hedge him round!  
Who talks of lying down to rest, and longs  
For all the sad and wasting panoplies  
Of self-afflicted woes—to him say I,  
Rise up! Fill all thy lungs with gladness full,  
Make thou thy name upon the walls of fame;  
Achieve, and put thy strength to earnest test!  
For nature lies not down to unearned rest,  
Nor does the soft surrur of the wind  
Lull her to well deserved repose until  
Her work is done; then gently breathes o'er all  
A final benison of falling leaves!

WEDSWORTH WADSWORTH.

### THE WOMAN FROM SITTING BULL'S.

In the fall of 1879, Paul Sandusky, Jo Hamilton and I built our winter quarters on Flat Willow Creek, about twenty miles east of the Snowy Mountains. The country was still infested with roving war parties from the different tribes, some coming from Sitting Bull's camp, then on the Big Bend of Milk River.

As we intended to do some trading with the friendly tribes, especially the Crows and Blackfeet, we built commodious quarters, consisting of two buildings facing each other and about forty feet apart, and containing altogether five rooms. Joining on to the "Fort"—as we called it—we constructed a high stockade corral for the horses.

Game of all kinds was then very abundant, and bands of elk and antelope could be seen almost daily within a mile or so of our place. Glad to have company, we gave free quarters to all hunters and trappers who cared to stop with us, and by March 1 we numbered eleven men, including our cook, "Nigger Andy."

A few hundred yards below our "fort" a little creek, which we named Beaver Castor, joined the Flat Willow. For some miles above its mouth it flowed through a deep cut in the prairie, bordered with sage brush and willows. At its junction with the Flat Willow, in the V formed by the two creeks, was quite a high butte. It sloped up very gently from the Flat Willow side, but was almost a cut bank on the Beaver Castor side.

This butte was our watch tower. From its summit we could see miles and miles of the surrounding country. One morning in March most of the men went out antelope hunting, leaving four of us in camp—Jo Healy, laid up with rheumatism; Harry Morgan, the herder; the cook and myself. About 10 o'clock this morning I concluded to take a hunt, and before catching up a horse I climbed the butte to see if I could spy a band of elk or antelope near by. As soon as I reached the summit I saw some moving forms on the prairie not far off, near Beaver Castor, and adjusting my glass, I found that they were a large war party of Indians afoot. They also saw me, for I saw several of them stop and level their telescopes at me. I took pains to let them know I was not an Indian, for I strutted about with long strides and faced them with arms akimbo. Finally, as they came close, I backed down from the summit, very slowly, and placing a buffalo chip on top of a bush, so as to make them think I was still watching them, I dashed for the fort.

I found that the horse herder had caught up an animal and gone out hunting; so grabbing a lariat I ran out to drive in the band, which was grazing nearly a mile from the house. I went down as fast as I could run, but found that I couldn't get within roping distance of a single animal. They had been in the corral all night as usual, and in spite of my efforts they kept straggling and feeding along, and every minute I expected the war party to swoop down on me. However, I finally got them home and into the corral, and my clothing wet with perspiration I sat down to get my wind.

In the meantime Andy had not been idle. He had placed all our spare arms and ammunition by the loopholes, had dragged Healy, bed and all, to a place of vantage, where he could shoot without hurting his rheumatic legs, and had then gone on preparing our dinner. So we waited and watched, expecting every minute to be attacked. But no Indians came. We had our dinner, and as the afternoon passed the boys kept straggling in by ones and twos, until by 5 o'clock all were home. None of them had seen any Indians.

Finally I proposed that two or three of us get our horses and make a reconnaissance.

"We don't want no horses," said Sagebrush Charlie, "just you and me go up on the butte and take a look from there."

I didn't like the proposition, for I surmised that the war party were concealed in the brush on Beaver Castor, probably near the butte. But on the other hand I didn't care to be bluffed, so I went with him.

As we neared the top of the butte we proceeded very cautiously, moving only a step at a time. Only a few yards more and we would have reached the summit, when we saw that an Indian on the opposite side of the butte was looking at us. We could see nothing of him but his head, and of course he could see only our heads. Thus we stood facing each other for what to me seemed a long time. "Shall we shoot?" asked Sagebrush. "No," I replied. "If we advance to shoot he will have the best of it, and if he advances we will have the edge on him." So we continued to stare at him. After a while I saw that the Indian was beginning to back down out of sight, so I

did the same. I made only a step and he had disappeared, but I kept backing away, watching the top of the butte, with rifle cocked ready to shoot in an instant. When half way down I turned to run and saw Sagebrush just disappearing around the corner of the fort. Until then I had supposed that he was at my side. So calling him some name, I fairly flew down the hill, expecting every minute to have a shower of bullets about my ears. But I too reached the fort without any sign from the enemy.

When I got inside I found the boys joking "Sagebrush" about leaving me, and seeing that he was ashamed of himself I said nothing to him, although I was quite angry at him.

As soon as it was dark we put on a double guard, and kept ourselves in readiness for an attack. Late in the evening we concluded that the Indians would make a daylight raid on us, so we arranged about guard duty and slept by turns. However, we heard nothing of our dusky friends, and at 6 o'clock the cook called breakfast as usual. The horses had now been in the corral nearly twenty-four hours and were very hungry, so four of us saddled up and went out to make a big circle and find out if our friends had left us. We went down Flat Willow a mile or more, then swung up on to the prairie, crossed Beaver Castor and headed home, but could see no Indian signs. Finally we went up on top of the butte, where Sagebrush and I had seen the Indian the night before. There in the loose shale we found his tracks, and saw that after backing down a little ways he had, like us, turned and run by mighty leaps to the bottom. There we found a great number of tracks and a lot of moccasins, some meat, etc., and following the trail we found that the Indians had crossed Beaver Castor and gone up on to the prairie, where in the thick dry grass we lost all traces of them, and concluding that they had left we went home and turned the horses out to feed, with the herder and one other man to herd them.

After dinner, perhaps 2 or 3 o'clock, we saw a person on foot come down on to the creek from the prairie, about half a mile below the house. I went down to see who it was, and found to my surprise that it was a lone Indian woman, and as soon as I came up to her she began to talk to me in a language which I at once knew to be Nez Percés, but which I could not understand. I replied to her in Sioux, and found that she understood and could speak a little of that tongue, and by piecing it out with signs we got along very well. I told her to go up to the fort with me and get something to eat, and afterward she could tell us her story. When we reached the place the boys all crowded around and stared at her, and asked all sorts of questions, but I told them to wait, and we would hear what she had to say.

The woman didn't seem to be at all embarrassed. She sat at the table and calmly and slowly ate the food the cook set before her, not heeding the ten or eleven pairs of eyes that were intently watching her. After she had finished eating I asked her to tell us where she had come from, where she was going and all about herself, and I interpreted her tale, sentence by sentence, to the boys. She said: "I came from Sitting Bull's camp on Milk River, when some of my people, Nez Percés, are living with the Sioux. Two years ago, my son went with some Sioux and Nez Percés to war against the Crows. They had a big fight on the Yellowstone, and it was supposed that my son was killed. But not long ago I heard that the Crows had captured my boy, and that he is still living and in the Crow camp. Having no relatives and no husband, I made up my mind to go and live with my son, and started out; this is the twenty-third day since I left Milk River. I have been starved most of the time and am very tired."

"Hush!" said one of the boys, "That's too darned thin. I move that we hang her right now."

At this, every one began to talk at once. Some said she was a spy, others that she was all right.

Finally I said to her, "The boys, some of them, think you are not telling the truth. Yesterday a big war party was here, and they think you belong to that outfit."

"How they lie," she interposed. "I haven't seen an Indian since I left Milk River."

"That may be," I replied, "you cannot blame the boys for being a little suspicious. However, they will not harm you. You are as safe here as you would be among your own people. Just as soon as this snow goes, one of our men will start for the Yellowstone with a four-horse team after some provisions, and you can go with him. From there it is only a short distance to the Crow camp. In the meantime you can stay with us here and rest up. Throw off your robe and make yourself at home."

"I like what you say," she replied, "but I am afraid of all these men. Let me stay close by you."

Wherever I went that afternoon she followed me, and when it came time to turn in I made her a bed of buffalo robe behind the counter. Some of the boys spread down in the room and others in the cook house.

"I don't like this," the woman said to me. "I am afraid to sleep there; let me make my bed down beside yours."

"Don't fear," I replied, "no harm will come to you. No one in this place cares for you or wishes to harm you."

"Well, then," she said, "if that is so I will step out a minute and then go to bed."

Now the door to this room was fastened from the inside, when we wished it, by two wooden bars; outside we closed it merely by a rawhide thong and pin. Some of us were always at home, and when we all left this room we fastened the door with the thong to keep the dogs and the cold air out. As the woman started to go out I went up to the counter and took my six-shooter, intending to follow her out, but quicker than a flash she darted through the door, and closed and fastened it with the thong and pin. Of course all the boys in the room made a rush, and two of us getting our fingers between the door and the jamb gave a strong jerk, snapped the fastening and we all ran out. The woman had disappeared in the darkness, but we could still hear her footsteps as she ran toward the brush. Suddenly she gave a peculiar kind of a whistle and from all around in the brush she was answered by the hooting of owls. We all rushed back into the fort, put out the lights and made ready for an attack.

After an hour or so the boys began to talk. "I knowed," said one, "that she was a spy."

"Didn't I say to hang her," exclaimed another, "You fellows that thought she was all right are sure soft."

We all sat up until long after daylight, and not until 8 or 9 o'clock did any one turn in. But we were not attacked, nor did we see the woman again.

Several weeks afterward, when Hamilton went to the Yellowstone after supplies, he learned that this woman had stopped at the "Circle N" ranch and that they had lost 140 horses.

## Natural History.

### FACTS ABOUT THE OPAH.

In his interesting article entitled "The Opah," which was published in FOREST AND STREAM of Oct. 7, my friend, Dr. R. W. Shufeldt, has—probably inadvertently—made some statements which, I am sure, he will be glad to have corrected.

"Years and years ago," he says, "a specimen was taken near Sable Island, Nova Scotia, and ichthyologists predicted then it would probably some time be captured upon the immediate coast of the United States. This has recently been done by Captain Wm. T. Lee on the La Have Bank in 280ft. of water (42° 49' N. lat., 63° W. long.)."

This statement is in error in the following particulars: First, the specimen of opah referred to by Dr. Shufeldt was not taken "upon the immediate coast of the United States," as an examination of the position will show, but nearly south (or off) of the center of Nova Scotia. Second, it was not caught on La Have Bank, but on the southern slope of the depressed ridge that extends eastward from that bank to the Western, or Sable Island, Bank, and is commonly known to the fishermen as "La Have Ridges." Third, the depth of water where the fish was caught (on a halibut trawl line) was about 280 fathoms—1,680ft.—instead of 280ft.

I may, perhaps, be pardoned for writing of these matters somewhat *ex cathedra*, when it is stated that I am entirely familiar with the fishing ground referred to, having been there many times, and also that the fish in question was sent to me by Capt. Lee, since, at that time, I was preparing the exhibit of the U. S. Fish Commission for the Columbian Exposition.

The "aid to science" which has been given by the New England fishermen is worthy of all praise, and it is specially gratifying to me to see public attention called to the contribution of one who, for years, was on the crew list of the vessel I commanded in the Atlantic halibut fishery, and who has since then been on the lookout for rare things from the depths of ocean. J. W. COLLINS.

In Oct. 7, 1893, issue of FOREST AND STREAM (p. 293) in referring to the classification of the opah, I remarked that it "has been grouped with the dolphins or the *Coryphæna*, but by others, and more properly, it has been placed among the *Stromateidae*, as the family *Lamprididae*." This should read, "placed among the *stromateoid* fishes," instead of the *Stromateidae*, as above. Otherwise the statement is correct. DR. R. W. SHUFELDT.

### Nut Hiders.

THE recent article giving an account of the chipmunk planting corn, reminded me of an afternoon spent with the gray squirrels in the park in Quincy, Ill. These squirrels are tame enough to take nuts from one's hand. I fed them liberally, and noticed that after eating all they wanted, they buried the nuts, and were as eager to get them for that purpose as they were to eat them when hungry. It was curious to see how particular they were about getting a place that suited them for the burying. The ground was apparently all alike, covered with a thick short turf of green grass, but the squirrel frequently examined a dozen places before deciding to plant. The planting was done by digging a hole about 2in. deep with the forepaws. The nut was then pushed tightly down, the dirt pushed into the hole with the nose and packed by the fore paws; then the grass was carefully pulled over the spot, and in a number of cases a dead leaf was carelessly thrown over it. The concealment was so deftly done that not a trace of the work was left. Doubtless the nut was buried to conceal it till it was needed for food, but it is probable that thousands of these buried nuts are never dug up and grow to be trees.

A friend once told me that he noticed a flock of crows making constant trips between some pecan trees and a plowed field, and going to the field he found that the crows were burying pecan nuts. In this case it would seem to be an instinct for planting, as it is not likely that a crow could use a pecan nut for food, the shell being too hard to crack and the nut too large to be eaten whole. The crow seems to have a sort of mania for hiding things any way. Our pet crows would carry away and hide combs, thimbles, bits of glass, and other small things that they could not eat.

O. H. HAMPTON.

### A Grouse Escapeade.

AUBURN, Susquehanna County, Pa., Oct. 15.—About 6:30 yesterday morning one of the ladies of the house heard a commotion among the chickens. Stepping out on the back porch to ascertain the cause, she was surprised to find a grouse behind a screen door that swings back across a corner and had been fastened back, but not so close but it allowed the bird to fly into the trap. When discovered, the grouse was trying, with raised ruff and expanded tail, to get out through the wire netting. The lady released the door and picked up the bird, but her grasp was not secure enough to hold so slippery a customer, and it fluttered from her hands and went whirling away. All who have pursued this noble bird well know its ability in getting off and doing it slick, too.

To-day I flushed one from a grapevine not far from the house. It flew across fields some sixty rods to cover.

BON AMI.

### Yellow Rail.

On Saturday, Sept. 30, George Richards, of Hackensack, New Jersey, shot a yellow rail on the meadows near that place. This—although we have not examined the specimen—was probably *P. noveboracensis*, a species which is usually regarded as rare, but which is probably more abundant than is commonly thought, its shy secretive habits making it very hard to find.

## THE ARROW-HEAD.

A Post and Pre-Columbian Autobiography.

EDITED BY CLARENCE B. MOORE.

A FAMILY in Norway can to-day trace its descent, in unbroken line, to Eric the Red, the great Scandinavian navigator, who flourished about the year 1000, while some Roman nobles claim an origin still more remote, though upon less reliable authority.

It is related of the great Napoleon that upon meeting Prince Massimo, of Rome, he sneeringly remarked to the Italian, "They say that you have as ancestor the great Fabius Maximus."

"I could not prove it," replied the Prince, "but the report has been current in our family for the last thousand years."

An old family indeed!

But I come of one compared to which the Roman or the Norwegian is but of yesterday. I am almost coeval with the world. I belong to a branch of the Quartz family—the Flints. I am an arrow-head.

I shall not speak of the long ages before the coming of man, of the upheavals of the earth, or of the strange animals that roamed around, animals long since gone, whose remains are now fossils and phosphates.

A long, long time after that I lay upon the surface of the ground, and saw the red Indians pass me single file, on their war expeditions, or heard the twanging of the bow, as some dusky hunter sent his arrow after the fleeing deer. I thought my life would go on forever thus, upon the ground, in the northern part of what is now the State of Florida. But it was not to be. One day a party of squaws in search of flint passed along, and one stopping picked me up (for I was not much larger than her closed hand) and carried me, with one of my relatives who had lain near me for ages, to the home of her lord. The other squaws also had a number of my family connections, and I gathered from the conversation that a party of braves was soon to start for a country further south, where stone was seldom seen, a land bordering on a mighty river. There it was their intention to trade me and my relatives for fish, which, when dried, they could readily bring back to their inland home.

The journey to the great river was neither long nor arduous. The trade was satisfactorily concluded, and after a grand feast the braves returned to their home, as did also the various river and coast Indians, who had gathered there with their sun-dried fish.

My new owner, who, it turned out, was a chief in his tribe, tossed me and a number of my relatives into the bottom of his canoe. This craft was made from a great log of cypress, sharpened at either end, and hollowed out by repeated blows from chisels and gouges of shell, after previous treatment by fire.\* With four braves, his companions, the chief started up the river for his island, distant a five days' journey. We usually traveled at night, for it seemed that unfriendly tribes peopled the banks, tribes only too eager to vary their diet of periwinkles and mussels by a meal from some luckless prisoner. Whenever my owner could distinguish the great heaps of shells which marked a village, he with his companions usually hugged the further shore, but whenever they felt sure of a friendly reception they halted for a brief visit.

My new owner was of powerful build, though no taller than some among the white men whom years later it was my fortune to see. His head, however, was small and round, with massive jaws, from which no tooth was missing. During the long years I passed among his people I seldom saw a missing tooth, and never one showing signs of decay. His powerful legs, upon which the muscles stood out in knots, were well fitted to bear him for long days' journeys in the chase or in war. His dress was of skin and his weapons consisted of a bow and lance, and arrows tipped with flint†. The arrow-heads were about one-third the size of the ordinary lance-head, and sometimes had a shank projecting from the base. The head was fastened to the body of the arrow by inserting the shank in a cleft and binding it around with sinews of the deer, while the lance-head often had no shank, its base being put within the split end of the body of the lance.

Our journey was uneventful. As we progressed, the river grew narrower and narrower. At length we crossed a great lake, and soon after leaving the river and traversing another lake much smaller in size, we followed a narrow creek for a short distance, to my master's island home. The party was joyfully received, and many of my relatives were distributed to various warriors whose fish had been intrusted to the travelers.

My new home on the island was built of palmetto thatch, and many similar houses were to be seen in every direction, for the tribe was a large one. Lofty palmettoes

were abundant, impressing me as peculiarly graceful, since I had seen none in my former home, and but few on my journey up the river. Near and under the village lay great heaps of periwinkle and mussel shells, formed by the continual emptying of refuse from the daily repasts, together with fragments of broken pots and earthenware vessels of all sorts; in fact, everything no longer of use, and therefore of no value to the owner. Beyond these great ridges of shell which covered acres of ground lay a swamp where the people had raised a huge conical burial mound of sand. To this mound and to the great shell heap then in use ran causeways of shell through the swamp, insuring easy access in wet seasons as well as dry. Upon the side where the causeway joined it the burial mound sloped down more gradually, thus making easier the approach to the summit.\*

My doubts as to why I had been brought this long distance were speedily solved. I soon learned that I was to become an arrow-head, for my owner took me to one of those who made weapons of stone for a living. The arrow-head maker sat before his hut industriously plying his trade. Business was apparently good, as was to be expected, considering the quantity of stone recently received by the warriors. The weapon maker was very

shell beads put me in a pouch of deer skin which hung at his belt. Speedily returning to his home he selected the straightest and strongest shaft in his possession, and bound me to it with the tough sinews of the deer.

Was it chance that took him toward the lonely burial mound that night, when the moon had risen? I never knew, but as my owner passed along the causeway to the swamp, a long, wailing cry arose, and then a woman's shriek. There was no mistaking either. The one was the cry of a panther, the other came from Kakola. In an instant my owner was at the base of the mound. Above him stood Kakola, while between them crouched the yellow beast ready to spring. Twang! went the bow. Passing clean through the panther's neck I came out on the other side. The beast staggered and fell; its sinewy limbs twitched for a moment, then all danger was over. Kakola stood pale and motionless, but in an instant her preserver had her in his arms, and there, on the huge mound of sand, with the moonlight shining through the palmettoes and the dead panther at their feet, their vows were plighted.

Before returning my owner pulled me from the neck of the beast and vowed that since I had done him such a service in time of emergency he would never use me again save in the direst need.

As they walked toward the village he hung around the neck of Kakola a charm made from a pebble of quartz brought from the ocean, a pebble with a groove cut around the smaller end to afford a more secure hold for the deer sinew by which it was suspended. By these charms of quartz the Indians set great store, and I thought nothing could be more highly prized; but years after when I saw what the white men would do and endure for a yellow stone they called gold I realized of how little comparative value were the quartz pebbles to the Indians.

The adventure with the panther made a great stir in the tribe, and I was pronounced a bearer of good fortune. The resolution of their chief never again to use me save in case of imperative necessity was highly commended by all, as was the betrothal of Kakola. No, not all, there was one exception. The chief's cousin and nearest of kin looked upon the girl with a covetous eye, but it was not in his power to interfere, and my owner took Kakola to his home.

A period of rest in the affairs of the tribe followed the nuptials, the chief hesitating to make any move that might separate him from his bride; but one day, being over on the mainland in pursuit of deer, he unwarily planted his foot upon a large serpent coiled in his way. Quick as lightning the snake struck at his leg, driving in both fangs above his ankle. Of little service was the circular charm of shell he wore, the gift of his bride, and equally vain were the incantations of the medicine man, for swelling immediately set in, and fainter and fainter beat the heart until at last it ceased. Poor Kakola!

The rival cousin succeeded my late owner, and decreed a funeral befitting the dead man's rank. First of all an expedition was sent to the river, where an attack was made upon a passing canoe containing three warriors of another tribe. Of these one escaped, the remaining two being brought back as prisoners. These unfortunate wretches were promptly slaughtered and cooked, and upon them the whole tribe feasted, until nothing but the charred bones remained.

Having thus, after their fashion, honored their departed chief, the funeral was solemnized. Along the causeway, through the swamp, marched the whole tribe, the warriors in full war regalia, the women wailing piteously.

When the slope ascending to the mound was reached they halted, and the principal braves mounted to the summit. The body was then placed upon the ground, no pains being taken as to any particular arrangement of head or limbs, such being their custom, and while it lay thus in a heap poor Kakola, knowing full well what fate awaited her, took her last farewell.

With the remains were placed the charred bones of the victims, a chisel of stone, two strings of shell beads, and a gauge fashioned from a conch shell. Beneath the head were laid two pieces of broken pottery, and lastly, upon the breast I was placed, to serve my owner in the future life, as I had done upon earth. The suspicion of a smile flitted across the new chief's face as he saw me, and glancing toward Kakola his eyes for an instant only flashed triumph, and then resumed the downcast expression that befitted the occasion. Last of all a mass of sandy loam was heaped upon the dead man and myself, and we were left alone.

The mound had been formed by successive burials. It had been begun, tradition ran, hundreds of moons before, after a great battle, when a round shell heap was selected and the slain, placed side by side, were covered with a mound of white sand. Upon this first interment others had been made, until at last it had assumed its present shape and size.

We had lain in our grave but a short time when I saw a flat instrument of wood strike the body on which I lay,

"LOOK, ZEKE, HERE'S A FINE LARGE ARROW-HEAD."

skillful. Taking me in his left hand, and striking repeated blows with an implement of flint held in his right, he soon separated from the rest a piece of stone about double the size of the arrow-head desired. From this piece I am descended. The same process was then repeated on the other side of the mass of flint, but owing to an imperfection the line of fracture was so irregular that the fragment thus obtained was useless, and with the portion that remained—a core too small to be of any further use—it was tossed into a heap of cores, broken arrow-heads and chippings of stone which each night were emptied outside the entrance. This duty fell upon Kakola, the daughter of the maker of arrow-heads, and with Kakola, as I soon learned, my owner was in love.

When my twin was discarded the weapon maker turned his attention to me, and putting aside his heavy hammer of stone he began to chip small flakes from me with a lighter implement, and so deftly did he work that under his rapid blows I soon assumed the outline desired, though my thickness had to be reduced by still further careful chippings. At length I was completed, and proud was the armorer of his triumph when I lay before him, an arrow-head of graceful outline, twice the usual size, and fashioned from flint of a deep red, alike useful and beautiful.

That evening my owner came to the home of the maker of arrow-heads. As Kakola met him her cheeks assumed a hue as deep as mine, though in her congratulations on his safe return she was not so warm as had been many of the other maidens of the tribe. My owner received me with an exclamation of approval, and paying over a string of

\*This mound is on Tick Island, Volusia county, Fla.

\*The Huguenot Le Moyne saw these implements in use.  
†The Florida Indians used chert, hornstone or chalcedony, varieties of flint.

and a little later the new chief, with a covetous smile visible in the moonlight, lifted me from my resting place. Quickly filling the hole that he had dug, he returned to his home where poor Kakola sat disconsolate. His cousin's wife and his cousin's favorite weapon were now the property of the new chief.

Affairs went along quietly enough for a while in the tribe, but a storm was brewing. The sole survivor of the warriors attacked upon the river had wasted no time in returning to his people, a powerful tribe living to the north, by the sea. At once a large force had been organized, which, marching over to the river, was joined by many allies from friendly villages on the banks, where canoes were provided for the journey up the stream.

The island of which my new owner was chief was safe from surprise in the portions surrounded by the lake, and by the broad stream running into the lake beyond; but on the west a narrow and winding creek alone divided it from the mainland, which in that place was densely wooded.

Late one night, without sound of warning, a great cry arose from the woods, mingled with the shrieks of our women and children. The foe was among us. Rallying almost immediately, the chief and the fighting men of the village fell furiously upon the attacking party, but were driven by degrees to the burial mound, and into the surrounding swamp. The chief's lance was broken and of his arrows the one of which I formed the head alone remained; while the supply of missiles among his warriors was almost exhausted. The chief of the attacking forces, lance in hand and heading his braves, charged upon the party on the mound. The braves behind us began to waver, and a stampede was imminent; when my owner fitted me to his bow, and exerting all his force, loosened his grasp on the string. Away I flew through the air, then all was darkness. Reeling back, the chief of the invading forces, with me buried in his chest, fell heavily to the ground. Panic seized his followers. Hastening to the water, bearing their disabled leader, they leaped into the canoes and swiftly paddled away.

I next saw the light when, having arrived at their village, the medicine man, pulling with all his force, withdrew me from the body of the wounded chief. My new home was by the sea, and for full a hundred summers, descending from father to son, I remained with the tribe by the ocean. The people lived mainly upon oysters and fish, cannibalism being unknown to them. Their scrapers for removing the fat from skins were of shell, while piercing implements for all uses save war were made from the inside of the conch. They, too, had great heaps of shell near their villages, but with them the oyster and clam took the place of the periwinkle and mussel.

One day a wonderful thing was seen. Far out at sea enormous canoes with wings were descried moving toward the town, and were observed to stop at a distance from the shore. From them came many smaller canoes, filled with men of the most wonderful description. Their faces were white, and many wore garments of a polished stone which they call steel, their weapons being of the same material. Some carried tubes from which came lightning and thunder and hailstones that gave death to those they touched. Rumors of such people had reached us long before, and in fact, it was reported that when men had for a short time been living near the great river bear the point where it entered the sea.

Our people and the new comers soon made friends, and land was given the white men upon which to build a town, our people in return receiving many presents of a nature quite new to them. My owner, who had ceded to them the town, which they named St. Augustine, became an object of envy to all the braves. Around his neck he now wore a string of beads made of silver, as the strangers called it, and from it hung a round charm of yellow gold. This gold piece they called money, and it bore the likeness of their great chief beyond the sea.

The leader of these white men was named Menendez, and they all came of a race called Spaniards. One day great preparations were begun, and I learned that an expedition was on foot to attack the white men on the river. These white men, though they worshipped the same great spirit as the people of Menendez, differed somewhat in the form of worship, and hence the Spaniards wished to kill them. Crossing swiftly to Fort Caroline on the River May, or St. John's, as it is now called, Menendez with his men surprised the fort, and putting nearly all of its defenders to the sword, speedily returned to St. Augustine. After this the Spaniards had full control.

They now began to abuse the chief, my owner and his people, and by harsh treatment gained their enmity, though for a time they suffered in silence. Our tribe even moved away, settling in new quarters on the coast, not far from where the great river flows into the ocean. But the time of vengeance was at hand. One day three ships, as the winged canoes were called, arrived, and from them landed many men like those slaughtered by the Spaniards, under a gallant leader. The great chief of these people, I heard it said, being of the same religion as the Spaniards, had not taken amiss the slaughter of his heretical subjects, and had turned a deaf ear to the cries for vengeance that arose from the widows and orphans of the murdered men, and from so many of his nation. Such being the case, the noble-hearted Frenchman had taken it upon himself to avenge his countrymen. Joined by the Indians, who were now panting for revenge, he attacked and took the Spanish fort. Many of the defenders were slain, while those who surrendered were put to death. And as the Spaniards had posted an inscription to the effect that they had slain the prisoners "not as Frenchmen but as Lutherans," so the French leader, de Gourgues, explained that his reprisals were not on Spaniards but on murderers.

In the attack on the fort the chief received a mortal wound in a hand-to-hand conflict with a gigantic Spaniard, upon whose breast-plate his lance-head was shivered. He lived only long enough to receive the thanks of his allies before their departure for their home beyond the sea.

I was buried with him, lying on his breast, with the ornaments of silver and the talisman of gold. This time I had a long, long sleep, over three hundred summers I have since learned, but at length a time of waking came. One day I heard the sound of digging, then of voices, and soon the sunlight, from which I had been so long hidden, burst in upon me. In a trench dug in from the sloping

side of the mound, upon the surface of which great live oaks were now growing, stood two men, one much lighter than any Spaniard, the other darker by far than the people among whom I had passed so long a time, and with clothing differing greatly from that of the whites whom I had seen before my burial.

When he saw me, the white man eagerly picked me up exclaiming, "Look, Zeke, here's a fine, large arrow-head," and held me out for the inspection of the black man, who, with an indifferent "Yes, sah, I reckon hit are," resumed his digging.

Many of the chief's bones had crumbled away, but such as remained were carefully removed from the sand, packed in moss and sent, with others from the mound, to a large building in a city far away to the north, where it seems such things are kept, and where many people in queer costumes, some wearing before their eyes oval pieces of glass, which I take to be charms, come and gaze down upon me as I lie in my case. But alas, no notice sets forth my ancient race, or mentions the chieftains I have served so well, or the strange things that I have seen. I lie upon a plain white card bearing only the words:

FOUND WITH SKELETON C.

### THE AUTUMN FEVER.

DAY before yesterday I was standing in front of the hotel at a little town on the Missouri, when a covered wagon stopped in front of the opposite store and began taking on part of an outfit. On the wagon cover was painted "Cherokee Strip or Burst." Behind the wagon was tied a white bulldog and a sorrel mare in a blanket, evidently the running horse that was to do the racing on the opening day. I soon saw that about all the adventuresome young men in town belonged to the outfit. They had two covered wagons and about six riding horses besides the runner before mentioned. They were going for a lark and I envied them their trip. There was a good deal of lively talk with those left behind. One young fellow called out to a blushing young lady as the ferryboat pushed off:

"If you see my girl tell her to take good care of herself while I'm gone."

"Where will I find her?"

"Oh, just inquire around. Most anybody can tell you who she is."

"Have you any other message for her?"

"Yes, tell her I'll be back all right and do what I said I would."

Another older member of the crew was called out to in a jeering way by some man on shore.

"That's all right," he replied, "but say, if your wife seems to grieve from now on don't be surprised. In fact, I shouldn't wonder if she left here in about two or three days now."

An old darky hobbled to the river bank about the last thing with a basket filled with divers jars of preserves and pickles, a parting message from some fond mother. You could tell they had not made such a trip before from the way they had their wagon loaded—one of them, at least.

When I came back to the city and was waiting in the depot for my suburban train, I got talking with a man from Coffeyville, Kas. After a while we drifted around to hunting, and he said with a twinkle in his eyes that showed his love for the chase, "Of course I don't know you, but if you're just the right kind of a fellow and you come out there I'll show you some awful good shootin'." \* \* \* Oh, yes," as the talk progressed, "we got plenty of good tough horses. Our ranch in the Nation is just in easy riding distance." \* \* \*

"Them Dalton boys 'r' awful good with a rifle. You know Bob, the murderous scoundrel, he did nearly all that killin', and he shot all the time from his hip. End he ne'er missed."

Little fishes! Think of getting into a fracas with a man who didn't even have to take aim, but could just hold the gun at his side and when he pulled the trigger knew it was going to hit you.

But that is neither here nor there. I don't know just exactly what is either. Only that Cherokee Strip outfit and this encounter in the depot and the talks of the chickens and deer and turkeys makes my trigger finger sort of feverish and my scrawny little legs itch to get straddle of a cow pony.

This autumn fever! I suppose the better part of the Anglo-Saxon race gets it about this time. Those big wooden stirrups, and the neat little horses that are never gun-shy!

GEORGE KENNEDY.

### AMONG THE PINES.

THE opening of the season found me in northern Vermont. Here is a veritable sportsman's paradise. Cover is abundant, consisting mainly of pine, interspersed with hemlock, birch and oak. The surface of the country is quite uneven, cut up by many ravines well hidden under the pines, the most selected recesses of which, with their sombre shades and soft carpet of brown, are the favorite haunts of the ruffed grouse.

A blessing, indeed, to the overworked toiler at the desk are these weird nooks and the saucy feathered game that dwells therein. What a source of recuperation for the weary brain is to be found in the pure air, the happy sunshine, the restful sighing of the pines.

A glorious time we had of it, my faithful spaniel and I. Now stopping to admire a bit of scenery, or a giant tree, the growth of a century, now hastening after an old cock grouse, a wild and wily fellow, who had completely outwitted us at first attack. Up and down we went, along deserted wood roads and forgotten paths, as chance or inclination might direct, until the shades of evening warned us that we must hasten homeward, that another happy day afield was ended; destined long, however, to live in memory.

### Sebois Sportsman's Lodge.

PATTEN, Maine, Oct. 8.—One day last week J. D. Cooper of Patten, left this place for a day's hunt in the woods at 7 A. M., and returned at 3 P. M.; having killed on his trip one moose, two deer, one fox and six partridges. This is a record to beat.

G. W. L. COOPER.

A man lately caught a big black snake under a pile of cord-wood on Mount Tom which was 9 ft. long. It had 5 red squirrels in its stomach. He took the whole family.—C. H.

### THE SAGINAW CROWD.

Pilgrimage of 1892.—II.

(Continued from page 316.)

JACK went off over the hill after grouse, and our early start for the afternoon was a failure on account of his prolonged absence. We did at last get under way after bidding the boys good-bye, for we were bound to be in camp on the Little Missouri that night. The distance was variously estimated at anywhere from fifteen to twenty-five miles. The Kid and Paddock made a mistake and took the wrong road, which delayed us another half hour. Pulling back across the country behind the "lone corral" we gained the right road, but it was nearly half-past two o'clock before we were straightened out, and then we were only two miles from the ranch. The Kid had told us about an antelope buck that seemed to make his home around this corral; and sure-enough there he stood on the hill to the right. As we came in sight he bounded away like the wind, and after that kept a good distance from us. The only other opportunity we had whereby we were in reasonable distance of shooting antelope was some hours later, when we came to the pitch of a small rise in the ground, and in the valley below us not twenty rods away stood an antelope with head thrown back looking at us. Instantly, though, he was in motion; and how they can fly when they set out to do it. Before we could throw a shell into the chamber and jump out of the wagon he seemed to be a half mile away; and though we cracked away at him two or three times we failed to bowl him over.

The buckboard continued in the lead, and looking back with the glass we could see that the large wagon had stopped for something or other, and then we saw them working at the wheel; and when they did finally overtake us at night time, they related that the box in one of the wheels had become loose, and it looked as if they were destined to leave the wagon there; but Jack, with an ax and one of his sharpened knives, succeeded in wedging it in place in a most artistic manner, and as is always the case, when it was fixed it was better than in the first place. We had no more trouble with a loose box on the entire trip. When we saw they were ready to proceed we drove on, and by this time the trail had become very indistinct, for the only travel over it is the outfit from X's, and they don't use it often.

A branching road creates indecision in our minds as to which one to take; the country looked the same in every direction, and one road seemed to be traveled as much as another. One turned to the north, the other to the west. There was but one point that we knew of where we could descend to the bottom lands of the river from the high breaks of the plateau. To miss that meant that we have to camp without water and on uncertain ground. There seemed to be landmarks that were familiar, and though I had been over the road merely going and coming once, and that years before, yet I was quite positive that the road to the left was the one we should take. There was no use hesitating; Paddock knew no more than we did; so, putting on a bold front, we took the left-hand road to the westward and bowled along at as rapid a rate as the much-used-up persuader would affect spiketail and his mate. It was growing late, and yet the Little Missouri seemed to be as far away as ever. Far to the north and westward we could see a line of buttes, which meant the boundary of the Bad Lands; to the south the breaks of the Magpie, and far to the northwest the Kildeer Mountains.

Drive though as we would, the distant hills came nearer very slowly. In a case of this kind, when there has been indecision as to which road should be taken, time and distance both seem long; and an uncertain feeling pervaded the entire party as to whether we were right or wrong. At last the prairie dog village was reached that I had been telling the boys about all afternoon. I remembered that about three miles to the eastward of the point where we made the descent into the bottom lands was a very large prairie dog village; and it was a great relief to us when this landmark came in view. As far as the eye could reach we could see prairie dogs on the little mounds at the entrances to the burrows. They would chipper at us as we drove along, and, with a quick jerk of the head, disappear in an instant, giving us a parting salute with a quick wiggle of their stubby tails; and as one went down another came up near by. One cannot resist a shot or two at these innocent little fellows, for they do make a mighty tempting mark for the rifle, and the occupants of the buckboard were no exception. After knocking over one or two our ambition in this direction was satisfied, and we were again on the road. Some two or three miles in the distance, with the aid of the glass, we could see the rest of the party coming.

The three miles between prairie dog village and the breaks was about the longest three miles I have ever driven. A covey of grouse rose in front of us and scurried down the hillside into the scrub oak and chaparral in the valley far below. The road wound to the right and left among the high buttes; and then, suddenly topping one grand old fellow, there, at our feet, spread out like a thread of silver, shone in the setting sun the Little Missouri. I am aware that the expression "thread of silver" does not apply to every one of these muddy rivers; but it did in this case, for the shallow stream runs over beds of burned clay and scoria, and there is an absence of that red, muddy deposit that is so noticeable in most of the Western rivers. The water is clear and seemingly pure, and, as the sun painted the buttes with every shade of red, terra cotta, orange, green and gray, we sat and watched in the fading light the shades creep from out the gorges and fill the hollows, until the others joined us. Paddock seemed quite crestfallen to think we had set the pace, for he had been bound to camp some way back. After all, his alarm as to whether the horses would stand the trip or not was needless, for they were in good condition and had not had hard driving. Now, there was nothing for it but to plunge down the mountain side to the river bed. Standing where we did, I pointed out, some two miles down the river, the place where we had camped on our previous trip, it was at the edge of a grove of cottonwood trees, which, later on, we found had been the camping ground for a band of Gros Ventre Indians, and the next morning, when exploring in that direction, we found the remnants of their camp, and a recently improvised mud smoke-house where they had evidently smoked their venison.

Once before, in going down this decline, we had a very

\* Landing of the Spaniard, Menendez, 1565.

† The French Huguenots at Fort Caroline on the St. John's River.

‡ Dominio de Gourgues, 1688.

narrow escape from going over the ledge, and taking a fall of several hundred feet. Ferd was driving then, and the wagon was heavily loaded; and we were strung out behind pulling back. Somehow or other it got the best of us, and though we hung on like grim death, in making a sharp turn, the marks in the dirt in the road showed where the wheel had missed by about 2 or 3 in. the edge of the cliff.

This year we were better prepared, our wagons had breaks that would hold; and though the descent is very steep and risky, yet we made it in safety; but it was dark by the time we reached the fringe of cottonwoods by the riverside. We had marked about the spot we had wished to camp, but it was some time before we could find the right place; for we wanted to be where we could get water for the camp easily, have plenty of wood, and at the same time find a spot well shaded where it would be clean. This country is regularly overflowed in the spring, and it leaves a slimy deposit, that on drying makes a palpable powder that is most disagreeable in camp. We found a place at last that was fairly satisfactory, and kindling a fire for light, we set to work establishing our camp.

Henry, Paddock and the Kid took the horses to water, and then back into the hills to look for good pasturage, where they could be picketed until morning. Some gathered wood, Harrison began to get supper for the hungry crowd; and antelope steak was soon sizzling over the coals. Tents arranged in a semi-circle the right way of the wind from the fire soon completed camping arrangements. What scene is finer than the white tents before a camp-fire on a cool October evening? The crackling fire and the shower of sparks shooting up into the moving leaves above, coupled with the sounds one always hears in a new country, make a quiet, picturesque scene, that to me is the ideal of a sportsman's life. The first night in camp in a strange country, and after the evening smoke has been regaled by stories of Indians, bears and mountain lions, does not produce the soundest sleep.

Finally our preparations were made for sleeping. Judge and Jack had the little tent all to themselves, and kindly consented to give the Kid sleeping room at the tent door; I found a good place for my sleeping-bag near the fire, while the others, with the exception of Seib, had the large tent. Seib was bound to sleep outdoors, the starry heavens above and wrapped in the stillness of the night—that was

behind us instead of crossing the river; and none of those stationed at the water had a shot, though we started a dozen or more deer. The thicket where they were resting was very dense; and, though we could hear the startled animal spring from its grassy bed in front of us, possibly not 50 ft. away, yet nine times out of ten we could not even get a glimpse of it, much less a shot. Some of the more fortunate, in the open parts of the woods, caught distant views of the fleeting forms; but it was a morning of disappointments. Briggs wounded one, but did not get it. If we had only had a slow old hound, the wounded deer could not have escaped; and it would

A BUCKING BRONCHO AT H. A. RANCH.

have been a much more humane way of hunting, and at the same time have been easier for us. The bullberry bushes and thorns were almost impenetrable; and, when we emerged in the open glade beyond, we were a tired and hot crowd, with scratched and bleeding hands and faces.

After resting we concluded to beat back over the same ground. On the start, I got out of line and was afraid to follow, for the arrangement was that we should all keep in line to avoid accidents in shooting at anything that might come up in front of us. I heard a fusillade from those ahead, and, taking a stand by a large cottonwood, saw a doe coming full tilt from the cover, about 200 yds. off. I took careful aim and knocked her down, breaking the right foreleg. She whirled and flew away from me. I again shot, and the animal disappeared entirely. I hunted the ground high and low, but could not find her. I am glad to say, though, that we found her the next day, and Jack was fortunate enough to put a bullet in the right place.

We saw many bear tracks; in fact, they seemed to be everywhere, denoting that there were lots of silver-tips in that country, and that the Judge would have a chance to use his trap, which he had lugged from home with him. In the afternoon the Kid went back to camp and brought the trap on horseback, and we, following along the bar to Bend No. 2, came upon tracks so large that the Judge gave up in disgust, and said he would have to have a trap made to fit that kind of a bear. Measurements taken of one impression showed that the wearer of that moccasin had a foot 13 in. long and 8 in. wide. Just think of it, he must have weighed nearly a ton. We were none of us such ardent bear hunters after that time. Places where they had been breaking through brush and trees and pulling down bullberries showed that the reach of some of them was very high, and that a tough withe, the size of a man's arm, was no obstruction to them, for these were broken 10 ft. high and pulled down in every direction.

We were tired out that night on reaching camp. The Judge had forded the river two or three times with the Doctor on his shoulders, to avoid his getting wet. The rest of us were not so tender-footed, and did not object to wading the stream, which was not over six to eight inches deep at the fording places. We were disappointed in not getting deer, of course; but we had seen lots of them, and knew better how to get at them next time, and all of us resolved to shoot better at the next opportunity.

Paddock proved to be a brick, and thoroughly understood the country and its game. He was willing to go

"JUDGE AND JACK HAD THE LITTLE TENT ALL TO THEMSELVES."

through the thickest brush and stir them up for us; and we were confident that when it did come his time to shoot something would drop. In this we were not mistaken, for later on we found him to be a most unerring rifle shot, and on the two deer he killed during our stay but three cartridges were used.

After stripping and bathing in the clear stream and partaking of a good square supper that Harrison had ready for us, the programme of the night before was repeated. Of course the usual batch of stories was told as we sat around the camp-fire. I remember one I told about Charlie Bellinger and his spittoons. Poor Charlie was one of those fellows who, no matter how hard he worked, never seemed to get ahead. He had a shiftless, good-for-nothing wife, who probably used up what money he earned as fast as it was paid him. Something was wrong, anyhow, for Charlie worked hard and had good steady work;

at least he had had for a number of years. He spoke with a drawl and a distinct nasal twang that heightened the interest of his narrative. In his palmy days, before he was married, he had invested in a muzzleloading shotgun, which cost him \$45; for Charlie was a sportsman, or at least he liked to shoot; and whenever he could get away for a day, or a Sunday morning in pigeon time, he used to whack away at them with as much spirit as the rest of us. Through all his stages of poverty and misfortune he had hung on to his shotgun. It was before the breechloader had come into general use, and was a pretty good gun of its kind. Toward the last, though, he had frequently threatened to sell it, as he could not afford to go shooting, nor to own so valuable a gun; and he vowed that the first chance he had he would sell it and buy some furniture for his house. But the months went by and Charlie did not part with his treasure. Once or twice I asked him in a joking way if he had sold his gun yet, but he would drawl out some excuse or other. Finally he came in smiling and said: "Well, by gum, I have sold my gun. I made a great trade for it." "Well, Charlie, what did you get?" "Well, by gum," he said, "I went down to the second-hand store and got one of these here folding chairs and a bed and two of the dandiest, nicest spittoons you ever see. By gum, they set that high," and he made a motion with his hand that would indicate that the new acquisitions stood at least knee-high. He looked upon them as articles of ornament rather than of use. Now, to think of his swapping off a \$45 shotgun for a second-hand chair and bed that combined were worth about \$2.50, and concentrating three-quarters of the value in these two useless spittoons was laughable, knowing, as I did, the contents of his house—a little shanty without lath or plaster, consisting of one room and a woodshed, and containing a tumble-down cook stove—not even a piece of rag carpet on the floor. Old soap and candle boxes constituted the chairs; and for a bed he had constructed a rough box on four legs out of pine boards he had taken from the mill. What possible use these two ornamental spittoons, that stood 2 ft. high, could be to him the Lord only knows; but he had made the swap. The shotgun was gone and also any hope he might ever have of a day's outing or a chance to get away from the miserable, dirty, shiftless wife of his, and his entire hope of

THE THICKETS WHERE WE HUNTED DEER.

the future was concentrated in these two "dandiest, nicest spittoons you ever see." Charlie's end was a tragic one. One day there was trouble in the fire room, where Charlie was stoking the boiler, and he turned up his toes in an apoplectic fit. Whatever became of the household ornaments that he had set so much store by no one knows.

About this same time, we had working for us here in the mill a Dutch lumber sorter, who was a great philosopher. He came down one day and told about painting his house. In his broken English he said that it wasn't exactly brown, or most any other color; it was just a sort of a friendly color. He had a pretty good little place, and wasn't afraid of burglars, for his wife was "the loooset sleeper you ever see."

He also had an old shotgun, and occasionally would go down near the millboom to shoot at the divers. He came back all smiling one day, and told the boys at the mill that he had shot two divers-to-hell (getting the cart before the horse). In pigeon time he would use up quarts of ammunition; but always said that they flew so "sidling" that he could not shoot them.

A few more reminiscences of like nature put most of the audience to sleep, and it was time to hunt cover.

This time, Seib too concluded to sleep in the tent; and we all slept the sleep of the tired and weary. No tuneless lion disturbed our slumbers, and at daybreak we were ready for the second day with our deer.

W. B. Mershon.

#### The Remington .40 Trajectory.

Editor Forest and Stream:

I was much interested in the report by your correspondent "H." in your issue of Sept. 9, of the trajectory of the .40-65-330 Remington rifle at a range of 500 yds.; also the remaining velocities at various points. Will your correspondent kindly give us further information, and thus add to our obligation to him, to Lieut-Col. Farley and to Capt. Clark? Was the curve in the vertical plane established by actual measurements from a base line, or was it computed from experimental velocities at different points? If the latter, at what distance from the muzzle were the times of flight taken? What is supposed to be the maximum error of the instrument used in measuring the times of flight? Was the factor known as "vertical drift" taken into consideration in making the calculations of "drop" of projectile? If not, please state whether or not it has been proven that, in cases similar to the one under discussion, the vertical drift is so small as to be of no practical importance in the computation of a range table.

Have any reliable experiments ever been made with a view of establishing the character of the resistance of the air with reference to "clipped point" bullets, such as are ordinarily used in sporting and target rifles of small caliber?

E. A. LEOPOLD,  
NORRISTOWN, Pa.

"THERE AT OUR FEET SHONE THE LITTLE MISSOURI."

all he cared for. Before morning he changed his tune. Whenever I awakened he was up building a fire and stamping around to keep himself warm, for it had grown cold and his bed evidently was hard. In the morning he had great stories to tell of a screaming mountain lion somewhere back of the camp. Ferd too had heard it and said it was a most unearthly sound, and whether it was a lion or a she wolf with a litter of young pups out for a moonlight frolic we never knew. I have strong suspicions though that it was the wolf, yet lion tracks were seen every day somewhere on the soft sand by the river bed.

Before going to bed that night I had whispered in the Judge's ear that I would call him before daylight and we would slip down the river about a mile to a spot I knew we could reach before the deer had gone back into the woods, and we would be sure of getting a shot at something. He was agreeable, and as the stars began to pale I patted him on the shoulder and without disturbing any one in camp but Harrison (who was already putting over the kettle) we slipped down the winding trail, passing the deserted Indian camp, and came out at a big bend of the river, facing high bluffs on the one side and flanked with a heavy growth of cottonwoods on the other. Deer tracks were seen at every step, and at one place the deer had worn a runway where they had crossed and then gone up the steep bank on the opposite side, which told us we were in a game country and that hundreds of them must have crossed there recently. Dividing our forces, I took the lower bend and he the upper one, and hiding ourselves in the thicket patiently awaited the expected game. It was not our morning though, for nothing showed up, and after waiting for an hour after sunrise we went back to the camp where breakfast was ready. A lone wolf howled in the distance as we neared camp, and the Kid and Henry told of running on to three or four when they went after the horses to bring them to water.

The river is crooked, and at each sharp bend, between the bank and where the clay cliffs tower hundreds of feet high, is a strip of level bottom, anywhere from 500 to 1,000 yds. in width, which for two-thirds of its width on the river side is covered with thickets and open timber; and between that and the cliffs is nothing but sagebrush or prairie. Our idea was, that by posting some of the party on the river edge, the others starting in from the lower side would breast the thicket, and drive the deer across the river, and some one would surely get a shot. Our experience before had been that these thickets were full of white-tailed deer, and it was simply a question of marksmanship as to whether we were successful or not. Stretching out in line we entered the brush.

Before long we caught glimpses of deer breaking cover, and going in the direction where some of the boys were stationed, an occasional snap shot was made by the beaters, but with poor success. They would run around

# FOREST AND STREAM IN THE WORLD'S FAIR.

*As Seen by Our Staff Correspondents.*

## Chicago and Xerxes.

Oct. 10.—The World's Fair progresses, and it progresses after Chicago fashion. You can't guess big enough, or lie down and go to sleep and dream big enough for this daring, dirty, dear old town. She breaks the records.

Yesterday was Chicago Day, and there assembled a crowd. It was not merely a large crowd, nor the largest crowd of this country, nor the largest crowd of this century, but the largest crowd of any country or of any century. That is the way Chicago does business.

The papers are comparing this crowd with the famous army of invasion gotten together by Xerxes, the Persian king, who marched on Greece to put an end to the banana monopoly. Xerxes is said to have had 5,000,000 in his army—a lot more than he needed. Which I beg to say Xerxes has not handed down his turnstile records, and maybe he didn't have any turnstile. In all probability about half of that 5,000,000 was a bluff, which, big as it was, didn't work on the Greeks. In all probability, too, the actual part of the army, not the Oriental imagery of it, was scattered over 100 or 200 or more square miles of country, or over country that far across. Yesterday, on a piece of ground not twenty miles across there were somewhere between 2,000,000 and 3,000,000, and over 750,000 of them paid and unpaid for, were on a piece of ground not one mile square. There never was such a crowd as that in the history of the world. Chicago has the documents to prove this. Xerxes was a good fellow in his way, and he meant well, but he is a trifle vague, and he won't do any more. Chicago has the record.

Such a crowd as that is a wonderful, a fascinating, and a terrible thing. It is unthinkable, except one sees it. Fortunately it was American, one of the wonderfully good-natured crowds which make the most remarkable feature of this exposition. It swarmed along the narrow aisle of the Angling Pavilion, and would have broken down the railing, turned over the furniture, and swept away the FOREST AND STREAM exhibit entirely had it not been for the efforts of the guard, Emil Walters, and of the FOREST AND STREAM men who rallied to his aid.

Meantime, the crowds continue at the Fair, at the rate of two to two and a half million people a week. The tax on the business resources of the town is inconceivable. Everybody is coming. The FOREST AND STREAM men are hurried and busy day and night now, trying to meet all the paper's friends. Let them all come. There is only one World's Fair, and only one Chicago. We may get tired, but after the Fair is over we can go to New York, or some other quiet place, and rest up again. Let 'em come.

## A Fine Mascalonge.

Oct. 12.—Mr. Gardiner M. Skinner of Clayton, N. Y., maker of the celebrated Skinner spoons, wrote me on Oct. 7 that he had just taken in the St. Lawrence River a fine mascalonge, weighing 42lbs., and that he had sent it on for display near his section in the Fisheries Building. When the fish was received here it was not in condition for display, and Dr. Henshall took it in charge, skinned it and sent the skin down town for mounting. The specimen was well worth preservation. It measured 4½ ft. in length and weighed, as stated, 42lbs. If Mr. Skinner does not look out that fish will get into the FOREST AND STREAM exhibit yet.

## A Lovely Trout.

Early in the season I remarked upon a beautifully mounted brook trout displayed in the Government Building by Mr. Farrington, of Lowell, Mass. It was really the most beautiful little bit of trout poetry I had ever seen. Well, through the courtesy of Dr. Bean, representative of the U. S. Fish Commission, Mr. Farrington has out of the kindness of his heart presented to the FOREST AND STREAM for its exhibit another specimen of his delicate and dainty taxidermy, another trout, as beautiful as the first one, and bigger. All the FOREST AND STREAM fish are bigger and better than anybody's else. This new and lovely addition to the paper's treasures is 13½ in. long, and the inscription says that it was caught in Maine. The half skin is mounted on a convex oval plaque of light wood, and shows a perfect profile, eye and all. The coloration is preserved perfectly, the outline is not distorted in the least. The whole effect is not less than beautiful. This is bric-à-brac, vertu, objet d'art, and we think so much of it that we keep it out of the dust and under glass. Mr. Farrington has the thanks of the paper for supplying it with just what is wanted—a nice brook trout. The unique and beautiful specimens of his amateur handicraft are not common in the land. I know of no professional who can equal them in their fidelity and carefulness.

## Some Persons.

Mr. Carrington Phelps, of Phelps Island, Lake Minnetonka, Minn., in the summer time, and of Minneapolis in the winter, spent some moments in the FOREST AND STREAM corner this week. He speaks very highly of the charms of Minnetonka. Mr. Phelps was a classmate at Yale of Mr. Geo. Bird Grinnell, the President of the Forest and Stream Publishing Co., to whom, however, he applies a classmate name and title rather less dignified than the above.

Messrs. W. F. Ellis and C. Ellis, brothers, from the cold land of Manitoba, have now departed for the north part of the world.

Mr. R. S. Cox, of the justly famous firm of Haller & Cox, attorneys at law, Seattle, Wash., is back in Chicago for a look at the Fair. Dick went to Seattle, as near as I can learn, because the duck shooting is better there. When the firm of Haller & Cox go duck shooting they leave a card on the door saying, "Back in half an hour." They may be back in a week, or maybe in two days. You couldn't expect a fellow to stay if the flight was no good. I never saw Teddy Haller, but I believe I am acquainted with him.

Mr. Geo. A. Winn, of Arlington, Mass., the other side of the continent, was here looking at the recent shooting at Burnside and enjoying the Fair also.

Mr. A. J. Peaper, secretary of the Mobile Light and Railway Co., of Mobile, Ala., pretty well toward the south edge of the country, dropped in often but I missed him.

Hon. H. S. Winslow, of Newton, Iowa, which is very near the center of the earth, called and left a card whose owner I wish I could have met. He is one of the biggest hearted men on earth, and would rather fish than plead. In days of old, before I went wrong and became a newspaper wreck, I used to read law in Judge Winslow's office. If he had met me now, and gazed into my innocent face, it would have astonished him to see how much law I have forgotten. I had a narrow escape from greatness, because I came very near being a lawyer, once, and I will leave it to Haller & Cox, attorneys, if I wouldn't have been a corker.

Mr. C. C. Carpenter, of Chicago, pauses and asks if the editor of FOREST AND STREAM is in. No. He has gone back home, but if he and the whole force were out here in line, they could all be busy meeting friends.

Mr. John R. Schneider, of Evanston, Ill., came in and gazed with awe upon the Kekoskee championship medal and then sadly shook hands. "I guess I'm sort of losing my grip," said he. "I can't lie like I used to could." Mr. Schneider spends each summer in camp in Lake county, fishing and practicing.

Messrs. Edwin C. Gibbs and John Griffith, of Cincinnati, O., parleyed with local demons, or *locum tenens*, or whatever the servant girl called it, at the FOREST AND STREAM prize exhibit for a time this week.

Mr. J. M. Boyce and wife, of Wellsboro, Pa., "Nessmuk's" old home, left their names on the FOREST AND STREAM register and spent some time examining the FOREST AND STREAM's perpetuations of that odd character. Mr. Boyce knew "Nessmuk" well. "Nessmuk" would go hunting when he felt like it," said he, "no matter how business was. I can attend to business when I can't go hunting," he would say, and away he would go."

## Castalia.

Mr. J. W. Fenner, of Cleveland, O., paid a pleasant call, and so did Judge Cummings of the same city. The latter is a member of the Castalia Club, which sent on the big brown trout to FOREST AND STREAM. Mr. John A. Waite, of Toledo, O., also a member of the club, called and looked at the "King of Castalia." Lastly, Andy Englert, the man who caught the King, came in and cast a loving eye upon the case. Andy tells me that in September he caught another brown trout, which tied the record, 7lbs. 6oz. The latter is the weight of the King of Castalia, shown by FOREST AND STREAM. This last fish was taken on a 4oz. rod, at night, and without a landing net. It was then determined to net out these great brown trout for fear they would eat all the fish and drink all the water up. Andy says that he has gill-netted fourteen of these fish in the Castalia stream since then, whose total weight was 48lbs. He got one of over 6lbs.

## Unclaimed Letters.

There are at the FOREST AND STREAM exhibit unclaimed letters for F. O. Cloyes, Newton B. Stone, Wm. Richardson and Miss Grace Armitage. E. HOUGH.

Mr. Norvin T. Harris and wife, of St. Mathews, Ky., called at the FOREST AND STREAM exhibit on the 12th inst. No pleasanter information can be told to field-trial supporters than that Mr. Harris will attend some of the field trials this year and will also have some of his dogs in the competition. I am heartily glad it is so, and I am sure that every one else will be glad, too. To the fame of Kentucky as a land which produces the finest horses, of which he himself has largely contributed, he also was one of the first to bring the glorious State into prominence in the records of field trials.

Wun Lung, the little giant which swept victoriously through the competition so many times in so many different sections, will be represented by his progeny in some of the forthcoming events of like character. Of the little wonder, Wun Lung, Mr. Harris still has a lively recollection, and a keen regret at his loss. He was a wonderful little dog afield and a companionable one in home life.

Connecticut Day brought Mr. Arthur B. Calkins, of New London, Conn., to the World's Fair in general, and to FOREST AND STREAM's exhibit in particular. His card indicated that his profession is "attorney at law," but his sunny manner and frankness would indicate the true gentleman and sportsman. On the following day he introduced his friend, Mr. S. B. Manwaring, of Waterford, Conn., and his autograph, too, was duly inscribed in FOREST AND STREAM's register.

Mr. W. W. Holmes, of Waterbury, Conn., and Mr. Ben O. Bush dropped into the exhibit together. Mr. Holmes, as the readers know, wields a shotgun with great force at the tournaments. He assured me that Mr. Hough has libeled Waterbury in times past, inasmuch as the chief industry of the people of that city of different times does not consist solely in winding up their time pieces. Blarney Castle, in the Midway Plaisance, excited Mr. Bush's praises for its historical greatness and goodness.

Mr. Maurice D. Wilt, Philadelphia, praised FOREST AND STREAM's yachting department and wished there was more of it. He seemed to be of the enthusiasm which makes true gentlemen and sailormen.

Chicago Day brought a troop of FOREST AND STREAM friends to the fore. Of them was Mr. J. Ingersoll, of Cleveland, O. He gave some most interesting descriptions of the trout waters near his city, the manner in which the streams have been stocked and the present status of them. In his experience he said that the brown trout would bite best at night. They were trying to clear the stream of them.

The "Nessmuk" canoe is of special interest to every visitor, and it is marvelous how many people know of it and its late owner, of whom all speak in terms of praise. Many of the visitors knew him personally, but none seemed to have such an intimate knowledge of him as did Mr. M. D. Packard, of Canton, N. Y. He dwelt at some length on "Nessmuk's" fondness for life in the woods, his

nobility of character and his rare mentality. In respect to the little 10lbs. canoe, the Sairy Gamp, he gave some most interesting history. That canoe was not the result of speculative experiment. An unfortunate solicitation on the part of "Nessmuk" for something lighter than anything at that time in existence in the way of a boat stimulated the builder to action. "Nessmuk," said he, "had matured his ideas concerning the size and weight of canoe he wanted. His then lightest canoe, the Bucktail, weighed about 18lbs. He wanted something still lighter. He told his wants to Mr. Rushton, but the latter had many misgivings as to building so light a craft, fearing that in practical use it might result in a catastrophe. He so expressed himself to 'Nessmuk.' The latter had no fears of that sort, but on being shown that a canoe which proved unserviceable would reflect on the skill of the builder he admitted the gravity of the undertaking. However, the canoe was built and it proved not only light but serviceable. The sides did not come together as skins would do as some people had predicted. It was thoroughly tested by weights before it was permitted to be practically used. It proved a most serviceable canoe and met 'Nessmuk's' wants. That canoe is the Sairy Gamp."

Of FOREST AND STREAM he said he had taken it almost from its first issue and that it was clean from the first page to the last, and fit for any ones' wives or daughters to read.

In regard to the name, a lady who stopped at the cosy corner one day remarked, "Why did they call that canoe the Sairy Gamp? She was the most unlovely of Dickens's characters. She stole the medicine from her patient and took something to cheer her heart when she was 'so disposed.' There are too many Sairy Gamps."

I could not explain the matter. Sairy did not like water, she did not weigh 10lbs. nor was she 10ft. long. The name seemed to be a mere sentiment without any reference to the Sairy of old, and it so, perforce, had to rest.

Mr. Bert Ainsworth, of Madison, Wis., admired FOREST AND STREAM's exhibit and described some yachts and boats he had built for the lake fishing and traffic on the waters near his home. He closed a pleasant interview with an invitation to call on him and enjoy his boats and the fishing, for which a grateful feeling still lingers.

Mr. Geo. F. Wright, cashier of Iron City National Bank, Pittsburgh, a member of the Pittsburgh Rod and Gun Club, made a most pleasant call, chatted about game matters and spoke of FOREST AND STREAM's high merit. Mr. John S. Dumsers ("Occasional"), of Elgin, Ill., after his autograph wrote, "One of the oldest friends and readers of FOREST AND STREAM." A delightful conversation with Mr. Dumsers on game and fish interests satisfied me that he and the paper were friends of each other. From another source I learn that he is a most charming and sound writer.

Mr. A. B. Cole, West Stockholm, N. Y., registered and said FOREST AND STREAM is the best paper in the world. Its newsy columns and high literary excellence won his admiration and patronage. Ruffed grouse shooting, his favorite sport, afforded an interesting theme.

Mr. Austin T. Quirk, Secretary and General Manager of the Globe Accident Insurance Co., of Indianapolis, and his wife, stopped at the exhibit for a few brief moments' conversation. Mr. Quirk is an active member of the American Field Trial Club, and, until a few months ago, lived in Columbus, Indiana. He regretted that circumstances prevented the club from holding field trials this year.

Among the names of celebrated dogmen which serve to give an added effulgence to FOREST AND STREAM's register, I observe that of Mr. H. W. Lacy, who writes himself "one of us," and gives his abode as being in an Eastern hamlet somewhere on Manhattan Island. Mr. Lacy saw the World's Fair and is now proud to be one of the vast congregation of Chicago admirers.

Messrs. Theo. E. Gatz and Mr. Ewing, of St. Louis, Mo., add yachting to their accomplishments. They bestowed much praise on Mr. Stephens for his skillful editing of the yacht department. The descriptive matter, they said, is technically accurate and the conclusions just and impartial. I hear many similar comments, and, were I to relate them all, I feel sure that Mr. Stephens would realize that his admirers are not limited by any horizon.

The ladies, it should always be remembered, are naturally as enthusiastic in a healthy fondness for delightful sports appertaining to the rod, dog and gun as are the lordly lords of creation. But, bless them, they are satisfied with the sport for its own sake, and such praise and fame as are bestowed and have their limits within their home circle. In his public writings, the husband has a proclivity to remember his own big catch, forgetting that of his wife and her keen enjoyment of it. But it was not so in the reminiscences of camp life told in a few pleasant moments by Mr. Carrington Phelps, of Minneapolis, who called at FOREST AND STREAM corner on Oct. 13, with his wife and son. Memories of the pleasant outing brought an animation of manner which denoted the true sportswoman. It appears that Mrs. Phelps carried the honors through several consecutive outings of "high hook" till this year, when the scales turned slightly against her. But there is another year coming. Mr. Phelps began taking FOREST AND STREAM in 1875 and has taken it ever since. His good opinion of it seems to grow with the years. An invitation was extended to the writer to join in their fishing next time, which the aforesaid writer hopes to do.

Speaking of ladies and their fondness for field sports reminds me of a visit of a group of Kentucky ladies to FOREST AND STREAM's corner on the 11th inst. That Kentucky is deserving of its eminence in one of the three specifications, namely, beautiful women, no one will now more stoutly maintain than myself, and I will further add that they have a nobility of character and a charm of manner which win admiration from the most phlegmatic Northerner.

But that is not what I intended to say, nor is it all that their merit deserves. In conversation with one of them I learned that she owned a dog, was fond of field shooting, admired good horses, but had never learned to fish, for want of opportunity, yet took a keen interest in fishing as set forth in the experiences of brothers and other male relatives. They remained but a short time, and somehow after they left the cosy corner did not seem so bright the rest of that day. I believe that Chicago would be a better city were it situated in Kentucky.

B. WATERS.

909 SECURITY BUILDING, Chicago.

# Game Bag and Gun.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## PLUMED QUAIL FROM THE SADDLE.

PASADENA, Cal.—“The biggest thing in the way of sport I ever heard of,” said an old Californian, “was some years ago down in the arroyo—by Los Angeles—a friend of mine wrote me that he was entertaining an Englishman who was anxious to bag a few snipe, and asked me to come down, so I went. The Englishman was as jolly a gentleman as one would want to meet, but young, and a trifle fresh, to put it mildly. His ideas about America were a little vague, and he was inclined to accept almost anything that came along. So one evening a dozen of us met at the bend of the arroyo, and our English friend was provided with a large linen bag. ‘You see,’ said our host, ‘we each take stations at certain positions and hold the bags just over the water, and some one will creep around and come down stream and drive the snipe. You see, the birds fly low, just above the stream, and will pop into your bag before you know it.’ The Englishman took his place, and the rest of the party went home and to bed and we heard that early the next day a Mexican coming along saw him and brought him into town. He had held the bag over the little stream until he could hardly move, but he didn’t see the joke until the Mexican began to laugh. There were several bottles opened the next day, you may be sure, yet ‘bagging snipe’ is still indulged in when a very anxious sportsman is found.”

Quail shooting in the San Gabriel Valley is a sport well worthy the name, and requires harder work and quicker shooting than in the East. Again, the flocks, though large, are often separated by a number of miles, and he who walks all day, by night has covered more ground than is conducive to strict enjoyment. I think I have reduced the sport to a science by shooting from my horse, only leaving the saddle to pick up the birds. It might be claimed that this was taking undue advantage of the birds, some of which will not fly from a horse, but all the quail that I have killed from the saddle were honest wing shots when the bird was humming through the air at full speed.

An idea of shooting in this valley may be obtained from a trip taken on the 22d of February last. There was snow in the air. For several days previous it had been raining in the lowlands and snowing on the Sierra Madres, so that the entire range was capped with snow of dazzling whiteness; and the great pines that grow upon the peaks were loaded with the downy covering, appearing in strong relief against the blue sky. Yet as we rode up the valley and entered the great arroyo, headed for the Linda Vista trail, the air was redolent with orange blossoms, flowers springing up everywhere, and the bare limbs of the peach trees were here and there dotted with blossoms, which from a short distance resembled great flakes of snow blown from the distant mountain. Our objective was a cañon that cuts into a range of hills, a spur of the Sierra Madres, just to the west of Pasadena, and to reach it the very crest of the hills had to be reached—a climb of no little magnitude. But the horses had been over such country before, and by judicious tacking the summit was made in two hours. If game was not found, the view quite repaid the climb, as probably several hundred square miles of country were stretched before us, orange grove and vineyard succeeding each other as far as the eye could reach, only ending, so it seemed, against the whitened slopes of San Geronio. The descent upon the other side was by a “hog back” or ridge about four feet wide, sloping away to cañons into which the horses would roll if a slip was made. It was something like sliding down the side of a house, and my faithful little mare, that has carried me over many such a place, slid a part of the way, simply settling back on her haunches and going with the gravel, coming out of the dust further down in good shape. In this manner the cañon bottom was reached, and found to be, owing to the recent rains, full of water; so that we had to wade perhaps half a mile, which brought us out into the open country. We had just stepped upon the sod when there came from far away a note, so curious that it would have attracted the immediate attention of any one. It was a musical whistle, but seemed to say, “Po-ta-toe.” This was repeated several times, and then came the answering note, “I-love-you,” and if we had been nearer a soft chirping would have been heard. It was the call of the plumed quail coming down the cañon on the breeze. In a moment guns were in hands, and two mischievous deer dogs that would have stampeded the flock were made fast to the saddles, and separating gradually we pushed in the direction of the sound.

We had gone perhaps 200 yds., when I heard a low whistle, and looking in that direction saw one of my companions motioning me to come. We had entered a greasewood patch that grew about 4 ft. high, abounding in the sharp yucca, or Spanish bayonet, and it was slow work for the horses, but in a moment I was at my friend’s side. Both were peering through a little window in the bush upon a sight likely, as it did, to cause a “revulsion of feelings” and a rush of blood everywhere. But 40 ft. away was a covey of plumed quail of unheard of size. They literally covered the little field in which they were feeding, and were running about, bobbing their heads in a comical fashion, and showing off their points to the best advantage. It was a beautiful sight, and one not often seen under the most favorable circumstances. It would have been murder to have fired, so for a moment we watched them, then rushed the horses at them, and amid the roar of wings took them right and left from the saddle—the air seemed full of black balls—darting here, there and everywhere, some dropping, the wounded scudding for cover, while the turf was dotted with fallen plumes. We estimated there were over a thousand in the entire flock, and the roar of their wings as they made for the little side cañons was startling. The spoils were soon gathered, the wounded fished from gopher holes, where they had crawled, and the main body followed up.

The work was more difficult now, as the birds were fired into almost invariably separate, and in this case had divided up into several small cañons and hiding in the greasewood on the slopes, so that the only method

of reaching them was to dismount and climb over the ridges and take the birds on the fly, with the chances of their dropping into the bush at the cañon’s bottom. This was hard work, and holding a gun in one hand and hauling yourself up by the greasewood with the other has its disadvantages. In the midst of this performance a bird flushed immediately in front of me. To drop the bush was to fall over backward. So clinging with one hand I fired with the other, making the cock’s feathers fly, but he landed in the bush and crawled off. Every “hog back” crossed provided several birds that darted off with remarkable rapidity and afforded fine shooting when we were fortunate in being on the ridge. Finally the birds were driven over into the mouth of a broad cañon, and numbers were running in the stubble. The only way was to run for it; and run we did. Once in range, they began to rise and bombard the air everywhere, the reports of the guns coming thick and fast, the firing being to the right and left as quick as possible.

When it is remembered that the country here was the dry wash of a stream filled with stones, prickly pear and other cacti, it will be seen that it was no child’s play. In fact, I consider quail shooting here, looking at it from all sides, as hard work, and one of my companions, an old sportsman in the East, who has tried all game, told me that he considered that the little birds called for shooting entirely different from their allies in the East. This is owing in some measure to the cunning of the cocks. I have seen their tactics on many an occasion, and when hiding they show many tricks which would be amusing if study was the object instead of game pie or quail on toast. If a cock is certain that he is not observed he will lie low within 3 ft. of the sportsman. Walking rapidly along some time ago, following a flock, I saw a fine plump cock not 3 ft. from me, crouching under a bush. I had come upon him so suddenly that he concluded to stay. I was too near to fire so I kept on, then turned. When seeing that he was caught he shot away, only to fall. In thick cover birds will often take to low trees, and to see four or five of these little creatures climbing a tree, always keeping upon the opposite side, just their tips or plumes occasionally showing, is a comical sight. The hens are less venturesome and are exceedingly shy.

The bag we secured in this cañon would have delighted the eye of an artist, the birds forming an attractive picture. In fact I never went out with a new hand, no matter how ardent a sportsman, but regret was expressed that sport should demand the destruction of such beautiful birds. There are two species very much resembling each other, so much so that if they rise together it would be somewhat difficult to distinguish between them. They have, however, quite distinct ranges, the California variety or species, *Lophortyx californica*, is found in this State up into Washington Territory, probably following the bases of the Sierra Madres up to the Sierra Nevada, and so on, and probably some are found well down toward Mexico; but the favorite ground of the little birds is southeast of central California, the San Gabriel Valley, especially about San Bernardino, abounding in them. The other species is *L. gambeli*, the quail of Arizona, New Mexico and northern Mexico. I have recently had opportunities for examining numbers alive, and it is difficult to determine which is the most attractive.

Both species have black throats, and the sides of the head are decorated with marks or splashes of white; the breast bluish, and from the top of the head springs a jaunty plume, made up of several feathers—springing from the same spot and spreading out; when running, this is thrown forward, giving the bird a curious appearance; the tops of the plume feathers curl over forward, and the webs bend backward, folding over the succeeding feather, so that only a single plume is seen. In the hen the crest is much smaller and brown instead of black. In the lower portions the greatest difference between the species is noticed. The Arizona quail has a wide buff coloring in the upper part of the abdomen, while the lower portion is black. In *L. californica*, the upper part of the abdomen is a golden brown, the feathers being a rich chestnut edged with black. It is difficult to adequately describe these beautiful birds, as their attractiveness is the result of nature’s wonderful grouping of shades, colors and tints, and in the make-up they constantly remind one of diminutive pheasants. When running they do not make rapid headway, but once flushed they put themselves out of range in remarkably short time, having a way even when wounded of pouncing into the brush and escaping. It is evident that in the well conditioned birds flying is difficult work, as the wings are small in proportion to the weight of birds, and some that I have taken were so fat that they broke open as they struck the ground.

Regarding the quality of the quail in a gastronomic sense, in my estimation it does not compare with its ally of the East. It lacks the delicate flavor and is often strong—offensively so—when dieting continually among sage brush. Yet the little bird is, when properly cooked, a delicacy not to be slighted. For the table, as far as my experience goes, I prefer Gambel’s quail, or the Arizona variety, but it is evident that, as with other birds, proper feeding would vastly improve their flavor.

There is still another quail in this country, of which a friend said the other day: “I would give \$25 to flush a covey.” The bird is the shy mountain quail, or plumed partridge (*Oreortyx pictus*), found only in the darker recesses of the upper range. It is much larger than its ally of the mesa and is a noble bird of fine carriage. Instead of a plume the head bears two long attenuated feathers, which look like pens pushed behind a hidden ear and give the bird a rakish appearance. The general color is dark blue, the throat chestnut, the sides and abdomen rich chestnut, while the coloring upon the feathers alternating black and white is quite attractive. They are rarely seen in large flocks, ten and twenty being the average. They are confined to the ranges of this State and Oregon. As a table delicacy they exceed the plumed quail. *Callipepla squamata*, the blue quail of Arizona and Mexico, probably sometimes strays into the Sierra Madre foothills, but the ones previously mentioned are the true lords of the mesa lands. C. F. HOLDER.

## Washington Ducks and Deer.

NEW WHATCOM, Washington, Sept. 30.—Duck and deer hunting is good in this section, also fresh and salt water fishing. W. E. H.

## A WEEK AT CAMP BLAIR.

THE North Wakefield Fishing Club, whose camp bears the above name from respect to one of its members, is located in the township of North Wakefield, about thirty-five miles northeast of Ottawa, Canada, in one of the wildest and most picturesque regions I have ever seen east of the Rocky Mountains. The membership of the club is limited to twenty, and at present is composed of gentlemen from Brooklyn, N. Y., and Canada.

The property of the club consists of 100 acres of land on which stands the club house, a substantial building 30x40 ft.; two stories high, suitably divided into dining and sitting rooms; and sleeping apartments, with a large extension for a kitchen; also an ice house, and boat house for storage of boats in the winter. The club has a long lease from the Canadian Government of five lakes, and has purchased one rod in width of land surrounding each lake, thus being able to legally protect their leased property. The club house stands but a few feet from and overlooks Clear Lake, the dimensions of which are from a half to three-quarters of a mile each way, with small bays or inlets crowding in between the hills here and there and the crystal waters of which mirrored with the lofty rocks, hills and forest by which it is surrounded, make a lovely view from the veranda of the club house. Clear Lake is indeed a beautiful lake, but not more so than the others. They are all beautiful, but like beautiful maidens they are not all alike, but each has a charm peculiar to itself. They are all gems nestling in a deep setting of the everlasting rocks and hills. And yet to a votary of the rod and reel they possess another charm which crowns the whole with glory, and makes this locality an ideal haunt for those who follow the ways of good old Izaak Walton. They teem with trout as fine as ever took a fly, in weight from 4 lbs. down to 1 lb., and very few are caught weighing less than 1 lb.

Now I am sure that the pleasure I enjoyed with four other members of the club during a week’s sojourn at Camp Blair will gain me pardon for so minute a description of it as I have given. A country boy is always to be pardoned for the pride and importance which fills him with the possession of his first pair of boots; and though a lad of sixty-seven summer, I must declare that this was metaphorically my “first pair of boots” in trout fishing, and yet do not for a moment imagine that my delight depended on the great number of fish that came to my landing net, for this would be far from true. My experience in fishing with the fly had been in following it down some shallow brook, occasionally “snaking out” a 4 oz. trout, but oftener catching a stick with my fly while another stick gave me my “weather eye” a jab, and still in this I had found some sport and a wonderful school for patience and perseverance. I knew little of the subtle art of fly-casting, hence had to content myself in seeing others more skilled reap the merited reward of their proficiency, but ask the other boys if I did not cheer them every time they landed a 1, 2 or 3-pounder? and I know they cheered me to the echo for every fish I caught. We were not fishing entirely for quantity, but for sport, and that sport was mutual, generous and very pleasant.

Our cook, a French Canadian, was well skilled in cooking fish and game, and our table was well provided with both, and our appetites did honor to the cook and his table.

Partridges were quite plenty, but there was no sport in shooting them, for they were always in thickets, and when disturbed would generally jump on a log or flutter into a bush or tree and sit there till shot down. Late one afternoon as we were returning to camp from the day’s fishing we met an old man and his son going down the lake in a canoe, and who when questioned by the guide in regard to their destination and object, said they were to meet a party with hounds on Oct. 1 for a deer hunt, but the guide told us he thought they had a net with them and would use it that night; so after supper and it had become dark the guide and one of our party started down the lake to investigate, and were rewarded by finding a net set, which they took up and brought to camp with six trout, one of which weighed 2½ lbs. The net could not have been set an hour, and it is probable that the poachers would have got in the neighborhood of 100 lbs. of trout if the net had remained undisturbed till morning.

It being against the law of the Provinces to use nets for taking fish in the lakes, whether private or public, when we came out of camp we gave the net, with all information, to one of our Canadian members, who will proceed against the poachers in the courts.

The poaching incident was the only unpleasant one during our stay, and this even had a sort of adventurous charm about it which made one think of self-defense in its broadest and most honorable sense. The foliage of the forests when we first arrived had scarcely begun to take on its autumn tints, but ere we left nature’s wonderful artist had painted the landscape in a thousand glowing shades, rivaling even our boasted New England autumnal scenes. Amid such surroundings, with genial and wholesome companions, I know I am a better man for the week I spent at Camp Blair. A.

HADDAM, Conn., Oct. 13.

## Moose and Deer in Maine.

KING AND BARTLETT CAMPS.—P. O. Eustis, Me., Oct. 8.—Large game and partridges are more plentiful in Franklin county this season than at any time for the last eight years. David Haines, a guide at this camp, shot a fine 2-year-old bull moose the other day (since Oct. 1). In a “drive” near Gus Douglass’s Spectacle Pond Camp, in which ten men took part, a moose passed within 25 ft. of where Mr. Dana J. Flanders, of Boston, Mass., had been stationed, but he thought the “drive” was over, so had left his position and by so doing lost a fine chance. Mr. Flanders’s party took out four deer on the buckboard, having shot them at Gus Douglass’s camp, near Hurricane Pond. This party sighted nineteen deer while in camp. Dr. P. W. Bamber, while at W. W. Douglass’s Blakesley Camp, had a good shot at a cow moose, but to his credit did not shoot. He afterward shot a nice doe and Mr. Rome, of his party, shot a fine buck near last named camp. So far I have seen six deer and have shot two, one being a 3-year old buck and the other a 5-year old doe. Any sportsmen who visit Gus Douglass or W. W. Douglass’s Camps, can count on having shots at large game. Either one can be reached by letter or telegram at Eustis, Me. CLARENCE HOWLAND.

## IN A QUICKSAND.

CINCINNATI, O., Oct. 14.—*Editor Forest and Stream:* Plover are ripe and plenty in and about this section of the State, and hunters are having splendid sport. It will be some little time, however, before Mr. Dan M. Ryan, a cousin of the ex-Secretary of State, will indulge in the sport since his experience of yesterday while hunting along the waters of the Sciota River.

He killed a particularly plump bird which fell in the water about 10ft. from the bank. The water was shallow and clear, and the sandy bottom easily discernible, and Mr. Ryan unhesitatingly walked in after the dead bird. He had not taken many steps when he felt himself sinking. The thought of danger did not occur until he made an effort to extricate himself. Then he found that his struggles to release himself only sank him deeper in the treacherous sands. A branch overhead, which he might have caught had he known his danger in time, only bent down in mockery now a foot beyond his outstretched hand. He looked about, but no one appeared to help him. He shouted, but there was no reply. Slowly he sank until the shallow water was about his waist. He took off his heavy hunting coat and put it between his legs to make his downward progress as slow as possible.

Just as hope was disappearing, the sinking man saw a farmer on the brow of a hill across the fields. He called, but the farmer did not hear nor heed. Again and again he called with the desperation of death staring him in the face, but the man paid no attention. At last, just as he was giving up hope, the man turned and came toward the river. He seemed ages coming, but he got within calling distance just before Ryan's head went under water. For a time the farmer hesitated as to the best and safest method of rescue, but a happy thought struck him just in time to save the doomed man's life; and reaching the overhanging limb, he bore it down until Ryan could clutch the branches. Then going back to the house he secured a rope, and by a good deal of exertion pulled the man out. By way of reward, Brother Dan presented his rescuer with his fine 12-gauge gun. WICK.

The St. Paul, Minn., *Pioneer Press* of recent date reports an incident of this nature and of fatal termination: "Charles A. Lindberg, forty years old, foreman of James J. Hill's farm near White Bear, met with a terrible death yesterday afternoon. About 1 o'clock he left home, telling his wife he was going to Mud Lake, on the western boundary of the farm to shoot ducks. Two hours later one of the farm hands passing along the edge of the lake heard the faint halloo of some one out on the water. Peering across the lake he saw near the middle of the sheet of water an overturned boat and could dimly discern the outlines of a human being struggling in the water. There was no boat near in which the farm hand could go to the assistance of the drowning man, and he hurried off to Mr. Hill's residence and spread the alarm among the other employees. When finally a boat was secured and rowed to the spot where the overturned hunting boat floated on the surface of the water, nothing could be seen of its former occupant.

"The boat was recognized as the one Lindberg was accustomed to use, and search was begun for the hunter's body. It was found within 3ft. of where the boat had been capsized, in about 4ft. of water. The bottom of the lake is an oozy mass of mud and treacherous quicksand, out of which shoot thousands of water lily stems. Evidently Lindberg had shot a couple of ducks—the dead birds were floating near by on the water—and in attempting to pick them up had capsized the frail boat. His feet became tangled in the web of water lily vines, and he could not extricate himself from the quicksand, into which he sank inch by inch until he was drawn under the water and drowned. The body was nearly buried in the mud when the searchers recovered it."

## CAMP LUCKY.

It was in the latter part of September, away back in the seventies, when with Joe P. for partner I started for the woods in northern Maine to build a camp where we were to hunt the ensuing winter. Early in the summer we had cruised for and found a desirable location. Our aim was to find a good pitch in the vicinity of a caribou runway, so that meat could be gotten near camp, delivered as it were, on the hoof. It was desirable also, in fact, of prime importance, to have a good chance for water and firewood; and such a spot was found where a spring brook emptied into a large stream. There was a level of about one-fourth of an acre in the lower angle formed by the streams, on an elevation of 10 or 12ft., which would be dry, besides having a pleasant outlook toward the south. Our journey was by team forty miles, then by batteau as much more and occupied seven days. We lost no time, but worked early and late, so that the last week in October found the camp completed except some inside work to be done as odd jobs in stormy weather. A good supply of white birch saplings and dry cedars were closely stacked up in the yard.

Camps, hunters' camps particularly, have an individuality, emphasized by names, usually selected because of some novel or noted feature of the country or from some incident connected with its construction. Several names had been suggested, none of which suited, so this was held in abeyance.

The work ended on a Saturday, and the next day was to be put in washing and mending and cooking grub to be ready for a start Monday morning to establish trapping lines and build deadfalls. We had been too busy to look for game, but had shot a few partridge near-by just for a change.

When night shut down there were indications of storm which boded snow, a desideratum wished for. It was fairly light when I awoke, and a glance at the window disclosed a mantle of snow already melting from the rising temperature, and a misty drizzle. Going to the window overlooking the path to the brook I saw a young bull caribou standing across the path where it descended to the water. Without speaking to Joe I stepped lightly to the door, opened it and stood with one foot outside, took a quick but careful aim and fired. Owing to the humidity the smoke hung like a blanket, but not doubting the shot I turned to get my knife just as Joe reached the window, saying as he looked, "What's the matter? You can't hit a barn this morning unless you are inside of it." Then, as I looked, there stood the caribou just as before, except

that his head was lowered and he seemed snuffing at something. I was mortified with such an exhibition of poor shooting, but hastened to make amends, and so stepped out as before and fired. As I did so Joe sang out, "You downed him that time." Going to the spot, I found two caribou lying there side by side dead. It seems that the second caribou was hidden by a thicket of small cedars a rod or so behind, coming along the path immediately after the first one fell, and both were following a well trodden caribou path. We soon had one skinned and cut out for immediate use, the other being grolloched and hung head up in the camp yard on a tall tripod. By this time we were as hungry as bears and soon as possible got ready a breakfast of broiled outlets, after which the pipes were going and conversation turned on the event of the morning, Joe remarking that "it was mighty lucky getting the meat, as it would save the supplies," meaning pork and beans, "besides giving us meat for bait." As he spoke the word "lucky" I had an inspiration and asked, "What's the matter with 'Camp Lucky' for a name?" Joe sprang up swinging his hat as he declared, "That's just plumb center!" PINE TREE.

## ADIRONDACK DEER SHOOTING.

SOME years ago a younger brother of the writer started one morning in the fall for the Adirondacks on a deer shooting trip, and the morning of the second day after it began to snow and continued snowing until the railroads in northern New York were blocked, and for a time the trains were almost abandoned. We at home were thinking that he started at just the wrong time, but late the evening of the first day of the storm—for the storm continued most of two days and nights—he turned up with two deer, having been gone from home just three days. The first morning he went to Saratoga and up the Adirondack Railway to North Creek, then to the exact hestopped at Indian River, and there turned off from the beaten path and walked into Harvey Bonney's camp on the Third of the Seven Chain Lakes. Harvey met him at Indian River and packed his duffle in to camp on a horse. The next day he shot the two deer and the following morning he took the back track and reached home the evening of that day. It was snowing when he started from camp, but he passed over the nine miles to the stage road before the snow got too deep for fair traveling, and the stage and railway brought him home with his venison before the blockade began. A friend of his from Albany was on the train as he went to North Creek, also bound on a deer shooting trip, but his destination was miles beyond Indian River, or as my brother said, he had gone so far and into a country where everybody was looking for deer, that if he was successful the law would expire before he could get home with his game. In these days of activity and money grubbing I presume there are men fond of shooting who do not find an opportunity to enjoy it, chiefly because it takes too much time from their business to reach the shooting grounds, engage in the sport and return, and the object of this article is to show how deer shooting may be indulged in without waste of time in journeying to remote places.

There is still good shooting to be found at the Seven Chain Lakes, perhaps as good as at the time to which I have referred, and at Levey Lake, twelve miles from Indian Lake P. O., in an opposite direction, Governor Flower and his party killed four deer recently. In this section, too, Tom Powers, the State Forester, and his men secured eight deer for the State breeding park in the Catskills. They are all does two years old and over, and at this writing are confined in a barn at Indian Lake. They were driven to water with hounds and then roped. But the place for deer shooting that I have in mind is nearly fifty miles south of Indian Lake, and only about forty miles from Saratoga Springs. One can leave New York city at midnight and it is possible to have a shot at a deer the following afternoon. From Saratoga go up the Adirondack Railway to Stony Creek Station, twenty-nine miles, and drive to Harrisburg, in the town of Stony Creek, and there, if a man can hold a rifle straight, he will be pretty sure to get a deer. Forty-two deer have been killed there this season, and not a sportsman has been there and failed to get a deer, and most of them have killed the limit—two. I saw one buck—the largest killed this season—from there that weighed 307lbs. Last year, what is believed to be the largest deer ever killed in the Adirondacks was killed at Harrisburg. It weighed 388lbs., and from tip to tip was 9ft. 7in. long. Its antlers were 32in. long, and one beam had ten prongs and the other nine. Myron Butties, forester of the Adirondack Club, told me that the largest deer he ever saw weighed 317lbs., but that he had heard of one that weighed 325lbs. I know of another deer for which a weight of 325lbs. was claimed, but I also know that it actually weighed only 315lbs. Last year twelve deer were killed in one day at Harrisburg. There is a small but comfortable hotel at Harrisburg, kept by Oscar W. Ordway, father of Henry Ordway, who killed the big buck, but the place is not generally known as a deer shooting resort except among local sportsmen.

When I was writing of near-by deer shooting I did not imagine that deer would make their appearance within rifle shot distance of my desk, which happens to be situated about in the middle of a village of over 12,000 inhabitants, but such is the truth. This morning (Oct. 13) about 5 o'clock a man residing on Sherman avenue in the village of Glens Falls, N. Y., opened the door of his house and stepped out on to his piazza, and was surprised to see two deer, a doe and fawn, in his yard. He called his wife to see the deer, and some of his neighbors had in the meantime discovered the strange visitors, and all watched them as they played about in the gardens and jumped the fences from one lot to another. No effort was made to kill them, and for a wonder no dog discovered them and finally the deer disappeared in the direction of the race track on the north edge of the town. There is no cover for deer within five miles from the place where they were seen. Luzerne Mountain is five miles away on the west, and it was in the western part of the town, inside of the corporation limits, that they were first seen. French Mountain is five miles away on the north. Upon making inquiries I found that a deer was seen ten days ago in a field a mile from the base of Luzerne Mountain, and another or the same one at Long Pond (Glen Lake, where the record-breaking small-mouthed black bass have been caught) four miles north of the village. The deer came, in all probability, from the mountains on the east side of

Lake George, wandered south to French Mountain and then followed the hills around to Luzerne Mountain and so to town. Last week two deer were killed on Tongue Mountain, which divides the Narrows of Lake George from Northwest Bay, near Bolton. Another was killed on the main Bolton shore a few miles north of Bolton. Still another hunter shot a horse which he mistook for a deer.

Members of a shooting club returned here yesterday from the Kunjamuck region, which I have described in *FOREST AND STREAM* as affording fine trout fishing and deer shooting, and tell me that in nine days' shooting 14 members killed 26 deer, and, tell it not in Gath! shot, during the same time, at 46 other deer which they did not kill. A large proportion of the deer killed were bucks. Members of another deer shooting party also returned yesterday from the Boreas Ponds, at the head of Boreas River. There were 11 men in the party and they killed 21 deer in 10 days. There are deer left in the woods yet, for a friend of mine, a veteran newspaper editor, shot 13 times at one deer, and another friend shot 27 times at 6 deer, and the 7 deer are alive to-day unless some other man has killed them. As if to emphasize the fact that game is abundant this fall, a partridge flew into a tree in front of my house yesterday and remained some time, although a gang of 50 or more Italians were at work in the street, building a sewer. A. N. CHENEY.

## CALIBERS AND RANGE.

PROVIDENCE, R. I., Oct. 9.—*Editor Forest and Stream:* In last week's issue there is a good account of the wonderful shooting qualities of the .22 short cartridge, and your correspondent gives this little cartridge a wonderful amount of credit. Whew! Killing at 303yds. Now, our friend is evidently a Westerner, and no doubt in the West that distance is not so great as it is East here. But we doubt very much if such a little cartridge would do such execution at 303yds. I will confess I am a little surprised at the shooting of the .22cal. cartridges. I recently purchased a little Stevens arm, in which could be used either the short or the "long rifle" cartridge, intending to use the arm this winter for indoor practice shooting. Well, we took it down cellar the other night for the first time, and the way that little ball bored through soft pine was a caution. We finally set up an iron plate, and the balls flattened themselves out almost as thin as tinfoil. But we were only using it at about 20yds. We didn't suppose it was good for more than that, and the Stevens Arms Co. in a recent letter in reply to one addressed to them regarding the range of the ball, etc., say that the .22 is not reliable beyond 100ft. Now, who is right and who is wrong? We don't pretend to know much about it and don't want to criticize any one, but think of it a moment. Suppose we want to shoot squirrels with the smallest possible caliber. If the range of that ball (.22cal.) is good to kill at over 300yds., it won't be safe around this part of the country. And we don't dare use any more the .38cal. Winchester on Connecticut woodchucks. I wonder if those huge .45 balls that we used some time ago in the wilds of Maine shooting at a bottle (empty) are still traveling.

But there are some who insist that the .22 is big enough for them. Several years ago one of us was on a sheep ranch way out in the "woolly West," where there were grizzlies. Old Jack W., the guide thereabouts, always carried a heavy .45 Winchester, Jim B. (who tells this part of the tale) a .44, and the rest—well, they are not in the tale, excepting the principal character, a man from the East, a good shot and a crank on rifles and the theory of shooting. He could drive you crazy with his calculations as to the range, penetration, etc., of the rifles used, and brought out with him a little .22 that he said was plenty big enough for him. Of course the boys all laughed at him. But he insisted that if a grizzly, no matter how old and tough he was, got a dose of lead from that little rifle in his head he would be sick enough to lie down and give up. And no one could tell him anything different. He was going to kill bear to prove it, too. Well, he went out early one morning, and that night he didn't come back to the ranch. The boys waited half the night, but he didn't materialize. Next morning Jack and Jim B. started out to find him. They knew about where he would go and had no trouble in following his trail. And it wasn't long before they heard faint calls for "help! hel-p-p!" and down by the side of the cañon was a sight. They didn't have kodaks then. Up in a good-sized scrub was our friend, Waltzing around the tree to his own time was a huge grizzly, scornfully gazing up at the half dead fellow at the top of the tree.

Well, to make it short, Jack used the big .45 to good effect, that is, he started the old fellow up, and he galloped off into the brush (I don't know why he didn't make it interesting for the boys, but they say he didn't). They took the .22cal. man down from the tree. His boot was torn off, and his trousers leg and the leg itself badly torn. But he don't tackle a grizzly any more with a .22, and his faith in that little gun is badly shaken.

Now, of course, all this yarn is going to the very extreme, and I can hear you all say, "Oh, well, we don't suppose any fool would think he could kill a bear with a .22." But the point I wish to make is, that I believe the .22 is very much overestimated.

The Winchester people only say that their .38 and .44 are reliable to 300yds., and I am a little inclined to doubt that the .22 is good for that distance. The Stevens people say that the "long rifle" cartridge will do fine work at 300yds., but we are talking about the .22cal. short.

Our old friend "Iron Ramrod" may be able to give us some tips. I was thinking of using the Stevens .22 on ducks down the Bay this fall and winter, where a heavier caliber would carry across and make it dangerous for people on shore; but if the .22 is such a formidable weapon we'll have to go without our ducks. We have hard work to get on to them with a shotgun and the little rifle seemed to be a good thing to use; but from the experience of our Western brother it looks as if we couldn't use rifles at all.

Up in York State a couple of years ago I was present at an old-fashioned turkey shooting match. All kinds of rifles were used, range about 450yds., and even the .32 calibers didn't get there, probably on account of the wind. They would reach, but one could see the dust kicked up on all sides, and the men were good shots, too. The heavier balls got the turkeys.

But pardon the space I have taken.

TODE.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## The Saginaw Crowd.

CHICAGO, Ill., Oct. 13.—This week's FOREST AND STREAM contains the first of the records of the "Saginaw Crowd," which seems mighty good stuff. It is, however, stuff just a year old. The "Saginaw Crowd" is at this writing out in search of another year's record for FOREST AND STREAM. Mr. Merston, the crowd's chronicler, wrote to the editor of FOREST AND STREAM that the special hunting car of the Crowd would be in Chicago Oct. 7, leaving the same evening for the West over the Wisconsin Central. Being on that date engaged in framing burning thoughts about eleven miles south of here, I could not see the car nor meet the Crowd, both and all of which I should have liked to do. We will not have to wait a year, I hope, before hearing of this year's doings.

## A Hunting Car Disaster.

Not all hunting parties of this season, it seems, are to be careless and happy. It was a sad disaster which overtook the merry party out in Dakota this week. In regard to this the dispatches have the following to say:

"NEW ROCKFORD, N. D., Oct. 11.—A car attached to a Northern Pacific train, containing a hunting party from Iowa, Minnesota and Wisconsin, was derailed two miles south of here this morning and twenty persons injured. Three of those hurt will probably die. A. J. Patch of Dubuque suffers terribly from internal injuries and the physicians hold out little hope of his recovery. W. C. Earl's spine is so injured that should his life be saved he will never be able to walk. Mr. Moody, of Colmar, has not regained consciousness and is suffering from concussion of the brain.

"The party was bound for the hunting grounds south of here and were in the highest spirits. They occupied a private car which was attached to the accommodation train. It was fortunate that they were not with the express, which travels at a much higher rate of speed. The manner of the disaster was such that had the speed of the car been greater, nearly all of the occupants of the car must have been instantly killed."

## Around Chicago.

Mr. H. B. Young, of Chicago, wishes to go for a short trip within 100 miles of Chicago, to a point where he can get some fishing, also some shooting on ducks, squirrels, grouse, etc. Queries for sporting localities come in all sorts of shapes, and all sorts of combinations are asked for, it being a very common requirement that the desired spot must be "within 100 miles of Chicago." I cannot supply, as an Eastern reader requests, "good big-game shooting near Chicago," but for our friend above we can, fortunately, take a location out of the box. If Mr. Young will go up to Mukwanago, on the Wisconsin Central, he can get bass and pickerel fishing yet in the lakes near by there, possibly catching a few fish. I should judge from reports of this week, from Twin Lakes and other Wisconsin waters. At Eagle Lake, six miles west of Mukwanago, he may get a little duck shooting—almost certainly he could get shooting there this rainy, stormy weather. He can, in the hills not far from there, once in a while get up a grouse, and if the squirrels have not migrated since summer, he can go out northwest of Mukwanago and get a few. All of these things are possible and probable, but if Mr. Young does not get all or any of them as wished, I beg he will not come back and revile the writer, for bills like the above are not altogether easy to fill.

Messrs. J. M. Jones and E. C. J. Cleaver asked to-day where would be a good place to go duck shooting—it is dry, very good duck weather to-day. The flight must be working down in this rough storm, but just how far down it is hard to say. I left them hesitating between Spring Lake, on the Illinois River, below Peoria, and Koshkenong Lake, Wisconsin, with a leaning toward the latter, at which place some very good bags have been made this fall.

## Some Thoughts.

I often hear great admiration expressed for the editorial page of FOREST AND STREAM, which has been kept up, invariably excellent, invariably fearless and fair, all these years. This comes to my mind again as I find the following, from the Louisville Post, about editorials and newspapers in general:

"The Evening Post believes that every properly conducted newspaper will properly discuss every public question—will discuss it freely, fully and intelligently, and will faithfully express public opinion, and force it on the attention of all concerned. Then if we turn to New York we find that the most signally successful newspaper of recent years makes a special feature of its editorial work, and numbers among its greatest achievements work that has been distinctively editorial work. Further, it will be found that the newspapers which give most attention to the editorial page have the most perfect and complete news service. You find the best newspapers in Chicago and excellent newspapers in St. Louis. New York has no better newspaper than the Chicago Tribune or the Chicago Herald or the St. Louis Globe-Democrat. Every one of these journals is stronger to-day than ever in its history in its editorial discussion of current events."

The above remarks certainly apply in force to the sporting journals. Sporting journalism has changed in its requirements in the past few years. Its journals have to be better now. They need be little models of the great dailies. The old ways are not good enough. I have in mind a *passé* Chicago sporting journal, which never has dared to have any opinions or beliefs, and which, singularly coincident therewith, has not for a long time dared to have any editorial page. Perhaps it was afraid to, for fear it might say something. I don't see why it should be afraid of that, and am disposed to think rather that it didn't have any editorial because it didn't have anybody who could write any. But still that is a small matter, and what I wanted to call attention to is the truthfulness and accuracy of the quoted statement that the "newspapers which give the most attention to the editorial page have the most perfect and complete news service." This index does not fail in the case of FOREST AND STREAM, certainly, which is head and shoulders above the others both in the one respect and the other.

## Times Have Changed.

The sporting journal which stays in the race to-day must have belief and opinions of its own and by itself. It must not be afraid of its clientage. It must be able to

stand alone and to think by itself, and therefore be able and eager to protect the best interests of its clientage, and to do it highly, fearlessly and unselfishly. You pick out a paper of which this is not true, and you find left of it only a common quarreling ground, and a news service unworthy of the name. On the other hand, pick out a paper of which it is true, and you find—well, you find FOREST AND STREAM.

FOREST AND STREAM took the World's Fair award, diploma and medal.

## It Would Break Them.

Last week FOREST AND STREAM, which is published in New York, had out in the West (for which alone I am speaking), aside from the attendant of its World's Fair exhibit, a staff man at Huron, Dakota, reporting one event, another staff man in Minneapolis, Minn., reporting another event, and another staff man at Burnside, Ill., covering a third event. This was all the same time, and in only one part of the country. It would break the staff of any competitor of FOREST AND STREAM to do this, and no other competitor did do it.

FOREST AND STREAM took the World's Fair award, diploma and medal.

## Rather Western.

Once upon a time there was a man who said he didn't read FOREST AND STREAM because it was an "Eastern paper." He reads it now and he knows better. He knows so big a paper can't be sectional.

This morning I took out of the Western mails subscriptions to FOREST AND STREAM from Fort Wrangel, Alaska; Portland, Ore.; San Francisco and Pasadena, Cal. Rather Western.

FOREST AND STREAM took the World's Fair award, diploma and medal. It will be a swift hand that takes down that ribbon from the FOREST AND STREAM's eagles.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## VERMONT SMALL GAME.

WATERBURY, Vt., Oct.—*Editor Forest and Stream:* The only live game warden in this section has at last been heard from. He resides in a neighboring town, and bobs up serenely with the following letter, addressed to one of our local sportsmen, who has recently "imported" a pointer and counts on making sad havoc among the grouse:

Mr.—

I heard that you was coming out here To hunt partridges With that Western Dog but it is a Gainst they law To hunt paridges With a dog for I am Fish and game warden. I don't care how much you hunt round here but don't hunt with that Bird dog I thought that I would tell you Now so you would not get in to any trouble. If you had been A friend of — I would not a warned you of your danger.

Yours truly,

—, Fish and game Warden.

It may be well to state that the law referred to was repealed some years ago, but news evidently travels slowly in the particular neck o' woods presided over by this warden. The game law is generally well observed hereabout, for the simple reason that few care to do any shooting before the opening of the season. Our birds are found in thick cover, as a rule, and no good shooting can be had until the leaves are falling. For this reason light bags have been the rule so far during the season.

The grouse are never plenty here, but we seem to have about an average supply this season, and fairly good shooting may be expected by those who know where to go. Squirrels are unusually scarce, and I have not heard of one being killed. Foxes numerous, and those who have hounds are getting down to business.

Last season's trout fishing was poor, as of course must be expected in a region where the streams are stripped of anything they hold in the shape of trout, without regard to size, as regularly as the season opens. Of course no streams can stand such fishing, and we consequently look for the early extermination of the trout. I am aware this view may seem wrong to residents of more favored portions of the State, but it is a cold fact here, and one not pleasant to think of.

Rod.

## Rochester Shooters.

ROCHESTER, N. Y., Oct. 16.—In a late issue I referred an Oswego correspondent who signed himself "W." to a Mr. Truesdale, of this city, for good locality for gray squirrel. Since my notes appeared I met Mr. Truesdale one evening as he was mailing a letter. He hailed me and remarked that I was "to blame for that letter being mailed," and said that five or six others on the same subject, but to different addresses, had preceded it. I offered to settle for the postage, but this was not accepted, he remarking that he preferred to get even in some other manner.

He then told of a morning which he put in at Buck Pond recently, failing to secure any ducks, but bagging seven mudhens and five hell-divers, all of which were retrieved by a small, part cocker bitch. I am reliably informed that a Mr. Hartman, of Union Hill, about six miles from this city, brought in seventeen woodcock as the result of one day's shooting last week. Mr. Hartman is about sixty years of age, and shoots a 14-gauge muzzleloader; is a crack shot and evidently knows where to look for the birds, as this is the heaviest bag heard from this season.

A party of Rochester gentlemen, A. Erickson Perkins, Geo. Wilder and Haywood Hawkins, started for North Woods Oct. 10. Harold P. Brewster and L. L. Allen have since joined the party.

Another party started for Muskoka region Oct. 9 for a three weeks' shooting and fishing trip. This party will stop at Cunningham's Inn, Lake of Bays, and includes Charles E. Cunningham, John P. Callihan, J. A. Bryant and Thomas Hammond. At the same time Charles W. Voshall, Willard Upton, Joseph Seigfried and James Wood started for Mr. Voshall's place, Idlewild, on Rice Lake, Canada.

O. S. BEE.

## Rank Growth of Wild Rice.

CINCINNATI, O., Oct. 11.—Letter from my old hunting companion, Newt Martin, states that the northeast corner of Honey Creek Lake, Iowa, has grown over with wild rice so thick that he and his friend found it necessary to carry their boat over the island in order to get to our favorite spot where Newt and I killed so many ducks three years ago. He also states that he killed thirty-two bluewing teal from my old stand which I built on that particular trip. There was little or no rice at all in this lake before this season.

F. B. MAGILL.

## NEW ENGLAND GAME NOTES.

THE open game season is on in most of the game sections in New England, and to some extent the hunters are abroad. But the great exodus to the World's Columbian Exposition is interfering with hunting trips to a considerable extent. Even those who annually make a pilgrimage to favorite game sections are going to Chicago instead this fall. But occasionally a sportsman is found with a plenty of means and more of leisure, and such will spend a good deal of the autumn in hunting, having already been to the World's Fair. Others are so fond of hunting that they have stifled the desire to see the White City at Chicago, and are spending their short vacation in looking after the game birds. A number of trips will also be made into Maine after large game this fall by Boston hunters. Indeed, some of them have already been there, and one of the party has got into trouble, if we are to believe a special Bangor dispatch to the Boston Herald. That dispatch is dated Oct. 14, and says that E. E. Smith, W. H. Butler, E. E. Sabin, George Kendall and A. Kittenhiel, of Boston, were arrested the day before by Game Warden Corlis for dogging deer near Naticus Lake. Each has been fined \$40 and costs by the Municipal Court. Their guide, A. H. Macpheters, was fined \$100 for keeping and using dogs for deer. It is said to have cost each man about \$100.

Mr. Westley Jones of Roxbury has just returned from his annual hunting trip to the Adirondacks for deer. The trip was a delightful one. Ten deer are said to have been killed by his party, who were quartered at the Kickabuck Camps. The party also report that Mrs. Jones shot a handsome buck with a .32cal. Winchester. As far as reported she is the first lady to have brought down a buck this season, and she is justly proud of her achievement, provided it was fairly done. But if the poor brute was driven into the water by hounds and held by a guide while the lady shot him, it was simply unladylike and cruel. Mr. L. W. DePass, Assistant Secretary of the Boston Chamber of Commerce, and C. W. Hodgkins have returned from their shooting expedition to the Cape. Their friend the Doctor was prevented from accompanying them, at the last moment. They report the birds more abundant than they had anticipated, from the reports others have brought about game being very scarce. They shot 314 birds in all, these including only a moderate number of birds as small as peep. In the lot were eight ducks. They were rather too early for duck shooting, those birds having just begun to fly as the hunters came away.

Local sportsmen have occasionally been out after partridge, but generally they report the birds very scarce, in spite of the fact that the all-round writers for the Sunday papers are covering these papers in spread-eagle style, with yarns about the abundance of ruffed grouse this season and the fun of hunting them. Such writers take a dash each season at the game subject, and the way they overdo it reminds one of the patent medicine advertisement; every case is a success. There is no such thing as failure or moderation. To read these writers the novice is led to suppose that the woods are full of game ready to be shot, while the experienced hunter is simply disgusted with the untruthfulness of such writings. So far as the editors of the daily and Sunday papers are concerned, they are not particularly interested in the amount of fact or fiction the writers use, provided their stuff seems to be interesting and promises to sell papers. In one of these articles published in a Boston paper on Sunday, Oct. 8, the writer mentions a great many "rough" grouse shot by a Boston sportsman, but also acknowledges that he did not get any very big bags of quail. Probably he did not, and it is not likely that he would have been fool enough to have told of it if he had killed any quail, since the open season on these birds did not begin till Oct. 15. If any quail were killed, and the writer of the article will furnish information concerning the shooting to either Geo. W. Higgin, president of the Massachusetts Fish and Game Protective Association, 27 School street, Boston, or to Richard O. Harding, secretary, 304 Washington street, the person shooting them will be punished according to law. The fine is \$20 for each offense. So far as birds seen are concerned, the prospects for quail shooting in Massachusetts are not good this fall.

Late reports indicate that the big-game season has started in with a rush in Maine. On the first day of the open season, Monday, Oct. 2—Sunday being a legal close day on game at all times—eight deer are reported to have been brought into Bangor. On Tuesday, half a dozen more were landed, and venison is a drug in that market. The woods are being scoured by men and boys with guns; some with dogs. H. P. Perkins and Sid Robinson of Bangor, brought in the first moose, from Little Sabois. Since that time there are reports of four other moose taken in Maine, with any number of deer. Again the game wardens are busy looking after deer and game birds being illegally shipped to the Boston and New York markets. Every possible means is adopted to get the game to market. Boxes of birds go as personal baggage, while deer and partridges are headed up in barrels. So far no illegally shipped game from Maine has been seen in the Boston markets. But later it will come in. It is next to impossible to keep it out entirely; but such shipment is greatly checked.

On the subject of enforcing the game laws in Maine it is nothing more than the truth to mention that at several of the fishing resorts, in the vicinity of Rangeley, deer have been served regularly on the hotel tables nearly all summer. I have it from positive sources that such is the case. I am not writing this because I believe it to be the worst form of illegal game killing for the proprietors of camps to permit of the shooting of deer out of season for the use of their tables, but to show how poorly the game laws are enforced by the wardens in some sections. Indeed to take deer enough for table use in the woods would not work much harm to that game in Maine, and there is nothing detestable about it, compared with the shooting of such game in hot weather by sportsmen who have no use for it and only leave it to rot. But in spite of all the illegal shooting done there are more deer in Maine for those who propose to take them legally in the present open season than ever before. But concerning moose it is doubtful if the report can truthfully be made as good, while concerning caribou the reports make a positive scarcity.

SPECIAL.

## Dry Ducking Grounds in Iowa.

ALGONA, Ia.—This is a poor season for ducks here, it is owing to the general dried-up condition of things. S.

### Massachusetts Out-of-Season Quail.

BOSTON, Oct. 8.—*Editor Forest and Stream:* In "Woodcraft" "Nessmuk" quotes from one of his own poems in "Forest Runes":

"And lungs are poisoned and shoulders bowed,  
In the smothering reek of mill and mine;  
And death stalks in on the struggling crowd—  
But he shuns the shadow of oak and pine."

With "Nessmuk's" word's ringing in my ears, I started for the 8:35 train on the Providence road one day last week. I had my usual accompaniments—dog and gun—and intended to enjoy the company of the oaks and pines, even if the pockets of my shooting-coat did not bulge out much at nightfall. I had with me a young man from the office who had not been in the woods for a number of years, and to witness the pleasure and joy beaming o'er his face at the sight of hills and valleys would do one good. His exuberance was almost childish.

We tramped about through briers and swamps without getting a shot. I noticed that his courage was failing him and endeavored to cheer him. He admitted that he expected to see grouse or something else spring up every five minutes. And to make matters worse he sank in a bog hole almost up to his knees and I laughed until I cried. He will never go there any more.

We found some gray squirrels toward the afternoon. They are in very poor coat as yet. In fact, the tail of one came off in my pocket. In another fortnight or so their covering will be in fine form.

Close to a farmhouse I heard Bob White and proceeded to investigate. I was led into an almost impenetrable thicket, very wet and boggy. I put up about fifteen birds which I may have a chance at later on, that is if the farmer in the adjoining house does not have them before opening day.

I called at the house for some milk and the conversation turned to shooting, when the housewife informed me that her husband had shot some quail that morning. If he has quail for breakfast every morning up to the 15th I will stand a poor chance for a shot.

We found grouse pretty well scattered and too smart for us to get a shot at them. Cover is too thick as yet. We require a good heavy frost to strip the small growth of its foliage.

My friend Brann, of Revere, has lately returned from down East, and reports fine shooting on spruce partridge and hemlock partridge, rabbits and other small fry. A ten-days' trip only cost him and his chums \$15 each.

J. P. W.

[If our correspondent will communicate his information about illegal quail shooting to the Massachusetts Association he will doubtless have their thanks and do his part toward enforcing the laws and protecting the birds.]

### Notes from the Blackfoot Land.

PIEGAN, Mont., Oct. 1.—*Editor Forest and Stream:* The weather for the past month has been simply awful for this season of the year. Early in the month it began to be squally and went from bad to worse and did not clear up until the 30th. More moisture has been precipitated in the past twenty days in Montana than in the past two years.

Dr. James and Dr. Draper, of New York, have returned from their annual outing along the summit of the Rockies, and in spite of the bad weather had a good time. The first day's hunt they killed a very large ram, and from that on always had plenty of meat in camp. They made a trail into a certain valley never before hunted, and found there plenty of elk, sheep, goats and deer. They set a certain Saturday for climbing "Flinsch's" peak, but ere that morning arrived the mountains were covered with 2ft. of snow and ice, and they have been obliged to defer the attempt for another year. Half of the time the storm kept them in camp. But that was not so unpleasant after all. They had a lodge. That is the kind of shelter we all use in this country; why should one be cooped up in a cold tent, or open camp, or stand shivering around a smoky fire, when a lodge is more convenient, and so much more comfortable. Let the north winds blow, and drift the falling flakes; the lodge is up, and within the hunters sit around the genial blaze, and smoke and dream the tedious hours away.

Coming back across the summit the party experienced considerable difficulty in getting their horses through the snow, which in places was 5ft. deep. No one, however, is better able to handle a pack outfit in a bad place, than their guide, Wm. Jackson. I believe he could take a train over a wall mountain if necessary.

Oliver Sanderville killed a large female grizzly at Heart Butte last week. He had a .44cal. Winchester carbine and fired six shots, all of which hit the animal. She did not show any fight but tried her best to get away.

Thomas Bird has killed quite a number of sheep at St. Mary's lately. He has a dog that will bay them, and he is thus enabled to choose the rams and let the females go.

A late editorial in FOREST AND STREAM speaks of the good influence the Boone and Crockett Club has exerted in various parts of the country. It has certainly done a good deal toward preserving the game in this section. Members of the club who have hunted here, have by word and example induced guides and hunters to stop useless slaughter of game, and to kill only enough for camp use, and then nothing but males if possible. The guides in turn have impressed these views on visiting sportsmen, so that to-day, no matter how much one would like to make a "record," his guide will not countenance it.

The autumn flight of waterfowl has not yet begun. There are a good many ducks here, but they were bred in the vicinity. Chicken shooting continues good and some good bags have been made.

J. W. SCHULTZ.

### Game Notes from Monroe County, Pa.

THE heavy frosts of last week have changed the summer green of the woods to the most brilliant autumn coloring, which pen cannot describe; though the looker on seems enchanted by the hour at the grand display of varied hues interwoven in the miles of forest.

My attention was called to this place by an advertisement in FOREST AND STREAM, and it is strange that more New Yorkers do not choose this charming country for an outing for trout fishing in the spring, and for hunting during the fall months. The Mountain House is kept by Mr. Thos. H. Stites, situated on the banks of the east and west branch of the celebrated Brodhead's trout

stream, known as the Anomalink, only three hours from New York, on the D. L. & W. Railroad, to Spragueville, ten miles above the Water Gap; three fast trains each day make the trip short and enjoyable.

Several parties from New York come here every fall to enjoy the hunting, and it is a favorite resort at that time for ladies, who enjoy the walks and drives, or the rest which the place affords.

Mr. Stites owns 1,000 acres of wood and meadow land, which he now protects for his hunting guests. The grouse shooting is good, birds are more plenty this year than for some seasons, and after the leaves are off the sport will be satisfactory. Quail are not plenty, there are fair covers near the place, and last fall the farm was stocked, another year should show good shooting. Woodcock are abundant during the fall flight at end of October. Rabbits are plenty and afford one considerable sport in a tramp through the woods.

Fox hunting after Nov. 1 is one of the enjoyments of the place, and as Mr. Stites has then one of the best hounds in the State, one can well spend a morning in this exciting chase.

The present outlook for shooting is much better than for some years.

VERITAS.

### Adirondack Deer Hounding.

NUMBER FOUR, Adirondacks, Oct. 11.—*Editor Forest and Stream:* The open season for hounding deer which closed yesterday has been by far the most disastrous to the deer in this section of any previous year. It is reported from every locality on the west side of the Adirondacks, unless it be in St. Lawrence county, that there were not more than half as many deer at the commencement of the open season for hounding as there were last year, and I think that nine-tenths of these have been slaughtered this season. Within a radius of three miles from Number Four, ever since the open season commenced, there have not been at any time less than 100 and at times 300 men, and 100 hounds and dogs of all kinds have been constantly on the ground. Not only has every water been watched, but the hunters spread themselves all through the woods, and being such a multitude of them there was hardly a chance for a deer to escape.

Fifteen to twenty deer were killed every day at first. But as the deer got scarcer not so many were killed. Thirty were killed last week in the two little lakes within one-and-a-half miles of the Fenton House. Yesterday, the last day, they made a grand rally and killed eight in the two lakes mentioned. Wagon loads of deer have been taken out most every day. Fully 300 deer have been killed in this immediate vicinity, and I think that 400 would come nearer the figure. Ladies have participated in the slaughter, and the meat hunters have been abundantly rewarded. How long shall this slaughter go on under the sanction of law ostensibly for the protection of the deer? How long shall our State continue to sacrifice her noble game by legalizing a method of hunting deer compared with which crusting or any other method of hunting would be protection?

MUSSET.

### Nova Scotia Hunting License.

*Editor Forest and Stream:*

During the last three years I have spent part of each season hunting large game in Nova Scotia and I found that there were a few resident sportsmen who were very much opposed to non-resident hunting on their grounds, and the increase in the price of the license is doubtless due to their influence. The majority of the natives, however, were against a non-resident license, saying it kept a great deal of money out of the Province, and money which would be spent where it was needed.

As for the license being a protection to the moose, the game needs protection ten times as much from the native as from foreign hunters. On one of my trips I met one of the natives who had killed in less than ten days five moose—two cows, two calves and one bull; and he had only commenced hunting and expected to be in the woods for three months or more. Not over one-half of the non-resident sportsmen who go to Nova Scotia moose hunting even see the game they are after, and not one moose in every ten killed each season is shot by them, while they will leave at a low estimate at least \$250 in the Province for each one they get. The native hunter gets on an average about \$35 for the meat of each moose he gets out.

C. M. STARK.

### In White Mountain Forests.

CAMP DORSET, Lincoln, N. H., Oct. 4.—I have been camping in the Franconia Mountains since June 21 alone, excepting for stray fishermen and tourists who happened along. I have been photographing and picking up health; gained over 15lbs. in the time I have been here. Trout do not average very large, but I have seen many a creelful taken out of the East Branch of the Pemigewasset and Franconia branch. I have some views which I think much of, for the beautiful forest is doomed. The axe is at work on my hills, and in a few years the views I have and expect to take will be an impossibility. I am pretty well posted in these woods now and know just where to look for a deer, of which there are some. I got within 20yds. of a fine doe before the season opened; she was lying down, and I had a good chance to inspect her full round glossy form. I was close enough to see the sun glittering on her moist muzzle and could see her eyes shine. She was very tame. I did not attempt to harm her and am not sorry for it. Now is nature in her glory of completion and content.

N.

### Gray Squirrel Shooting Wanted.

MERIDEN, N. H., Oct. 8.—Can some of your readers tell where gray squirrels abound this fall? It is a rather old-fashioned game, I presume, these days, but as I am very fond of rifle practice it is my favorite game, and it would give me great satisfaction to have a good squirrel hunt this fall in some of the Atlantic States. I came here from the Pacific Coast this fall expecting to find them here as in former years, but was disappointed.

Thinking you would be likely to hear from some of your correspondents, I take the liberty of addressing you, hoping you will favor me with an early answer, and I hope to learn of some place in the States south of here on the coast. Possibly Virginia would be a good place for this game.

H. B. C.

[A Washington note in last issue named White House, Va., on the Potomac, as a squirrel shooting point. We hope that readers having knowledge of good ranges will advise H. B. C. and others through these columns.]

### The New .25cal. Shell.

In regard to the new .25cal. rifle shell to hold 25grs. of powder, designed by Mr. Carpenter, permit me to record my note along with "Barrister" in its favor. The shell, if right in other respects, will be a great improvement over the small shell we are now using and which holds about 20grs. of powder. I have been shooting the .25cal. exclusively for more than two years, and have used bullets weighing from 65grs. up to 115grs., the latter being four calibers in length. One of the difficulties in using the heavy bullets has been a lack of velocity, resulting from the small powder charge. These extremely long bullets show a decided tipping tendency when using 21grs. of powder, and this tendency was much reduced when loading at the muzzle with 30grs. of powder, besides the accuracy was improved and the trajectory curve much reduced. The new shell will be a step in the right direction, not only on account of its capacity for holding a reasonable powder charge, but on account of its cylindrical shape inside, allowing the bullet to be seated to any depth desired, and insuring accuracy when using any charge within the limits of the shell. The advantages of this feature are apparent.

If not too late I would suggest that the Winchester No. 2½ primer would probably give the best results in the new shell, as it does in the 20grs. bottle-neck shell now in use. The first shells put on the market used the small primer, and with these I always got more or less escape of gas around the primer; but the new Winchester shells taking the large primer are absolutely gas-tight.

I should like to hear further from Mr. Carpenter about the new shell, and especially what primer it will use.

NORRISTOWN, Pa.

E. A. LEOPOLD.

### Big Bores for Ducking.

ELMWOOD, Mass.—*Editor Forest and Stream:* Of late I have heard several reports from various gunning stands where large-bore guns are used. I will not say used, for I have not heard of any birds being shot with these guns; but if the reports are true, they are at the stands and without doubt are kept for use. Several stand owners have 8-bore guns, which seem large enough, and in my opinion too large for any true sportsman to use.

One gentleman having several of these large guns, argues that if he doesn't get the birds some one else will; and so he goes on with his slaughter every fall, keeping but few for his own use and sending the rest to market.

The greatest outrage on ducks and geese in the gun line, if used, is a heavy firearm, which, I should say from the description given me by two gentlemen who saw it at a certain gunning stand, was a sort of blunderbuss, half octagon barrel, 14in. bore, and so heavy that it is all a man can do to hold it to his shoulder long enough to take aim. The parties owning this weapon claim they have a right to use any firearm they can hold to their shoulder. Will you kindly inform me what the law is in regard to the size bore allowed?

R. C. STEVENS.

[The Massachusetts law does not limit the bore of a gun for duck shooting, but prohibits the use of "swivel or pivot gun."]

### Game Near Los Angeles.

LOS ANGELES, Cal., Oct. 7.—Quail are fairly plentiful around here this season, and there have been some good bags of ducks made at the various lakes and sloughs. They are all home bred ducks, however, as the northern birds have not come down as yet.

The season for quail and ducks opened one month earlier this year (Sept. 1) than last, just about one month too early, as the majority of the quail are not full grown till Oct. 1, and you occasionally find young birds as late as this month. I went out after ducks last Monday, to a certain lake near here, and found plenty of young teal and some mallards. This lake is a favorite resort of wildfowl in the winter, and I had fine sport there last season. Good luck to "Our Paper."

CULPEPPER.

### One-Armed Shooting.

SALT LAKE CITY, Utah, Oct. 10.—A mention of the one-armed grouse hunter induces me to tell of a sportsman of this city. Every time I see him I simply stare in open mouthed wonder. He has lost both his right arm and right leg. The arm is off at the shoulder and the leg at the knee. He uses a wooden peg-leg and it takes a good man to walk with him all day. Although I have seen him in the field, I have never seen him shoot; but I am told that he can load and fire his 10-bore as quickly as the best. I must confess the first time that I saw him I was overcome with a sense of sorrow and sympathy for his great misfortune; but since I have seen some of his bags of ducks I have gradually gotten over that feeling.

A. B. W.

### The Sinking of a Dead Bear.

NEWBURYPORT, Mass., Sept. 8.—I saw in the FOREST AND STREAM of July 29 J. G. Rich speaks of some bears sinking at once when shot, while others float. My experience with most animals is that if shot just as the breath is drawn in they will float, if just as they blow it out they sink.

If salmon don't feed in fresh water, will "Podgers" kindly explain how he gets the hook into their mouths?

A.

[Some say that the salmon takes the fly for sport; others say in anger; others have other theories in which the food consideration does not enter.]

### Western Massachusetts.

WILLIAMSBURG, Mass., Oct. 7.—The stage from Waltham this morning brought in a bunch of 12 woodcock and 11 partridges, with express tag attached. Wm. Taylor, of New York, shot 2 quail, a male and a female, ten days ago in Goshen; this is unusual. A bevy of 9 birds had been previously seen by several persons. Guess this was the only brood in the township? As a whole, grouse and game birds of all kinds are not numerous this fall.

C. H.

### About Clubs for Deer.

I HAVE helped to rope deer alive in a lake for stocking Blooming Grove Park, but I never pounded the life out of one with a club. It saves ammunition, but it doesn't seem right. It used to be a method of market butchers only to knock down cattle with an axe; but I think they are more humane now. In some abattoirs they use electricity, don't they?

H.

# Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

## VOLCANIC ASH FROM MT. SHASTA.

Report to the U. S. Fish Commission concerning the injurious effect of the volcanic ash beds on Mt. Shasta, on the waters of the McCloud River, California. By Livingston Stone. Printed in advance of its publication by the Commission through courtesy of Commissioner Marshall McDonald.

NEARLY fifteen years ago a peculiar cloudiness was noticed at times in the summer in the McCloud River, which at others was as clear as crystal. This somewhat mysterious appearance in a pure mountain stream, fed by the melting snows of Mt. Shasta, not only excited curiosity, but also created some alarm, as it was feared that it might have an injurious effect in turning away the ascending salmon from the mouth of the river. An investigating party was sent to the head of the McCloud at that time to ascertain the cause, and they reported that a creek called Mud Creek or Ash Creek had overflowed its banks and was discharging mud into the McCloud River. They changed the channel and for a time the evil was remedied.

Recently, however, this cloudiness has very much increased, so much so that after very hot days the usually clear waters of the McCloud look almost as white and muddy as the Missouri at St. Louis. In response to a recent report of mine to Washington on the subject I received instructions to go to the upper waters of the river and again investigate the causes of the trouble. Accordingly, on May 26 I left Baird Station for the upper waters of the McCloud, taking with me Mr. Seymour Bass, the foreman of the station. On arriving at Sisson's Camp on the McCloud we took a guide and proceeded to make examinations. We found a very interesting state of affairs, though from a natural history point of view a very discouraging one as regarded the practical future of the McCloud River.

We found that far up the mountain side, there was a vast bed of volcanic ashes, doubtless deposited there in remote ages past when Shasta was an active volcano. In the heat of summer quite a considerable stream of water is formed by the melting snows on this peak of perpetual snow. This stream takes its course directly through this bed of ashes just mentioned, and as it flows at present, deposits them in the McCloud River and causes the mysterious cloudiness which the salmon fishery interests now make it desirable to avoid.

The question now arises, "Why is the river any worse off at the present time on this account than it was twenty years ago?" This appears to be the explanation. Twenty years ago and previous to that time, the stream familiarly known as Mud Creek, flowed over a tract of table-land from twenty to fifty acres in extent, where it distributed itself in various channels or deltas and in which it deposited the fine ashes, which it held mechanically in its waters. This plain or table-land acted as a great settling-box (to use the phraseology of the miners), and caught by precipitation the fine ashy sediment which is now carried into the McCloud River.

This plain or natural settling-box has now been completely filled up with the ash deposit, united with the fine sand which occurs with it, and no longer acts as a catch-box to receive and detain the fine ashy sediment, which comes down from the side of the mountain. One effect of this has been to turn the once fertile plain into an absolute desert of sand and ashes, and another effect of it has been to carry some of the deposit already made on the plain into the McCloud River.

The stream flowing from the mountain side, as it cannot distribute itself any longer on the plain below, now simply cuts a channel for itself through the accumulated deposit that it has made, and carries with it into the McCloud not only the ashes it took along with it from the mountain, but also what it gathers on its way through the vast deposits on the plain.

This explains why the turbid appearance of the McCloud has increased to such an extent so very recently. How long this state of things will last no one can say. The ash deposit is far above the timber line in perpetual snow and has never been thoroughly examined.

Certain it is, however, that the sedimentary deposit is increasing to an alarming extent in the McCloud River. We were informed at Sisson's Camp, about forty miles up the river and a short distance below where the ashy stream at present comes in, that the deposit was so great there, that all the deep trout fishery pools of the McCloud were filled up by it last year to a level with the higher portions of the bed of the river, and that the trout fishery was completely ruined. The river being rapid at this point, much of the ashy sediment is carried beyond Sisson's Camp and distributed in pools and eddies along the channel of the river for many miles.

Before it reaches Baird Station, which is two miles above the mouth of the McCloud, almost all, if not all, of the heavier sediment has been deposited; but there remains in the river countless millions of exceedingly fine particles of ashes, of apparently about the same specific gravity as the water, which give the river the cloudiness which has been mentioned. One cannot say for a certainty that this turbidness actually prevents many salmon from coming up the McCloud, but as it is well known that salmon prefer clear streams to turbid ones, it is safe to say at least that the ashes in the river are very undesirable. And not only do they possibly prevent salmon from coming into the river, but they actually destroy many miles of spawning beds, where the salmon have been accustomed to swarm in great numbers and deposit their eggs.

To obviate the trouble and keep the ashy deposit out of the McCloud is a difficult problem to solve. It appears to be one of those instances where the mighty agencies of nature mock at the power of man. No human power can prevent the sun from melting the snows on Mt. Shasta, or the water thus created from pouring down the mountain side. Only one possibility remains and that is to turn the melted snow stream on to other level places, using them for temporary settling receptacles and thus doom other fertile plains to deserts—and this at present seems exceedingly impracticable. Some of the efforts that have been made for temporary relief are rather ludicrous.

For instance those interested in the trout and salmon fishery at Sisson's Camp, on the McCloud, turned the stream at one time into the dairy farming valley of Squaw Creek, which joins the McCloud below Sisson's Camp. The dairy farmers on Squaw Creek who, very naturally, did not want their dairy farms turned into a desert, any more than the fishermen wanted their trout pools filled up, immediately turned the stream back into Elk Creek, which, emptying into the McCloud a short distance above Sisson's Camp, brought the dust and ashes back to the Sisson trout pools again.

There is, however, one method which if resorted to every year will for the present bring temporary relief, and that is to take back the stream (Ash Creek or Mud Creek) from Elk Creek into which it has been turned and restore it to its original channel, and then to distribute its ashy waters through several smaller artificial channels or deltas, in which they may precipitate most of their sediment before they reach the McCloud.

This would of course create more new deserts on a small scale, and would necessitate the presence of some one all summer on the spot, where the streams could be watched. While land is no more valuable there than it is now, this plan for temporary relief would doubtless be practicable, and by engaging the services of some person living in the vicinity the expense could probably be kept within reasonable limits, say \$100 a year.

In conclusion, allow me to add that the subject presents a new and very interesting field for scientific inquiry, and it is to be hoped that some geological or other scientific party will sometime voluntarily undertake a thorough study and examination of the situation which promises such fruitful results.

LIVINGSTON STONE.

## THE SEDUCTIVE SMELT.

I wish I were a fish!  
Oh, wouldn't that be neat?  
Made into a sweet bouquet,  
Laid at some lady's feet?  
For when she picked me up,  
If so inclined she felt,  
And put me to her little nose,  
Why, then I'd be a smelt. —Pollock's Rip.

SMELTS are running bravely now; or if they don't they ought to, for there are hundreds of fishermen after them in earnest. Smelt fishing is all the vogue. Down East is the place to catch them just at present, although their geographical range is from the Potomac River to the Gulf of St. Lawrence, including both salt and fresh water locations, three varieties being represented in the distribution. They are a beautiful fish of silvery brightness, with a lateral stripe of silver running from shoulder to tail, which Senator Stewart might envy, and are almost translucent. They are much prized for the table, and when cooked and served the backbone cleaves to the flesh unbroken, and all the little bones are chewed up and swallowed incontinently, while a fresh cucumber flavor lingers in the mouth in a grateful sort of a way which epicures appreciate. At this season they afford much sport to the angler, and are taken in tidal currents along the coast with a light rod, hooks and line, baited with shrimp, two 6-inch snoods, with their hooks attached, being bent on to the ends of a wire spreader shaped like a letter A. Quantities are also netted (illegally) at the outlets of creeks where they are inclined to congregate, and in winter multitudes are taken through holes cut in the ice, sometimes as many as 200lbs. per man per day, which at the market price of twenty-five cents per pound makes a good showing in dollars for a single day's work, though we are not at present writing considering work, but sport.

Portsmouth, N. H., is a favorite winter resort for smelt fishermen. In February and March they are in their prime, for they are essentially a winter fish, spawning in those months. They seldom exceed a foot in length and the average is hardly more than 5 or 6 in., the latter size being yearlings and more highly prized, as the large ones are coarse and tough. In the Gulf of St. Lawrence they are often taken with small scarlet (ibis) flies while fishing for sea trout. In Maine and Massachusetts they are protected during the months of April and May.

One of the favorite smelting grounds near Boston just at present, and for a fortnight past, is at Nantasket, where one will see at every tide from two to a dozen skiffs anchored at chosen places best known to experts. Weir River and the vicinity of Bumkin's Island and Paddock's Island are good places, the Boston Herald tells us, and so are Strawberry Hill, near Hull, and the little bight, or "hook," which makes into the land between the Hull Y. C. pier and the steamboat landing. Smelts also like to gather around the lobster cars and under the floats at the boat houses. In every skiff there will be one or two fishermen and every man intent on smelts, all eager. Every newcomer is regarded as an interloper by those already on the ground, and if he happens to drop his kelleck into the water with a "kerchunk," so as to scare and scatter the fish, curses and thin-spaced imprecations from the other boats drop like hot shot all around him, for it will take fully twenty minutes for the school to gather again, which is longer than most country schoolmarm's allow for recess. From half flood to full and half ebb is the best time of the tide, though one is often apt to catch more pollock and haddock than smelts until the tide begins to turn. When the waters commence to run out of the estuaries and inlets the smelts are on their feed. Voracity drives out caution then, and suspicious fish which have been wary until now lose all their shyness snatching the tempting bait with avidity, and without reserve. Every boat is provided with a bait car filled with sedge grass or seaweed, which keeps the shrimp fresh and active. The shrimp cost \$2 a quart at the market, but if one wishes, and knows how, he can net his own shrimp in the creeks with a long-handled scoop. A gill of shrimp will answer to start in with, but it will take about \$5 worth to stock up a bait car for an afternoon's fishing. Hooks are put on lengthways, the point into the tail, through the body and out at the head. Shrimp prefer it that way. By the time the novice has learned the trick most of the bait is gone. Just then the fish begin to bite sharp and he has to borrow. At the finish, after reckoning up all expenses of the outing, the boat hire, the bait, the rig, the car fares, the luncheon, and the Waukesha water, the amount of fun and fish required to balance the account is considerable.

Upon the whole smelting may be regarded as a high

art. It engages all the perceptive faculties. Something else besides nose is requisite, as will appear upon the face of it at the outset. Much, of course, depends upon the shrimp, but an adept will take two smelts to a tyro's one, especially if the latter is fishing with a single hook. One should feel repaid for his time and outlay if he boats no more than a dozen fish at the first attempt. Time and tide will serve again, and perseverance must bring eventual reward. Sententiously speaking, "Pas de lieu Rhone que nous."

CHARLES HALLLOCK.

HADLEY, MASS., Oct. 7.

## SUSQUEHANNA "SALMON."

CLEARFIELD, Pa. Oct. 9.—My wife and myself left Clearfield Monday Oct. 2, for a few days' salmon fishing on the west branch of the Susquehanna River and Pine Creek in Lycoming county, bordering on Clinton county. We took the early morning train at Clearfield via P. R. R. for Lock Haven, and there we changed cars to the P. & E. R. R. and got off at Pine Station on the Susquehanna River, six miles below Lock Haven. At this point Farmer Rodabaugh met us with a team, and at 12:15 we were enjoying a good country dinner such as only Mrs. Rodabaugh knows how to cook with the assistance of her daughter and daughter-in-law. After dinner we were joined by Ash Rogers, one of Jersey shore's crack fishermen, who never fails to catch fish when he is allowed to fish; but on this occasion Ash was elected to row the boat for Mrs. Clark. About 2 P. M. we were ready with our trolling lines, spoon hooks and lamper eels for bait. At this point on the river Pine Creek empties into the Susquehanna, and there is a stretch of deep water for at least one mile and a half. The depth of the river here is from 5 to 15ft., and at least one-fourth of a mile from shore to shore. It was in this water that Mrs. Clark caught a salmon on Aug. 28, measuring 29in. in length and weighing 6½lbs. It took at least fifteen minutes to land him as no landing net is used, and we generally row to shore to land our fish, having lots of sport in the deep water. We use light bass rods with lots of line from 150 to 200ft., which makes the sport very exciting when a big fish is hooked and landed. Well, we will return to this trip. We trolled the river on Monday from about 2 P. M. until a late supper or as long as we could see, and did not get a strike, and we gave up thinking we had caught all the salmon in this water on our last trip, and returned home to supper.

Tuesday morning we were up at daybreak, but the weather looked threatening. After breakfast we seated ourselves in the boat, and we had made but one turn in the river when it commenced to rain in torrents, and while rowing for home at the rate of at least five miles an hour with my spoon hook spinning on top of the water, I hooked a pike (some people call them pickerel) 23in. long, weighing 3½lbs. This ended our Tuesday fishing, as it rained all day and we were kept indoors.

Wednesday morning it did not rain, but was cloudy throughout all of the day. Farmer Rodabaugh hitched up his team and took us up Pine Creek about three miles, and we struck a nice strip of dead water, in the middle of which an old bridge pier was visible. After getting a boat, Rogers took the oars and we started in to troll. We had not gone over 50yds. until I had hooked a salmon and landed him safely, and in less time than it takes me to write it I hooked four, the largest measured 26in. and weighed 5 lbs. strong. This was enough sport for one day and we returned home. Rogers dragged our fish in the water in order to keep them alive, so that we could put them in our live box until we went home to Clearfield.

Thursday morning we got up at day break, and Farmer Rodabaugh hitched up his team and took us back to this same water where we got two boats, Rogers rowing for Mrs. Clark, and Ernst Rodabaugh rowing my boat. We trolled for two hours faithfully, and never got a strike. Rodabaugh said, "We have paddled this water until it is so thin that the boats will hardly float." We then went to shore and visited John Nepley, who owns a small farm on the banks of Pine Creek. John told us all about farming and how he whipped the Beech Creek Railway Co. in a lawsuit for right of way through his lands, while we ate his grapes and pears, which he had in abundance. I suppose we visited Mr. Nepley for about two hours, when Mrs. Clark and Rogers commenced to troll again. I heard Rogers holler, "Come in out of the wet," and looking down the creek I saw Mrs. Clark tugging and wrestling and her 8oz. rod almost bent double, and I knew she had a good big one hooked. Rogers would say, "Reel in and keep your line stretched, he is a dandy. Come in out of the wet, it is too damp for you out there." When the shallow water was reached, I could see by the splash that it was a big one. After seeing them land their fish, I started in fishing myself, and in the shortest time imaginable, Mrs. Clark landed three—one measuring 28in., weighing 7½lbs.; one 27in., 6½lbs.; one 20in., 3lbs. My catch was four, weighing from 2½ to 4lbs. each. They then quit biting just as suddenly as they commenced, and we returned to our quarters.

One of the peculiarities of the salmon in our streams here is that when they bite they bite fast and wicked, and when not in the humor, a fisherman might as well go home.

Friday we returned home to Clearfield with eleven salmon and two pike, the total weight being 51lbs.

THOS. E. CLARK.

## Spawning of Quebec Trout.

It was quite dark Saturday evening, Sept. 30, when I took my last trout for the season and laid away my rod for nearly eight months to come. The close season commences Oct. 1, but in some of our waters I had stopped fishing two weeks sooner, finding the eggs far advanced. In the lake where I was the trout spawn very late, never until after the ice has taken. We have had good fishing all the season and the trout, though never attaining extra size have averaged larger than I ever knew them before—as well as plenty. One pleasant evening while rowing about half a mile to the camp I counted fifty-two "rises," visible from my boat, in perhaps eight or ten minutes.

X.

## Basswood Lake.

SOWERBY, Algona, Oct. 7.—The lake trout are taking first-rate just now. Was out yesterday for a couple of hours, caught seven, varying from 3 to 4½lbs.

G. F. DYER.

## ANGLING NOTES.

## A Defective Fish Law.

WHEN the fish and game laws of New York were printed after the passage of the Game Code in 1892, I noticed that Sec. 110 read: "Black bass or Oswego bass shall not be fished for, caught, killed or possessed between the first day of January and the thirtieth day of May, except as provided by Sections one hundred and forty-four and one hundred and sixty-eight." I underlined "one hundred and forty-four," and wrote in the margin, "This probably means Sec. 143." I did this because Sec. 143 relates to special seasons for black bass in certain waters in the State, and Sec. 144 does not, as it refers only to the Consolidation Act of New York city. At the time I thought Sec. 143 was so specific that it would care for itself, and I called the attention of one of our lawmakers to the evident error that it might be corrected as a mere matter of form, not suspecting that it might interfere with the enforcement of the law. The error was not corrected by the last Legislature, and a few days ago my attention was called to a violation of Sec. 143, in that black bass had been caught out of the season provided by the section. Then only was it discovered that there was no penalty for violating Sec. 143. The penalties for violating the sections of an article are contained in the concluding section of each article. Sec. 110 is in Article V. and Sec. 143 is in Article VI. In the first the penalties are given correctly, but in the second there is no penalty for violating Sec. 143, although there is a penalty for violating Sec. 144, and thus the error in Sec. 110 is perpetuated, for there can be no doubt that in each instance 144 should read 143. In following up the case referred to as being a violation of Sec. 143, a curious muddle regarding the nomenclature of our fishes was developed which emphasizes the need of reform in this respect.

The section provides a close season for black bass in Lake George until August 1, and information was obtained that a hotel keeper on the shore of the lake had been serving his guests with black bass caught in the lake in the month of July. There were three witnesses to the transaction, the cook in the hotel, a man of all work about the place, and a resident nearby. Upon examination under oath not one of the witnesses would swear that the fish were black bass, but one and all did swear that they were Oswego bass. As a matter of fact, there is not a large-mouthed bass, the so-called Oswego bass, in the lake, and never has been; but as long as I can remember the bass of the lake, which are all the small-mouthed species, have been called by a large number of people about the lake Oswego bass or "Swagoes." More than ten years ago I was subpoenaed as an expert by the district attorney of Essex county, who had a case against a man for taking black bass illegally in Lake George. The man contended that he had not caught black bass, as charged, but had caught Oswego bass. I had to send to Greenwood Lake to get a large-mouth bass to show to the jury, and of a great many Lake George fishermen that I showed the big-mouth to not one had seen its like before. On one occasion the New York Fish Commissioners "resolved" that the name "Oswego" applied to black bass should not be recognized by the Commission, but it still has a place in the statutes. They also "resolved" into disuse the name "salmon" trout as applied to lake trout, but salmon trout yet has a prominent place in the fish and game laws of the State.

## October Black Bass Fishing.

In the autumn black bass fishing, if there are plenty of bass, is good, bad or indifferent, depending largely upon the temperature of the water. As the water becomes cold the bass resort to broken rocks in deeper water than any in which they are found during the summer. I know of "shoals" in water over 50ft. where the best fishing is to be found at the tail end of the season, although this is deeper than the fish go as a rule.

On Monday of last week Mr. D. P. McQueen of Schenectady joined Mr. Gilman Mason of Sandy Hill at Kattskill Bay, Lake George, to wind up the fishing season with a day's black bass fishing. They caught seventeen black bass, the largest one weighing 4½ lbs., and all were caught in water from 12 to 15ft. deep on rocky shoals. A few weeks ago when there was a week of cold weather the bass were deeper than they are now. Black bass fishing in Lake George reached a very low ebb owing to years of illegal fishing (chiefly by taking them on the spawning beds), and a legal open season that did not cover their spawning operations. A rigid enforcement of the law as to the means of taking bass, and a close season that permitted the bass to spawn unmolested for the past few years has done wonders for Lake George in the way of improving the bass fishing. A few hundred black bass have been planted in the lake, but the planting of such bass as can be obtained from the State will not do as much for the lake as the close season covering the spawning period, and the enforcement of the fish laws.

## Minnow-Casting Records.

In compiling the best fly and minnow-casting records for the World Almanac I investigated a printed statement that the longest minnow-cast on record, 148ft., was made in Wisconsin in 1891. I knew that 148 was not the longest cast on record, but I wished to know why it was called so. To my surprise, I found that the cast was one of five in a competition, the average of which did beat the best average of five casts on record. At the National Rod and Reel Association tournament at Central Park in 1888, Mr. A. F. Dressel averaged 137ft. in five casts, and with 33 points for accuracy, or a total of 170, he took first place from Mr. Sidney Fry with an average of 140½ and 20 points for accuracy, or a total of 160½. Mr. Dressel made three casts of 136, 161 and 168ft., and Mr. Fry made two casts of 159ft. each. At a tournament held at Camp Lake, Wisconsin, July 4, 1891, Mr. E. C. Sturges made five casts of 131ft. 9in., 140ft., 147ft. 3in., 137ft. 10in. and 148ft. An average of 140ft. 11in. Mr. Sturges, who is secretary of the club, writes that the conditions were as follows: "Each man to have five casts. Rods not to be over 8ft. in length; casting to be done single-handed with a quarter ounce weight; line to fall within stakes set 10ft. apart. At the time of contest the wind was blowing from the side." Mr. Sturges used a rod 7ft. 3in. long and weighing 8oz. I hunted up the old score book of the National tournament of 1888, and I find that Mr. Dressel used a rod 8ft. 4in. long and 9oz. in weight. Mr. Fry used a rod of same length, but a quarter of an ounce heavier. Both used a sinker weighing ½ oz. The score book gives Mr. Fry's

average of five casts 140ft.; but I am satisfied that this is an error, for upon footing up the five casts they make make 140ft. 4in., and every other record is given in feet and inches. A. N. CHENEY.

## NEW JERSEY COAST POUNDS.

ASBURY PARK, N. J.—*Editor Forest and Stream:* In my former article on our coast pounds I endeavored to outline the abuses of that system. But after five months of assiduous study and hard work I realize that there yet remains much to learn. In order to secure such facts as are necessary for proper enlightenment on the subject I have enlisted the services of several men who are directly connected with the fisheries, men who have been compelled to give up their boats and hire with the pound owners; for their former vocation is gone, and they have no other trade. Pound fishing is for them a last resort. I now wish publicly to thank these men for their kind offices, and the valuable assistance they have rendered. In every instance letters addressed to them have been answered promptly and intelligently, and in every case where the same questions were propounded to ten or more parties the answers have been so uniform that no possible room is left for question regarding their accuracy; and the fact is established beyond cavil or doubt that it is a serious condition and no idle theory which confronts us regarding the future supply of our food fishes.

There is no State perhaps in the whole Atlantic seaboard of more importance to our large cities than is our own as regards the necessary supply of fish; and there is none whose laws are more lax and certainly none which is not better provided with fish wardens and other much-needed protection. It is contiguous to two of the largest cities in our Union and with a population increasing rapidly. It becomes the duty of every citizen to foster and protect our fish in every available manner. Southern Europe years ago felt the need of stringent measures regarding this subject, and acted accordingly with her Mediterranean fisheries, imposing the severest of penalties for the wanton destruction of fish, and subscribing immense sums of money for the erection and maintenance of hatcheries, even far-away Russia appropriating large sums in order that she might have fish sent within her borders, until now that body of water is teeming with the life that at one time threatened to become extinct. Our Pacific Slope, with only a tithe of the Eastern population and with advantages far superior to our own for the successful spawning and growth of fish, has found it necessary to make a close season for all food fish, particularly the salmon; and pounds are not allowed of smaller mesh than a given size. Fishermen must return alive to the water all small fish that may be taken; and their nets and fish wheels must be out of the water during Saturday and Sunday of each week during the open season.

Note the difference here in New Jersey. There is no close season for any variety of salt-water fish, our pounds are down every day in the week, including Sunday; they use a mesh less than 1in. square, and fish the entire season, beginning with the running of the shad, until the supply is either exhausted or has left our waters.

Examination and inquiries fully convince me that nine-tenths of all early caught fish of all varieties are females endeavoring to respond to nature's prompting to reach their spawning grounds. Between Barnegat Inlet and Sandy Hook there are but two streams which fish can enter and spawn in, viz., Manasquan and Shark rivers. These two streams heretofore poured out annually millions of the young of all kinds of fish, but now, as matters stand, every approach to these streams is shut off by pounds, so that they might as well not exist so far as propagation is concerned.

We must, however, give our State Commission credit for honest and earnest endeavor to maintain and increase our supply of shad by placing annually millions of fry in the Delaware River and protecting them all along its course until they have attained sufficient size to be able to care for themselves. But it simply exemplifies the case of building a house on the sand. Let us follow these same fish and see what becomes of the vast majority of them. Of course they reach the southern waters, wintering there, and start back with the large fish; in the spring they have attained the size of a herring, and their numbers perhaps as fifty to one. Compared with adults, every pound along the shore gathers its quota. Of course they are destroyed, being gilled in the small meshes, and as they are not of marketable size they are thrown away. Thus we see that perhaps one-half of all shad fry that are planted find their way in the pounds, and are wasted after they have reached the age where all would become mature fish. One fisherman, of whose integrity there is no question, assures me that the pound in which he fishes caught and destroyed a great many thousands of these valuable fish in the spring of 1893, and he adds, "I would not be surprised to learn that each pound on the entire coast is equally destructive." Is it for this that our State spends vast sums of money, honestly endeavoring to promote public welfare, only to have the results of their labors thwarted by a reckless disregard of public beneficence?

The injury to the shad supply does not stop with the destruction of the small fish, however. In the summer months, when buck shad are running, great catch of these also are made. These are mature fish; and as they are not allowed to be sold in the markets they go overboard with the rest, dead, an expensive bit for dogfish and skates and a sorrowing monument to the honest endeavors of our Commissioners of Fisheries. I have positive information that in July, fully one month after the season was closed, shad was offered and sent to our retail dealers from the pounds, thus making themselves amenable to our State law, advantage of which will undoubtedly be taken.

Again, our law of last winter makes it a misdemeanor to fish with hook and line or in any manner on Sunday. The pounds are down and open during the entire season, Sunday and weekday alike, and as this is positively a manner of fishing they must as a matter of course stand open to conviction.

Great stress has been placed upon the menhaden fishery, and State laws have been passed prohibiting that iniquitous system from being pursued within the three-mile limit. But destructive and disastrous as this is, when compared with former fishing it is of but small import. While we know that at times they make great catches of food fish, yet they do not hover around every small inlet on the coast; they do not fish at night nor Sundays, and their nets are only down periodically when they discover

a school of fish. They do destroy the menhaden, upon which our fish depend largely for food. I would not say one word in support of the menhaden fishery; it is reprehensible, but I use it only to draw comparison to show how necessary it is that we have immediate legislation against the pounds.

The venerable Geo. W. Childs, in a strong editorial on this matter recently, pointed out how important this subject has become to our State, showing conclusively that when great catches are made they ship a small quantity to the markets, carting them through our streets as a blind, then employ a tug or smack to take away the vast remainder to the fertilizer manufacturers to be converted into that product, while the residents of inland towns and the farming population would gladly pay good prices for them could they have the chance. But, of course, it pays the pound men better to dispose of them quickly and in bulk, even at small price, so they can get their nets ready for another day's catch and so avoid the delay and work of landing them on the beach.

To show how every subterfuge is adopted to deceive the people in this matter, a prominent pound owner announced publicly that an agreement had been made between pound fishermen not to land on the beach smaller fish than those of marketable size, under a penalty of \$250 for each offense. (Nothing, of course, was said about throwing them away at sea or allowing them to hang gilled in the net until they rot and drop out.) His boat was watched, and on the morning following the statement great quantities of small bonito and mackerel were landed whose individual weight would not exceed 3oz. Demand was immediately made upon him through the newspapers for the money, but up to the present writing he has not kept faith with his promise nor offered explanation of any sort.

According to United States statistics, completed June 30, 1889, the hook and line industry of New Jersey was the most important of the States in the Union, giving employment to over 5,000 men, who supported their families and provided plentifully, of whom the majority owned their homes; and winter always found them with a goodly sum laid up and ample larder provided. Now how different. They can catch, if very fortunate, about fish enough to provide a living only during the fishing season, and when that is done they are compelled to do any odd job which presents itself the remainder of the year. A great many work in the pounds at the pittance of \$50 per month, glad even to stroke the hand which smites them, so pressing are the demands of little ones and hunger. And all this that a few men may grow rich, little caring how hard the lot of the line and net fishermen becomes, heeding not the fact that three to five years at best will see even their vocation gone; for at the rapid rate of decimation now going on all the gregarious fish of our coast will have been practically exterminated. One significant fact points this plainly. The fishermen all say that of their entire catches of bluefish all they now take are of very large size. None of the medium weights are met with, thus conclusively showing that practically all the spawning of the past two or three years have been destroyed by the pounds during the great southern migration in September and October, when 20,000 to 50,000 to each net is about the average daily destruction. This, indeed, assumes a serious aspect and threatens a national calamity unless stopped and at once. Protection is thrown around the quail, the rabbit, the insectivorous and song birds. The oyster and even the humble hard clam all have their welfare guarded. But our most important product, the salt water fish, is left open to every system of vandalism that can be concocted in the brain of man and a ruthless and wanton waste heretofore unheard of in the annals of civilization. As a menace to navigation these pounds stand paramount to all obstructions on our coast, stretching as they do over one-half mile seaward and supported by an immense chain cable. Small mercy will be shown the occupants of any ill-fated light craft which may be caught in a sudden squall and temporarily unmanageable become entangled in that labyrinth of ropes, nets and chains. Will not our board of lighthouse supervisors investigate this matter and satisfy themselves that these assertions are true.

The entire population of our State is aroused and on the alert regarding this matter. Protective associations are being formed along the whole coast, represented by our best citizens, all demanding redress from this overshadowing grievance which enriches a few and impoverishes the populace in many ways. There are no extenuating circumstances to be held out in favor of the pounds; it is simply a game of present wealth to the owners and extermination in the near future of the fishes. And he who wantonly and without excuse or reason willfully destroys so valuable a gift of our beneficent Creator, lowers his status of citizenship and should be held accountable by his fellow man. LEONARD HULIT.

## A Big Fish for Chicago Day.

CLAYTON, N. Y., Oct. 9.—*Editor Forest and Stream:* Last Friday, 6th inst., in company with Lew Marshall, oarsman, I had the good fortune to capture one of the handsomest maskalonge I have ever seen. This fish weighed 42lbs., and measured 4ft. 7½in. in length. Desiring to afford others an opportunity of viewing such a magnificent specimen, I expressed it, with my compliments, to Capt. J. W. Collins, Chief Dept. Fish and Fisheries, and Dr. J. A. Henshall, in charge Angling Pavilion, with the request that it be placed on exhibition in the Angling Pavilion, during Monday, 9th inst., which I believe is Chicago Day at the Fair. Among other parties in Chicago, whom I advised accordingly, was your Mr. E. Hough. G. M. SKINNER.

## Queen City Fishing Club.

CINCINNATI, O., Oct. 14.—On Oct. 8 the Queen City Fishing Club, one of the largest organizations in the State, will formally dedicate its new club house, situated at Oak Point, Put-in-Bay, where the club, which is a stock company with a capital of \$12,500, owns eleven acres of land. The building is a model one, consisting of eighteen rooms and kitchens. Accommodations are prepared for from fifty to seventy-five persons. Among the members are Messrs. G. T. Sterritt, W. B. Smith, Mayor Masby, City Treasurer Ziegler, Hon. Geo. R. Griffiths, Gen. Frank Kirchner, Jr., Norman J. Kenan, Dr. T. W. Graydon, A. Howard Hinkle, Hon. H. B. Morehead, John Hetherington of New York, H. M. Little, James Finnegan and railroad magnate W. W. Peabody. DICK.

## WITH THE CHANNEL CAT.

EXETER, Neb., Oct. 10.—I had come down from my ranch in Wyoming to spend a few days with the old folks in Nebraska whom I had not seen for a number of years, and as a matter of course had brought my fishing outfit along, for I intended having a try at the channel cat for which the lower "Big Blue" is noted, and where I had caught many and many a large string in my boyhood days.

I had been at the old home two days and decided that on the morrow, weather permitting, I would again try my luck in the old familiar places. So telling father to call me early, I turned in.

It must have been near 5 o'clock the next morning that I was awakened by the well known call which used to bring me out of bed in days gone by, when I was a youngster going to school. After a hearty breakfast, I donned my waders and taking my split-bamboo "buggy whip" from its case, I started for the river, a mile away. It was an ideal morning. A southeasterly breeze came singing over the hills and through the trees, which had commenced donning their fall colors. I again hear the old familiar roar of the water falling over the dam, and catch a glimpse of the stream through the undergrowth.

It does not take me long to reach the little strip of sand below the dam, and putting my rod together am soon wading to the center of the stream where the water is not over 3ft. deep, for miles below the dam. I have reached a favorite spot, and putting on a couple of fat hoppers, I make a cast toward the bank where the current sucks in under a bunch of willows and old dead stumps. My line has run through and has come to a dead stand in an eddy just below, the cork bobbing up and down in the quiet water, when all at once the cork is gone and I feel that heavy tug-tug at the line that only a channel cat knows how to give. The reel is singing its first song for a long time, and how pleasant it sounds. He has started for the bank and I have some 50yds. of line out when he turns and makes for up stream in a zig-zag course, keeping a taut line on him. He soon tires of that and makes a shoot for the center of the river below me. I now have him with head up stream and soon tire him out, reeling him in, still fighting feebly. I soon have him on the string and the pocket scales say 3½lbs. Not so bad for a starter.

After a few more casts and no rises, I start on my way down stream, casting in all likely looking places, until I have traveled nearly a mile and am at the head of a series of rapids where in days gone by I had taken strings of "cats" that I could hardly carry home, and where many a "tip" had broken, letting that "large one" go free. My line has hardly touched the swiftly running water before it is as taut as a bowstring, and the reel is again singing that song which is such music to the ear of the angler. By the way the line is going out and the heavy strain on the rod, I know I have a "whopper." He is working down stream, and in that swift current with my light tackle down he must go to smoother water with me following close behind, floundering over slippery rocks and into washouts until the end of the rapids are reached. Then the fun commences. He has headed for that pool of deep still water that I know is full of snags and sunken logs. Once there good-bye to my line and prospective fish. Giving a few turns to the reel, I gradually work his head up stream and he soon commences that zig-zag work that I know means he is tiring. Soon I have him within reach and am just going to net him, when he recovers and away he goes nearly breaking my tip; but it is his last run, for that has expended his energy, and he comes rolling over and over into the net. He weighs 6lbs. even, and as I am no "fish hog," I limber up and start for home, well satisfied with my morning's work.

DIAMOND WALT.

## Onondaga Anglers' Association.

THE Anglers' Association at their meeting last evening transacted some important business, which has for its object the bettering of the condition for fish in some of the waters in Onondaga county. The new dam which the State is about to build at Baldwinsville will, unless steps are taken to prevent it, become a barrier to the passage of fish up the Seneca River. After discussion of the question it was decided to appoint a committee to secure legislation next winter for the construction of a fishway past the dam. The expense is estimated at \$1,500 and an appropriation by the State for the purpose is sought. John N. Babcock, Henry Loftie and George B. Wood were selected as the committee. The great spawning ground of the fish is in Cross Lake and its vicinity, the fish passing up the river to that locality, and the fishway proposed will prove of inestimable value.—*Syracuse (N. Y.) Herald.*

## Pennsylvania Fish Protective Association.

PHILADELPHIA, Oct. 10.—The regular monthly meeting of the Pennsylvania Fish Protective Association was held this evening at their rooms, No. 1,020 Arch street, Philadelphia, and was well attended. A communication from the Pennsylvania Commissioner of Fisheries requesting permission to establish an office in the rooms of the association was considered, and a motion to accord that privilege was unanimously adopted.

The action of the Pennsylvania authorities in proceeding to remove the fish baskets in the Susquehanna River was commended and also the work of the Pennsylvania Fish Commission in removing the wing walls recently erected in the Delaware River during low water. Preparatory measures were taken to celebrate the eleventh anniversary of the Association in November.

W. G. SELLER, Sec'y.

## Lake Gogebic Bass.

CHICAGO, Oct. 14.—Our agent at Gogebic, Mich., advises me that on Oct. 5 Mr. J. Edmund Strong, of Chicago, caught in Lake Gogebic eight small-mouth black bass, weighing 29½lbs. He, and the guide who accompanied him, also caught a deer that was swimming across the lake, and succeeded in killing it and bringing it back to the hotel in the boat. On the same day Messrs. A. M. Fuller and Geo. W. Pitkin, of Chicago, caught fourteen black bass weighing 49lbs.

W. A. THRALL.

## Inning of the Faithful.

FT. DODGE, Ia., Oct. 8.—Fishing in this part of the country is now at its best. The summer fisherman has

quit. The small boy is in school or on 'nutting expeditions. The granger who spears and dynamites is busy picking corn, and so a few of the faithful who have been "skunked" on some trips and poorly rewarded on others, are now reaping the reward of our patience. Small-mouth black bass are biting freely, and the big ones have broken their summer's fast and make the strings average up well. I saw a string of ten black bass which weighed 25lbs., not a bad average for our stream, the Des Moines. Bait is scarce; frogs are either too small or just the opposite, and the bass don't seem to take even those of proper size freely. Minnows are scarce, as many small streams are dry. Small bullheads, about 3in. long, are the best bait we get. These are tough and lively and eagerly taken.

## Merrimack Salmon.

HADLEY, Mass., Oct. 10.—An October run of heavy salmon, some of them estimated to weigh 40lbs., have been trying for several days to get up the Merrimack River at Sewall's Falls, but were prevented by the low water and the absence of a fishway. Fish have also been lying at the mouth of the Suncook, a tributary of the Merrimack, but have been unable to get over the dam at Garvin's Falls. The State Fish Commissioners propose to capture them and take them to the State Hatching House at Plymouth, where the spawn will be secured.

C. H.

## Fishing in the Gulf.

BILOXI, Miss., Sept. 27.—As fine a catch of fish as I have ever known caught was made on the Horseshoe Bar, about two miles in front of Biloxi, last Tuesday. Messrs. C. N. Golden, Louis Hahn and E. Fayard caught with hook and line 110 Spanish mackerel, one jackfish of 28lbs. and one lemon fish. The catch weighed 240lbs., and was the largest known to this coast for many years. These parties were in one boat. Other boats caught from 10 to 75 mackerel each. The fishing all along the Gulf coast has been excellent, and the outlook for the winter is very promising.

ANODRAC.

## The Kennel.

FIXTURES.  
DOG SHOWS.

Nov. 21 to 24.—New Jersey K. L., at Newark. Dr. W. F. Seidler, Sec. Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. Second payment in Derby due Nov. 1. P. T. Madison, Sec'y, Indianapolis, Ind.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

## A Fishy Matter.

THE two judges of the Minneapolis dog show conspired together in rather a fishy matter, which I am sure will lead to the destruction of some fish. Mr. Hansen took Mr. Davidson as his guest to his home at Osceola Mills, which invitation included some trout fishing in Mr. Hansen's private waters. Mr. Davidson surrendered easily. The writer, too, was the recipient of a similar generous invitation and felt like surrendering easily, but owing to busy days, inclination gave way to duty. May they "cast their lines in pleasant places."

By the way, I regret to observe the proclivity and growing practice of erstwhile good dogmen of "going fishing." They have a hard-earned reputation for veracity to cherish, and with such in possession are in trust for posterity, one cannot be too careful these days. Still I do not anticipate any alarming defection, since no dogman of proper sentiments will ever take any thrilling pleasure in catching trout till the latter are bred true black, white and tan in color, of that there is no question. Trout which are orange-ticked, or red ticked or roan, can never hope to hold a firm place in the seething corner of the true dogman's heart, in which repose his large store of pure affections. The dogman is a keen stickler for the refinements in the fancy, and when he goes fishing or angling—or both—he should not forget that he has a mission, namely, to improve and elevate his brethren of the fly. Never neglect true art, and this cannot be done without a conscientious observance of details. For instance, it is now quite as bad form to shoot a quail, snipe, woodcock or grouse over a liver-colored setter as it is to catch a trout with a worm, or, rather, to catch a trout by inducing him under various cloaks of kindness and friendship, to bite a worm with a concealed weapon about its person. To the rude barbarian, who shoots to kill or fishes with a pole, the delicacies of true art are naught; yet the little refinements, after all, are what fill the longings of the spirit of the true sportsman for something nobler and higher. If a sportsman feels that his pleasure rests solely on possessing a dog whose color matches his own complexion, or whose happiness consists in wearing a costume which harmonizes with the foliage, the sky, the birds or the eternal fitness of things, who, by a single word, would deny the happiness to him?

But it is useless to get fish and dog mixed—even the Indian would not so fancy them. Yet I dislike to see man's best friend deserted for the tinsel and glitter of speckled beauties.

Mr. Geo. E. Gray, the well-known trainer and field trial handler, stopped over at Minneapolis to attend the dog show. The summer sun and prairie winds had left a healthy bronze on his cheek, and the firm grip of his hand denoted that he is no weakling. He was en route to Indiana with a string of twelve dogs. The southern part of the State will be the section in which he will give his dogs work on quail and put on the finishing touches preparatory to the fall contests.

The sportsmen who are interested in field trials should

keep in mind that the All-Aged Stake of the International Field Trials closes positively on Nov. 1. Address W. B. Wells, Secretary, Chatham, Ontario.

At the Minneapolis show I met Mr. Paul H. Gotzian, who still admires his old fancy, although he is not so materially interested as an owner as in months not far in the past. There, too, was Mr. Al. C. Anderson, always amiable and affable. He, the present year, took a trip to the Pacific coast, but did not take an active interest in canine matters while there.

I read with much pain of the destruction of the entire plant of the *St. Laundry Clarion*, a weekly paper published at Opelousas, La. Mr. J. W. Jackson, a gentleman well known as a sportsman and breeder of fine dogs, is the editor. All the circumstances indicated that the fire was of incendiary origin. The paper was fearless and independent in its policy, which undoubtedly made it some enemies. It is just such papers as the *St. Laundry Clarion* that the South needs to stir it to action and to strive for progress. With an energy which is supposed to be limited to the boundaries of the North, the paper came out the following week, but undismayed and unflinching. Out of the ashes of that fire, I believe, will grow a larger paper with the loyalty of a large constituency clustering about it. So let us hope it will be.

In a brief note Capt. C. M. McMurdo informed us that he would pass through Chicago about Oct. 4 on his way to his home in Virginia. It will be remembered that he has been enjoying the bountiful chicken crop in Manitoba. A pleasure was lost by being absent from Chicago in attending the Minneapolis show at the time Captain McMurdo was in the city. When speaking of a genuine gentleman and sportsman, one can never go wrong in mentioning the Captain.

Mr. H. W. Lacy, kennel editor of *FOREST AND STREAM*, stepped off the train in Chicago Sunday morning, Oct. 1, and the two Western representatives of *FOREST AND STREAM* met him simultaneously after a wait of about two hours in the ghostly morning hours for his arrival on a late train. We felt much solicitude for him, as we greatly feared he might be lost in this great city. He was en route to Huron, S. D., to daily with the gay greyhound and giddy jack rabbit. As he did not leave till evening there was time for a trip to the World's Fair, which was made by boat. It is considered the proper caper on seeing the Fair to look awe-struck or interested and to remark that it is a great and glorious enterprise, a grand monument to American enterprise in general and Chicago in particular, etc., *ad infinitum*, but Mr. Lacy did neither. He gazed upon it as calmly as if world's fairs were as common as cobblestones. He greatly admired *FOREST AND STREAM*'s exhibit in the Fisheries Building. But we were pressed for time and hurriedly walked through the middle of the grounds and the Plaisance I believe that Mr. Lacy was not quite in his usual good form, as he only talked dog about eight-tenths of the time.

## Mr. Anderson Retires.

I regret to learn that Mr. H. B. Anderson of Glen View, N. J., will retire from the profession of dog training; that is, I regret it is to lose a man who was an ornament to it. I rejoice that he will be in a better occupation, and my wishes go with him for his prosperity and happiness. He writes to me, under date of Oct. 9, as follows: "I drop you this note to say that I am going out of dogs entirely. I am returning to the practice of dentistry, and after the 15th inst., my office address will be Franklinville, N. Y., where all communications should be sent. I look over my three years as a professional handler with pardonable pride, as I have been instrumental in landing six winners in three seasons, viz., Ready II, Nugget, Bedford, Lady Alice, Nanon and Ben Hur of Riverview, who I prepared for last year's Members' Stake, Philadelphia trials. I am also out of red setters entirely, and no more need expy. The only dog I keep in retiring is a Rowdy Rod ex Prima Donna puppy." He, too, has an enviable record as a gentlemanly handler.

B. WATERS.

## Westchester County Fair Show.
